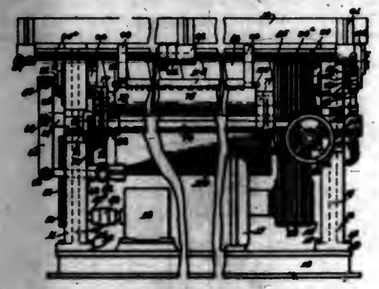
1. In a machine for operating a tool to be drawn through a work piece, a head constructed to engage and disengage said tool, means for moving said head in a reciprocating path, tripping means for cooperating with said head to cause said head to disengage said tool, and stationary means for supporting said tripping means adjacent the path of movement of said

head for limited movement parallel to the path of travel of said head.

2,106,214
TOOL SUPPORT
John Q. Holmes, Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application June 24, 1936, Serial No. 86,996
12 Claims. (Cl. 218—0.5)



1. A device for heading rivets inserted in parts to be joined comprising, in combination, a locator for the parts and inserted rivets; riveting tools movable longitudinally relative to each other; and confined hard particles against which one end of each tool rests.

2,106,215
ROLL GRINDING MACHINE
Edward Hutchens, Cudahy, Wis., assignor to Utility Manufacturing Company, Cudahy, Wis., a corporation of Wisconsin
Application December 15, 1934, Serial No. 757,620
11 Claims. (Cl. 51—49)

11. A machine for surfacing rollers comprising an elongated grinding roll adapted to receive thereagainst the entire length of a roll to be ground, a feed roll in spaced parallel relation to the abrasive roll, supporting arms for the ends of said feed roll, a shaft keyed to the ends of said arms, means for rotating the feed roll relative to the supporting arms, means for rotating the sup-

porting arms about the shaft for raising and lowering the feed roll, and separate spring urged

means for holding the roll to be ground in the nip between the feed roll and the abrasive roll.

2,106,216
HONING MACHINE
Albert M. Johnsen, Rockford, Ill., assignor to Barnes Drill Company, Rockford, Ill., a corporation of Illinois
Application January 28, 1935, Serial No. 3,714
23 Claims. (Cl. 51—34)

1. A honing machine comprising, in combination, an elongated horizontally disposed frame, a carriage mounted on one end of the frame for relative movement longitudinally thereof, a spindle rotatably supported on the carriage, work holding means supported on the other end of said frame for holding the work coaxially with the spindle, a honing tool attached to said spindle and adapted to enter the work, a drum supported at said one end of the frame, a sheave supported at a point intermediate the two ends of the frame, a cable anchored at one end to said drum and at the other end to said carriage and running over said sheave, a second cable anchored at one end to said drum and at the other end to said carriage, said second cable being wound on the drum in such manner that it is paid out when said first mentioned cable is being wound on the drum, and means for rotating said drum.

2,106,217
MACHINE TOOL
Albert M. Johnsen, Rockford, Ill., assignor to Barnes Drill Co., Rockford, Ill., a corporation of Illinois
Application November 29, 1935, Serial No. 52,105
33 Claims. (Cl. 51—34)

1. A combined honing and lapping machine having a work support and a tool support, means for reciprocating one of said supports, and means operable selectively to impart either a continuous rotary motion to the tool support or a step-by-step rotative movement thereto.

2,106,218
FILTERING APPARATUS
James H. Kriesk, Newark, N. J.
Application April 10, 1936, Serial No. 73,656
6 Claims. (Cl. 210—131)

1. In a filter casing having an inlet and an outlet and a shoulder therebetween, a cover for the casing, a filter bag having its open top folded over to form a loop, an adjustable ring within the loop, a distributor disc over the top of the bag having a depressed tapered portion entering the said bag, and means to force the said disc against the top of the bag and the said top against the shoulder, the said tapered portion of the disc simultaneously spreading the said ring while entering the top of the bag to force the sides of the loop at the top of the bag against a wall of the casing above the said shoulder.

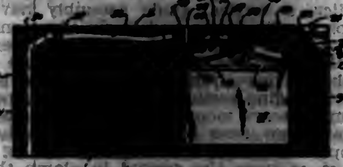
2,106,219
SPRING ASSEMBLY
Howard H. Lanning, Topeka, Kans., assignor to General Steel Castings Corporation, Eddystone, Pa., a corporation of Delaware
Application June 17, 1935, Serial No. 27,026
1 Claim. (Cl. 105—194)

A spring assembly for locomotive trucks comprising a single piece equaliser bar having spaced apart side walls united intermediate of the ends to provide an elongated open top chamber having ends and side walls and provided with inspection and drain openings in said side and bottom walls, while the side walls at the ends of the equaliser bar are united by a transverse tie plate provided with an arcuate journal box top bearing portion, a dished bearing block removably seated in each end of said chamber; a spring in said chamber composed of superposed flat plates secured together intermediate of the ends by an encircling band the top whereof is formed to constitute a fulcrum point for the frame member of the truck; and a roller at each end of said chamber for supporting the spring plates.

2,106,220
BAFFLE GATE BEARING FOR ONE-WAY ROTATION
Albert Law, Jackson Heights, N. Y.
Application September 22, 1936, Serial No. 101,966
1 Claim. (Cl. 188—31)

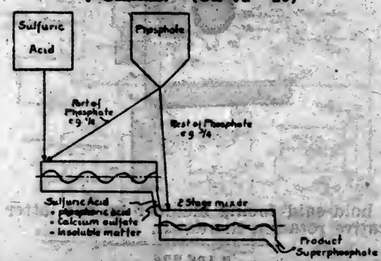
A bearing for a baffle plate or the like having a shaft carrying a set of arms, comprising a fixed housing, an annular member secured to said

shaft and rotatably held in said housing, two pairs of diametrically opposite channels formed between said housing and said annular member and adapted to receive locking balls, one pair of said channels having a bottom inclined, and being tapered, in a given circumferential direction, the



other pair of said channels having a bottom inclined, and being tapered, in the opposite circumferential direction, whereby the positioning of a set of locking balls in either of said pairs of channels will serve to lock said annular member against rotation in one direction only.

2,106,221
PROCESS FOR THE REFINEMENT OF MAGNESIUM AND MAGNESIUM ALLOYS
Alexander Laschkarew, Berlin, Germany
No Drawing. Application January 21, 1937, Serial No. 121,619. In Germany February 3, 1936
2 Claims. (Cl. 75—67)



1. A process for the refinement of magnesium and magnesium alloys, comprising in steps: melting the metal which is to be refined; and passing through the molten metal the vapours emitted by an aqueous solution of hydrogen peroxide containing an oxide of manganese.

2,106,222
STORAGE BATTERY
Theodore Matthew, Burlingame, Calif.
Application March 10, 1934, Serial No. 714,973
1 Claim. (Cl. 136—177)

In a storage battery having positive and negative plates, a battery casing having separate compartments for the positive and negative plates as well as a flush cover, connection members between the elements of the battery, all of said members being sunk in the cover to maintain its flush characteristics, said members being extended to one end of the casing to form the battery terminals, an electrolyte in which the plates are immersed and which evolves gases of different characteristics at the positive and negative plates incident to the operation of the battery, and means forming vents connecting to the compartments and leading to the opposite end of the casing from that at which the said terminals and downwardly to the outside of the casing, whereby to conduct said gases to the outside of the casing without intermingling and without contacting said members.

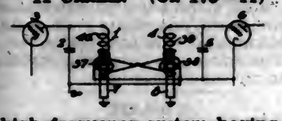
2,106,223
PROCESS FOR THE MANUFACTURE OF SUPERPHOSPHATE
Sven Gunnar Nordengren, Landskrona, Sweden, assignor to Aktiebolaget Kemiska Patenter, Landskrona, Sweden
Application April 4, 1935, Serial No. 14,628
In Sweden April 8, 1934
7 Claims. (Cl. 71—40)

1. A process of preparing superphosphate, which comprises mixing in a first step phosphate rock with sulphuric acid of relatively high concentration in great excess over that required for the decomposition of all the phosphate rock to phosphoric acid, and thereupon reacting in a second step the resulting unseparated mixture of phosphoric acid, sulphuric acid, calcium-sulphate, and undecomposed phosphate rock residue, with enough additional phosphate rock to form monocalcium-phosphate and calcium-sulphate in the ratio found in superphosphate.

2,106,224
DEVICE FOR TRANSFORMING ACOUSTICAL ENERGY INTO ELECTRICAL ENERGY
Harry F. Olson, Collingwood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 21, 1933, Serial No. 698,069
5 Claims. (Cl. 179—128)

1. The combination of a hollow structure arranged to produce a magnetic field, a diaphragm having a closed triangular prismatic projection arranged with its apex in said field, and a linear conductor mounted on said apex.

2,106,225
KEYBOARD CAM ACTUATING ROLL FOR TYPESETTING MACHINES
Solomon Rich, Glen Ridge, N. J.
Application March 27, 1936, Serial No. 71,162
4 Claims. (Cl. 199—25)



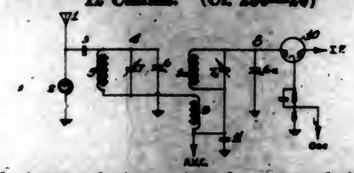
1. A unitary removable facing member for a cam actuating roller shaft of the keyboard mechanism of a typesetting machine comprising, an elastic rubber sleeve and a longitudinally split metallic liner to provide an internal hard and smooth sliding surface contiguous to the bore of said sleeve, said liner being yieldably contracted by the constrictive elasticity of said sleeve to an initial internal diameter somewhat less than the external diameter of said roller shaft but subject to diametric enlargement against the yielding constrictive tension of said sleeve to permit longitudinal sliding of the facing member endwise over the roller shaft, the constrictive tension of said sleeve being operative to contract

said liner into strong frictional engagement with the surface of said roller shaft so as to engage

and hold said facing member on the latter for operative rotation therewith.

2,106,226
COUPLING MEANS FOR PERMEABILITY-TUNED CIRCUITS
William A. Schaper, Chicago, Ill., assignor to Johnson Laboratories, Inc., Chicago, Ill., a corporation of Illinois
Application June 26, 1935, Serial No. 28,436
11 Claims. (Cl. 178—44)

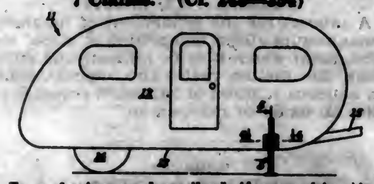
11. A high-frequency system having two resonant circuits each including a capacitor and an inductance coil, a magnetic core movable relatively to each of said inductance coils for tuning said circuits in such a manner that the ratio of inductance to resistance is maintained substantially constant, and means including said cores to so regulate the coupling between said circuits as to maintain substantially constant amplification throughout the tuned frequency band.



2,106,227
SURFACE TREATMENT OF METAL TO PREVENT LOCALIZED CORROSIVE ATTACK
Charles A. Scharschu and George O. Kiefer, Brackenridge, Pa., assignors to Allegheny Steel Company, a corporation of Pennsylvania
No Drawing. Application April 29, 1935, Serial No. 18,913
16 Claims. (Cl. 148—6.5)

16. A bath for rendering corrosion resistant ferrous alloys immune to localized corrosion or pitting which consists of about 1–20% chromic acid and about .5–5% hydrofluoric acid, the balance being substantially all water.

2,106,228
COLORING AND PROTECTIVE COATINGS
Oskar Schober, Herrnm. Benirk Koeln, Germany, assignor to American Lurgi Corporation, New York, N. Y., a corporation of New York
No Drawing. Application September 6, 1933, Serial No. 688,353. In Germany September 1, 1930
3 Claims. (Cl. 134—76)

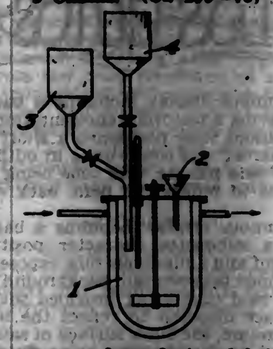


1. A coloring and protective coating composition comprising a vehicle and a pigment suspended therein composed of an intimate mixture of finely ground metallic aluminum and silicon distributed throughout said vehicle in finely divided form, said mixture containing at least 5% of silicon.

2,106,229
PRESELECTOR SYSTEM
Dwight V. Sinsinger, Chicago, Ill., assignor to Johnson Laboratories, Inc., Chicago, Ill., a corporation of Illinois
Application February 11, 1936, Serial No. 63,295
12 Claims. (Cl. 250—20)

1. A pre-selector system for a superheterodyne receiver including a fixed-tuned antenna circuit and a pair of variably tunable resonant circuits, a capacitance connected between said antenna and one of said resonant circuits, means including an inductance for coupling said resonant circuits, variable capacitors for tuning said resonant circuits and adjustable capacitors for aligning said resonant circuits, one of said adjustable capacitors being so connected to said inductance as to increase the discrimination of said system against signals of image frequency.

2,106,230
TRAILER LEG
Lincoln L. Whitson, Van Nuys, Calif.
Application October 17, 1936, Serial No. 106,069
7 Claims. (Cl. 248—354)

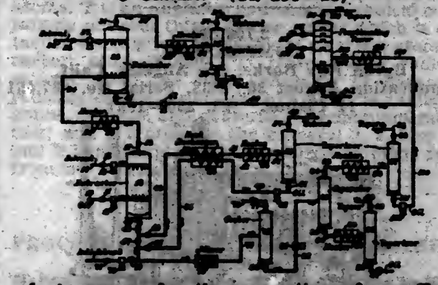


1. In a device as described, the combination of a wall plate having upper and lower grooved guide rims, an abutment on one vertical edge and being open on the other vertical edge, means to secure the wall plate to a vertical surface of a trailer, a vertical guide assembly having a base plate with upper and lower edges engaged in the grooves of the guide rims and insertable from the open side of the wall plate, the guide assembly having a vertical opening, a leg having a foot extending vertically through said opening, a clamping screw mounted on the guide assembly and having an inner end extending into the vertical opening and adapted to engage the leg when the foot contacts the ground to clamp the leg to the guide rims of the wall plate to the side of the trailer.

2,106,231
BICYCLE LAMP
Lee M. Wiley, Marion, Ind., assignor to Delta Electric Company, Marion, Ind., a corporation of Indiana
Application March 27, 1937, Serial No. 133,228
7 Claims. (Cl. 240—7.55)

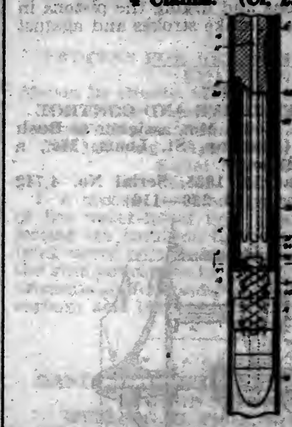
1. An electric bicycle lamp unit comprising an elongated casing, an elongated substantially cylindrical dry cell holder mounted within said casing longitudinally thereof, and means supporting said dry cell holder in spaced relation to the walls of said casing, said last named means including a longitudinal extension on the rear end of said holder, said extension having an open slot adjacent its rear edge for engagement with a securing means on said casing.

2,106,232
PRODUCTION OF HIGH QUALITY LUBRICATING OILS
Hermann Zorn, Ludwigshafen-on-the-Rhine, and Walter Rosinsky, Oppau, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
Application October 4, 1933, Serial No. 692,130
In Germany October 15, 1932
5 Claims. (Cl. 196—78)



1. The process of producing lubricating oils which comprises incorporating a high molecular weight polymerization product prepared from isobutylene alone, which product when added to a lubricating oil considerably flattens the temperature-viscosity curve thereof, with a hydrocarbon oil capable of undergoing polymerization and acting on the mixture with a condensing agent of the Friedel-Crafts type at a condensing temperature.

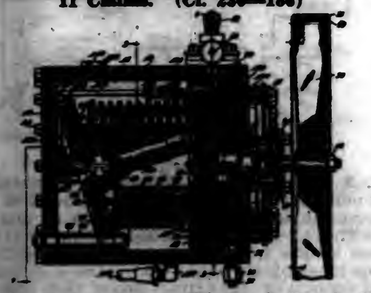
2,106,233
PORTABLE DEMAGNETIZER
John T. Beechlyn, Worcester, Mass., assignor to O. S. Walker Co. Inc., Worcester, Mass., a corporation of Massachusetts
Application September 21, 1936, Serial No. 101,773
10 Claims. (Cl. 175—181)



1. In a device for removing residual magnetism, a laminated core, a pole on said core, the outer end of the pole having the contour of a cylindrical arc with the axis of the arc substantially at right angles to the laminating plane, and a winding on said pole for producing an alternating magnetic field beyond the outer end of the pole, said pole contour being adapted to be brought into close proximity with the surface to be demagnetized.

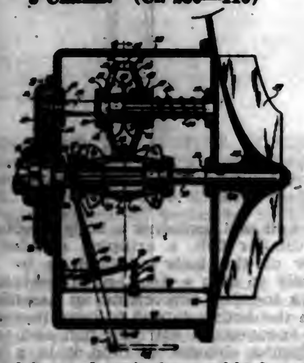
2,106,234
PROCESS FOR SOLVENT EXTRACTION OF OILS
Ulric B. Bray, Palos Verdes Estates, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application February 19, 1934, Serial No. 711,963
5 Claims. (Cl. 196—13)

1. A process for the separation of paraffinic and non-paraffinic fractions from mineral oil containing the same which comprises extracting said oil with a selective solvent, separating the extract phase soluble in said solvent from the raffinate phase insoluble therein, reducing the selective solvent content of said extract phase, then commingling said extract phase with an anti-solvent and separating from said extract phase an intermediate raffinate rendered insoluble in said extract phase by said anti-solvent said intermediate raffinate containing the bulk of said anti-solvent.



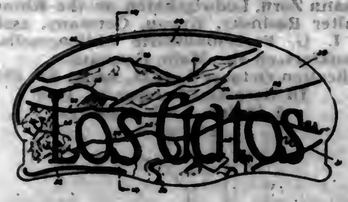
2,106,235
RELEASING SPEAR
Ora A. Brown, South Gate, Calif., assignor to Baash-Ross Tool Company, Los Angeles, Calif., a corporation of California
Application July 30, 1934, Serial No. 737,592
4 Claims. (Cl. 294—86)

1. A well tool including a body adapted to enter a tubular fish, a gripping member on the exterior of the body adapted to be actuated outwardly to grip a fish, and a control for the gripping member comprising an assembly movable on the body adapted to have movement resisting engagement with the fish and related to the gripping element to hold it in a retracted position, and an operative connection between the assembly and body for feeding the assembly



relative to the body to a position where the gripping member is released for actuation, the body having a spiralled thread groove of at least 180° extent, said connection comprising a lug on the assembly cooperating with the groove, the groove having a straight portion for retaining the lug in a position where the gripping member is retracted.

2,106,236
COMPRESSOR
Byron Ray Burke, Los Angeles, Calif.
Application August 30, 1933, Serial No. 687,451
11 Claims. (Cl. 230—136)

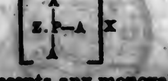


1. A compressor comprising a hollow body, a drive shaft rotatably mounted in the end of the body, means providing a plurality of cylinders in the body arranged about the drive shaft, pistons reciprocable in the cylinders, a flanged gyratory oscillator mounted for conical revolution about a point co-axial with the axis of rotation of the drive shaft, means connecting the oscillator to the drive shaft to be revolved thereby, and transmitters operatively connecting the flange of the oscillator to the pistons so as to cause the pistons to be moved thereby in the direction of their compression strokes, said pistons being flanged, and springs surrounding the cylinders engaging the flanges on the pistons and urging the pistons in the direction of their intake strokes and against said transmitters.

2,106,237
ENGINE BLOWER DRIVE AND CONTROL
Eugene S. Bush, St. Louis, Mo., assignor to Bush Manufacturing Company, St. Louis, Mo., a corporation of Missouri
Application February 4, 1935, Serial No. 4,742
8 Claims. (Cl. 230—116)

1. In a drive and control assembly for a blower or the like, a variable speed transmission through which the blower is driven, a ratio-varying control member associated with the transmission, a device responsive to air pressure, an electromagnet in actuating relation to said control member, and control connections from the air-pressure-responsive device to the electromagnet.

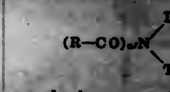
2,106,238
LUMINOUS TUBE DISPLAY
Arthur Clifton Deams, Los Angeles, Calif.
Application October 2, 1936, Serial No. 103,705
11 Claims. (Cl. 40—130)



1. A luminous display including a background member having a pictorial representation thereon and a luminous tube positioned a short distance in front thereof and conforming in outline to an element of said picture, said tube being provided with means to reflect the light back onto said picture.

5. A luminous display including a background member, a silhouette character positioned in front thereof and a luminous tube exposed to view and positioned between said background and said character, said tube being provided with a mirrored surface disposed to reflect the light onto said background, the outer surface of said mirroring exposed to the observer being finished in a light color to reflect light incidentally falling thereon to cause the same to blend into said background in appearance when said display is lighted.

2,106,239
PROCESS FOR BREAKING PETROLEUM EMULSIONS
Melvin De Groote, St. Louis, Mo., assignor to The Tret-O-Lite Company, Webster Groves, Mo., a corporation of Missouri
No Drawing. Application March 17, 1937, Serial No. 131,462
7 Claims. (Cl. 196—4)

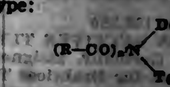


1. A process for breaking petroleum emulsions of the water-in-oil type, which consists in subjecting the emulsion to the action of a cation-active, surface-active substance of the formula type:

in which Z represents any monovalent hydrocarbon radical having at least six carbon atoms; AAA represents at least one hydrocarbon radical, and not more than three hydrocarbon radicals which replace three hydrogen atoms of the phosphonium radical; said hydrocarbon radicals being selected from the class consisting of monovalent hydrocarbon radicals, divalent hydrocarbon radicals, and trivalent hydrocarbon radicals, with the proviso that the total valency value of AAA shall be 3; and X represents a non-surface-active negative radical or component, the total number of carbon atoms represented in AAAZ being not over thirty-five.

2,106,240
PROCESS FOR BREAKING PETROLEUM EMULSIONS
Melvin De Groote, St. Louis, and Bernhard Keiser, Webster Groves, Mo., assignors to The Tret-O-Lite Company, Webster Groves, Mo., a corporation of Missouri
No Drawing. Application April 2, 1937, Serial No. 134,660
15 Claims. (Cl. 196—4)

1. A process for breaking a petroleum emulsion of the water-in-oil type, which consists in subjecting the emulsion to the action of a demulsifying agent comprising a chemical compound of the formula type Y.X, in which Y denotes a residue derived from an amide of the formula:



in which n and n' represent the numerals one or two, D is a hydrocarbon radical; and T represents a non-ionizable hydrogen atom equivalent, selected from the class consisting of a hydrogen atom, a monovalent hydrocarbon radical, and a hydroxylated hydrocarbon radical having not more than two hydroxyl radicals as a part thereof; and R—CO represents the acyl radical of a detergent-forming carboxy acid; and X is a residue derived from a polybasic carboxy acid of the type:

$$B(COOZ)_{n''}$$

in which n'' denotes a numeral at least as great as 2 and no greater than 3, B denotes the polybasic carboxy acid residue, and Z represents an ionizable hydrogen atom equivalent.

2,106,241
PROCESS FOR BREAKING PETROLEUM EMULSIONS
Melvin De Groote, St. Louis, Mo., assignor to The Tret-O-Lite Company, Webster Groves, Mo., a corporation of Missouri
No Drawing. Application April 10, 1937, Serial No. 136,189
11 Claims. (Cl. 196—4)

1. A process for breaking a petroleum emulsion of the water-in-oil type, which consists in subjecting the emulsion to the action of a demulsifying agent comprising an amide of the formula type:

in which n and n' represent the numerals one or two, D is a hydrocarbon radical; and T represents a non-ionizable hydrogen atom equivalent selected from the class consisting of a hydrogen atom, a monovalent hydrocarbon radical, and a hydroxylated hydrocarbon radical having not more than two hydroxyl radicals as a part thereof; and R—CO represents the acyl radical of a detergent-forming carboxy acid.

2,106,242
PROCESS FOR BREAKING PETROLEUM EMULSIONS
Melvin De Groote, St. Louis, Mo., assignor to The Tret-O-Lite Company, Webster Groves, Mo., a corporation of Missouri
No Drawing. Application June 21, 1937, Serial No. 149,470
10 Claims. (Cl. 196—4)

1. A process for breaking petroleum emulsions of the water-in-oil type, which consists in subjecting the emulsion to the action of a demulsifying agent of the formula type:

$$(X)_n.R.T.D$$

where R represents an aromatic nucleus; X represents an alkyl radical having at least three carbon atoms and not more than sixteen carbon atoms; T is an aliphatic hydrocarbon radical containing not over thirty carbon atoms which is attached directly to R by means of a carbon atom to carbon atom linkage; D represents a radical selected from the class consisting of hydroxyl radicals, carboxyl radicals, sulfonic acid radicals, amine radicals, and quaternary ammonium radicals; and n represents the numeral 1, 2, 3 or 4; and R is additionally characterized by being free from any other substituents.

2,106,243
PROCESS FOR BREAKING PETROLEUM EMULSIONS
Melvin De Groote, St. Louis, Mo., assignor to The Tret-O-Lite Company, Webster Groves, Mo., a corporation of Missouri
No Drawing. Application June 21, 1937, Serial No. 149,472
10 Claims. (Cl. 196—4)

1. A process for breaking petroleum emulsions of the water-in-oil type, which consists in subjecting the emulsion to the action of a demulsifying agent comprising a compound of the formula type:

$$R.COO.T(OH)_n.(SO_2Z)$$

in which R.COO is a carboxy acid radical derived from a detergent-forming carboxy acid; $T(OH)_n$ is a residue derived from a polyhydric alcohol of the kind which in unaltered form contains at least three hydroxyl groups; n is the numeral 1, 2 or 3; and SO_2Z is the typical sulfonic acid radical in which Z represents an ionizable hydrogen atom equivalent.

2,106,244
PROCESS FOR BREAKING PETROLEUM EMULSIONS
Melvin De Groote, St. Louis, Mo., assignor to The Tret-O-Lite Company, Webster Groves, Mo., a corporation of Missouri
No Drawing. Application June 21, 1937, Serial No. 149,475
15 Claims. (Cl. 196—4)

1. A process for breaking petroleum emulsions of the water-in-oil type, characterized by subjecting the emulsion to the action of a demulsifying agent comprising a chemical compound of the kind obtainable by esterification of an alkylol aromatic sulfonamide by means of a polybasic carboxy acid body.

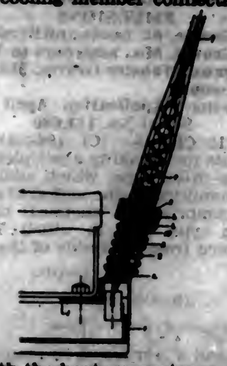
2,106,245
MANUFACTURE OF NEWSPAPER SOUND RECORD SUPPLEMENTS
William G. H. Finch, New York, N. Y.
Original application April 28, 1936, Serial No. 75,851. Divided and this application November 28, 1936, Serial No. 113,168
10 Claims. (Cl. 101—32)

1. The method of producing a newspaper supplement sound record sheet which consists in forming a master positive grooved record of sounds to be reproduced; making a negative record containing projections corresponding to the grooves of said positive record; forming a

curved platen containing a replica of said negative record projections; and rolling the platen

upon the supplement sheet to form a grooved impression thereon corresponding to the sounds to be reproduced.

2,106,246
WADDING
Charles A. Fournace, Appleton, Wis., assignor to Paper Patents Company, Neenah, Wis., a corporation of Wisconsin
Application November 20, 1935, Serial No. 50,712
7 Claims. (Cl. 154—54)



1. Wadding comprising a plurality of plies of creped tissue superposed to form the desired wadding thickness, and means uniting said plies comprising a plurality of spaced, embossed portions of relatively small area which are so proportioned and so arranged that said embossed wadding is of substantially uniform thickness throughout its entire area.

2,106,247
IMPROVED LUBRICANTS AND METHODS OF MANUFACTURING THE SAME
Anthony H. Gleason, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application June 21, 1932, Serial No. 618,473
15 Claims. (Cl. 87—9)

1. A composition of matter comprising a viscous lubricating oil containing waxy constituents and a small quantity of a high boiling polymer produced by the reaction of an aliphatic oxygen-containing compound with an unsaturated hydrocarbon chain of at least 10 carbon atoms and selected from the class consisting of esters and acids on the one hand, and on the other cyclic compounds selected from the class consisting of aromatic hydrocarbons, their hydrogenated, alkyl, oxy, hydroxy, nitro and amino derivatives.

2,106,248
CABLE MOUNTING FOR ELECTRICAL APPARATUS
Mats Hedlund, Stockholm, Sweden
Application June 13, 1935, Serial No. 26,426
In Sweden August 18, 1933
2 Claims. (Cl. 219—25)

1. A cable mounting for electric heating apparatus comprising a coupling box, a cable secured at one end in said coupling box and gradually increasing in diameter towards the coupling box, the wires in the cable having extensions extending between the coupling box and the heating apparatus and having the pitch of their screw line decreasing gradually towards the coupling box, and a cooling member connecting the coupling box with the heat apparatus and surrounding said extensions.

2,106,249
FLAME SENSITIVE CURRENT CONTROLLING ARTICLE
Charles C. Hower, Cleveland, Ohio, assignor to The Cosmo Laboratories Company, Cleveland, Ohio, a corporation of Ohio
Application September 27, 1933, Serial No. 691,199
14 Claims. (Cl. 201—76)

1. A flame sensitive current controlling article arranged within a space normally occupied by a flame and comprising a material which is normally electrically non-conducting, which becomes electrically conducting when placed within a flame, and which upon removal of the flame reverts to a non-conducting condition by the action of atmospheric gases on it, and means for sustaining its temperature, after the removal of the flame, at a sufficient degree and for a sufficient period of time to permit its reaction with atmospheric gases to result in its reversal to the non-conducting form.

2,106,250
TELEVISION RECEIVER TUBE
Max Knoll, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application July 14, 1934, Serial No. 735,006
In Germany July 31, 1933
1 Claim. (Cl. 250—27.5)

In a cathode ray tube the combination comprising means to develop an electron beam, a first

pair of deflecting plates, a second pair of deflecting plates positioned angularly with respect to the first pair of plates, said second pair of deflecting plates having a width greater than twice the sum of the maximum distance of the axis of the electron beam when deflected from the axis of the tube and half the diameter of the electron beam whereby the expanse of the field set up by the second pair of plates is substantially greater than the field set up by the first pair of plates.

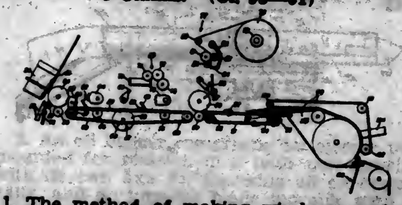
2,106,251
WINDOW STRUCTURE
Frank G. Ludwig, Lockport, Ill.
Application February 24, 1937, Serial No. 126,966
5 Claims. (Cl. 20—56.5)

1. A window structure as described, comprising spaced panes fused together at the edges, said space being evacuated, and said panes having inner surfaces thereof provided with shatterproof material.

2,106,252
DENTAL TOOL
Vincent J. Lasagna, Brooklyn, N. Y.
Application December 31, 1936, Serial No. 118,557
7 Claims. (Cl. 32—17)

1. A dental impression wax holder comprising a handle, a slide member in pivotal connection with the handle, a holder for engagement with the slide member, and a cylindrical member mounted on the holder for retaining wax and adapted to surround a tooth to permit taking an impression of the cavity thereof.

2,106,253
INTERMEDIATE-FREQUENCY COUPLING DEVICE
Charles C. Neighbors and Herbert R. Mclaughlin, Chicago, Ill., assignors to Johnson Laboratories, Inc., Chicago, Ill., a corporation of Illinois
Application November 11, 1933, Serial No. 697,551
9 Claims. (Cl. 178—44)



5. In a band-pass filter, a coupling device including a first winding and a second winding, a cylindrical compressed comminuted ferromagnetic core for each of said windings, said cores being in spaced relation with their axes intersecting at right angles, and means for axial adjustment of the position of one of said windings relative to the other of said windings to secure a desired degree of inductive coupling between said windings.

2,106,254
VANITY MIRROR DEVICE
Joseph O. Newell, Los Angeles, Calif.
Application May 8, 1937, Serial No. 141,461
4 Claims. (Cl. 88—97)

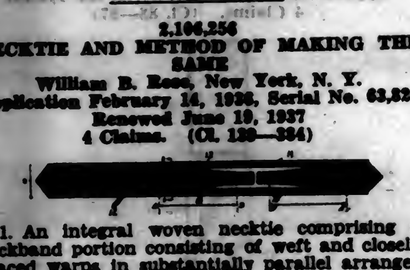
3. A vanity mirror device comprising a casing containing illuminating means having a lamp exposed at the front of the casing adjacent one end thereof, a frame pivoted exteriorly of the casing on the rear wall thereof and at the end of the casing adjacent the lamp and movable in a plane parallel to the plane of the casing to occupy folded and extended positions, a mirror secured to the inner side of the frame for occupying a position between the frame and the back of the casing when the frame is in folded position, a sheet of soft material secured to the outer face of the rear wall of the casing and positioned for wiping contact by the mirror when the frame and mirror are moved to folded and extended positions, the mirror when extended being positioned to receive the illuminated reflection of the face of the user with the casing constituting a hand grip, and the frame being outwardly offset relative to the pivoted end thereof on the casing to provide a space for the mounting of the mirror and sheet of soft material.

2,106,255
ENVELOPE MACHINE
Abraham Novick, Flushing, N. Y., assignor to F. L. Smithe Machine Co., Inc., New York, N. Y., a corporation of New York
Application November 20, 1933, Serial No. 644,765
5 Claims. (Cl. 93—61)

1. The method of making window envelopes which comprises separating whole blanks successively from a stack, individualizing the separated blanks, cutting window openings in the individualized blanks, applying window patches to the individualized blanks, feeding the blanks di-

rectly into fanned-out relation and gumming the sealing flaps of the fanned-out blanks.

4. In an envelope making machine, the combination of means for removing blanks from a stack, means for delivering them face down to a conveyor, means co-operating with the conveyor to individualise the blanks while face down, instrumentalities for successively operating on each blank while face down, means for re-arranging the blanks in fanned-out relation while maintaining them face down, and means for thereafter operating upon the fanned-out blanks.



2,106,256
NECKTIE AND METHOD OF MAKING THE SAME
William B. Rose, New York, N. Y.
Application February 14, 1936, Serial No. 63,826
Renewed June 19, 1937
4 Claims. (Cl. 139—384)

1. An integral woven necktie comprising a neckband portion consisting of weft and closely spaced warps in substantially parallel arrangement, a knot forming portion consisting of weft and gradually diverging continuations of the neckband warps, and an end portion gradually increasing in width and the warps of the neckband and knot forming portions in parallel and spread relation, and additional warps at opposite sides of the parallel continuations of the warps of the neckband and knot forming portions.

2,106,257
FILTER FOR FILTER TYPE RESPIRATORS
Nathan Schwartz, New York, N. Y.
No Drawing. Application October 3, 1936, Serial No. 103,905
8 Claims. (Cl. 252—2)

6. A process for increasing the efficiency of porous filtering material for filter type respirators, comprising steps of impregnating the material with an acidified solution of a proteolitic enzyme then impregnating the material with a dilute colloidal solution of silver, and then heating at 350 to 550 degrees centigrade.

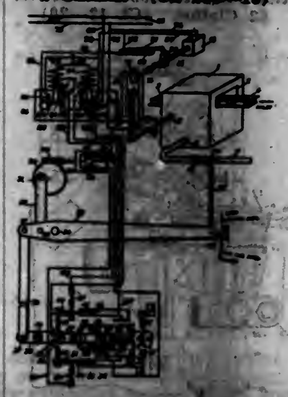
2,106,258
FIFTH WHEEL
Carl G. Seyferth, Muskegon, Mich.
Original application March 3, 1937, Serial No. 129,599. Divided and this application April 22, 1937, Serial No. 138,523
6 Claims. (Cl. 280—33.1)

1. In a trailer vehicle, fifth wheel mechanism mounted on said trailer and convertible to use with male or female coupling mechanism on a tractor, comprising a plate member mounted on said trailer for longitudinal movement relative thereto, a king pin mounted on said plate member for movement between operative and inoperative positions, and means mounted on said plate member for engaging the male portion of a tractor coupling mechanism when said king pin is in inoperative position and for locking said king pin in operative position to be engaged by female coupling mechanism on a tractor.

2,106,259
COATED ALUMINUM PRODUCT
Otto Steckmar, Hanover, Germany, assignor to Vereinigte Leichtmetallwerke G. m. b. H., Hanover-Linden, Germany, a corporation of Germany
No Drawing. Application July 24, 1936, Serial No. 92,269. In Germany July 25, 1935
5 Claims. (Cl. 29—181)

1. As a new article of manufacture having high tensile strength and high corrosion resistance, a composite aluminum article comprising a base element of aluminum alloy containing copper and a welded coating of a magnesium-aluminum alloy substantially devoid of zinc and containing more than about 6% to about 13% of magnesium said composite article having substantially the same tensile strength per unit of cross section as the uncoated base element.

2,106,260
TRIMMING
William F. Thumm, Lombard, Ill.
Application July 19, 1937, Serial No. 154,248
3 Claims. (Cl. 30—74)

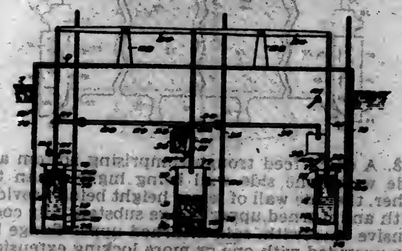


1. A trimming comprising a body member having finished outer surfaces, a plurality of spaced wide cleats permanently attached to the inside surfaces of said body member, said cleats having sharpened edges adapted to be pressed into an object to be trimmed so as to hold the trimming to said object without being visible on the outer surfaces of the body member of said trimming.

2,106,261
METHOD OF FIXING AND PRESERVING GROSS ANATOMICAL SPECIMENS AND THE LIKE
John A. Waldmann, Chicago, Ill.
Application November 30, 1936, Serial No. 113,501
27 Claims. (Cl. 25—30)

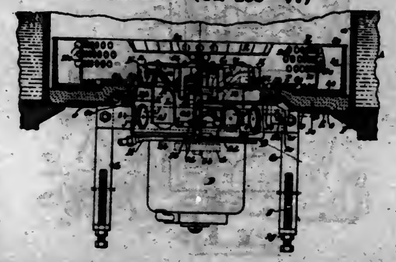
24. A gross anatomical specimen consisting of a rigid mass of thoroughly dehydrated dead animal or human tissues saturated with a mass of transparent dry lacquer.

2,106,262
AUTOMATIC CONTROL SYSTEM
Christian Wiltgen, Philadelphia, Pa., assignor, by mesne assignments, to Automatic Temperature Control Co., Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application April 8, 1932, Serial No. 604,684
2 Claims. (Cl. 236—15)



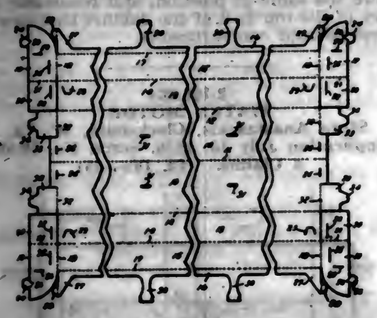
1. In a system of a furnace temperature regulator operating on a fuel supply, a valve in said fuel supply, a motor operating said valve and controlled in its movements by a limit switch consisting of two outside fixed switch contacts and a center ratchet operated floating normal contact assembly, electric contacts responsive to temperature changes in the furnace, electric relays wired to an interrupter operative in response from the temperature responsive contacts in combination with electric inter-wiring to operate through said limit-switch, the said motor and valve, the system arranged to subject the valve to cycles of oscillations, the ratchet contact assembly operative to vary the effective length of strokes of each part of a cycle.

2,106,263
COOLING CABINET
Henry G. Winter, St. Louis, Mo., assignor to Anheuser-Busch, Incorporated, St. Louis, Mo., a corporation of Missouri
Application August 24, 1936, Serial No. 97,577
3 Claims. (Cl. 62—96)



1. A cooling cabinet for retail establishments, consisting of an insulated casing having a top, a bottom and side walls, a coil structure on the interior of the cabinet extending around the side walls of same and arranged so as to form in effect a lining for a food or bottle receiving space, said coil structure being composed of a continuous outer pipe, adapted to hold a non-circulating cooling medium, and a continuous inner pipe arranged inside of said outer pipe in spaced relationship with the same, and adapted to hold a circulating refrigerating medium, transverse partitions inside of the cabinet that divide said food or bottle space into a plurality of compartments, the ends of said partitions being rigidly fastened to the coil structure to support and secure the same in position, and removable closures in the top wall of the cabinet that provide access to said compartments.

2,106,264
WATER MOTOR
Steve Anastasakis, Clarksburg, W. Va.
Application July 16, 1936, Serial No. 90,986
4 Claims. (Cl. 103—55)

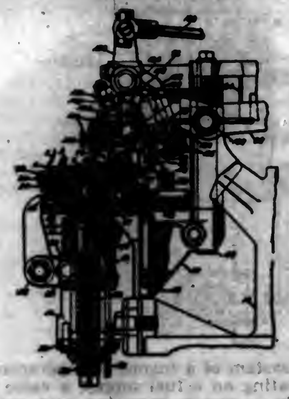


1. A fluid motor comprising a plurality of piston and cylinder assemblies, certain of which are of different weights and capacities; four-to-one leverage connections to said assemblies and connected with the pistons; tanks associated with said leverage connections; a fluid tight receptacle in which said parts are located and having fluid intake ports communicating with a source of fluid supply, and valve means carried by said receptacle for controlling inflow of fluid from said ports and discharging to said tanks and to one of said cylinder and piston assemblies, and means whereby said valves are periodically and separately opened and closed to admit measured quantities of fluid to said tanks and said piston and cylinder assembly to actuate the various parts of the motor.

2,106,265
OIL BURNER
Oscar J. Appel, Paterson, N. J.
Application March 31, 1934, Serial No. 718,252
7 Claims. (Cl. 158—77)

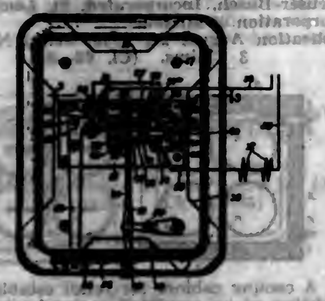
2. An oil burner comprising an ejector nozzle mounted for rotation in a path non-coincident with its own axis for throwing off oil centrifugally, and an impeller blade movable with said ejector nozzle, said blade extending in substantially the axial plane of the ejector end of said nozzle at an angle to the path of rotation of the nozzle end and said blade having an opening therethrough beyond the ejector end of said nozzle.

2,106,266
CHICK FEED TROUGH
Russell O. Bate, Macedonia, Ohio
Application April 5, 1937, Serial No. 134,967
11 Claims. (Cl. 119—61)



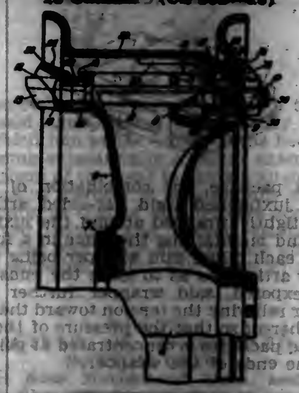
8. A chick feed trough comprising bottom and side walls, one side wall being higher than the other, the side wall of lesser height being provided with an inturned upper flange substantially coextensive therewith, said inturned upper flange being provided with one or more locking extensions each extending inwardly and passing through and locked with said higher side wall and integral means closing the ends of said trough.

2,106,267
MACHINE FOR USE IN THE MANUFACTURE OF WOVEN MATERIAL
Earl A. Beeman, Marblehead, and Charles H. Pegin, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application August 11, 1936, Serial No. 95,486
28 Claims. (Cl. 66—1)



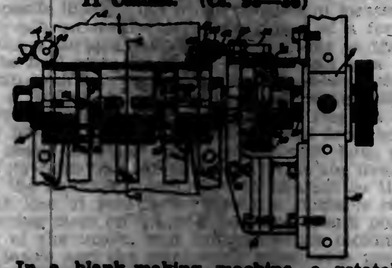
1. A machine for use in the manufacture of woven material comprising members for tucking an end portion of a strip of material through slits in a sheet of material and alternately from one surface to the other of said sheet of material, and means operating in timed relation to the tucking members to draw the strip successively through said slits, thereby to secure an interwoven effect of the strip and sheet material.

2,106,268
FOLDING MACHINE AND METHOD OF COVERING INSOLES TO WHICH SAID MACHINE MAY BE APPLIED
Frederic E. Bertrand, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application May 15, 1936, Serial No. 79,940
62 Claims. (Cl. 12—36)



1. In a machine for folding over the edge of a ribbed insole sheet-material secured to the opposite surface thereof, a vertically movable support for the tread-surface of the insole, means movable vertically with the support for pressing the material against the edge of the insole, and means movable by the operator to control the pressure-movement.

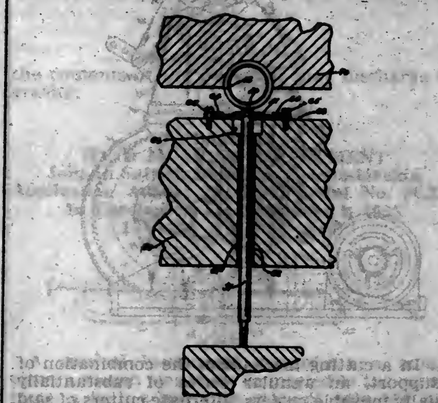
2,106,269
CONTROL DEVICE
Joseph E. Brennan, West Chicago, and Frank J. Korber, Chicago, Ill.; said Korber assignor to said Brennan
Application May 2, 1931, Serial No. 534,644
Renewed November 25, 1937
8 Claims. (Cl. 200—122)



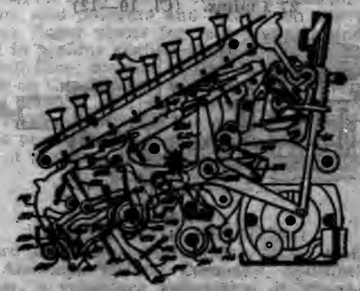
1. A control device comprising a pair of switches, thermostatic control means for each of said switches including heating elements controlled by their respective switches, a shunt circuit to each switch around the heating element of the switch arranged to be electrically connected to the heating element only when its switch is closed, and means for varying the relative resistances of said heating element circuits and said shunt circuits.

2,106,270
Frederick W. Burgett, Niles, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan
Application August 10, 1936, Serial No. 95,506
13 Claims. (Cl. 293—43)

1. In combination, a wheel spider having a plurality of radially extending spokes, a pair of oppositely extending sockets at the ends of each of said spokes, a bolt having double-walled support in said spoke end and having clamping lugs carried at its ends within said sockets and outwardly of said support, and a collar on said bolt for holding one of said lugs in fixed position on said spoke and when only a single rim is mounted on said wheel spider.



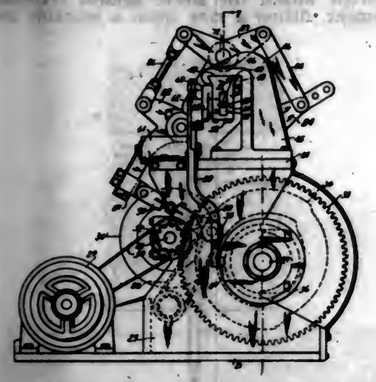
2,106,271
STAY-PLAITING MECHANISM FOR BLANK-MAKING MACHINES
Robert M. Dallas, Beverly, Mass., assignor to Heagus-Sprague Corporation, Lynn, Mass., a corporation of Massachusetts
Application July 22, 1936, Serial No. 91,883
11 Claims. (Cl. 12—36)



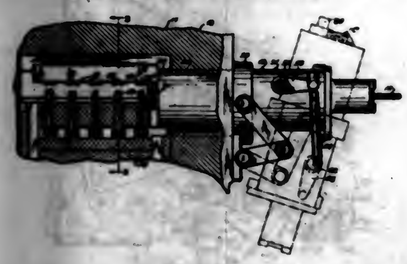
1. In a blank-making machine, a rotatable member provided with a portion arranged to act upon the edge of an assembly of shell-material carrying along said edge a projecting loop of thinner material to depress the projecting loop and with portions arranged to guide the assembly with negligible lateral play for such depression.

2,106,272
SHOCK ABSORBER
George W. Mercy, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 15, 1936, Serial No. 90,846
4 Claims. (Cl. 213—10)

1. The method of assembling the highly polished piston rod of a hydraulic shock absorber without marring its polish, said rod having a reduced end, which consists of pushing the reduced end of said rod through the central aperture of a relative thin disc, supporting said rod and disc upon a rigid electrode having an insulating sleeve so that the disc electrically engages the electrode, and the rod is insulatingly supported within the sleeve against transverse movement, fitting a ring upon a movable electrode and by actuating said movable electrode, pressing the ring into engagement with the end of the rod protruding from the disc while maintaining the rod longitudinally immovable and causing electric current to flow from one electrode to the other through the ring, rod end and disc whereby adjacent contacting surfaces of said ring, rod and disc are fused and welded together.



2,106,273
REGISTER
Howard Moffat Fleming, West Orange, N. J., assignor to Gardiner Company, Orange, N. J., a corporation of Delaware
Application December 4, 1936, Serial No. 114,172
11 Claims. (Cl. 235—60)

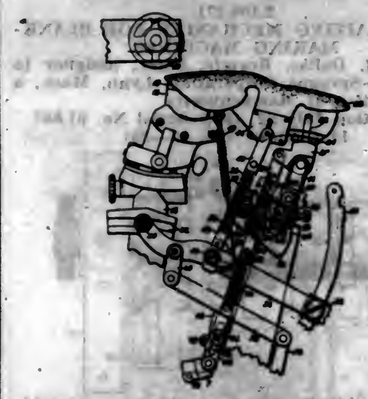


1. In a register, numeral wheels, crawl tens transfer mechanism between said wheels, overdraft signifying segments on said wheels each extending over a plurality of peripheral digit places, and devices adapted to sense the location of one or more higher order wheels at zero registering position and to cooperate each with a segment of next adjacent lower order to signify an overdraft.

2,106,274
APPARATUS FOR CUTTING BAR STOCK
Lee A. Frayer and Carl L. Harvey, Kent, Ohio, assignors to The Lamson & Sessions Company, Cleveland, Ohio, a corporation of Ohio
Application December 22, 1933, Serial No. 703,536
11 Claims. (Cl. 164—57)

1. In a cutting mechanism the combination of a support, an annular series of substantially radially movable cutters, alternate cutters of said series constituting one set and the intermediate cutters constituting another set, a plurality of rocker arms on said support, means connecting the cutters of said one set with corresponding ends of the respective rocker arms and the cutters of the other set with the opposite ends of the respective rocker arms, and means for moving said rocker arms in one direction to cause converging of the cutters of one set and in the opposite direction to cause converging of the cutters of the other set to thereby actuate said sets of cutters.

2,106,275
FEED AND CUT-OFF MECHANISM
Lee A. Frayer, Kent, Ohio, assignor to The Lamson & Sessions Company, Cleveland, Ohio, a corporation of Ohio
Application February 27, 1936, Serial No. 66,105
27 Claims. (Cl. 10—12)

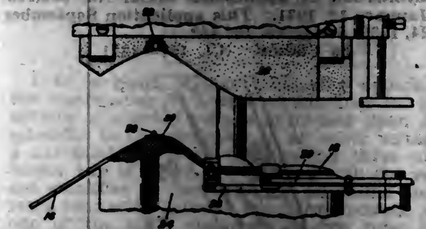


1. In a feeding device, a support, a gripping element having an opening through which a bar of stock may extend, said opening being shaped to grip the bar upon tilting of the element relative thereto, and means mounting said element on said support comprising pivot means permitting swinging of the element transversely to the axis of the bar and hinge means permitting tilting of the element.

2,106,276
MULTIPLE ARTICLE PACKAGE AND METHOD
Arthur S. Heinemann, Los Angeles, Calif.
Application June 1, 1934, Serial No. 728,472
Renewed June 22, 1937
17 Claims. (Cl. 206—65)

1. In a package, the combination of a plurality of juxtaposed rigid flat-sided articles, a wrapper tightly wrapped around the juxtaposed articles and maintaining the same in a fixed relation to each other, said wrapper being shorter than the articles so as to leave the ends of the articles exposed, said wrapper further having means for relieving the tension toward the middle portion thereof so that the pressure of the wrapper on the packages is concentrated at points adjacent the ends of the wrapper.

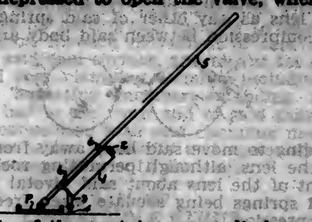
2,106,277
MACHINE FOR PRESSING THE BOTTOMS OF SHOES
Fred L. Mooney, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application April 15, 1936, Serial No. 74,553
In Germany February 27, 1936
17 Claims. (Cl. 12—34)



1. In a machine for pressing the bottoms of shoes, the combination with means for applying pressure progressively along the bottom of a shoe on a last, of a shoe support comprising a toe rest and a spindle for engaging the heel end of the last in its spindle hole, said spindle being mounted for tipping movements in directions toward and from the toe rest, a saddle for transmitting the pressure of said pressure-applying means to the shoe, means for forcing said saddle against the bottom of the shoe, and a locking device arranged to permit the spindle to tip toward the toe rest as the saddle is forced against the shoe but to act independently of the saddle to lock the spindle positively against reverse tipping movement in the pressure-applying operation.

2,106,278
SCREW LOCKING MEANS
Martin H. Redmer, Chicago, Ill.
Application February 29, 1936, Serial No. 66,269
2 Claims. (Cl. 151—32)

1. A screw comprising a head and a threaded shank, said head having substantially flat recesses which join at the center of the head, each recess being substantially a sector extending to the periphery of the head to provide an open end, and a locking member of substantially the same cross section as that of said recesses adapted to be inserted therein and wedged against their walls and the wall of the member into which said screw is threaded to lock said screw in position.



2,106,279
MANUFACTURE OF REINFORCED SHOE BOTTOM UNITS
Simon G. Ross, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application July 21, 1934, Serial No. 735,673
4 Claims. (Cl. 12—146)

1. That improvement in methods of making composite insole units which consists in locating a jig-pin adjacent to the break line of a form having a surface contour corresponding to that of the heel seat, the shank and the ball area of a high-arch last, forming a jig-hole in an insole and a jig-hole in a molded metallic shank-stiffener at points corresponding to the location of said jig-pin, laying the insole on said form and the shank-stiffener on the insole with both of said jig-holes on said jig-pin to locate the insole and the shank-stiffener in true relation to the break line of said form, laying a moldable reinforcing piece on the heel seat and shank portion of the insole, and simultaneously molding the insole and the reinforcing piece with pressure against the form and securing one to the other while the interposed shank-stiffener and the insole are maintained by said jig-pin in true relation to the break line of said form.

2,106,280
DISPENSING DEVICE
Karl Sandhop, Flushing, N. Y.
Application June 12, 1936, Serial No. 84,846
4 Claims. (Cl. 91—35)

1. In a device of the type described the combination comprising an applicator having a handle, a container mounted on said handle, and a valved spout secured to said container and arranged to engage the valve with the surface on which the applicator rests when the handle thereof is depressed to open the valve, whereby

the contents of the container may discharge by gravity.

2,106,281
WIND MUSICAL INSTRUMENT
Johann Sattler, Bohemia, Czechoslovakia
Application August 15, 1936, Serial No. 96,273
In Czechoslovakia November 1, 1935
1 Claim. (Cl. 84—389)

A musical instrument comprising a mouth piece, a mouth piece tube connected to the mouth piece, a bell, a bell tube integral with the bell and including upper and lower runs and a curved connecting portion and having the upper run paralleling the mouth piece tube, a draw connected to the mouth piece tube and including upper and lower runs and a connecting portion and having the lower run aligning with the lower run of the bell tube, valve casings and one of said valve casings connected to the lower run of the bell tube and with the valve casing connected to the lower run of the draw, tubes connecting the valve casings and located in a plane with the lower runs of the bell tube and the draw, a series of draws connected to the valve casings and each varying as to length and all shorter than the first-named draw, valve elements having passages mounted in the valve casings for oscillatory movement, vertically arranged plungers operatively connected to the valve elements for oscillating the latter during the reciprocation thereof, vertical guides for supporting said plungers and formed on the valve casings, finger pieces for said plungers and located in a plane slightly above the upper run of the bell tube, springs located in the guides for acting on the plungers for urging the valves into closed position, said valve casings being disposed transversely relative to the draws, bell tube and mouth piece tube and in a plane above the lower runs of the first-named draw and the bell tube.

2,106,282
OPHTHALMIC MOUNTING
Edward M. Splaine, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application September 21, 1934, Serial No. 744,917
14 Claims. (Cl. 88—47)

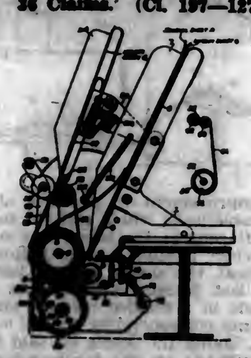
1. In an ophthalmic mounting, a lens, a lens strap having a body portion and a pair of arms to extend along opposite sides of the lens, means extending through the lens and arms for pivotally connecting the strap to the lens, and a plurality of separate springs positioned one overlying

the other with the spring nearest the lens at least as long in a direction following the edge of the lens as any other of said springs and held in compression between said body and lens and

tending to move said body away from the edge of the lens, although permitting rocking movement of the lens about said pivotal connection, said springs being arcuate when free from said compression.

2,166,283
OPHTHALMIC MOUNTING
Edward M. Splaine, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application January 16, 1936, Serial No. 58,478
In Canada October 16, 1935
12 Claims. (Cl. 88—47)

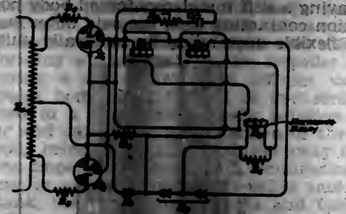
7. A device of the character described for attachment to a lens at a point removed from the horizontal geometrical center line of the lens, said attachment having a portion adapted to overlie a face of the lens and be pivotally connected to said lens and a portion adapted to overlie the edge of the lens with the major portion thereof lying above a horizontal line extending through the pivotal connection to the lens, said edge portion having an attaching face on the side thereof adapted to lie towards the lens which is relatively short in a direction which is to follow the edge of the lens and which lies at an angle other than normal relative to the horizontal center line of the lens when the attachment is on said lens, and resilient means secured to said face and having portions adapted to extend outwardly of the opposite sides of said horizontal line extending through the pivotal connection to the lens and being adapted to engage the edge of the lens at two spaced points and being supported so as to exert forces on said portion overlying the edge of the lens in both directions of movement of said portion about the pivotal connection to the lens when the parts are in their normal position of use.



2,166,284
OPHTHALMIC MOUNTING
Edward M. Splaine, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application January 15, 1936, Serial No. 59,247
14 Claims. (Cl. 88—47)

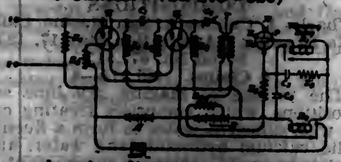
6. In a device of the character described for attachment to a lens, said attachment having a portion adapted to overlie the edge of the lens and a lens connecting portion adapted to engage a face of the lens, said portion overlying the edge of the lens being relatively narrow in a direction which is to follow said edge and being provided with a surface which is cupped in said direction, curved resilient means having a slot therein extending in the direction of the length of said resilient means and means fitting and extending through the slot and being headed over to overlie and secure the resilient means to the cupped surface intermediate the upper and lower edges thereof with the resilient means cupped substantially to the shape of the cupped surface whereby the resilient means will be adapted to engage the

edge of a lens at two spaced points at a substantial distance to each side of the portion overlying the edge of the lens and will be free to flex throughout the greater portion of its length during use, the means for securing said resilient means to the cupped surface being adapted to urge and maintain the resilient means in surface contact with said surface.



2,166,285
PAPER SUPPORTING AND FEEDING APPARATUS
Oscar J. Sundstrand, Bridgeport, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware
Continuation of application Serial No. 508,106, January 12, 1931. This application September 24, 1936, Serial No. 102,442
36 Claims. (Cl. 197—127)

27. In equipment of the character described, a rotary platen, front feed means, injector means for rapidly rotating the platen, and injector means for rapidly actuating the front feed means.



2,166,286
GAS-FILLED TUBE CIRCUITS
Leland Kassen Swart, Mountain Lakes, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application November 5, 1935, Serial No. 48,379
Renewed November 30, 1937
11 Claims. (Cl. 175—320)

1. The combination of a gas discharge tube having input and output circuits connected to its electrodes, the electrodes of the tube forming a plurality of discharge paths one of which extends to the input circuit and another to the output circuit, means including sources of voltage connected respectively in the input and output circuits for ionizing the gas between all of the discharge paths of the tube, and means responsive to the discharge of the gas in the output circuit for simultaneously de-ionizing the

gas within all of the discharge paths formed by the electrodes to which both circuits are connected, said means being connected to the output circuit.

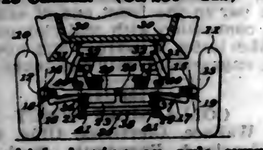
2,166,287
GAS DISCHARGE TUBE CIRCUITS
Leland Kassen Swart, Mountain Lakes, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application November 5, 1935, Serial No. 48,380
7 Claims. (Cl. 175—320)

1. In a heart voltage measuring apparatus, the combination of a tunable amplifier for amplifying a selected voltage impressed upon said amplifier to the exclusion of all other voltages, a gas-filled discharge tube having three electrodes, two of which are supplied with the voltage amplified by the amplifier, exhibiting apparatus connected between the third electrode and one of the other electrodes of the tube, and means for periodically deionizing the gas between all of the electrodes of the gas-filled tube.

2,166,288
CIRCULAR SAW APPARATUS
Herbert R. Taute, Milwaukee, Wis.
Application September 27, 1934, Serial No. 745,673
1 Claim. (Cl. 143—174)

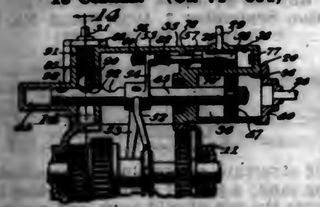
In a wood-working machine, the combination of a work table having gage clamping surfaces along the front and rear edges thereof, a gage bar movable over said table, means for clamping the front end portion of said gage bar to the front clamping surface, the rear end portion of said gage bar having a rearwardly opening guide slot therein and having a cam surface on its upper side sloping upwardly and forwardly, a clamping member engageable with the rear clamping surface and slidably fitting in said slot for up and down movement, said clamping member having a sloping portion engageable with said cam surface for moving said member to clamping position upon forward movement of said member along said cam surface, and means for operating said rear clamping member including an elongated actuating member extending along said gage bar to the front end of said gage and having a connection with said clamping member to urge the latter forwardly and upwardly into clamping engagement with the table.

2,166,289
COLLAPSIBLE STRUT
John F. Wallace, Cleveland, Ohio, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a corporation of Ohio
Application January 30, 1935, Serial No. 4,165
2 Claims. (Cl. 244—102)



1. In an airplane, a pair of hydro-pneumatic shock absorbers pivotally mounted at their upper ends, a ground engaging member mounted on the lower end of each shock absorber and carried thereby exclusively, means controllable from the cockpit of the airplane for contracting the shock absorbers, and means for swinging the contracted shock absorbers upon their pivots in planes normal to the pivots through approximately a right angle into inoperative position.

2,166,290
ORE CONCENTRATOR
Randall P. Akins, Denver, Colo.
Application September 2, 1935, Serial No. 38,937
2 Claims. (Cl. 209—425)



1. A jig structure comprising: a longitudinally extending tank; a pair of shafts extending transversely over the top of said tank and beyond the sides thereof; bearings on the side walls of said tank supporting said shafts; a crank extending downwardly from each extremity of each shaft on the exterior of said tank; a connecting rod extending along each side of said tank connected to and supported by said depending cranks and extending beyond one extremity of said tank; a cross head extending across the latter extremity of said tank between said connecting rods; a differential vibrating mechanism attached to the middle of said cross head to impart a reciprocal vibration to said two connecting rods; a pair of horizontally extending cranks secured to each shaft intermediate its bearings and adjacent the latter, all of said latter cranks extending in a common direction; a bracket member depending from the free extremity of each of said latter cranks within said tank; a longitudinally extending jig frame within said tank having side frame members attached to said bracket members so that said jig frame will be supported from said horizontally extending cranks; a series of transversely extending partitions across the bottom of said jig frame; a screen supported upon said partitions; a series of compartments on said screen, said compartments being positioned below the top of said jig frame; and means for feeding ore into said jig frame.

2,106,291
WHEEL SUSPENSIONS
William D. Allison, Detroit, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a corporation of Michigan
Application November 7, 1935, Serial No. 48,651
15 Claims. (Cl. 280—112)

2. In a vehicle having an axle supported in raised position by a pair of wheels, a chassis frame, resilient means for supporting said frame upon said axle, said axle comprising mechanism for converting a horizontal transverse force applied to one of said wheels at its area of contact with the road to a vertical force and said mechanism including a stabiliser member mounted on a part of the axle for rotation about a longitudinal substantially horizontal axis and a rigid frame pivotally connected at transversely spaced points to said chassis frame and pivotally connected at transversely spaced points to said stabiliser member.

2,106,292
VACUUM CONTROLLED TRANSMISSION
Dana K. Hadertscher, Detroit, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a corporation of Michigan
Application March 11, 1935, Serial No. 10,448
18 Claims. (Cl. 74—334)

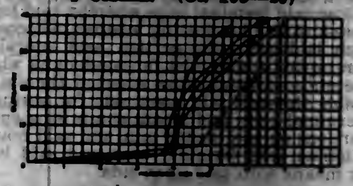
1. The combination of a pair of gear shift rails, a vacuum or pressure operated shifting device for independently shifting each rail, a movable master valve controlled by the clutch pedal and connecting a source of vacuum or pressure to said devices, a vacuum or pressure controlled locking means for the shift rails connected to said master valve, and valve means connected to said master valve for controlling the return of one shift rail to neutral position before the other rail is moved out of neutral position, said master valve being movable into successive positions in one direction to connect said source with said valve means, locking means and shifting devices.

2,106,293
PACKING MATERIAL AND ASSEMBLY
George Christensen, Plainfield, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application January 23, 1934, Serial No. 707,871
2 Claims. (Cl. 286—26)

1. A packing assembly comprising, in combination, a member of the type of a stuffing box provided with an inner surface to be packed; a member of the type of a cylindrical piston movable within the outer member, defining therewith a space adapted to receive packing material, and provided with an outer surface to be packed; a packing member disposed within the said space and having a stiff metal-reenforced body portion, a portion contacting with the said outer surface, and a flexible upstanding lip integrally united to

the said body portion at the outer edge thereof; and an independently movable rigid filler member disposed within the said space and adapted to be forced inside the said lip and to deflect it outwardly into packing contact with the said inner surface.

2,106,294
PROCESS OF MAKING DRY LIME SULPHUR COMPOSITIONS
Charles L. Chubbuck, San Marino, Calif.
No Drawing. Application May 17, 1933, Serial No. 671,517
4 Claims. (Cl. 71—4)



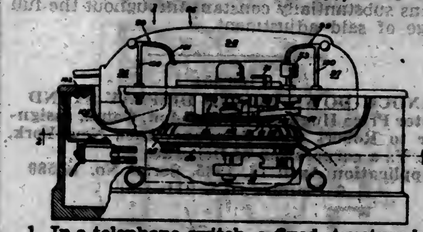
1. The process of making dry lime sulphur compositions, which comprises treating calcium oxide with sufficient water to form a fluent mass of solid calcium hydroxide and water, allowing the solids to settle, removing supernatant liquid, mixing sulphur with the resulting putty-like solid, and passing said mixture through a rotary flame-heated drier.

2,106,295
EVAPORATOR
Robert V. Cook, Chicago, Ill., assignor to Fairbanks, Morse & Company, Chicago, Ill., a corporation of Illinois
Application June 13, 1935, Serial No. 26,469
1 Claim. (Cl. 159—25)

In combination in a vertical container for the thermal treatment of liquids, a liquid circulating and heat exchange unit disposed below the normal level of liquid in the container, said unit including a horizontal tank of substantially annular form through which the liquid is to be passed for heat exchange purposes, a pump within the central opening of the tank, the pump being of vertical shaft type and including a propeller type impeller, a plurality of substantially vertical, stationary diffuser vanes disposed immediately adjacent to and extending substantially beyond the pump impeller, an open end tubular body forming a casing about the impeller and constituting a support for said diffuser vanes, the tubular body being formed of two sections connected in a zone substantially between the impeller and vanes, the lower section of the tubular body being flared in a direction away from the pump impeller discharge and terminating in a bell end in a zone substantially below said annular tank, the tank, pump, vanes and tubular body being supported in assembly entirely by the side walls of the container, in a manner to provide a substantially unobstructed circulation space above the said assembly, a liquid inlet in the top of the tank, a liquid outlet at the bottom thereof, a vertical pump shaft extending from the pump impeller to a point externally of the container, and a driving motor for said shaft, located exteriorly of the container.

2,106,296
FILM AND SHEET OF ORGANIC DERIVATIVES OF CELLULOSE
Camille Dreyfus, New York, N. Y., and George Schneider, Montclair, N. J., assignors to Celanese Corporation of America, a corporation of Delaware
Application April 5, 1934, Serial No. 719,138
4 Claims. (Cl. 106—49)

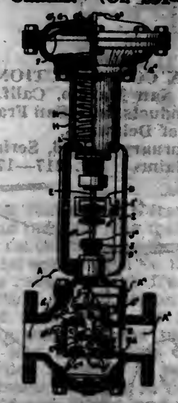
1. A composition of matter comprising an organic acid ester of cellulose of low acyl value and a mixture of diethylene glycol and glycerine in such relative proportions as to form a transparent film or foil of large tensile strength and high elongation dissolved in a compatible volatile solvent.



2,106,297
MANUFACTURE AND USE OF CELLULOSE DERIVATIVES
Henry Dreyfus, London, England
No Drawing. Application October 23, 1934, Serial No. 749,673. In Great Britain October 26, 1933
12 Claims. (Cl. 260—102)

1. Process for the manufacture of organic acid esters of cellulose, comprising subjecting an organic acid ester of cellulose which has been partially ripened in an acid medium to further ripening in suspension in a medium containing a base.

2,106,298
TREATMENT OF MATERIALS
Henry Dreyfus, London, England
No Drawing. Application September 28, 1935, Serial No. 41,422. In Great Britain October 2, 1934
11 Claims. (Cl. 91—68)



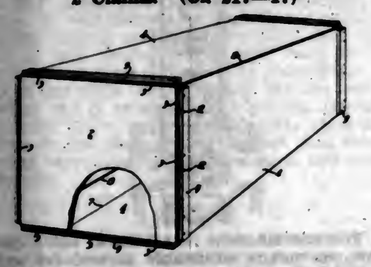
1. A process of sizing textile yarn, which comprises impregnating the yarn with an aqueous solution of an ammonium salt of a carboxyl-containing derivative of cellulose, and thereafter drying the yarn.

2,106,299
TELEPHONE SWITCH
Girard Fournese, Hollywood, Calif.
Application August 4, 1936, Serial No. 94,173
20 Claims. (Cl. 179—27)

1. In a telephone switch, a fixed structure having a main shaft rotatable and longitudinally slidable therein, a dial connected to the shaft for rotating the same to any one of a number of stations, a plurality of circular bus-bars mounted on the fixed structure, a plurality of pairs of contacts on the fixed structure, each pair corresponding to a station, a switch arm connected to the shaft and having conducting contact fingers, the said shaft and arm being movable on its axis of rotation to align the fingers on the arm with any pair of contacts on the fixed structure, a first manually operable means to move the arm with the fingers out of contact, the arm therefore being free for rotation by the dial and a second manually operable means to move the shaft and the switch arm in one only axial direction to engage the fingers with the bus-bars and the fixed contacts.

2,106,300
CONTROL VALVE
Thomas R. Harrison, Wyncote, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application April 26, 1934, Serial No. 722,465
9 Claims. (Cl. 251—24)

1. The combination in a control valve having a port, of means adjustable to and fro axially of said port to progressively vary the flow through the port between upper and lower limits, and providing and substantially confining the flow to one or more flow passages which are triangular in cross section and of aggregate area substantially less than that of the port when adjusted for relatively small flow, and providing a tapered plug portion extending into said port and defining the inner side of an unobstructed zone of

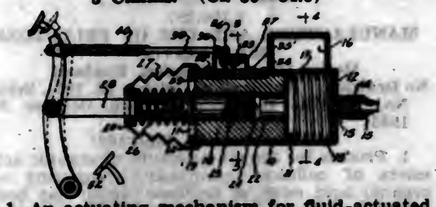


flow extending about the axis of said port and defined at its outer side by the wall of said port when adjusted for a larger flow, and thereby making the percentage of flow variation produced by a given extent of axial adjustment of said means substantially constant throughout the full range of said adjustment.

2,106,201
KNOCK-DOWN ISLAND DISPLAY STAND
Hector Price Hughes, New London, Conn., assignor to Robert Gair Company, Inc., New York, N. Y., a corporation of Delaware
Application April 16, 1935, Serial No. 16,580
6 Claims. (Cl. 211—72)

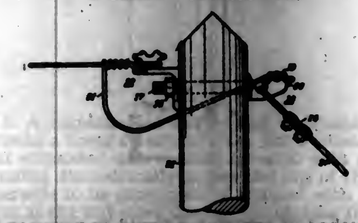
1. A display stand for cans of the class described comprising a sheet of material having angularly disposed vertically upstanding folds forming a tubular body, said body having therein and extending across the lines of the folds pairs of short horizontal cuts so as to form subfolds, there being vertical fold lines connecting the opposite ends of the pairs of cuts, said subpanels being urged inwardly to form can receiving niches, the cans being rested at the inner vertical portions of their peripheries against the sub-panels, the top and bottom faces of the cans being substantially embraced by the panels at boundary faces of the cuts, and the major portions of said peripheries at the outer sides of the cans being projected beyond the planes of the adjacent panels.

2,106,202
BOX CONSTRUCTION
Boyd R. Lewis, San Marino, Calif., assignor to Fibreboard Products, Inc., San Francisco, Calif., a corporation of Delaware
Application February 7, 1936, Serial No. 62,825
2 Claims. (Cl. 217—17)



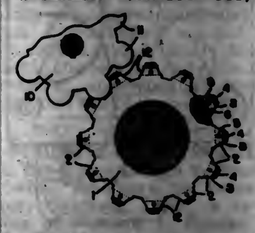
1. A box wall comprising a sheet of heavy paper folded to form a flat sleeve with the longitudinal edges of the sheet overlapping at one side of the sleeve, slats extending longitudinally through the sleeve, one of said slats underlying said overlapping edges, a cleat arranged outside the sleeve and extending transversely across the slats to reinforce the wall, and means for fastening the cleat, sleeve and slats together.

2,106,203
MOTOR HORN
Clyde Victor McBroom, Des Plaines, Ill., assignor to Benjamin Electric Mfg. Company, Des Plaines, Ill., a corporation of Illinois
Application May 13, 1936, Serial No. 79,440
4 Claims. (Cl. 177—7)



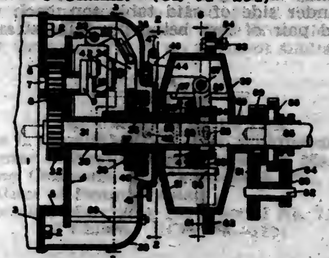
2. A weatherproof motor horn comprising a cup-like housing closed at one end and having an opening at its other end large enough to enable the insertion therethrough of a rotary electric motor unit, a rotary electric motor unit insertable and removable axially from the open end of said housing, a removable diaphragm and resonator extending across said opening and detachably secured to said housing for sealing said open end, said rotary motor comprising a rotary shaft and an actuator mounted on said shaft for actuating said diaphragm, an insulating terminal base mounted on the side of said motor intermediate the ends thereof, a lubricating means for each end bearing of said motor and substantially in alignment with said terminal base, said housing having a laterally-extending open side portion to enclose said terminal base whereby said terminal base and said lubricating means are accessible through said open side portion, said lateral extension having a side inlet for conductors whereby the ends of conductors inserted therein are accessible through said open side for wiring on said terminal base, and means comprising engaging portions on said motor unit and said housing for aligning said terminal base and said lubricating means with said open side.

2,106,204
ACTUATING MECHANISM FOR HYDRAULIC BRAKES
Robert E. McGee, Beeville, Tex.
Application September 3, 1935, Serial No. 38,912
3 Claims. (Cl. 60—54.6)



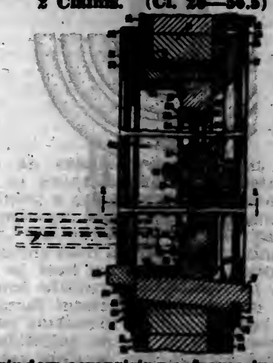
1. An actuating mechanism for fluid-actuated brakes including, a cylinder having fluid therein and having connection with said brakes, a piston slidable in said cylinder and having an axial opening therethrough, a second piston slidable within the opening of the first piston, resilient means for connecting the pistons, whereby both pistons move as a unit until the first piston has completed its stroke at which time the second piston begins its movement, thereby first displacing a large amount of the fluid from the cylinder under a low pressure and then displacing a comparatively small amount of fluid under a high pressure, releasable latch means for retaining the first piston at the end of its stroke, and manually operated means including a lever member for moving the pistons and having a lost motion connection between said lever member and said releasable latch means whereby the latch means automatically engages said piston on the piston operating stroke of the lever member and is forcibly released from such engagement on the return stroke of the lever member.

2,106,205
POLE FITTING
Ralph R. Pittman, Pine Bluff, Ark.
Application June 17, 1935, Serial No. 27,063
1 Claim. (Cl. 248—65)



A pole fitting for supporting an overhead conductor comprising in a single piece of metal a shank, a base portion at one end of said shank, an upwardly turned hook portion including a stem merging with said base at one end thereof and an enlarged end portion at the other end of said stem, said enlarged portion having a horizontally positioned peripheral flange extending outwardly from the upper portion of said enlarged end portion and a substantially semi-circular conductor-receiving groove extending transversely thereacross in a direction normal to the axis of said shank.

2,106,206
TYPE WHEEL
Claude A. Putnam and Charles F. Robbins, Keene, N. H., assignors to Markem Machine Company, Keene, N. H., a corporation of New Hampshire
Application April 12, 1937, Serial No. 136,565
2 Claims. (Cl. 101—368)



1. A type wheel having a body portion formed on its periphery with a plurality of radial type-carrying projections, each having a slot extending in a circumferential direction, a type member seated on the end of each projection and having a fin fitting the slot therein, and means to secure each type member to its projection, the edges of the fin of each type member being flush with the edges of the projection on which it is mounted and said fins being made of harder material than the body portion, whereby the edges of the fins present wear-resisting surfaces at the edges of the projections to receive the wear on said edges due to the action of the setting wheel in setting the type wheel.

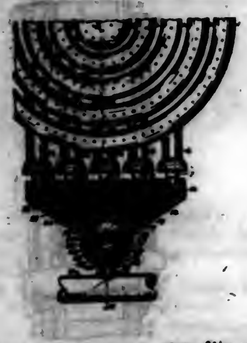
2,106,207
AUTOMATIC TRANSMISSION CONTROL
Harvey A. Smith, Webster Groves, Mo.
Application April 2, 1936, Serial No. 73,200
5 Claims. (Cl. 74—294)

1. In a device of the class described, the combination with a driving member, of a driven member, sun and planet gearing connecting said members, a cylinder controlling said gearing and determining the relative speed of rotation of said members, a main valve for said cylinder, an auxiliary valve for said cylinder, torque-actuated means for controlling said main valve, and manually-actuated means for controlling the auxiliary valve.

2,106,208
WINDOW
John L. Soderberg, Omaha, Nebr.
Application June 10, 1936, Serial No. 84,441
2 Claims. (Cl. 20—56.5)

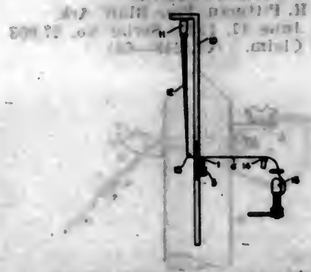
1. A window comprising a frame including upper, lower and opposite side members, horizontal and vertical rabbeted strips secured to said first members, a screen secured to the outer sides of said strips, a rabbeted sash frame engaging the rabbeted portion of said strips, means hingedly securing said sash frame for inward swinging movement, an outer window pane fixed to said sash frame, said sash frame having an inner rabbeted portion inwardly of said outer pane, a second sash frame engaging in the inner rabbeted portion of said sash frame, and means removably securing said second sash frame in said inner rabbeted portion.

2,106,209
FOLDING TABLE
Benjamin F. Sweeney, Long Beach, Calif., assignor of one-half to Henry T. Barr, Long Beach, Calif.
Application October 31, 1936, Serial No. 108,535
2 Claims. (Cl. 311—63)



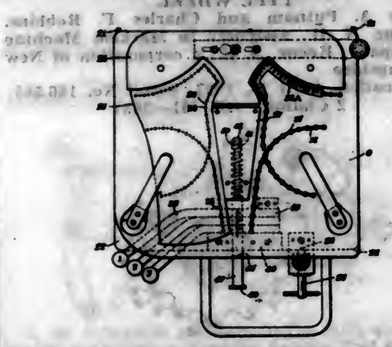
1. A folding table comprising a table top, a

pair of legs, each pivotally connected to the bottom of said table top, a second pair of legs, each of said second pair of legs being pivotally attached to one of the first named legs, a substantially U-shaped yoke pivotally attached to the under side of said table top, each of said second pair of legs being pivotally attached to



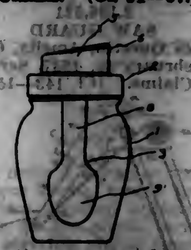
the sides of said yoke, each of said second pair of legs being curved at the upper end thereof, said curved end of the legs being engageable with the under side of the table top, and releasable stop means on said second pair of legs, said yoke being adapted to engage said stop means in one position of the table and to pass said stop means in another position of the table.

2,106,210
VALVE
Jane Elizabeth Warrick, Tampa, Fla.
Application March 9, 1936, Serial No. 69,205
9 Claims. (Cl. 277—69)



1. A device comprising a plurality of sections, fluid inlets communicating with said sections, a valve casing having a bore for a plug and having an inlet for fluid communicating with said bore and having a plurality of outlets also communicating with said bore and with the inlets of said sections, a movable distributor plug in said bore having a passage in communication with the inlet of the casing in all positions of the plug and having an outlet passage capable of registration with each of said outlets of the casing, said distributor plug having a bore for a regulator plug and a movable regulator plug in said bore having an inlet passage capable of registration with the inlet passage of the distributor plug in one position and movable out of registration therewith in another position and having an outlet passage communicating with the outlet passage of the distributor plug, the arrangement being such as to permit the regulator plug to open and close the inlet passage of the distributor plug in any position of said distributor plug.

2,106,211
PROCESS OF APPLYING LIQUID TO TEXTILE MATERIALS
William Whitehead, Cumberland, Md., assignor to Celanese Corporation of America, a corporation of Delaware
Original application June 14, 1929, Serial No. 370,763. Divided and this application September 24, 1935, Serial No. 41,594
5 Claims. (Cl. 91—68)

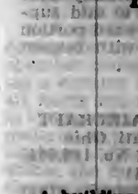


1. Method of applying a liquid to yarns or filaments, which comprises supplying a controlled uniform amount of liquid to a moving surface, passing the yarns or filaments over the surface at an angle to its direction of travel and at such a speed as to remove substantially all of the liquid from the surface, and maintaining constant the ratio of the speed of the moving surface and the rate of travel of the yarns whereby a uniform amount of liquid is applied to the yarns.

2,106,212
ORNAMENTING DEVICE
Arthur W. Altvater, University City, Mo.
Application February 1, 1936, Serial No. 61,942
29 Claims. (Cl. 164—93)

23. In a shoe part perforating device, the combination with a support, perforating elements carried thereby forming part of a perforation design for a work piece, a die holder provided with a die having perforating elements forming another part of the perforation design, said die holder and said support being relatively movable to cause the perforating elements carried by each to lie at the same cutting level, and an additional perforating element carried on the support in a position removed from said cutting level, of means for moving said additional element to said cutting level to increase the number of elements thereat.

2,106,213
COVER AND APPLICATOR
Leclare H. Austen, Chicago, Ill., assignor to Imperial Molded Products Corporation, Chicago, Ill.
Application January 29, 1936, Serial No. 61,327
5 Claims. (Cl. 91—67.4)



1. A combination cover and applicator comprising a cover attachable to a jar, a substantially flat elongated grip molded integral with and extending diametrically across the top of the cover operable to be conveniently gripped with the fingers at the flat sides thereof for placing the cover upon and removing it from the jar and for manipulating it in accordance with its intended use, said cover having therein an elongated aperture extending in a diametrical direction, and a flat spatula-like applicator comprising a rigid material having a correspondingly flat handle adapted to reception into the aperture so that the plane of the handle and applicator is maintained in a fixed definite relation with the plane of the grip, said applicator being movable simultaneously with said cover and grip and removable from the aperture for replacement.

2,106,214
METHOD OF MAINTAINING CHESTNUTS IN PRIME CONDITION
W. Charles Anderson, Linden, Calif.
No Drawing. Application June 20, 1936, Serial No. 86,145
1 Claim. (Cl. 99—156)

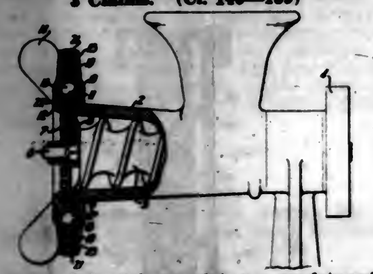
That method of maintaining chestnuts in prime condition which consists in exposing the nuts in the presence of moisture until they have absorbed a desired degree of moisture, then storing the nuts in a dry atmosphere until they have lost by evaporation a determined amount of moisture, then again exposing the nuts to the presence of moisture until the lost moisture has been approximately restored, and repeating such steps until the nuts are marketed.

2,106,215
BUILDING CONSTRUCTION
Howard L. Brooks and Hugh F. MacIntyre, Oakland, Calif., assignors to Pyro Enameling Company, Oakland, Calif., a co-partnership consisting of Howard L. Brooks and Harold B. Nayler
Application June 26, 1936, Serial No. 86,994
1 Claim. (Cl. 189—36)

A building unit for attachment to a support, comprising a metal sheet having a rectangular face area, a pair of end flanges upstanding from opposite ends of said face area, a pair of side flanges upstanding from opposite sides of said face area, one of said side flanges having a pair of apertures therein, and a pair of cylindrical pins projecting from the other of said side flanges parallel to said rectangular face area slidably to engage the apertures in an adjacent similar unit.

2,106,216
CIRCUIT INTERRUPTER
Clinton L. Dennold, Forest Hills, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 29, 1934, Serial No. 717,940
19 Claims. (Cl. 200—120)

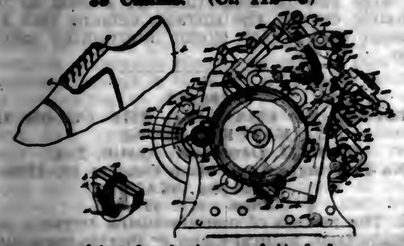
2. In an expulsion type circuit interrupter, means, at least partially of insulating material for defining a completely closed outer surface of an arc passage; means for closing one end of said passage, the other end of said passage being open, during each circuit interrupting operation; means, at least partially of insulating material, positioned within said passage, at least during each circuit interrupting operation for defining the inner surface of said arc passage; and means for establishing an arc between said inner and said outer surfaces; said surface defining means so restricting the volume of said passage that arcs of small current magnitude as well as arcs of large current magnitude are caused to intimately contact the surfaces defining said arc passage during each circuit interrupting operation.



2,106,217
PROCESS OF CHANGING THE COLOR OF NATURAL STONE
Edwin M. Dennedorf, Austin, Tex.
No Drawing. Application October 19, 1936, Serial No. 106,452
4 Claims. (Cl. 41—41)

3. The process of manufacturing terrazzo aggregate from natural stone or marble consisting of subjecting the same to an atmosphere deficient in oxygen at a temperature of from 600 degrees F. to 900 degrees F., maintaining the heat treatment during a period of several hours, admitting atmospheric air, and wetting the hot stone with water.

2,106,218
FILTERING
Roy D. Elliott and Mary J. Elliott, Jersey City, N. J.
No Drawing. Application October 15, 1932, Serial No. 638,029
9 Claims. (Cl. 210—262)

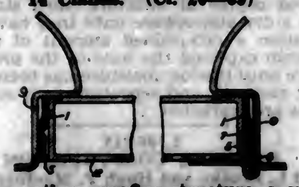


1. In the filtration of turbid liquids through pervious filter beds of loose granular media, the improvement which comprises providing the granules with a light coating or adsorption of an adhesive substance having an affinity both for the material of the granules and for the particles of the turbidity.

2,106,219
HANDWHEEL FOR GRINDERS
George J. Federighi, San Francisco, Calif.
Application May 4, 1936, Serial No. 77,754
3 Claims. (Cl. 146—189)

1. A handwheel for applying a predetermined pressure to an element, comprising a threaded ring for pressing against the element, a manually turnable ring rotatably mounted on the pressure ring, said pressure ring having a socket, an element carried by the manually turnable ring and adapted to engage said socket, and a spring for pressing said element into the socket, said socket having an inclined wall for retracting the spring pressed element when the manually turnable ring is rotated in one direction and having an upright wall to prevent retraction of the element when the manually turnable ring is rotated in the opposite direction.

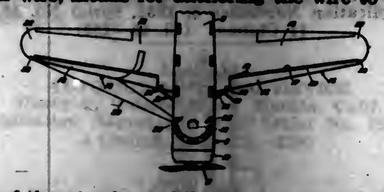
2,106,220
MACHINE FOR LACING SHOE UPPERS
Joseph Fenza, Salem, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application May 11, 1935, Serial No. 21,011
35 Claims. (Cl. 112—5)



1. A machine for lacing eyeletted shoe uppers having, in combination, a plurality of needles arranged to pass a series of individual cord loops through aligned eyelets of a folded shoe upper, devices cooperating therewith, and means for actuating each needle and the devices cooperating therewith thereafter to pass cord loops alternately through the same eyelets and across the edges of the shoe upper and to pass each loop through the preceding loop of the same cord, and finally to pass a portion of the same cord through the final loop to lock the loops.

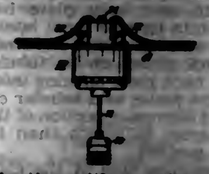
2,106,221
SAW GUARD
Gilles Guertin, Amelia, Ohio
Application February 16, 1937, Serial No. 125,962
7 Claims. (Cl. 143—159)

1. In a saw guard, the combination of a hood having a closed top and solid sides, a forward end, and a substantially horizontal lower edge, a work engaging roller at the forward end of the hood and marked along its periphery to indicate the plane of a saw guarded by the hood, an obliquely inclined hood support bar and means fixing the hood rigidly to the bar, a support bar guide including rollers providing a way in which the hood support bar reciprocates as the work is fed beneath the hood, means for mounting the support bar guide in an elevated position, and a ribbon type spring having one end movable with the hood and the support bar, and an opposite end wound in convolutions about a portion of the mounting means, and fixed thereto, for lifting and substantially counter-balancing the weight of the hood and the support bar therefor.



2,106,222
WEATHERPROOFING STRUCTURE FOR DOORS
David H. Harsly, Chicago, Ill.
Application February 22, 1937, Serial No. 127,066
14 Claims. (Cl. 20—69)

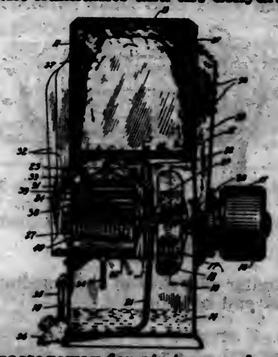
1. In a weather-proofing structure, a supporting member, a resilient rubber weather strip having a weakened section at its lower rear portion superposed upon said supporting member, and a clamping member having a flanged edge engaging said weather strip substantially over said weakened section and clamped to said supporting member for causing the forward portion of said strip to assume an angle with respect to said supporting member.



2,106,223
DEICING ATTACHMENT FOR AIRCRAFT
James B. Huntington, Cincinnati, Ohio
Application August 24, 1937, Serial No. 160,644
5 Claims. (Cl. 244—134)

1. A de-icing attachment for aircraft wings comprising a number of sheets of cellophane, clamping strips disposed along the longitudinal edges of the cellophane sheets and having serrated inner edges, means for fastening the clamping strips to the wing, a severing means located beneath each sheet and comprising a relatively thin wire, means for anchoring the wire to the

tip of the wing beyond the outer transverse edge of the cellophane sheets, means for detachably holding the wires disposed adjacent the inner transverse edge of the sheets, and means for operating said severing means from the cockpit of the aircraft.

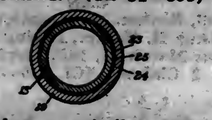


2,106,224
WIRING DEVICE
Roland R. Keesee, Prattsville, Ark.
Application December 22, 1935, Serial No. 55,823
1 Claim. (Cl. 173—329)

The combination with a ceiling rosette of an integral upstanding tubular portion having a relatively large bore for the accommodation of a plurality of two conductor cables, said rosette containing a pair of insulated load terminals and an additional terminal insulated from said load terminals, said terminals including means for connecting one conductor of a two conductor supply cable to one load terminal and the other conductor to the additional terminal, means for connecting one conductor of a second two conductor supply cable to said one load terminal and the other conductor to the additional terminal, means for connecting one conductor of a two conductor load control cable to the other of said load terminals and the other conductor of said control cable to said additional terminal, and detachable means for connecting a load circuit to said pair of load terminals, said detachable means providing a closure for said rosette.

2,106,225
PORTABLE AIR CONDITIONER
Ernest W. Kummer, Denver, Colo., assignor of one-half to David G. Ong, Phoenix, Ariz.
Application March 5, 1936, Serial No. 67,232
3 Claims. (Cl. 261—29)

1. A combined humidifying, and dehydrating device for use in an air conditioner having a chamber containing a cooling element, comprising a housing having a water compartment, and air inlets and outlets, a shaft rotatably mounted in the housing, a cylindrical drum of foraminated material secured to the shaft, fan blades projecting from the periphery of the drum, a helical plate within the drum, means comprising a pump for elevating water from the water compartment and delivering it to the inside of the drum, a dehydrator carried by the shaft and a partition separating the humidifier and the dehydrator, there



being a passageway for air to pass from one side of the partition to the other.

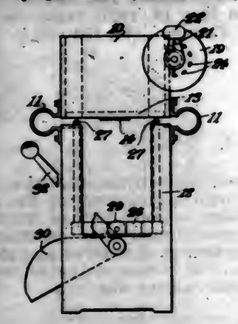
2,106,226
CURLER PAD
Ross M. McFadden, Los Angeles, Calif.
Application May 19, 1937, Serial No. 143,502
3 Claims. (Cl. 132—36.1)

1. As a new article of manufacture, a resilient pad for use with hair curlers of the air drying type, comprising a body formed with an elongated slot, and formed with enlarged circular transverse punchings at ends of said slot, whereby the pad may be transversely stretched to open the slot without tearing the pad.

2,106,227
STATIONARY INNER SLIDE TUBE FOR TROMBONES AND SIMILAR INSTRUMENTS
Reginald B. Olds, Los Angeles, Calif.
Application September 1, 1936, Serial No. 98,841
3 Claims. (Cl. 84—395)

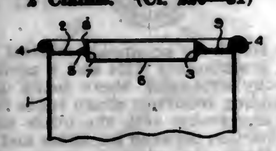
1. In a trombone or similar musical wind instrument, a stationary slide and a movable slide telescopically arranged, there being longitudinally extending relatively sharp edges formed on one slide engageable with the other slide so as to reduce friction between the slides and enabling spaces between the edges to receive and hold lubricant.

2,106,228
BASKET COVER
Albert H. Schmidtke, St. Joseph, Mich., assignor to St. Joseph Iron Works, St. Joseph, Mich., a corporation of Michigan
Application October 5, 1934, Serial No. 747,013
8 Claims. (Cl. 217—122)



5. A basket cover or the like comprising a plu-

rality of intermediate panels and a pair of end battens arranged crosswise of and secured to



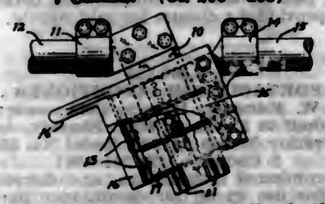
another similar plurality of intermediate panels and pair of end battens.

2,106,220
APPARATUS FOR TREATING MATERIALS
Ephriam J. Scott, Forest Hills, Mass., assignor to C. C. H. Thomas
Application May 25, 1927, Serial No. 194,013
Renewed March 21, 1936
7 Claims. (Cl. 25—41)

5. Molding apparatus comprising a mold, a plurality of resilient supports for the mold, said supports being substantially C-shaped, and means for vibrating the mold.

2,106,230
CAN
Harry Sebell, Boston, Mass., assignor of one-half to Arthur H. Parker, Lexington, Mass.
Application March 23, 1937, Serial No. 132,555
2 Claims. (Cl. 220—31)

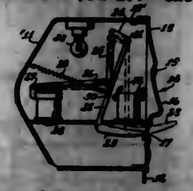
1. A can having a body portion, a closure-receiving portion secured to the body portion at one end thereof by a double-lock seam, said closure-receiving portion having a closure-receiving opening and a closure of the friction plug type fitting said opening, said closure having integral therewith a tab projecting from the periphery thereof, the end of which tab is rolled into the double-lock seam whereby said tab functions as a hinge for the closure when it is removed from the opening.



2,106,231
ELECTRIC SIGN DISPLAY AND METHOD OF MAKING SAME
Arthur Lawrence Smith, La Canada, Calif., assignor to Neon Lights, Incorporated, Los Angeles, Calif., a corporation of California
Application November 6, 1935, Serial No. 48,457
11 Claims. (Cl. 40—130)

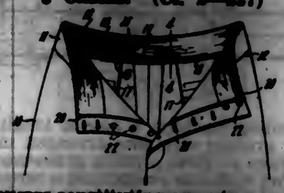
2. A luminous sign unit comprising: a front and back plate of glass sealed together in a single unit, said front plate having a gas chamber wholly therein, said back plate having a depressed portion in its rear face; laterally extending electrodes at each end of the chamber wholly within the back plate; and a tubular glass extension in the back plate opening into said chamber in the front plate, said tubular extension being within said depressed portion of the back plate and being shorter in length than the depth of the depressed portion.

10. In a luminous sign of the class described, the combination of: a front and back plate of glass fused into a single unit forming a gas chamber therein, said back plate having terminals molded therein with exposed portions on the surface of said plate; and movable roller contact members adapted to engage the exposed portions of said terminals, said roller contact members being adapted to be connected to a source of electrical current.



2,106,232
CONTACT FOR ELECTRICAL APPARATUS
Roy Wilkins, San Francisco, Calif., assignor to K. F. F. Electric Company, San Francisco, Calif.
Application September 8, 1936, Serial No. 99,744
7 Claims. (Cl. 200—166)

1. In an electrical switch of the knife blade type, the combination of a blade-like member having longitudinally extending and oppositely disposed non-oxidising contact surface forming members secured upon each side thereof, and co-operating blade engaging clips between which said blade-like member is adapted to move having transversely extending non-oxidising contact surface forming members secured upon the blade



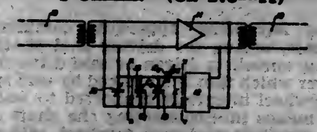
engaging sides thereof, the contact surface forming members upon said blade-like member and the contact surface forming members upon said clips being half round in cross section and secured in place by cold pressing same into grooves cut in the surfaces of their respective supporting blade and clips.

2,106,233
AUTOMOBILE SIGNAL DEVICE
David E. Wilson, Santa Monica, Calif.
Application August 11, 1936, Serial No. 95,376
4 Claims. (Cl. 177—329)

1. In an automobile signal device having a housing with a relatively large opening and two relatively small openings therein, the combination of a tongue movably mounted in said housing; electric light means in said housing adapted to illuminate said relatively small openings; and electrical means for actuating said tongue, sound producing member, and light means simultaneously, said electrical means including a remote control means.

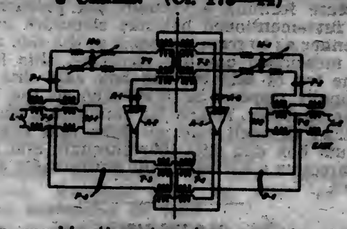
2,106,234
TROUSERS
Seth Adamson, Larchmont, N. Y., assignor to United States Rubber Products, Inc., New York, N. Y., a corporation of Delaware
Application May 16, 1935, Serial No. 21,626
3 Claims. (Cl. 2—237)

1. Trousers constituting an outer garment having an outer waist band portion adapted to stretch in the body encircling direction, an elastic waist band stiffening element having its upper edge secured to the upper edge of said outer waist band portion and comprising a woven elastic strip secured at the inner face of said outer waist band portion and provided with elastic warps woven under gradually increasing tension to impart a lengthwise curvature to the strip and a greater stretch to the upper edge of said strip than to its lower edge, to thereby provide a maximum range of stretch at the upper edge of the trousers and a smaller range of stretch at the lower edge of the waist band of the trousers whereby puckering of the trouser fabric is avoided.



2,106,235
ADVERTISING APPARATUS
James R. Allen, Glendale, Calif.
Application August 21, 1936, Serial No. 97,666
9 Claims. (Cl. 40—126)

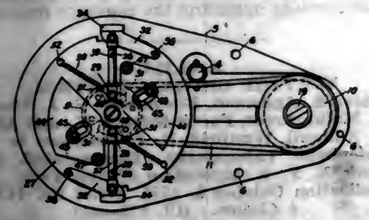
1. Advertising apparatus comprising a floor having a plurality of spaced track means arranged one inside the other, an endless conveyor means operated along each track means, a plu-



rality of objects carrying advertising matter carried by each conveyor means and means for simultaneously operating the conveyor means.

2,106,236
VOLTAGE OR GAIN CONTROL
Frithiof B. Andersen, Bloomfield, N. J., Charles O. Mallinckrodt, Forest Hills, N. Y., and Albert L. Stillwell, Westfield, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 8, 1935, Serial No. 44,950
4 Claims. (Cl. 178—44)

1. An aperiodic circuit for transmitting waves of a broad band of frequencies, having a pair of input terminals across which, a voltage comprising said broad band of frequencies is impressed, two variable capacities connected in series across said terminals, means for varying said capacities while keeping their sum constant, whereby a fraction only of said impressed voltage appears across one of said two capacities, separate adjustable means to vary the transmission loss through said circuit over said frequency band comprising a third variable capacity connected across said one only of said two capacities, and an output utilization circuit of high impedance connected across said third capacity.



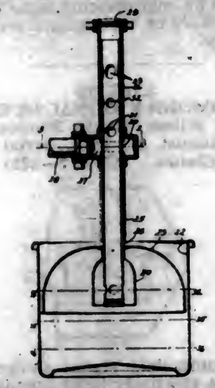
2,106,237
TRANSMISSION SYSTEM
Harold S. Black, Elmhurst, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 9, 1936, Serial No. 58,320
3 Claims. (Cl. 178—44)

1. In combination, two two-way signal wave transmission circuits, and a two-way repeater interconnecting said circuits, comprising two oppositely-directed one-way transmission paths coupled in conjugate relation with each other and in energy transmitting relation with said circuits, a plurality of conductively independent amplifiers and means coupling said amplifiers to said transmission paths so that said

amplifiers are effective simultaneously to amplify signal energy transmitted between said circuits for each direction of signal transmission.

2,106,238
FLYWHEEL CLUTCH MECHANISM
William A. Black, Montclair, N. J., assignor to United Research Corporation, Long Island City, N. Y., a corporation of Delaware
Application August 31, 1935, Serial No. 38,737
12 Claims. (Cl. 271—2.3)

1. Film advancing apparatus comprising a drive shaft, means for driving said shaft, film advancing sprockets driven by said drive shaft, a roller over which film is advanced by said sprockets, a flywheel integrally connected to said roller, and means interconnecting the shaft of one of said sprockets and said flywheel, said means being adapted to drive said flywheel during acceleration thereof and to instantly release said flywheel when uniform speed thereof is attained, said flywheel being driven thereafter by said film at the speed of said flywheel when released.



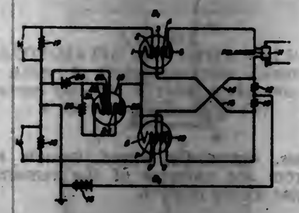
2,106,239
VARNISH AND PAPER DRYING MACHINE
Maxime J. Brisard, San Francisco, Calif.
Application November 25, 1935, Serial No. 51,394
4 Claims. (Cl. 34—12)

1. In a device of the character described, an elongated box-like structure, a second box-like structure forming a vacuum box positioned in said first-mentioned box-like structure in such a manner as to form channels at the side of said first mentioned box-like structure, slits formed in the top of said vacuum box, said slits being diagonally disposed with relation to the length of the chamber, means for conducting sheets of material through said machine and over said vacuum box and slits therethrough, and means for directing a current of air downwardly on said sheets.

2,106,240
VALVE
Walter K. Conover, New Castle, Pa., assignor to Cherry-Burrell Corporation, Chicago, Ill., a corporation
Application July 31, 1936, Serial No. 93,562
6 Claims. (Cl. 137—68)

1. The combination with supply means providing a fixed port, of a sleeve having apertures at different levels for alternative registration with said port and having means adjacent the respective apertures for closing said port upon displacement of the respective apertures therefrom, and

a float connected with said sleeve for the operation thereof, together with a receptacle arranged to receive liquid through said port upon registration of a sleeve aperture therewith and within which said float is operatively disposed.



2,106,241
FRUIT SIZER
Frank W. Cutler, Portland, Oreg., assignor to Food Machinery Corporation, San Jose, Calif., a corporation of Delaware
Application April 22, 1935, Serial No. 17,646
1 Claim. (Cl. 209—102)

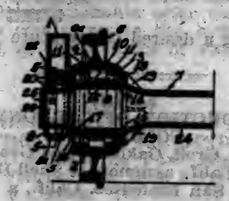
In a grading machine, a pair of longitudinally extending grading elements arranged in spaced apart relation to form a sizing gradeway, one of said grading elements comprising a series of sections arranged in alternate parallel and angular relation with the other grading element to form a series of grading sections separated by a plurality of intervening non-grading sections, a plurality of adjusting means associated with each of said parallel sections, a unitary control associated with each set of said adjusting means for simultaneously operating the same to move their associated section toward and away from the other grading element, and in confined parallel relation thereto, and means arranged beneath said non-grading sections for separating the fruit discharged from the respective grading sections into segregated groups.

2,106,242
ELECTRIC DISCHARGE TUBE CIRCUITS
Stephen Deba, Jr., Woodside, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 20, 1936, Serial No. 86,241
6 Claims. (Cl. 178—44)

1. A differential detector circuit comprising two space discharge detector tubes each including a cathode, an anode, a control grid and a screen grid, and circuits therefor, the control grid-cathode circuits and the cathode-anode circuits respectively being connected in push-pull relation, the screen grid-anode circuits of the two detector tubes being connected in mutually regenerative relation, means for impressing separate variable voltages respectively on the individual portions of the control grid-cathode circuits of the two detector tubes, and means in the individual portion of the cathode-anode circuit of one of said tubes directionally responsive to the flow of plate current therethrough to indicate which of said variable voltages is the greater.

2,106,243
RESILIENT BRAKE CONNECTION
George B. Dorey, Westmount, Quebec, Canada
Application June 27, 1935, Serial No. 28,604
Renewed August 2, 1937
4 Claims. (Cl. 74—582)

1. As an article of manufacture, a resilient extensible connection including a rod having at one end thereof a clevis mounted for lengthwise movement relatively to the rod; shoulders on the rod and clevis respectively; a spring encircling the clevis and interposed between the shoulders of the said rod and clevis, said clevis being formed of two parts; each disposed on opposite sides of the rod and formed with an enlarged portion projecting beyond the rod, said enlarged portion being adapted to receive a pin for connection with an adjacent connection; and a separator lying between the end of the rod and the said pin, said separator being rigidly united with the pair of clevis parts and acting as a separator to restrain impingement of the clevis parts on the rod.

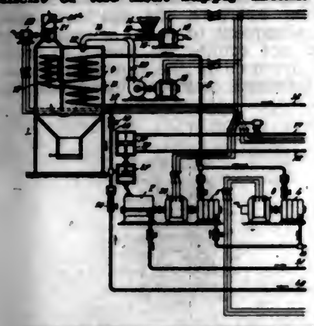


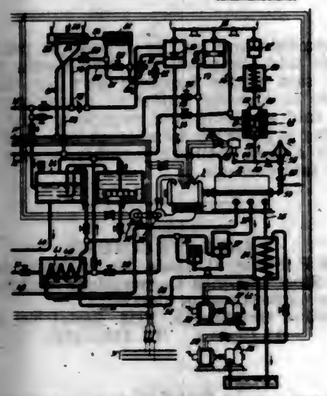
2,106,244
ELECTRICAL DEVICE
John R. Flegal, New York, N. Y., and Neil Y. Prisamman, Wyoming, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 19, 1936, Serial No. 80,644
7 Claims. (Cl. 178—396)

1. In combination, a plurality of superposed insulating plates, each plate having a central aperture and a slot extending inwardly from an edge to the aperture, the apertures and slots being in alignment to define a passage and an elongated slot connecting therewith, rectifying elements mounted in the central passage, conductive terminal members interposed between

said elements and having extensions projecting through said elongated slot, and means for securing said plates together and for applying pressure to and for adjusting the pressure between said elements and members, said means including a pressure member at one end of the passage and a resilient member at the other end of said passage.

2,106,245
AXLE STRUCTURE
Charles F. Fredo, St. Louis, Mo., assignor to General Steel Castings Corporation, Granite City, Ill., a corporation of Delaware
Application October 11, 1933, Serial No. 693,057
15 Claims. (Cl. 105—194)





1. In a railway vehicle, a side frame including a pedestal, a wheel-mounting axle including a main body part slidably engaging the pedestal jaws, and a removable seat on said part for mounting an equalizer element.

2,106,246
POWER PLANT
Hans Gleichmann, Falkenhain, near Spandau, Germany, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a corporation of Germany
Application September 28, 1933, Serial No. 691,249. Renewed April 10, 1937. In Germany September 30, 1932
26 Claims. (Cl. 60—106)

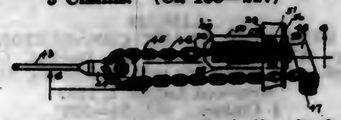
1. In a power plant, a prime mover, a boiler supplying steam to the prime mover, heat supply means for the boiler, feed water supply means for supplying water to the boiler and determining the operating pressure, a governor operated by the prime mover and controlling operation of the feed water supply means so that the boiler operating pressure increases with increases in prime mover

load and vice versa, and means providing for adjustment of the heat supply means so that

steam having a desired temperature may be secured.

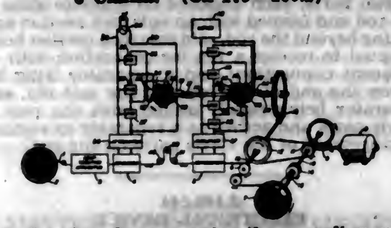
2,106,247
PRODUCTION OF CARBONYLIC COMPOUNDS
Herbert P. A. Groll, Oakland, and George Hearne, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application July 13, 1934, Serial No. 734,992
19 Claims. (Cl. 260—138)

1. A process for the production of valuable carbonylic compounds which comprises heating a halogenated epoxide with water under acid conditions and a pressure substantially greater than atmospheric to a temperature at least equal to 100° C., whereby the halogenated epoxide is converted to a compound of the class consisting of aldehydes and ketones, and removing the resulting carbonylic compound from the reaction mixture substantially as soon as it is formed therein.



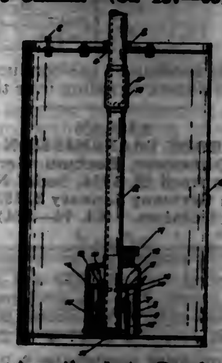
2,106,248
STATIC RESISTING GARMENT
Samuel S. Hall and Judd B. Hall, Carrollton, Ohio, assignors to The Surety Rubber Company, Carrollton, Ohio, a corporation of Ohio
Application December 24, 1936, Serial No. 117,574
3 Claims. (Cl. 2—168)

1. A glove of rubber or the like provided with a tubular sleeve portion having an annular groove spaced from its end, the end portion of said tubular sleeve portion being outwardly flared beyond said groove whereby said flared end portion may be turned back at said groove to form



an endless, outwardly flared trough entirely spaced from the exterior of the remainder of said tubular sleeve portion.

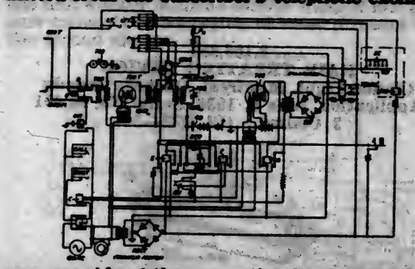
2,106,249
HAND BRAKE FOR RAILWAY CARS AND THE LIKE
Olivier A. Harel, Montreal, Quebec, Canada, assignor to George E. Dorey, Montreal, Quebec, Canada
Application July 28, 1934, Serial No. 737,354
5 Claims. (Cl. 188—217)



1. In a railway car brake including brake elements and a manually operated take up device for operating said brake elements; connecting means between the brake elements and the take up device, said connecting means including a pulley block and a flexible connection looped around said pulley block and having its opposite ends respectively connected to the car structure and with the take up device; a bracket rigidly mounted on the car structure and a spring interposed between the dead end of the chain and the car structure, said spring being directly supported by the bracket.

2,106,250
TESTING SYSTEM
Clarence N. Hickman, Jackson Heights, and Burton A. Kingsbury, Brooklyn, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 27, 1936, Serial No. 71,102
6 Claims. (Cl. 179—100.2)

1. A system for measuring the recording properties of telegraphone record members comprising means for moving the member, recording and reproducing magnets in spaced relation along the member, signal measuring apparatus, a circuit including an amplifier connecting the reproducing magnet to the measuring apparatus, a signal source of adjustable frequency, and means for alternately connecting the source to the recording magnet and disconnecting it therefrom and varying the effective gain of the amplifier at predetermined intervals whereby said apparatus alternately measures both the noise and signal levels of the record member.

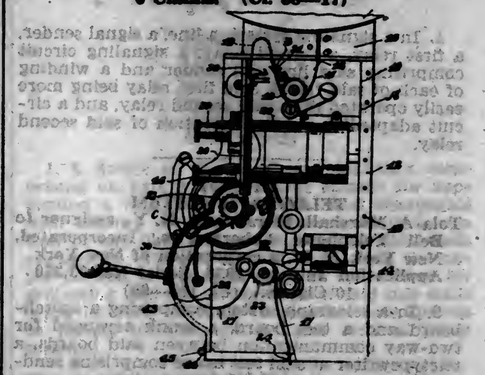


2,106,251
AUTOMATIC SHUT-OFF VALVE
Albert R. Hunt, Riverside, Conn.
Application October 7, 1936, Serial No. 104,256
6 Claims. (Cl. 137—68)

1. In an automatic shut-off valve, a housing open at its lower end and closed at its upper end, a check valve in said upper end, an outlet pipe attached to said upper end and depending within said housing, a cup shaped liquid container closed at its bottom end and open at its upper end and attached within the open end of said housing and spaced therefrom so as to form an annular passage between the outer wall of said liquid container and the inner wall of said housing, a cup shaped float closed at its lower end and open at its upper end located within said liquid container and surrounding the depending end of said outlet pipe, vertical guides for said float, a stop to limit the downward travel of said float, a flange attached to the upper open end of said float, openings in said float below said flange, the inside diameter of said flange being greater than the outside diameter of said outlet pipe, the outside diameter of said flange being smaller than the inside diameter of said liquid container, the passages so created adjacent the outside and inside edges of said flange, the openings in said float below said flange and the inside dimensions of said float being so proportioned and the stop being so located as to cause said float to remain in contact with said stop when liquid is flowing through all said passages and to cause said float to rise and contact with the end of said outlet pipe when liquid ceases to flow through the passages adjacent the edges of said flange.

2,106,252
TELETYPEWRITER STATION
Fullerton S. Kinkead, Bloomfield Park, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 18, 1936, Serial No. 69,194
10 Claims. (Cl. 178—4.1)

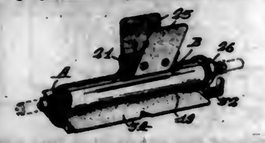
1. A substation for use in a system of telegraph communication employing a subscriber's circuit which is effective for communication only when energized, a sending oscillator of carrier frequency at said substation, a control device thereat, means whereby ringing current transmitted from the subscriber's telephone exchange



over one side of the connecting line actuates said control device at the subscriber's station to energize elements of the subscriber's circuit including said sending oscillator for unattended service.

2,106,253
PROCESS FOR THE PREPARATION OF HALOGENATED ORGANIC HYDROXY COMPOUNDS
Siegfried Leonard Langedijk, Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application July 21, 1933, Serial No. 623,903. In the Netherlands July 25, 1931
7 Claims. (Cl. 260—157)

1. A process for the preparation of halohydrins comprising reacting an unsaturated open chain organic compound containing a tertiary carbon atom possessing a double bond in an olefinic linkage with a hypohalite ester containing an alkyl group contiguous to the hypohalogenous acid radical, in the presence of water.



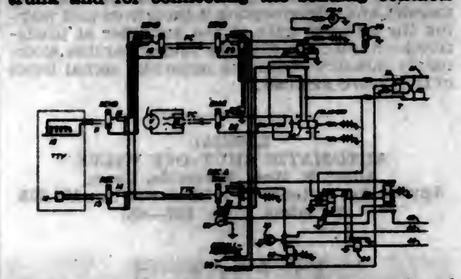
2,106,254
SAFETY DEVICE FOR MOTION PICTURE PROJECTING MACHINES
Carl F. Lick, St. Paul, Minn.
Application February 28, 1934, Serial No. 713,284
6 Claims. (Cl. 88—17)

1. A safety device for motion picture projecting machines in combination with a projector operating with a pair of film loops on either side of the light gate, and a film movable in one direction, controlling means continuously slidable on the film and operable by said loops to shut off the

light rays from the film in the projector by a change in character of the film loops and means pivotally supporting said controlling means at the end thereof first contacted by the film in its travel.

2,106,255
HAIR TREATING DEVICE
Claude Ligot, Montreal, Quebec, Canada
Application June 8, 1936, Serial No. 84,991
3 Claims. (Cl. 132—36)

1. In a hair treating device of the character described, a tubular mandrel, a pair of spaced resilient rings mounted on the mandrel, an annular toothed ratchet member formed on the mandrel, a pair of pivoted clamping jaws adapted to be removably positioned about the rings on the mandrel, spring means yieldingly urging the jaws to clamping position, a spring arm having one end secured to one of the clamping jaws, and a click formed on the free end of the arm disposed to engage the ratchet teeth of the mandrel when the device is assembled, the said click being yieldingly urged into engagement with the teeth so as to hold the mandrel against unwinding rotation when a coil of hair is wound thereon during treatment.



2,106,256
SIGNALING SYSTEM
Frank K. Low, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 27, 1935, Serial No. 18,564
25 Claims. (Cl. 179—16)

1. In a signaling system, a line, a signal sender, a first relay, a second relay, a signaling circuit comprising said line and sender and a winding of each of said relays, said first relay being more easily operated than said second relay, and a circuit adapted to aid the operation of said second relay.

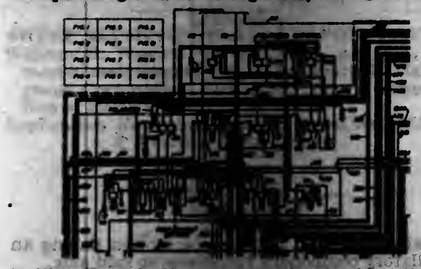
2,106,257
TELEGRAPH SYSTEM
Tola A. Marshall, Floral Park, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 30, 1936, Serial No. 93,350
10 Claims. (Cl. 178—69)

9. In a telegraph system comprising a switchboard and a test board, a trunk arranged for two-way communication between said boards, a teletypewriter at said test board comprising sending contacts and a receiving magnet, means comprising jacks for connecting said sending contacts and said magnet in series with one of the conductors of said trunk for half-duplex signaling over the trunk, and means comprising said jacks for connecting the receiving magnet in series with said one of the conductors of the trunk and for connecting the sending contacts

in series with another of the conductors of said trunk for full duplex signaling over the trunk.

2,106,258
ROPE TRANSMISSION
Otto Ohnesorge, Bochum, Germany
Application April 28, 1934, Serial No. 722,949
In Germany January 2, 1933
14 Claims. (Cl. 74—224)

1. A friction drive comprising a pulley, a tension element trained over the pulley, a track chain helically positioned on the pulley and supporting the tension element, a deflector structure for the track chain having a plurality of anti-friction members engaging a helix of the track chain at circumferentially spaced points, and means acting upon the anti-friction members of said deflector structure and adapted to vary the pitch of the helix formed by the track chain engaging points of said anti-friction members.



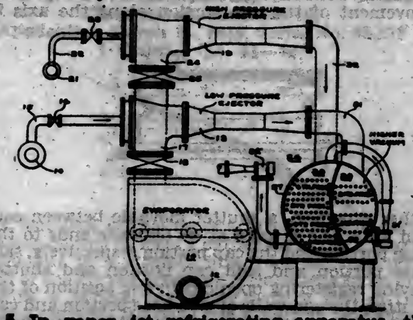
2,106,259
CAR TRUCK
Harry M. Pflager, St. Louis, Mo., assignor to General Steel Castings Corporation, Granite City, Ill., a corporation of Delaware
Application July 16, 1934, Serial No. 735,236
15 Claims. (Cl. 105—194)

1. In a railway truck, an axle, a side frame, an equalizer having a part carried on said axle and a part spaced therefrom, said equalizer being pivoted between said parts on said frame, and an individual resilient connection between said last-mentioned part and said frame, said side frame terminating adjacent its pivotal connection with said equalizer and said equalizer being forked so as to straddle said side frame.

2,106,260
TELEPHONE SYSTEM
Ralph Raymond, Nyack, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 19, 1935, Serial No. 27,240
24 Claims. (Cl. 179—6.3)

1. In a telephone system having selector switches for extending connections from a subscriber's line, a sending mechanism having registers for registering digits indicative of the designation of a desired line, other registers, means under the control of said first registers for operating said other registers, means for con-

trolling the selective movements of said switches in accordance with the setting of said registers, a chain of relays and means for successively and repeatedly operating said relays to associate said controlling means sequentially with said registers.



2,106,261
EJECTOR
Robert Lee Spurlin, Port Arthur, Tex.
Application June 12, 1936, Serial No. 85,915
6 Claims. (Cl. 103—263)

1. An ejector comprising a cylindrical casing, an intake nozzle within said casing, a discharge pipe, a bracket between the said casing and the discharge pipe and held in fixed relation to said casing and to said pipe, and a discharge member having a cylindrical portion slidably mounted within the said casing and cooperating with said intake nozzle, having a cylindrical portion slidably mounted within the said discharge pipe, and having an intermediate portion having screw-threaded engagement with said bracket, whereby rotation of said discharge member will cause longitudinal sliding movement thereof within said casing and within said discharge pipe.

2,106,262
STEAM JET REFRIGERATION APPARATUS
Ernest F. Stalcup, Ridley, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 24, 1936, Serial No. 76,223
6 Claims. (Cl. 62—152)

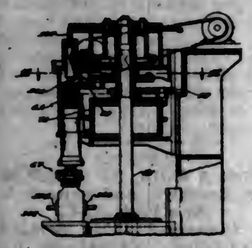
1. In vapor jet refrigerating apparatus, the combination of evaporator means, first and second ejectors for withdrawing vapor from said evaporating means to effect cooling by evaporation of liquid therein, said first and said second ejector being designed and constructed for operation with motive fluid of relatively low pressure and motive fluid of relatively high pressure, respectively, condensing means comprising first and second condensing chambers for condensing the vapor exhausted by said first and second ejectors, respectively, and means for conveying cooling water through said first and second condensing chambers in series in the order named, whereby the first ejector utilizing motive fluid of low pressure exhausts into a region of lower pressure than the second ejector.

5. In vapor jet refrigerating apparatus, the combination of first and second evaporator chambers, means for conveying liquid to be cooled through said first and second chambers in series in the order named to effect cooling thereof in successive stages, a first ejector designed and constructed for operation with motive fluid of relatively low pressure for withdrawing vapor from said second evaporator chamber, a second ejector designed and constructed for operation with motive fluid of relatively high pressure for withdrawing vapor from said first evaporator chamber, condensing means comprising first and second condensing chambers for condensing the vapor exhausted by said first and second ejectors, respectively, and means for conveying cooling water through said first and second condensing chambers in series in the order named, whereby the first ejector utilizing motive fluid of low pressure exhausts into a region of lower pressure than the second ejector.

2,106,263
HOLDER FOR A ROLL OF STRIP MATERIAL
Saul Teaher, Brooklyn, and Samuel A. Kerenes, New York, N. Y.
Application January 22, 1936, Serial No. 60,322
5 Claims. (Cl. 242—55.5)

1. A device of the character described comprising an axially contractable spindle for supporting a roll of strip material and engageable with bearing sockets in a recess provided in a wall or the like; and a cover having side walls engageable with said spindle and closing the upper portion of the open front of said recess for protecting said roll, at least one of said side walls being laterally movable to contract said spindle to permit its insertion in and removal from sockets.

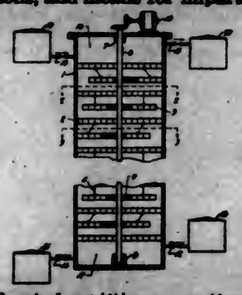
2,106,264
CLOSURE FOR RECEPTACLES
Percy M. Thorn, New Rochelle, N. Y.
Application December 19, 1935, Serial No. 55,157
12 Claims. (Cl. 221—64)



1. A closure of the character described compris-

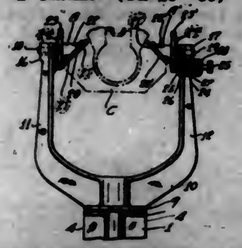
ing in combination a base portion having an end wall and a side wall, and a circumferential indentation within the side wall, a cap portion having an end wall and a side wall, fitting over said base portion and having an indentation fitting within the indentation in said base portion and engaging both edges of said indentation to prevent movement of the cap portion along the axis in

either direction, a shutter movable between said end walls and pivoted at its opposite ends to the base portion and the cap portion respectively, said base portion and said cap portion and shutter having registering openings in one position of the shutter, the end walls of said base portion and cap portion being so formed as to exert pressure upon the shutter immediately surrounding the opening in the base portion.



2,166,265
CLOSURE APPLYING MACHINE
Dominic W. Tiano, Boston, Mass., assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass., a corporation of Massachusetts
Application July 18, 1936, Serial No. 91,395
9 Claims. (Cl. 226—38)

4. In a closure applying machine, in combination, a closure applying device having means for engaging a cap during the rotation thereof to screw the same onto a threaded container, means for rotating the closure applying device in one direction to apply the closure to the container, and means for thereafter effecting the relative rotation of the container and closure thus applied to partially unscrew the closure.



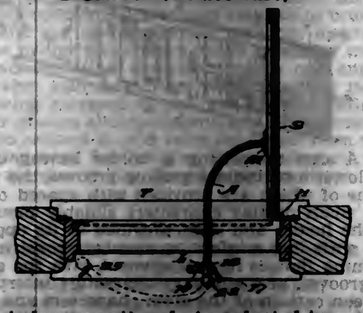
2,166,266
PROCESS AND APPARATUS FOR CONTACTING FLUIDS
Sigbeen Tijmstra, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application February 4, 1936, Serial No. 62,295
13 Claims. (Cl. 261—113)

1. An apparatus for contacting relatively immiscible fluids, comprising a chamber adapted to contain said fluids, a fluid inlet and a fluid outlet near opposite ends thereof, a plurality of partitions arranged transversely within the chamber, each of said partitions being provided with baffles substantially parallel with the axis of the chamber and each partition having a plurality of perforations, and means for imparting to some

of said perforated partitions a motion having an oscillatory component transverse to said axis.

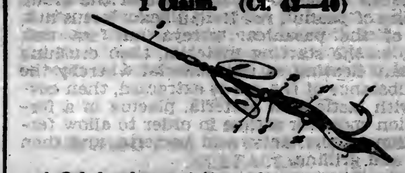
2,166,267
MOTOR-BLOCK STAND
Walter G. Vellmer, St. Louis, Mo., assignor to H & H Machine & Motor Parts Co., St. Louis, Mo., a corporation of Missouri
Application August 21, 1936, Serial No. 97,198
1 Claim. (Cl. 29—89)

A motor-block stand for supporting and holding a motor block to allow ready bodily placement and removal and to allow substantially universal movement of the supported block to give free and unobstructed access to all surfaces and cavities and openings requiring reconditioning, comprising in combination a base, a frame mounted on the base for revolubile movement on a substantially vertical axis, said frame including a pair of upwardly presented laterally spaced arms provided at their upper ends with open-topped axially aligned substantially V-shaped spindle receiving bearings, one of said arms having a transversely shiftable spring-pressed pin extending therethrough, a pair of companion motor engaging members each including as an integral structure a shank having at its one end an axially outwardly extending diametrically reduced spindle and at its other end a flat face plate extending laterally outwardly on each side of the shank and having a mounting face provided with a plurality of apertures in registration with standard openings in a motor block to be supported and being disposed in a plane at an oblique angle to the shank axis for detachable supporting connection with the standard openings on a motor block, and a transverse plate located concentrically of the shank intermediate its ends joining the shank with the spindle, said plate having an annular series of spaced apertures for selective position-determining engagement with the spring-pressed pin, said motor engaging members being thus bodily carried by and being movable with the motor block and having the spindles thereof in axial alignment on



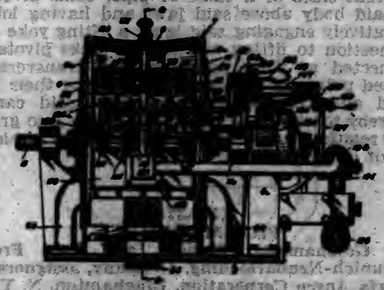
opposite sides of the motor block in laterally outwardly extending relation for rotative reception in the V-shaped spindle receiving bearings.

2,166,268
SHEET ALUMINUM PLANOGRAPHIC PLATE
William B. Wescott, Dover, Mass., assignor, by mesne assignments, to Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware
Application November 8, 1935, Serial No. 48,935
9 Claims. (Cl. 148—6)



2. The process of preparing planographic printing plates from sheet aluminum which comprises immersing said sheet aluminum in a solution of an alkali aluminate until the surface of said aluminum is freed from grease, is minutely pitted, and is sensitized to fatty acids.

2,166,269
WINDOW OPERATING DEVICE
James Elmer Auld, Cocoanut Grove, Fla.
Application February 17, 1936, Serial No. 64,374
1 Claim. (Cl. 268—117)

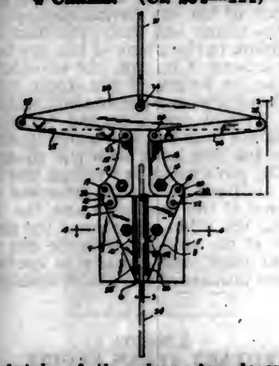


A window operating device adapted to move a window mounted to swing in a horizontal plane, comprising a flexible adjusting member consisting of a wire cable located within a flexible casing of co-extensive length, an abutment plate adapted to be secured to the sash and having a receiving chamber into which one end of said casing is projected, means for anchoring the last mentioned end of the flexible member within said chamber in such manner as to prevent endwise and rotative movements of the adjusting member, a ball-like handle having a recess formed therein, the other end of the flexible member being inserted into said recess, the edges of the recess being clamped around the adjacent end portion of the flexible member in such manner as to prevent relative movement thereof with respect to said handle, and an anchor member through which the flexible adjusting member is arranged to travel, said anchor member having means for releasably gripping said adjusting member in such manner as to lock the same against movement, said flexible member being sufficiently rigid to normally hold the sash in any adjusted position but possessing enough flexibility to slowly double upon itself under the impact of a sudden blow applied to the sash while in open locked position, so as to protect the sash from injury.

2,166,270
FISHHOOK
Clare Bryan, Chicago, Ill.
Application March 16, 1936, Serial No. 69,236
1 Claim. (Cl. 43—40)

A fish hook consisting of a wire having one end portion curved to form a barbed hook and a shank extending in a straight line from the rear portion of the curved hook and terminating in an eye having a portion projecting from a side of the shank opposite the barb and a portion projecting from the same side of the shank as the barb, the latter portion of the eye having contacting relation with the shank and then extending laterally from the shank in the plane of the eye to form a pin having a head at its end, and an enlargement intermediate the length of the shank whereby a pork rind formed with a perforation intermediate the length thereof and a second perforation at one end thereof may be maintained in assembled relation on the fish hook with the shank of the hook and the pin extending through the perforations and the head of the pin disposed opposite one side face of the pork rind and the enlargement against the other side face of the pork rind, the portion of the rind between the pin and the enlargement lying substantially in contact with the adjacent portion of the shank throughout its length.

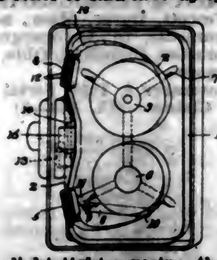
2,166,271
ROTARY STEAM ENGINE
Leslie W. Downward, Wilmington, Del., assignor to The Downward Turbine Corporation, Wilmington, Del., a corporation of Delaware
Application August 14, 1933, Serial No. 685,139
Renewed September 16, 1936
21 Claims. (Cl. 253—44)



1. A rotary engine including a shaft, a rotor carried by the shaft means constructed to direct steam to the rotor, reversible blades carried by the rotor adapted to deflect the steam in a direction opposite to the direction of rotation of the rotor, a stator, reversible blades on the stator adapted to receive steam from the rotor and to change the direction of rotation thereof, and another rotor receiving steam from the stator.

2,106,272
PROCESS OF PRODUCING POWDERED COCOA SUBSTITUTION
Seiichi Enaki, Nishiyedogawa-Ku, Osaka, Japan
No Drawing. Application August 22, 1936, Serial No. 97,468. In Japan August 12, 1935
4 Claims. (Cl. 99—26)

1. Steps in the process of producing powdered cocoa substitute comprising, removing the shell and interior cuticle of at least one of the group consisting of peanut, red Indian bean, loctus nut, acorn of the pasanica, torreya nucifera nut, walnut, as the starting material, then crushing and steam heating of the material whereby the fatty substance of the nut is extracted, then covering with lactic acid bacteria, placing in a fermentation room for a time in order to allow fermentation by the lactic acid bacteria, and then drying and grilling.



2,106,373
CABLE AND PIPE CLUTCH
Carl D. Garriott, Eagle City, Okla.
Application July 17, 1936, Serial No. 91,241
4 Claims. (Cl. 294—114)

1. A clutch of the character described, said clutch comprising a body containing oppositely and downwardly converging slideways, opposed triangular jaws having their hypotenuse sides sliding on said slideways and having their altitude sides formed with gripping surfaces for gripping different sides of a cable or pipe, cams pivoted on said body above said jaws and having lobes operatively engaging said jaws, a lifting yoke for connection to lifting means, and links pivotally connected at their outer ends to transversely spaced points of said yoke and having their inward ends pivotally connected to said cams, whereby to cam said jaws downwardly into gripping relation to said cable when said yoke is raised out of initial position.

2,106,374
FILM MAGAZINE
Leo Goldhammer, Munich, and Paul Frost, Munich-Neuharlaching, Germany, assignors to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
Application August 25, 1933, Serial No. 686,848
In Germany August 25, 1932
5 Claims. (Cl. 242—71)

1. A film magazine of the character described comprising a casing having front, rear, bottom, top and end walls, a film-feeding spool and a film take-up spool mounted within said casing and respectively spaced from the opposite end walls thereof, means forming two film channels in the front wall of said casing, one adjacent each end thereof, said channels being slightly inclined with respect to said front wall to facilitate the feed of said film from said feeding spool outwardly through one of said channels and inwardly through the other to said take-up spool and being

lined with a light-tight covering, the position and inclination of said channels with relation to the respective spools being such that the film in passing between said spools and the inner ends of the respective channels deviates from a line connecting the inner end of the respective channel and the surface of the adjacent one of said spools.

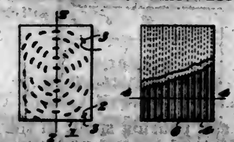
2,106,375
INTERCHANGEABLE SIGN
Walter L. Henry, Hamilton, Mo.
Application February 26, 1937, Serial No. 128,612
4 Claims. (Cl. 40—140)

1. A sign comprising a holder having upper and lower longitudinal guiding grooves, the walls of one of which are provided with spaced openings, main display characters slidably mounted on the holder and each provided at its opposite ends with flat reinforcing members constituting retaining flanges for engagement with the guiding grooves, and auxiliary characters interposed between certain of the main characters and provided with reduced tongues extending through the adjacent openings in the holder.

2,106,376
FIRE PROTECTING MEANS
Joseph Hanabist, Brussels, Belgium
Application March 23, 1934, Serial No. 717,105
In Belgium and France March 27, 1933
1 Claim. (Cl. 169—39)

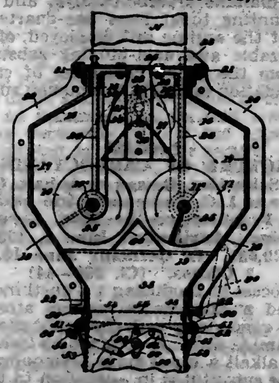
A sprinkler head comprising a fuse including two conducting strips pasted together with a fusible alloy, one of the strips being extended at one end and bent substantially at right angles at that end and the other strip being extended at the other end and bent substantially at right angles at that end, the bent portions of the strips extending in opposite directions, and pressure means for maintaining said fuse under stress, the line of action of the said pressure means being in line with the central longitudinal axis of the fuse.

2,106,377
DISPENSING DEVICE
Hasen G. Lemas, Detroit, Mich.
Application April 6, 1936, Serial No. 73,022
1 Claim. (Cl. 221—19)



A dispensing device for brushes of the class described comprising a supporting plate having a centrally disposed aperture therein, a discharge tube secured to one side of said plate and depending therefrom and having one end registering with said aperture, a transversely extending cylindrical shaped valve receiving member secured to the other side of said plate having oppositely disposed apertures therein registering with the apertures in the plate, a cylindrical shaped valve rotatably mounted in said member having a transversely extending bore therein adapted upon rotation of said valve to be brought into and out of registration with the apertures in the cylindrical shaped valve receiving member, an operating knob secured to one end of the valve, said cylindrical valve receiving member being recessed at one end thereof defining a pair of stop abutments and a laterally extending pin secured to said valve for cooperation with the abutment for limiting the rotation of said valve member in one direction or the other.

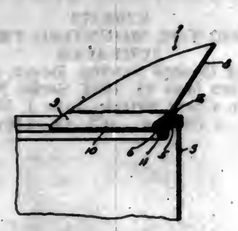
2,106,378
MILK PAIL COVER AND FASTENER THEREFOR
Frank W. Moore, Lennon, Mich.
Application March 3, 1936, Serial No. 66,941
4 Claims. (Cl. 220—58)



1. A receptacle open at its top, brackets at opposite sides of the receptacle formed of resilient material and each having a base portion rigidly secured against the receptacle and an arm extending upwardly from its base portion and projecting above the receptacle, a tongue struck from the arm of each bracket with its lower end integrally united to the arm, the tongues being bent inwardly and downwardly to provide inverted U-shaped ears of the marginal portions of the arms and when bent downwardly providing resilient securing tongues overlying marginal edges of the receptacle in vertical spaced relation thereto, a bail having its ends formed with eyes engaged with the ears, and a cover resting upon the upper marginal edge of the receptacle and slid horizontally into place to dispose the tongues in overlying relation to opposed marginal portions of the cover, the said marginal portions of the cover being provided with upstanding lugs and said tongues being provided with seats receiving said lugs and frictionally gripping the same to securely but detachably hold the cover in place.

2,106,379
METHOD FOR MOUNTING PRINTING SURFACES
Edward George Newing, Dover, England
Application May 23, 1934, Serial No. 727,193
In Great Britain June 1, 1933
5 Claims. (Cl. 29—148)

1. A method of mounting metal printing process plates on bases of metal harder than the metal of the plates, comprising securing an intermediate plate of metal harder than the printing plate and provided with raised parts on its upper surface to the base, providing the under surface of the printing plate with depressions, and pressing the printing plate down upon the intermediate plate to cause the raised portions of the intermediate plate to cut into the under surface of the printing plate.



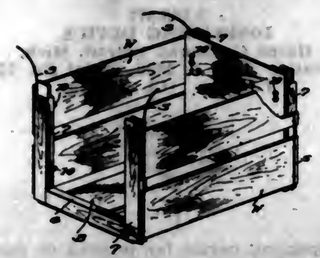
2,106,380
CONVEYER-DISTRIBUTOR FOR COTTON AND LIKE MATERIALS
Hugh Roberts, Jr., Columbus, Ga., assignor to Cen-Tennial Cotton Gin Company, Columbus, Ga., a corporation of Georgia
Application May 16, 1936, Serial No. 80,216
8 Claims. (Cl. 19—74)

1. A conveyer-distributor comprising a trough having at least two discharge openings longitudinally spaced along its bottom, a pair of conveyer screws positioned and arranged with their

axes substantially at the same level and extending along said trough and above the openings, means for rotating the screws so that their adjacent sides turn downwardly, and a ridge member in said trough extending upwardly between the screws and passing across at least one said opening to close a portion of the same beneath the space between the screws.

2,166,231
POURING SPOUT
Alvan S. Rough, Evansville, Ind.
Application October 7, 1935, Serial No. 43,955
7 Claims. (Cl. 221—23)

1. A paint can pouring spout in the form of an attachment for said can comprising a sheet metal spout provided at its inner end with an attaching portion including an inclined flange adapted to span the customary accommodation and retention channel constituting a permanent part of said can, said flange being formed with a downturned guard and retaining lip, and separate keeper means for sustaining the flange and spout in place.



2,166,232
PROCESS AND COMPOSITION FOR DYEING WITH ANILINE BLACK
Karl Schmidt, Krefeld, Germany
No Drawing. Application March 27, 1936, Serial No. 71,215. In Germany May 14, 1934
3 Claims. (Cl. 8—5)

2. In the dyeing and printing of textiles with aniline black, the step of treating the textile with a composition comprising an aniline salt, an oxidising agent, a heavy metal salt, at least one aromatic diamino organic catalyst and a quantity, amounting to at least one-quarter of the amount of the aniline salt employed, of at least one oxidizable and acid-binding substance selected from the group consisting of carbamide and degradation products of albumen substances.

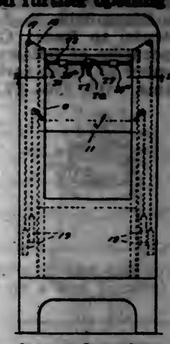
2,166,233
MANUFACTURE OF CARBOCYANINE DYES
Wilhelm Schneider, Dessau in Anhalt, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application June 4, 1934, Serial No. 729,021. In Germany June 10, 1933
3 Claims. (Cl. 260—44)

1. A process of producing a trimethine cyanine substituted at the central carbon atom, which comprises condensing with the application of heat the acid amide which is obtained by treating with a strong alkali a quaternary ammonium salt of an oxazole substituted in α-position to the nitrogen atom by a radical selected from the group consisting of alkyl, aralkyl, aryl, a hydroaromatic group and a heterocyclic group, with a quaternary ammonium salt of an azole selected from the group consisting of 2-methylbenzthiazole, 2-methylbenzselenazole, 2 - methylnaphthothiazole and 2-methylnaphthselenazole.

2,166,234
WIRE BOUND PACKAGE
Jack W. Simmons, Tallahassee, Fla.
Application March 9, 1936, Serial No. 67,971
2 Claims. (Cl. 217—47)

1. A collapsible package comprising in combination, a foldable unit consisting of opposed side walls and a bottom connected in loosely hinged relation by attached flexible binding elements, end cleats carried by the ends of said walls, headed studs carried by and projecting laterally inward of said cleats, detachable panels insertible and movable between said walls when in service position, and said panels being provided with key-hole slots adapted to take over said studs for interlocking said panels with said wall end cleats.

2,166,235
SHIM STRUCTURE
Ray W. Springer, Detroit, Mich.
Application February 28, 1936, Serial No. 66,155
3 Claims. (Cl. 154—43)



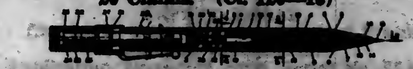
2. A load carrying shim consisting of a plurality of superimposed layers of relatively coarse woven fibrous material individually impregnated with rubber deposited from latex of a character rendering each layer relatively permanently tacky, said superimposed layers being compressed so that the latex is forced intimately into the porosities of the several layers forming a continuous connective resilient binder body extending throughout the several layers and bonding them securely together.

2,166,236
REFRIGERATOR CLOSURE MEANS
Newell Richard Tripp, Joplin, Mo.
Application September 24, 1936, Serial No. 102,394
2 Claims. (Cl. 20—19)

1. In a refrigerator having a vertical doorway therein, a pair of upper and lower doors closing the upper and lower halves of said doorway, respectively, and vertically slidable downwardly into opening positions, and over-balancing means for each door urging the same toward closing positions, the lower door having a ledge along the lower edge thereof in the path of opening movement of the upper door, said upper door

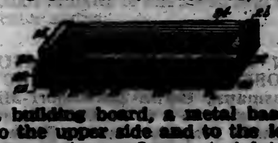
in the half-open position thereof engaging said ledge and upon further opening movement thereof moving the lower door toward opening position.

2,166,237
BUILDING UNIT AND WALL
John Wright Warren, Knoxville, Tenn.
Application November 16, 1932, Serial No. 643,374
7 Claims. (Cl. 72—39)



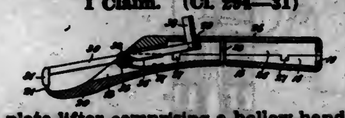
1. A building wall comprising a plurality of units arranged in horizontal courses, certain of the units having a horizontally extending depression and a vertical channel communicating with the depression, a veneer for the wall and a tie having a portion fastened to the veneer and in the depression and another portion embedded in the channel securing the veneer to the units.

2,166,238
PACKAGE
Raymond L. Wise, New York, N. Y.
Application April 11, 1935, Serial No. 15,847
13 Claims. (Cl. 229—51)



1. In a package, a sheet folded around to form front, back, and side walls, and projecting past an end, a slot in the sheet across one side at the foot of the projecting portion, a tab member having an upper glued surface inserted partially through said slot leaving a flap portion projecting outside, the parts of the sheet which project past the end being folded down over the end, and a revenue stamp applied transversely over the said end of the package, the inner end of said tab extending to under the edge of the revenue stamp, said tab body being substantially rectangular and of material stronger than that of the sheet and of approximately the full width of the side wall, its glued surface adhesively securing it to the sheet for the full width of the tab body and over substantially its entire surface.

2,166,239
MECHANICAL PENCIL
William H. Blake, Brooklyn, N. Y.
Application October 30, 1936, Serial No. 106,506
20 Claims. (Cl. 120—13)

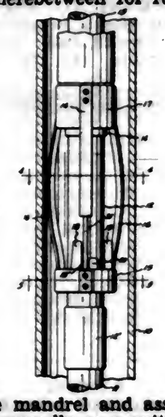


1. A pencil including a barrel provided with a thread, a rotatable, longitudinally slotted guide tube inserted in the forward end of the barrel with means to limit complete insertion therein, a lead holder axially movable in the tube having follower means projecting through the slot in said guide tube to engage said thread, manually rotatable means inserted into the other end of said barrel, and means to secure the last named means to the tube to maintain a driving connection therewith to rotate the tube positively in either direction.

2,166,240
BUILDING BOARD
Edward F. Crane, Newark, N. J., assignor to Norman E. Crane, Newark, N. J.
Application June 2, 1936, Serial No. 83,613
4 Claims. (Cl. 189—34)

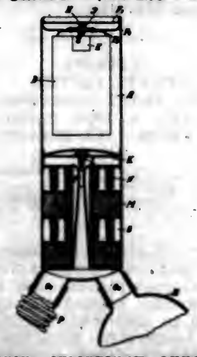
4. In a building board, a metal base, boards secured to the upper side and to the lower side of said base, waterproofing material interposed between the upper board and the base, and soundproofing material interposed between the lower board and the base.

2,166,291
PLATE LIFTER
Stanley Duraj, Russelton, Pa.
Application July 6, 1936, Serial No. 88,959
1 Claim. (Cl. 294—31)



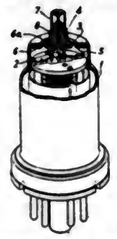
A plate lifter comprising a hollow handle composed of upper and lower sections riveted in registration, an upturned jaw on said lower section extending outwardly beyond the upper section, a lever pivoted in said lower section, said lever having a jaw cooperative with the first named jaw, an enclosed bowed spring to close said jaws, and a rigid thumb knob on said lever extending upwardly through the main portion of said upper section to cause separation of said jaws.

2,166,292
ANCHORING DEVICE
Samuel Allen Gulbertson, III, Dallas, Tex., assignor to The Gulbertson Corporation, Dallas, Tex., a corporation of Delaware
Application November 9, 1936, Serial No. 109,903
4 Claims. (Cl. 105—12)



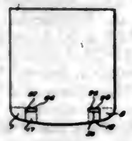
1. An anchoring device including, a mandrel, an elongate rib on the mandrel, a spring assem-

bly slidably mounted on the mandrel and including a ring surrounding the mandrel, elongate lugs on the ring for confining the rib within predetermined limits therebetween, a shorter lug on the ring adjacent one of the elongate lugs forming a notch therebetween for receiving the rib



to connect the mandrel and assembly whereby they move downwardly as a unit, said ring having a slot formed therein for receiving the rib and spaced from the notch, whereby the mandrel may move downwardly with relation to the assembly.

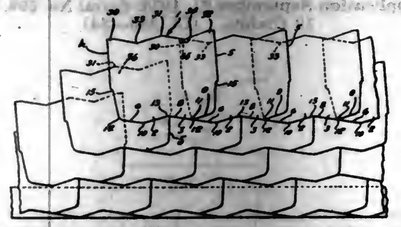
2,106,393
OXYGEN EMERGENCY APPARATUS WITH CLOSED RESPIRATORY CIRCUIT
Max Hausmann, Berlin-Zehlendorf-Mitte, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
Application October 21, 1936, Serial No. 106,729
In Germany December 5, 1929
3 Claims. (Cl. 128—191)



3. An oxygen emergency apparatus with a closed respiratory circuit comprising a gas chamber, means for generating oxygen in said chamber, a carbon dioxide absorption chamber adjacent said gas chamber, a nozzle attached to said gas chamber, a mixing tube surrounding and extending beyond the end of said nozzle, means disposed around said mixing tube for holding carbon dioxide absorption chemicals, a duct for leading at least part of the air exhaled by the user to a point adjacent the carbon dioxide absorption chemicals, discharge of generated oxygen through said nozzle into said mixing tube causing a circulation of exhaled air through said absorption chemicals.

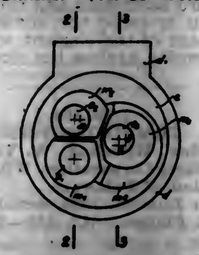
2,106,394
METAL TUBE LEAD-IN BUSHING
Loris E. Mitchell, Bloomfield, N. J., assignor, by mesne assignments, to Radio Corporation of America, a corporation of Delaware
Application November 25, 1936, Serial No. 112,635
3 Claims. (Cl. 250—27.5)

1. A radio receiving tube comprising a metal envelope, an opening in the wall of said envelope, a metal washer concentric with and sealed gas-tight to the envelope over said opening, a lead-in conductor extending centrally through the opening of said washer and insulatingly sealed gas-tight to said washer by a mass of glass of a temperature co-efficient of expansion substantially that of said washer, and a thimble-like contactor electrically connected to said conductor and mechanically supported on and insulated from said envelope by said mass of glass.



2,106,395
COVERING MATERIAL
John A. Topping, Bronxville, N. Y.
Application April 22, 1933, Serial No. 667,423
1 Claim. (Cl. 108—7)

An individual interlocking shingle having two like-extending side edges and an edge to be exposed extending generally transversely to said side edges, said shingle having a pair of slits in the body thereof extending inwardly from said edge to be exposed generally like-extending with said side edges, each of said slits lying between a side edge and the center of the shingle, said shingle for each slit also having a slot in the body thereof extending from said slit transversely thereto toward the center of the shingle.

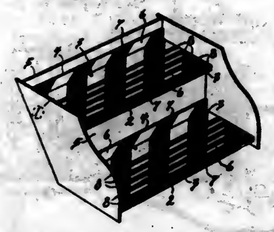


2,106,396
ROOF CONSTRUCTION
John A. Topping, Bronxville, N. Y.
Application September 28, 1933, Serial No. 691,295
15 Claims. (Cl. 108—7)

1. A roof construction comprising a plurality of roofing elements laid in overlapping courses and with a lateral edge of one element overlapping the element laid adjacent thereto in the course, said elements having the exposed coursewise edges thereof of serrated outline providing outwardly projecting portions, said outline having a part thereof extending from the outermost point of an outwardly projecting portion in a lateral direction to a point positioned with respect thereto inwardly of the element, said elements being laid in the roof with the outermost point of an outwardly projecting portion of one element substantially coincident with an inwardly positioned point of the adjacent element and with corre-

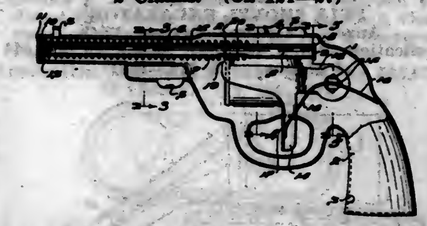
sponding points in the elements in each course substantially on a line parallel to the line of the course.

2,106,397
OPTICAL ADJUSTING DEVICE FOR CINEMATOGRAPHIC APPARATUS
Pierre Angénieux and Jean Marie Gutmann, Paris, France
Application April 6, 1935, Serial No. 15,004
In France April 16, 1934
4 Claims. (Cl. 88—16.4)



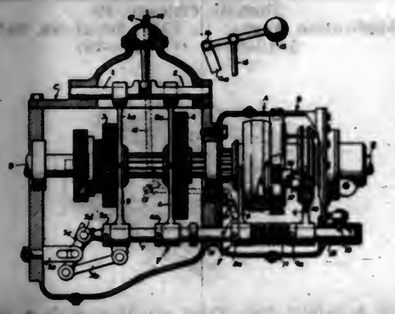
1. An adjustable optical device for a polychromic motion picture camera having a ring adapted to be fixedly mounted in a recess provided in the motion picture camera, a cylindrical block rotatably mounted in said ring, three objectives having their axes disposed at the apices of a triangle for projecting three pictures of the same scene on a standard strip of film, a mounting for each objective, the three mountings being positioned in said block and at least two of said mountings being rotatably received in said block, each on an axis eccentric to the optical axis of their corresponding objective, whereby the relative positions of the three objectives with respect to each other and the position of the whole of the three objectives with respect to the direction of movement of the film in the camera can be adjusted.

2,106,398
DRAWING INSTRUMENT
Alexander P. Bertasch, Lockport, N. Y.
Application May 10, 1935, Serial No. 20,783
5 Claims. (Cl. 33—27)



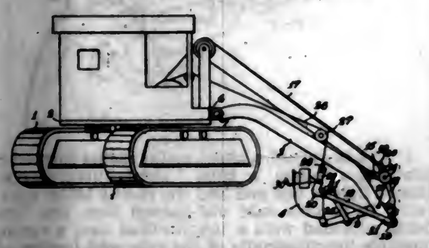
2. A scribing instrument for making ellipses, comprising a beam having holders thereon for a pivot stylus and scribing stylus, a supplementary holder adjustable lengthwise of the beam relative to said first-named holders and having a selective pivot stylus thereon adjustable axially to and from a pivot contacting position, and a spring for normally holding the supplementary pivot stylus at an elevation above that of the first-named pivot stylus.

2,106,399
SAFETY TREAD
Charles A. Beaumont, Decatur, and Frank Sherritt, Chicago, Ill.
Application August 12, 1935, Serial No. 35,800
5 Claims. (Cl. 20—79)



1. A safety step tread provided with a tread surface having contrasting color strips arranged diagonally of the tread and having spaced parallel strips of irregular surface anti-slip character arranged longitudinally of the tread and interrupting said color strips.

2,106,400
TOY PISTOL
Charles A. Brethen, Wyandotte, and John Gora, Ecorse, Mich., assignors to All Metal Products Company, Wyandotte, Mich., a corporation of Michigan
Application April 4, 1936, Serial No. 72,724
2 Claims. (Cl. 124—27)



1. In a toy pistol, a sheet metal casing formed to simulate a pistol, a tube having integral out-turned lugs at one end and the casing being apertured to receive said out-turned lugs, the tube being provided with a longitudinal slot, a spring movable longitudinally of the tube and having an end extending through said slot, a trigger member pivotally mounted in the casing and having a hook end, the trigger member being provided with a flange, a pair of hook lugs extending from the trigger member in spaced relation with the flange, a spring wire engaging in the hook lugs and against the flange of the trigger member at one end and engaging the casing at the opposite end, the arrangement being such that the spring wire tends to turn the trigger on its pivot to maintain the hook end in contact with the coils of the spring, the spring being compressible against the out-turned lugs of the tube and the hook end of the trigger member being engageable over the end of the spring when so compressed.

2,106,461
MOTOR CAR CONTROL DEVICE
Lindsay H. Browne, Rochester, N. Y., assignor, by mesne assignments, to Josiah Austice & Co. Inc., Rochester, N. Y., a corporation of New York
Original application October 16, 1931, Serial No. 569,189, now Patent No. 2,038,963. Divided and this application January 20, 1936, Serial No. 61,425. Renewed June 15, 1937
16 Claims. (Cl. 192—4)

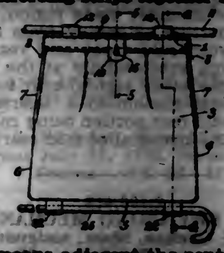
1. In combination in a self-propelled vehicle transmission mechanism, means for permitting rotative over-running of the driven shaft with respect to the power driving shaft when driving or set to drive the vehicle in a forward direction, means to automatically prevent back-rolling of the vehicle and interconnections for preventing the functioning of the back-rolling locking means, and simultaneously preventing the free over-running of the driven shaft or preventing the free over-running without change of the back-rolling means.

2,106,462
PULL SHOVEL EXCAVATOR
Angelo Carlesimo, Detroit, Mich.
Application March 10, 1937, Serial No. 130,644
4 Claims. (Cl. 214—138)

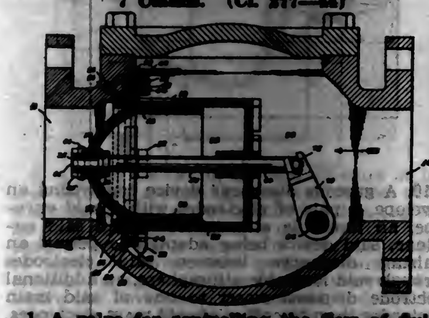
1. In a steam shovel employing a boom as a part thereof, in combination a tiltable dipper, a dipper stick provided with a plurality of selective bearings pivotally mounted in said boom, approximately at the end thereof, one end of said stick being pivotally attached to the back end of the dipper, the other end above its pivotal mounting on the boom being connected to means responsive to the pull of a cable, beam means pivotally mounted on said boom forward of the pivotal connection of the stick, the body of said beam means crossing the stick and being pivotally attached at the other end of the upper middle section of the dipper, and cable means to actuate the said dipper and said dipper stick.

2,106,463
VEHICLE BODY
Raymond L. Carr, Boston, Mass.
Application September 21, 1933, Serial No. 690,331
19 Claims. (Cl. 296—84)

6. In a vehicle body, the combination comprising windshield standard assemblies, and a forwardly curved or bulged glass screen therebetween, a flexible wiper element extending across the screen, and parts movable within the windshield standard assemblies and connected to the wiper element to cause the upward and downward movement of the element while pulling it taut under tension against the screen.



2,106,464
COMPOSITE PIPE
Wylie B. Ewing, Wheeling, W. Va., assignor to Wheeling Steel Corporation, Wheeling, W. Va., a corporation of Delaware
Application June 25, 1934, Serial No. 732,299
3 Claims. (Cl. 138—74)

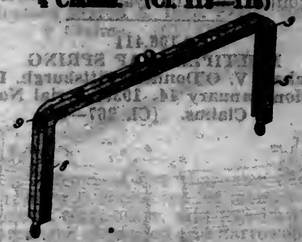


1. A composite pipe comprising a generally tubular member of relatively light construction as compared with thick-walled seamless tubes of comparable size adapted to withstand high pressures, said member having an opening through the wall thereof and having a portion of the material of said member at said opening extending inwardly generally toward the axis of said member and an auxiliary member having portions for attachment of a plurality of branch conduits and permanently connected with said member at said opening and embraced by said inwardly extending portion of the material of said member whereby to permit subsequent attachment of branch conduits at said portions of said auxiliary member.

2,106,465
CONTAINER
Clara D. Havemeyer, Chicago, Ill.
Application February 15, 1936, Serial No. 63,995
1 Claim. (Cl. 190—41)

A bag of generally flat construction having the walls thereof of flexible material, a continuous opening across the top and down each side thereof, reinforcing strips extending along the top at each side of the opening, an individual slide fastener for closing each side opening and forcing the reinforcing strips together and additional fastening means adjacent the center of the said strip for holding the strips together.

2,106,466
VALVE
William A. Heaney, Salem, Mass.
Application December 1, 1934, Serial No. 755,552
7 Claims. (Cl. 277—44)



1. A valve for controlling the flow of fluids, comprising a valve body having a fluid passage chamber therein and a recess in the body adjacent to the chamber, means providing a removable valve seat adjacent to the recess, a cooperating member within the recess engaging said means and having a threaded hole therein, and a screw threaded element in the hole of a length not greater than the distance between the two walls of the recess in alignment with the hole, one of said walls having a hole therethrough adapted to permit the passage of a wrench to engage and rotate said element and the element being of greater diameter than the last named hole and adapted upon rotation to crowd said member into tight holding contact with the valve seat means.

2,106,467
CAN TESTING DEVICE
Guy P. Hemsley, Gardena, Calif.
Application November 5, 1934, Serial No. 751,633
3 Claims. (Cl. 73—51)

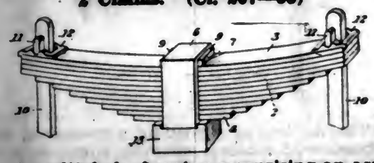
1. A checking device for filled and centrally sealed cans comprising a moving conveyor for carrying filled cans in an upright position, a plurality of vacuum cups positioned above the cans and movable along with the cans, means for moving the cans into engagement with the cups for causing the cups to contact with the can tops and to enclose the centrally sealed portion on the top, whereby the cups will continue to support the leak-proof cans above the conveyor and faulty cans will drop from their cups onto the conveyor, and means for freeing the leak-proof cans from their cups and for segregating them from the faulty cans.

2,106,468
METHOD OF MAKING FABRIC COVERED BAG FRAMES
William C. Hering, Newark, N. J., assignor to The J. E. Morgott Company, Newark, N. J., a corporation of Delaware
Application June 7, 1935, Serial No. 25,262
Renewed August 10, 1937
4 Claims. (Cl. 112—116)

1. The method of providing a U-shaped hand bag frame with a fabric covering, comprising covering a metal blank with the fabric, attaching said fabric to the blank by means of an adhesive then bending the covered blank into a channelled member, and then bending said member into a U-shaped frame member.

2,106,469
METHOD AND APPARATUS FOR THE EXTRACTION OF JUICES FROM VEGETABLE PULP AND THE LIKE
Clarence E. Jenkins, Keene, N. H., assignor, by direct and mesne assignments, to Beeji Corporation, trustee, Pittsburgh, Pa., a corporation of Delaware
Application September 26, 1931, Serial No. 565,274
23 Claims. (Cl. 100—37)

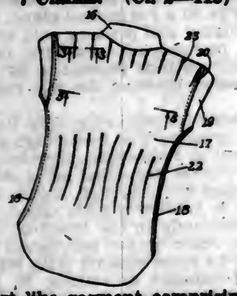
19. The method of extracting juice from pulp which comprises forming and continuously supplying pulp to an endless strip or procession positioned edgewise to a horizontal plane, simultaneously centrifuging and pressing said strip or procession, and permanently removing part of said pulp from said strip or procession by the difference in adhesion between the wet pulp and the dry pulp.



33. Apparatus for removing juice from pulp by a combined pressing and centrifuging, comprising a continuous foraminous member set edgewise to a horizontal plane and being substantially completely open at its bottom, means for driving the member at relatively high speed, means for supplying fresh pulp to the inner surface of the said member, roller means positioned within the said member to press against pulp on the inner face of said member to squeeze it, said roller means constituting the only means for cooperation with the inner surface of said member for

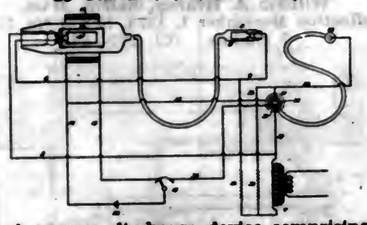
engaging pulp on said inner surface, said member and roller means cooperating to remove the substantially dehydrated pulp by selective action in which the substantially dehydrated pulp is projected from the member into the space enclosed by the member, from whence it falls clear of the member, and means at the outside of the foraminous member for collecting juice discharged centrifugally therefrom.

2,106,410
CERAMIC COMPOSITION
Andrew Malinovsky, South Gate, Calif.
No Drawing. Application January 18, 1936, Serial No. 59,793
3 Claims. (Cl. 106—36.3)



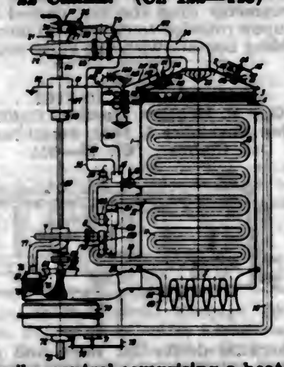
1. A ceramic composition comprising tremolite, bentonitic clay, and cyanite.

2,106,411
MULTIPLE LEAF SPRING
Michael V. O'Donnell, Pittsburgh, Pa.
Application January 14, 1936, Serial No. 59,063
2 Claims. (Cl. 267—53)



1. A multiple leaf spring comprising an assembly of superposed spring leaves having interfitting complementary projections and recesses at intermediate portions thereof for holding the leaves against relative longitudinal displacement, a band disposed about said intermediate portions of the leaves for holding the leaves together, said band lying in contact with an outside leaf of said assembly and having projection and recess interengagement with said outside leaf for holding the band and said leaf against relative longitudinal displacement, and positioning means lying between and in contact with the opposite outside leaf of said assembly and the inner surface of the band, the positioning means having projection and recess interengagement with said second mentioned outside leaf for holding the positioning means and said leaf against relative longitudinal displacement, and the positioning means and band being interlocked to hold them against relative longitudinal displacement.

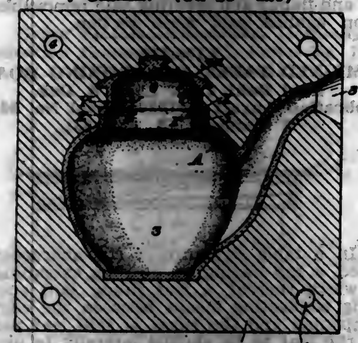
2,106,412
SHIRT
James Oviatt, Los Angeles, Calif.
Application October 21, 1936, Serial No. 106,836
7 Claims. (Cl. 2—115)



1. A shirt-like garment comprising front and rear portions joined together adjacent the shoulder of said garment, and arm scyes, said rear portion being oversize for a garment of any given size across the shoulder blade region, and tucks in said rear portion extending from the line of juncture between said front and rear portions and terminating substantially at the upper line of said shoulder blade region, said tucks bringing the shoulder portion to a desired size, the arm scyes of said rear portion being raised by the gathering of the material of said rear portion in said tucks.

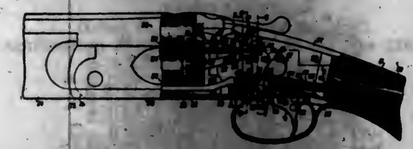
2,106,413
LAMP SWITCHING MECHANISM
Alfred J. Potté, Chelsea, Mass., assignor, by mesne assignments, to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application June 11, 1928, Serial No. 284,496
13 Claims. (Cl. 176—124)

10. A gaseous discharge device comprising an envelope, a pair of electrodes within said envelope, an ionizable atmosphere within said envelope, said device being adapted to permit an ionizing discharge between said electrodes through said ionizable atmosphere, an additional electrode disposed closer to one of said main electrodes than the other of said main electrodes, means for connecting said additional electrode to the other of said main electrodes, and means for controlling the current flowing between said closely-spaced electrodes to control the current flowing between said main electrodes.



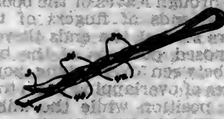
2,106,414
CONTROL SYSTEM
Nathan C. Price, Berkeley, Calif.
Application March 5, 1935, Serial No. 9,368
22 Claims. (Cl. 122—448)

22. A boiler control comprising a heated forced circulation boiler tube fed with a liquid such that vaporization occurs at a region in said tube, a variable volumetric metering means in said region for controlling a supply instrumentality



of said tube thereby to maintain a desired working condition in said tube, and said condition being related to the volumetric flow in said region.

2,106,415
METHOD AND APPARATUS FOR THE MOLDING OF COVERED CERAMIC RECEPTACLES
Bernard S. Purinton, East Liverpool, Ohio
Application July 27, 1936, Serial No. 92,751
7 Claims. (Cl. 25—129)



5. A mold for use in the manufacture of hollow ceramic articles having removable covers comprising a porous body into which a slip may be cast, said body having a mold cavity therein shaped to form a receptacle with an opening to receive a cover, said cavity having an extension juxtaposed to the part of the receptacle where the cover is to be received and which is shaped to form the cover for the receptacle, said mold cavity and extension being adapted to form the receptacle and the cover as a single unit in such manner that the cover and the receptacle can thereafter be separated by cutting.

2,106,416
MULTIPLE-BARREL FIREARM
Louis Stiennon, deceased, late of New Haven, Conn., by Roy L. Farrell, administrator, Pine Orchard, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a corporation of Maryland
Application June 20, 1935, Serial No. 27,518
6 Claims. (Cl. 42—40)

1. In a multiple-barrel firearm, the combination with two barrels arranged one over the other; a pair of independently-operable impact-members; a firing-plunger having an integral angularly-projecting firing-point and an impact-surface engageable by one of the said impact-members and extending forwardly and upwardly at an angle to the said firing-point and into a position to fire the cartridge in the uppermost of the two said barrels; a second firing-plunger having an integral angularly-projecting firing-point and an impact-surface adapted to be engaged by the other of the said impact-members and extending forwardly and downwardly at an angle to the said firing-point and into position to fire the cartridge in the lowermost of the two said barrels; and guide-means for each of the said firing-plungers constructed and arranged to guide the same and their firing-points and impact-surfaces in a direction substantially parallel with each other, the impact-surface of each of the said firing-plungers being in substantial alignment transversely of the firearm.

2,106,417
HAIRPIN
Edward I. Veitch, Piedmont, Calif., assignor, by mesne assignments, to Vogue Pin Company of California, Oakland, Calif., a corporation of California
Application March 6, 1935, Serial No. 9,630
2 Claims. (Cl. 132—50)

1. In a hairpin of the character described a pair of resiliently connected leg members, adapted to contact each other, said legs having alternately arranged expanded and narrowed portions throughout a portion of their length to form undulating side edges and said undulations being staggered with relation to each other.

2,106,418
CAR VENTILATOR
Hans Wagner, Magdeburg, Germany
Application February 4, 1936, Serial No. 62,355
In Germany April 3, 1935
1 Claim. (Cl. 98—2)

Ventilating means for windows of closed automobiles comprising a series of brackets each including a main portion of substantially triangular configuration, the inner edge of the base of which is provided with a recess for receiving with a tight fit the apex of the adjacent main portion so that the several main portions form a continuous closed surface for arrangement along the upper part of the frame of a window and conforming to the curvature of the window frame, an attaching flange integral with the inner edge of the main portion and adapted to be secured to the window frame in such a manner that the main portion of the bracket extends laterally from the window and exteriorly of the automobile, the outer edge of each main portion being inclined toward the front of the automobile, a louver member depending from the main portion of each bracket and positioned adjacent and substantially parallel to each inclined outer edge of the said main portion, said louver members being so positioned that when the automobile is in motion a current of air passing over the surfaces thereof creates a vacuum at the open outer ends to exhaust used air from the interior of the automobile.

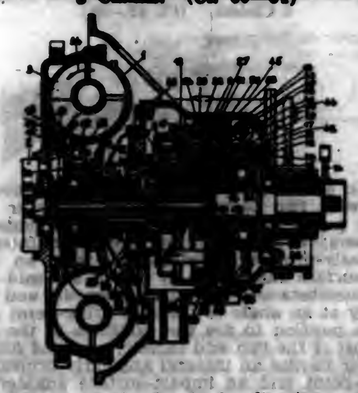
2,106,419
METHOD OF BINDING BOOKS
Carl J. H. Andersen, Newark, Del.
Application March 18, 1937, Serial No. 131,577
7 Claims. (Cl. 281—21)

6. The method of binding a book with a binder of the character described which comprises forming the binder in U shape, inserting fingers of the of the binder through leaves of the book, applying adhesive to the ends of fingers of the binder, bending fingers so that the ends thereof overlap oppositely disposed portions of the binder with the adhesive between overlapping portions, and fusing the edges of overlapping parts to hold them in overlapped position while the adhesive sets.

2,106,420
WINDOW FIXTURE
Gilbert E. Alphin, Mount Olive, N. C.
Application January 14, 1937, Serial No. 120,804
9 Claims. (Cl. 248—252)

1. A window fixture comprising a horizontally elongated bracket-carrying strip having a central opening, a plate lying against the central portion of said strip and having an opening alined with the aforesaid opening, one screw or nail driven through both of said openings into a window frame and constituting the sole means for attaching both said strip and said plate to said window frame, and an arm projecting from said plate to support an intermediate portion of a rod.

2,106,421
CIRCUMFERENTIALLY DIVIDED WHEEL RIM
William Jared Cox, Woodruff, Utah
Application November 4, 1935, Serial No. 48,942
Renewed November 10, 1937
1 Claim. (Cl. 152—21)



A circumferentially divided wheel rim comprising a continuous one-piece inner rim, one annular web surrounding said inner rim and integrally joined to the inner edge thereof, a second annular web surrounding said inner rim and integrally joined thereto substantially midway between the inner and outer edges of said inner rim, a main outer rim section surrounding both of said webs and integrally joined near its inner edge to said one web, said main rim section being integrally joined between its edges to said second web and projecting outwardly from the same to a lesser extent than said inner rim projects therefrom, a removable rim section abutting the outer edge of said main rim section, said removable rim section having an annular flange widely spaced outwardly from said second web and snugly surrounding the outer edge portion of said inner rim, and bolts passing through said webs and flange and securing said removable rim section against said main section.

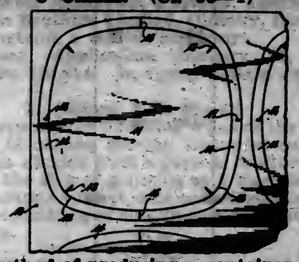
2,106,422
COMBINED TABLE AND IRONING BOARD
Fred Dahl, Clear Lake, S. Dak.
Application August 6, 1936, Serial No. 94,637
3 Claims. (Cl. 38—105)

1. In a table structure of the character described, a top having an opening extending the full width thereof, a leaf filling said opening, sliding connecting means between the edges of the opening and the edges of said leaf permitting the leaf to be shifted laterally to uncover the opening, a board having a width through a portion of its length sufficient to fill a portion of the opening when the leaf has been shifted to one position therein, said leaf when shifted to said one position having an end projecting beyond one side of the table top and said board when in the opening having an end projecting beyond the opposite side of the table top, supporting means beneath the table top for the board when the leaf is in position to entirely fill the opening, means for retaining the leaf in opening filled position, and resilient means connected with the leaf and the board whereby upon release of said retaining means the leaf and board will move in opposite directions to dispose them in projecting relation with the sides of the table top as described.

2,106,423
HYDRAULIC TRANSMISSION
Dimitri Semenoff de Lovenzi, Paris, France
Application July 2, 1934, Serial No. 733,696
In France July 3, 1933
8 Claims. (Cl. 60—54)

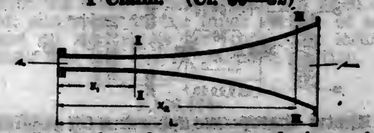
1. Improvements in hydraulic transmission mechanism comprising a driving shaft, a driven shaft, a rigid member including a pump keyed on said driving shaft, a rigid member including a turbine keyed on said driven shaft, a vane stator between the turbine and the pump, means actuated by the centrifugal force at a certain speed of one of said shafts to rigidly connect said driving and driven shafts, said means wedging between rigid members on the driving and driven shafts respectively.

2,106,424
TRAFFIC-LINE TOY
Georg Einfalt, Nuremberg, Germany
Application January 25, 1937, Serial No. 122,617
4 Claims. (Cl. 246—117)



1. A toy traffic-line comprising two tracks crossing each other at a crossing point and having on each side of the crossing point a recess elongated in the longitudinal direction of the track, in combination with signalling means indicating that the traffic along one track is free to move and along the other one that it has to stop, an automatically driven vehicle on the tracks, sliding elongated platforms capable of bringing the said vehicle to a stop, said sliding elongated platforms corresponding to and filling the elongated recesses in the track and being capable of dropping below the surface of the track, whereby the recesses are exposed, means for simultaneously operating the elongated platforms, so that on one track the said platforms will not interfere with the running of the vehicle and on the other track they will bring it to a stop, and for simultaneously operating the signalling means which indicate that along the one track the vehicle is free to move and along the other track that it has to stop; means on the track which are normally operative to maintain the said platforms inoperative, except when the vehicle passes over an exposed recess, and a stop mechanism on the vehicle with which the sliding platforms are adapted to co-operate to prevent or permit its operation.

2,106,425
CONTAINER
Helen G. Grant, Asheville, N. C.
Application January 16, 1937, Serial No. 120,969
7 Claims. (Cl. 206—44)



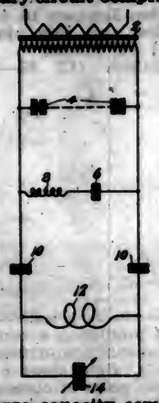
1. A container comprising a base for supporting a product, and a hood formed of a plurality of arch strips in overlying relation to and each attached at its opposite ends to said base and a sheet of covering material overlying said arches and being secured against the under side of said base, each of said arch strips being relatively thin and of relatively great width and positioned with the greater dimension thereof lying in a plane perpendicular to the surface of the said base.

2,106,426
CONTAINER AND METHOD OF MAKING THE SAME
Helen G. Grant, Asheville, N. C.
Original application January 16, 1937, Serial No. 120,969. Divided and this application June 23, 1937, Serial No. 149,961
3 Claims. (Cl. 93—1)

1. A method of producing a container support from flat sheet material comprising forming from a flat, substantially rigid sheet a base member having at least two pairs of openings in the surface thereof and at least two arched members from that portion of the sheet immediately adjacent the portion of which the base member is constituted, thereafter inserting the arched members into the said openings in the base member with the said arched members their greatest cross sectional dimension arranged perpendicular to the plane of the base member and with the greater portion of the length thereof spaced above the base member.

2,106,427
EXHAUST PIPE FOR INTERNAL COMBUSTION ENGINES
Oscar Hansson, Goteborg, Sweden
Application March 12, 1936, Serial No. 68,554
In Sweden October 16, 1935
1 Claim. (Cl. 60—32)

A diffuser shaped vacuum-producing exhaust pipe for internal combustion engines, blowers or the like characterized by the feature that the diffuser shape is determined by the following formula:



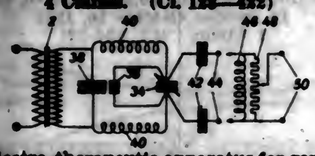
$$s = \frac{1}{\frac{1}{s_0} - \frac{1}{L}\left(\frac{1}{s_0} - \frac{1}{s_{max}}\right) \cdot x}$$

in which formula s is the variable cross section at the distance x from the smallest cross section s_0, while s_{max} is the largest cross section, and L is the length of the diffuser measured between the cross sections s_0 and s_{max}.

2,106,428
DIATHERMIC APPARATUS WITH QUENCHED SPARK-GAP
Josef Hofmann, Berlin-Reinickendorf-Ost, Germany, assignor to Elektrizitätsgesellschaft "Sanitas", Berlin, Germany, a corporation of Germany
Application February 21, 1933, Serial No. 657,793
In Germany February 25, 1932
8 Claims. (Cl. 128—422)

1. Diathermic apparatus for generating short or ultra-short waves comprising, in combination,

an oscillatory circuit including a condenser of relatively small capacity and a quenched spark-gap; an auxiliary circuit in parallel to said spark gap, said auxiliary circuit comprising a condenser



of relatively large capacity compared to that of said first-named condenser; a self-induction preceding said condenser in said auxiliary circuit; and a treatment capacity connected to said oscillatory circuit.

2,106,429

ELECTROTHERAPEUTIC APPARATUS

Josef Hofmann, Berlin-Reinickendorf-Ost, Germany, assignor to Elektricitätsgesellschaft "Sanitas" G. m. b. H., Berlin, Germany, a corporation of Germany

Application December 21, 1933, Serial No. 703,283
In Germany December 23, 1932
4 Claims. (Cl. 128—422)

1. Electro-therapeutic apparatus for generating short or ultra short waves, comprising, in combination, means to generate short waves including an impulse circuit; containing a condenser; a series spark-gap having its two ends connected to the two terminals, respectively, of said condenser; an auxiliary circuit parallel to said spark gap; a self-inductance and a capacity in said auxiliary circuit, said self-inductance being as large as feasible without danger of arcing at said spark-gap terminals serving to connect said short wave generator with the electrodes for short wave treatment; a long wave generating circuit comprising said spark gap and condenser means and means to connect said long wave generating circuit to said terminals.

2,106,430

EXTINGUISHER

Joseph Humblet, Brussels, Belgium

Application March 22, 1934, Serial No. 717,106
In Belgium and France March 27, 1933
4 Claims. (Cl. 169—11)

3. In an extinguisher filled with an extinguishing substance under pressure, a discharge head including a diaphragm and a discharge passage, a percuting plunger and guide means for said plunger in said head at one side of said diaphragm, means for moving the plunger away from the diaphragm and a ring of toothed-shaped projections located at the inner end of the plunger for cutting out a portion of the diaphragm, said projections providing means for retaining the cut-out portion of said diaphragm on the plunger whereby such portion is carried with the plunger when said plunger is moved through said diaphragm and liberated therefrom.

2,106,431

MANUFACTURE OF PAPER OR LIKE BAG TUBES OR BAGS

Alfred James Jones, Bristol, England, assignor to E. S. & A. Robinson, Limited, Bristol, England

Application August 15, 1934, Serial No. 740,015
In Great Britain August 22, 1933
18 Claims. (Cl. 93—18)

1. A method of forming bags or bag tubes of the character specified consisting in forming a tube from a web, transposing the sides of the tube, severing the tube with a compound cut into bag tube lengths and transposing the position of the cut edges so that the edges of the mouth of the tubes or finished bags lie substantially out of register and provide a closure flap or overlap.

8. Apparatus for making bags or bag tubes of the character specified comprising continuous tube forming mechanism, means for opening and flattening the tube in a plane substantially at right-angles to the plane of formation of the tube, a smooth knife for severing the tube into bag tube lengths and means for reopening the tubes and reflattening them at right-angles to the plane wherein the tube was cut.

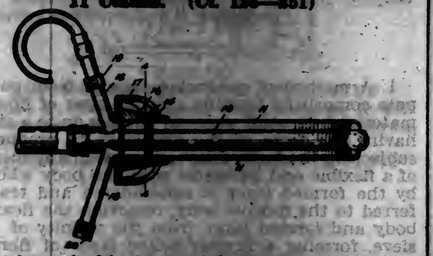
2,106,432

SAILING CRAFT

Malcolm McIntyre, Old Greenwich, Conn.

Application June 27, 1934, Serial No. 732,714
22 Claims. (Cl. 114—39)

1. A sailing craft of the catamaran type having two similar hulls and a fore and aft rig, a mast carried thereby, a sail carried by said mast, a boom on said sail, and struts spaced longitudinally of said hulls and pivotally connected to said hulls at corresponding points thereon, said struts holding said hulls parallel but permitting one hull to be advanced with respect to the other,



in combination with means for holding said boom at right angles to one of the struts as a hull is advanced and means controlling the advancement of the hulls.

2,106,433

DISTENSION DOUCHE

William E. Mease, Rapid City, S. Dak.

Application November 16, 1936, Serial No. 111,124
11 Claims. (Cl. 128—251)

1. A surgical instrument for treating body cavities including a pair of elongated blades arranged side by side, means for rotatably assembling said blades adjacent one end with their axes of rotation parallel, said blades including portions angulated beyond the point of assembly and adapted to be inserted in the body cavity, and means for rotating at least one of said blades with reference to the other.

2,106,434

KNITTING MACHINERY

James Marion and Robert Stewart Erskine Hannay, Chorlton, England, assignors to F. N. F. Limited, Purley Way, Croydon, England, a British company

Application November 12, 1936, Serial No. 110,540
In Great Britain February 21, 1936
12 Claims. (Cl. 66—86)

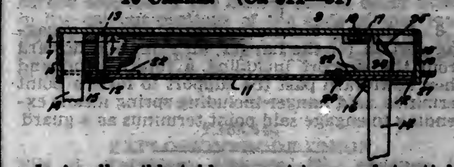
1. Mechanism for imparting patterning motion to a guide bar in a warp knitting machine, said mechanism comprising in combination a cam, an intermediate cam follower through the medium of which said cam is operative to act upon the guide bar to impart movement to the latter, and means interconnecting said cam and said follower for moving simultaneously in timed relation with said cam said follower to and fro in a direction transversely to the direction in which movement is imparted by said cam to the guide bar, whereby the rate at which movement is transmitted from said cam to the guide bar is varied.

2,106,435

ABSORPTION OF ACIDIC GASES

Doric William Parker and Richard Bromley Evans, West Bromwich, England, assignors to Robinson Brothers Limited, Oldbury, Birmingham, England, a British company

No Drawing. Application January 16, 1937, Serial No. 121,014. In Great Britain January 20, 1936
11 Claims. (Cl. 23—2)



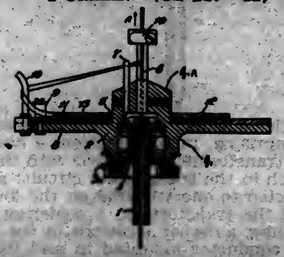
1. In a process for removing a gas of the group consisting of carbon dioxide, hydrogen sulphide and sulphur dioxide from a gaseous mixture containing it, the step of bringing said gaseous mixture into contact with at least one substance from the group consisting of the dipiperidyls and their homologues.

2,106,436

TABLE

Marie Bruce Pyle, Dallas, Tex.

Application August 5, 1937, Serial No. 157,594
10 Claims. (Cl. 311—81)



1. A collapsible table comprising a substantially square top, having a skirt depending from each edge thereof, a shelf fitting snugly and slidably within the space defined by said skirts, said shelf being recessed at each corner thereof, table legs hinged between their ends to said shelf to swing into and out of said recesses and to contact with the inner surface of said top when extended, and stops on the inner surface of said top and on said skirts for frictionally locking said shelf and said legs in extended position.

2,106,437

MACHINE FOR COVERING WIRE WITH A HELICAL WRAPPING

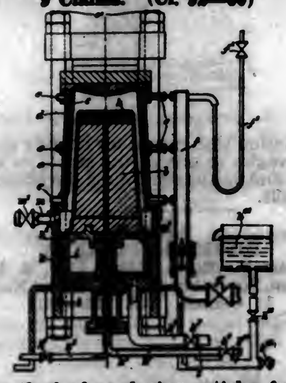
Alexander John Sands, Westminster, London, England, assignor to The London Electric Wire Company and Smiths Limited, London, England, a corporation of Great Britain

Application October 5, 1936, Serial No. 104,124
In Great Britain August 18, 1936
4 Claims. (Cl. 117—41)

1. In a machine for providing wire with a helical wrapping, a disc-like head, said disc-like head being arranged to rotate about a wire which passes vertically through the axis of said head, an annular package of wrapping material in

tape-like convolute form supported on said disc-like head having an effective contact with said head at the periphery of said package only, so that the tension in the wrapping material is maintained constant by the weight of the wrapping material on the surface at all periods during a wrapping operation.

2,166,438
DRAPERY HANGER
Fred J. Schwartz, Toledo, Ohio
Application July 24, 1936, Serial No. 92,467
8 Claims. (Cl. 156—21)

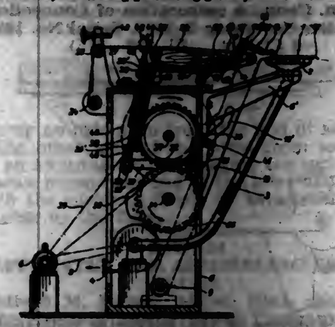


8. A drapery hanger having a support engaging portion for the hanger, an extension upward from the support including a return bend and then downward past the support to form a point terminus, said hanger including spring means extending to engage said point terminus as a guard.

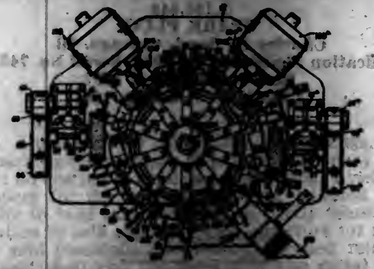
2,166,439
ELECTRIC SOLDERING IRON
Julius Schubert, Long Island City, N. Y., assignor to Steiner Bros. Inc., Long Island City, N. Y., a corporation of New York
Application November 4, 1935, Serial No. 48,253
1 Claim. (Cl. 219—26)

An electric soldering tool of the character described comprising, in combination, a handle; a step-down transformer associated with the handle; a switch in the transformer circuit; a metal tube connected to one terminal on the low voltage side of the transformer; a soldering tip on the metal tube; a carbon electrode in the soldering tip; a conductor mounted in and insulated from the tube; and a combined compression spring and conductor connecting the upper end of the rod to the low voltage side of the transformer to maintain said rod in contact with said electrode.

2,166,440
APPARATUS FOR THE FORMING OF THICK PAPER ARTICLES, SUCH AS BARRELS, TUBS, PLATES, AND THE LIKE
Ewen Ross Smith, Penig in Saxony, Germany
Application May 3, 1934, Serial No. 723,774. Renewed December 18, 1937. In Great Britain May 5, 1933
9 Claims. (Cl. 92—60)



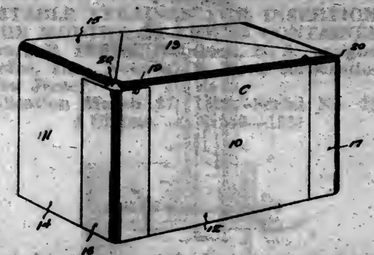
1. A method of producing articles from paper pulp comprising forming a felted layer of fibrous material from stuff water by suction on to a sieve having the form of the article to be produced, subjecting the formed layer to pressure by means of a flexible and inflatable couching body whereby the formed layer is consolidated and transferred to the flexible body, removing the flexible body and formed layer from the vicinity of the sieve, forming a further felted layer of fibrous material on the sieve, subjecting said further formed layer to pressure by means of said flexible body whereby said layer is consolidated and transferred to the previously formed layer on the flexible body, repeating the process until the last layer required to make up the desired total thickness of the article is formed on the sieve and couched, subjecting said layer to high pressure by inflating the flexible body whereby all said layers are consolidated together, and removing the article from the flexible body.



4. Apparatus for carrying out the herein described method comprising in combination an outer form having an inner wall of sieve-like construction on to which paper pulp is deposited by suction, an inner form having a grooved surface spaced apart from and movable in relation to the outer form and having a flexible and inextensible, inflatable couching body thereon having exterior superficial dimensions corresponding with the superficial dimensions of the interior of the sieve wall, means for bringing the inner form and couching body into close proximity with the sieve wall and means for admitting pressure medium between the inner form and the couching body.

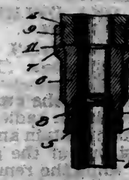
2,166,441
APPARATUS FOR PLACING WRAPPERS ON THE ROLLING APRON OF A CIGAR ROLLING DEVICE
Franz Heinrich Bonne Steiner, Dresden, Germany, assignor to "Universalia" Cigarettenmaschinen-Fabrik J. C. Müller & Co., Dresden, Germany
Application November 30, 1932, Serial No. 645,667
In Germany December 15, 1931
23 Claims. (Cl. 131—42)

1. In a cigar bunching apparatus, the combination of a rolling table, an apron associated with said rolling table, a roller cooperating with said apron, means moving said roller to and fro above said table, a wrapper support, means for gripping an end of a wrapper upon said support while leaving a portion of said wrapper free and means for moving said wrapper from said support whereby said wrapper is smoothed.



2,166,442
BUFFING METHOD AND APPARATUS
Horace D. Stevens, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application April 24, 1935, Serial No. 17,940
13 Claims. (Cl. 15—21)

9. In apparatus for buffing valve stem base flanges, the combination of a support for a valve stem, the upper face of said support being inclined whereby it holds the base flange of said stem in tilted position with relation to the horizontal, means for moving said support in a continuous course in a horizontal plane, abrading means positioned at spaced points along said course, each of said means being positioned in the path of the trailing portion only of the base flange of said valve stem, and means intermediate said abrading means for turning the valve stem angularly on its own axis through 180°.

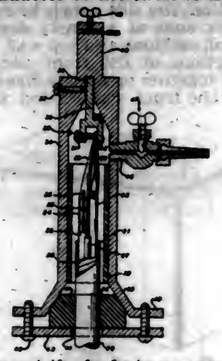


2,166,443
PLYWOOD AND FURNITURE MADE THEREFROM
Francis C. O. Thesman, Sheboygan, Wis., assignor to Frost Veneer and Plywood Company, Sheboygan, Wis.
Application March 22, 1935, Serial No. 11,248
2 Claims. (Cl. 312—140.1)

1. A counter, counter front, or other article of furniture, comprising a front plywood panel and side plywood panels, the front plywood panel being provided with a ninety degree bend intermediate its end formed on a short arc of a circle to provide a continuous front wall section and a top wall section, the side panels being bent intermediate their ends at a ninety degree angle to form side wall sections and top wall sections, the top wall sections of the front and side panels being mated together on a forty-five degree angle, the ends of the front wall section and the front

ends of the side wall sections being cut away, and corner panels provided with ninety degree bends to form front and side corner sections, the front corner sections of the corner panels being fitted in the cut-out portions of the ends of the front wall section and the side corner sections of the corner panels being fitted in the cut-out portions of the side wall sections.

2,166,444
EXPLOSIONPROOF UNION
Nils A. Tornblom, Chicago, Ill., assignor to Appleton Electric Company, a corporation of Illinois
Application March 22, 1936, Serial No. 70,223
3 Claims. (Cl. 285—190)



1. A union composed of a sleeve and a nut surrounding the same, the nut having at one end an enlarged screw-threaded bore and an internal shoulder inwardly from said bore, the sleeve having at the corresponding end an external shoulder adapted to be engaged by the said internal shoulder in the nut and at the other end an external shoulder adapted to engage the corresponding end of the nut when the latter is retracted and thus prevent the nut from being slipped off either end of the sleeve, the sleeve and the nut having long cylindrical bearing surfaces fitting closely together while permitting relative rotary and sliding movements.

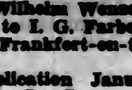
2,166,445
DRYING DEVICE
Lorentz G. Wade, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application March 25, 1936, Serial No. 70,761
6 Claims. (Cl. 34—20)

2. A device for drying electric cables comprising a hollow metallic body to receive an end of an electric cable, insulating means to seal the

body to the outer surface of the cable, means to connect a conductor of the cable to the body, and

means to connect the body to a source of electric current.

2,106,446



REMOVAL OF GASEOUS WEAK ACIDS FROM GASES CONTAINING THE SAME

Hans Bechr and Wilhelm Wenzel, Leuna, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany

No Drawing. Application January 26, 1935, Serial No. 3,676. In Germany February 1, 1934

8 Claims. (Cl. 23—2)

1. The process of removing a gaseous weak acid from a gas containing the same which comprises scrubbing said gas with a washing liquid comprising a base containing at least two atoms of nitrogen and corresponding to the general formula

in which B is selected from the group consisting of the aliphatic hydrocarbon radicles and those derivatives thereof which contain an amino group, and in which at least one of the groups A is a hydroxy alkyl group, while the remaining groups A are selected from the class consisting of hydrogen, the alkyl and hydroxy alkyl groups.

6. The process of removing a gaseous weak acid from a gas containing the same which comprises scrubbing said gas with a washing liquid comprising dihydroxyethyl-ethylene-diamine.

2,106,447

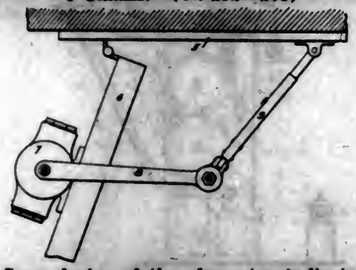
PIGMENTED COMPOSITION

George Barsky, New York, N. Y., and Gustave Kleinenstein, Maplewood, and Charles Rohlader, Newark, N. J., and Clarence F. Silleck, Brooklyn, N. Y., assignors to C. J. Osborne Co., New York, N. Y., a corporation of New York, and Maas & Waldstein Co., Newark, N. J., a corporation of New Jersey

No Drawing. Application June 5, 1936, Serial No. 82,006

10 Claims. (Cl. 134—79)

1. A pigmented composition for lacquers and the like comprising carbon black, a cellulose ester and an aromatic di-amino compound, the amino groups being linked to different carbon atoms, the quantity of said di-amino compound present being sufficient to act as a dispersing agent and as a stabilizer for the dispersion of carbon black.



2,106,448

MOLD OPEN DEVICE

Benjamin S. Bernhard, Boston, Mass., assignor to The American Hardware Corporation, New Britain, Conn., a corporation of Connecticut

Application November 5, 1936, Serial No. 109,244

6 Claims. (Cl. 292—275)

1. In a device of the character indicated, an arm having a through bore and counterbores at opposite sides thereof, an arm having a cam member with a bearing portion fitting in one of said counterbores and extending into said through bore, a bearing plate bearing in said other counterbore and secured to said cam member, whereby the latter is journaled on said arm on opposite sides thereof, said cam member having an eccentric portion engageable with a cam surface within said opening upon relative rotation between said arm and cam member.

2,106,449

SPARK PLUG

Charles R. Boyd, Chicago, Ill.

Application September 12, 1934, Serial No. 743,669

Renewed March 5, 1937

4 Claims. (Cl. 123—169)

1. A spark plug comprising a metallic shell adapted to be threaded into a cylinder wall, a ground electrode diametrically positioned with respect to said shell and fixedly secured at its ends to the lower end of said shell, an insulating electrode-retaining body positioned centrally within said shell and removably secured thereto to provide an axial spark gap, said shell having notched openings formed therein adjacent the lower end thereof and above said ground electrode, said notched openings being so formed as to leave a substantially thin ring-shaped portion at the lower end of said shell and said openings being laterally disposed with respect to the axial spark gap between the electrodes.

2,106,450

CONTROL

Kemper P. Brace, South Bend, Ind., assignor to International Engineering Corporation, Chicago, Ill., a corporation of Illinois

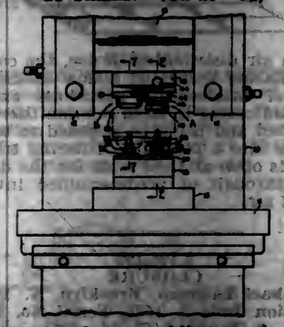
Application August 21, 1936, Serial No. 97,102

2 Claims. (Cl. 200—140)

1. A thermostatic control or the like comprising a switch, a pivoted lever having on one side

of its pivot a part with a relatively small throw arranged to actuate said switch, an expansible chamber engaging said lever on the other side of the pivot from said part and containing an operating fluid and having relatively little inherent resilience, a leaf spring secured to and

forming an extension from the end of said lever on the other side of the pivot from said part, and an adjustable stop engaging the spring some distance beyond the end of the lever and against which the spring is forced by expansion of said chamber by the fluid.



2,106,451

APPARATUS FOR ASSEMBLING SPARK PLUGS

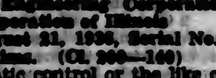
Archibald M. Brown, Akron, Ohio, assignor to The Firestone Steel Products Company, Akron, Ohio, a corporation of Ohio

Application January 28, 1936, Serial No. 61,162

14 Claims. (Cl. 29—24)

1. Apparatus for assembling spark plugs, said apparatus comprising a relatively stationary support for the metal shell of a spark plug, a yielding support for the porcelain thereof adapted normally to hold said porcelain in partly telescoped relation to said shell, a punch structure for moving said porcelain into fully telescoped relation to said shell and for deforming the metal gaskets about the porcelain, and means adapted to engage the porcelain and to position it concentrically with relation to the punch before the latter moves the porcelain toward fully telescoped relation with the shell, said porcelain centering means being operated by the pressure of the punch upon the porcelain.

2,106,452



REACTION PRODUCT AND PROCESS

Herman A. Bruson and Lloyd W. Covert, Philadelphia, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa.

No Drawing. Original application October 27, 1934, Serial No. 749,978, now Patent No. 2,063,434. Divided and this application March 14, 1936, Serial No. 68,944

6 Claims. (Cl. 260—3)

1. In a process for preparing a resin the step which consists of heating a material which consists of perhydro derivatives of compounds of the formula

wherein R is an aromatic hydrocarbon nucleus,

X and X' represent hydrogen, alkyl, aryl, or jointly a polymethylene ring, to a temperature above their melting points, but below their critical cracking temperatures, until their crystalline character disappears.

2,106,453

PORTABLE STRAINER FOR INSERTION IN THE MOUTHS OF LIQUID CONTAINERS

Edward R. Ekdahl, Irvington, N. J., assignor to Safco, Inc., Newark, N. J., a corporation of New Jersey

Application March 27, 1935, Serial No. 13,199

4 Claims. (Cl. 210—155)

1. A new article of manufacture substantially such as herein described comprising a circular disc of spring metal having an integral tab projecting from its edge and bent so as to form a clamp for engaging an edge portion of the wall around the mouth of any liquid container in which said disc may be inserted; other portions of said disc being slotted to form a plurality of parallel fingers to form a strainer for liquid poured from said container mouth while said disc is held therein.

2,106,454

WIRE COILING AND INTERWEAVING MECHANISM

Parmenas F. Frost, Mount Vernon, N. Y., and John C. Anderson, Keyport, N. J.

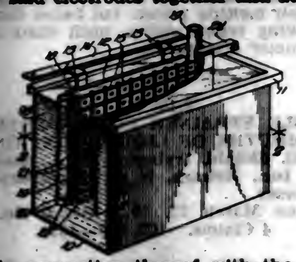
Application February 18, 1936, Serial No. 64,426

10 Claims. (Cl. 140—8)

1. In mechanism for producing looped wire netting, a tubular die having a spiral groove through the wall thereof and extending longitudinally thereof with at least the major portion thereof at a pitch in excess of 45°, a mandrel extending through said die, a tubular sleeve member fitting around said die, and means at the entrance end of said die for facilitating introduction of a wire into the groove of the die.

2,106,455

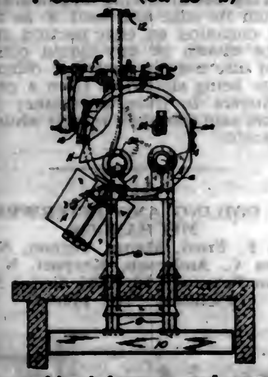
APPARATUS FOR ELECTRICAL ETCHING



Joseph Hemert, Chicago, Ill.

Application October 14, 1935, Serial No. 44,900

7 Claims. (Cl. 204—5)

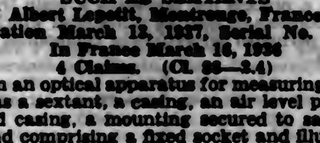


1. In an electrical etching apparatus, a cathode including a group of relatively small electrodes arranged in co-planar relation, said relatively small electrodes of said group being substantially uniformly spaced apart both vertically

and horizontally, and means electrically connecting said electrodes together and adapted to

facilitate connection thereof with the negative pole of a source of electricity.

2,106,456
APPARATUS FOR HANDLING MOLTEN METAL
Karl S. Howard, Bryn Mawr, and John H. Locke, Villanova, Pa., assignors, by mesne assignments, to Ajax Electric Furnace Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application July 24, 1935, Serial No. 32,922
7 Claims. (Cl. 13—8)



1. In a combined furnace and pouring ladle, an electric heating unit at one side of the furnace, a fuel burner at the other side of the furnace, and charging and discharging openings in the wall of said furnace intermediate said unit and burner.

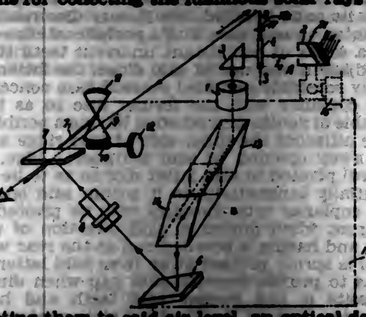
2,106,457
WOVEN FABRIC
Eli Hyman, Brookline, Mass., assignor to Hy-Sil Manufacturing Company, Revere, Mass., a corporation of Massachusetts
Application September 26, 1934, Serial No. 745,578
6 Claims. (Cl. 139—420)

1. As an article of manufacture, a lustrous fabric comprising series of flat warp and woof bands, the bands of one series consisting of flat, flexible strips of a material having a metallic lustre and the bands of the other series consisting of flat strips of a flexible transparent material with at least some of the bands being twisted at spaced intervals through an angle of 180° to produce facets reflecting light with a scintillating effect, the band being in a flat condition between said intervals, said fabric having the appearance of being composed entirely of bands having a metallic lustre.

2,106,458
AIR DISTRIBUTING DEVICE
Franz J. Kurth, New York, N. Y., assignor to Anemostat Corporation of America, a corporation of Delaware
Application December 22, 1936, Serial No. 55,723
2 Claims. (Cl. 98—40)

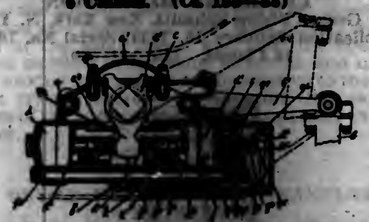
1. In an air distributing device, the combination of a flaring truncated hollow casing and a plurality of intersecting partitions extending through said casing in fixed relation thereto and to each other and being so disposed as to divide said casing into a plurality of flaring truncated closed ducts open at their ends for the distribution therethrough of predetermined invariable volumes of air.

2,106,459
CLOSURE
Michael Laitman, Brooklyn, N. Y.
Application June 3, 1936, Serial No. 83,227
3 Claims. (Cl. 24—207)



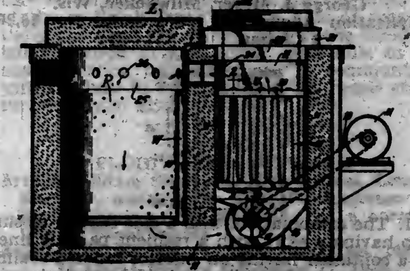
1. In a closure for two adjacent longitudinal beads, members slidably mounted on the beads and having longitudinal portions, retaining means extended between said members, and each of said members having prongs stamped from said longitudinal portion, each of said prongs being provided with an interlocking element, comprising a stud portion on one prong engageable with a bayonet opening on the other, the bayonet opening being provided with several enlarged portions into which the headed stud may selectively engage, and the material of the longitudinal portion being formed with bulged-out portions to permit the stamped out prongs to overlap.

2,106,460
OPTICAL DEVICE FOR MEASURING ANGLES, SUCH AS SEXTANTS
Albert Lepetit, Montrouge, France
Application March 13, 1937, Serial No. 130,653
In France March 16, 1936
4 Claims. (Cl. 88—3.4)



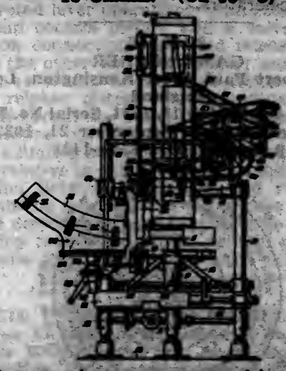
2. In an optical apparatus for measuring angles such as a sextant, a casing, an air level provided in said casing, a mounting secured to said casing and comprising a fixed socket and illuminating tube for the night, a removable socket for

daylight adapted to be mounted in said fixed socket, inclined striated glass plates secured in said removable socket, constituting multiple prisms for collecting the luminous solar rays and



directing them to said air level, an optical device mounted in said casing for receiving and directing the image of the bubble of said air level, and a control mechanism provided on said casing and controlling said optical device.

2,106,461
HYDRAULIC SHOCK DAMPER
Ivan Alexander Leslie, Derby, England, assignor to Rolls Royce Limited, Derby, England
Application April 27, 1935, Serial No. 18,700
In Great Britain April 27, 1934
6 Claims. (Cl. 188—88)



1. A hydraulic shock damper for the road wheels and axles of road vehicles, adapted to be mounted on the vehicle and having a compression chamber with inlet and outlet passages for the admission and escape of a damping fluid, a compression member operable in said chamber from a road wheel axle and arranged and adapted to place said fluid under compression during the return movement of the wheel after displacement thereof, valve means arranged and adapted to control the escape of the fluid from the compression chamber, valve loading means operable from the wheel axle and arranged and adapted to increase the valve loading proportionally to the amount of wheel displacement and hydraulically controlled locking means connected to the valve controlling means for maintaining the increased valve loading during the return of the wheel after displacement thereof, said locking means comprising two telescopically arranged members one slidably fitting within the other, said members being, relatively, axially displaceable under displacement of the wheel, there being provided a space between the two members, in communication with the compression chamber whereby the fluid therein will exert a radial pressure on said members and frictionally lock them together thus preventing their axial return movement and maintaining the increased valve loading during the return of the wheel to normal after its displacement.

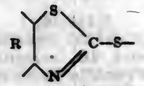
2,106,462
HEAT TREATING FURNACE
Le Roy A. Lindberg, Evanston, Ill., assignor to Lindberg Engineering Company, Chicago, Ill., a corporation of Illinois
Application October 12, 1935, Serial No. 44,676
1 Claim. (Cl. 219—35)

In a heat treating furnace having a normally closed chamber in which is maintained a rapid air circulating system and an opening in one wall of said chamber, and means closing the opening in said wall and extending into such path of air circulation for heating the air in motion, said heating means comprising a cap-like closure supported in said opening and having a framework on which is mounted spaced refractory supports, each having an annular groove, a heating element in the form of a helically coiled resistance wire extended between and carried within the annular grooves of the spaced supports, and the wire being formed in a single straight strand extending at substantially right angles to the direction of the helixes of the coil throughout its regions which lie within the grooves of the supports and in spaced relation to the side walls thereof, whereby less heat is delivered in the region of the supports and air circulation is unimpeded.

2,106,463
BAG OPENING MECHANISM
George Long, Joliet, Ill., assignor, by mesne assignments, to Franklin Steel Works, Joliet, Ill., a corporation of Maine
Application September 3, 1936, Serial No. 99,776
18 Claims. (Cl. 93—8)

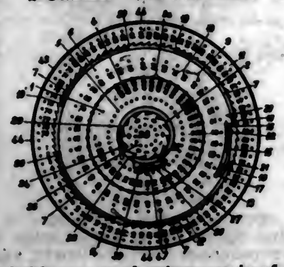
1. Bag opening means comprising a pair of bag opening fingers, each finger being substantially flat throughout its entire length, and means rotating said fingers from a position wherein the fingers are disposed edge to edge with their

corresponding faces in alignment to a position substantially 90 degrees removed therefrom whereby the faces which were in alignment are disposed in approximately parallel planes.



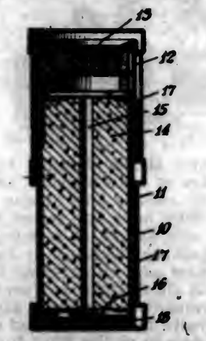
2,106,464
MEANS FOR SEALING CONTAINERS
George J. Meyer, Milwaukee, Wis.
Application August 15, 1935, Serial No. 36,264
2 Claims. (Cl. 215—31)

1. The combination, with a side sealing closure cap having a skirt with a resilient packing liner, of a container having an exterior tapered sealing surface to receive said cap and having circumferential serration-forming grooves in said sealing surface, each groove presenting an abrupt downwardly facing shoulder at its upper edge and a steeply sloping side wall extending to said sealing surface and forming the lower portion of said groove.



2,106,465
MERCAPTO-THIAZOLE DERIVATIVES
Ludwig Orthner, Frankfort-on-the-Main, and Ewald Zaucker, Cologne-Mulheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Original application June 23, 1931, Serial No. 546,418. Divided and this application August 7, 1935, Serial No. 35,664. In Germany June 30, 1930
2 Claims. (Cl. 260—44)

1. As new compounds acetamides in which at the most 2 hydrogen atoms of the methyl group linked to the CO are replaced by the group

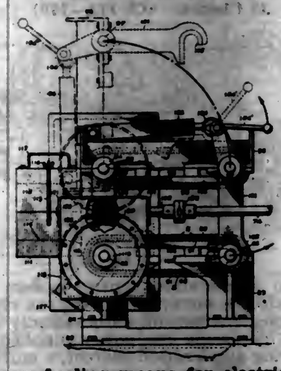


wherein R stands for a benzene or naphthalene radical, these compounds being valuable vulcanization accelerators.

2,106,466
GAME SCORER
Ralph Herbert Paul, West Kensington, London, England
Application September 15, 1934, Serial No. 744,105
In Great Britain September 21, 1933
2 Claims. (Cl. 235—142)

1. In a bridge scorer having a pair of rotatably mounted concentric discs, means for progressing one disc through a small angle consequent to rotation in one direction of an adjacent disc past a given position, comprising, a base with a raised circular ridge thereon having a short gap in it with its ends bevelled, the former disc rotatably mounted on said base with a peripheral edge having a series of equidistant undercut teeth therein adjacent one side of said ridge, the latter disc freely rotatably mounted on said base concentric and coplanar with the former disc so as to be capable of continuous rotation having a peripheral edge adjacent the other side of said ridge and a cut away opening in said peripheral edge, and a pawl pivoted to said latter disc so as to lie substantially tangentially to it within said opening and coplanar with the discs with its pivoted end in front when moved in said direction of rotation and having a bevelled end at the rear which pawl is spring pressed away from said latter disc so as to project through said gap when directly opposite it and engage said teeth and has a shoulder near to its pivot to abut against said ridge at the front end, with regard to said direction, of said gap and so quickly disengage said pawl each time the former disc is rotated through said small angle, the back end, with regard to said direction, of said ridge being so bevelled as to permit said pawl to ride over it when said latter disc is rotated in the direction opposite to the said direction without backward progression of said former disc.

2,106,467
CIGARETTE MEDICATION
George Philip Schmitt, New York, N. Y.
Application January 16, 1924, Serial No. 706,798
16 Claims. (Cl. 131—30)

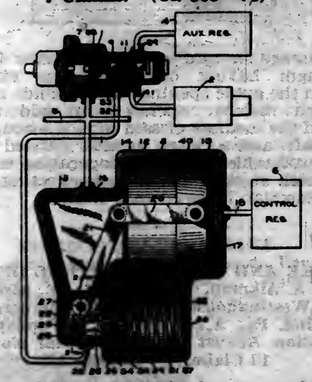


2. A cigarette lighter comprising, in combination, an igniting device, a fuel chamber in communication with said device, a medicament in said chamber, and means for conveying such medicament to a cigarette cooperating with said device.

2,106,468
METHOD OF MAKING WOOD PRODUCTS
Ernest H. Schroth, Palisade, N. J.
No Drawing. Application November 23, 1936, Serial No. 112,246
2 Claims. (Cl. 21—32)

1. The herein described method which comprises cutting wood into thin sheets, soaking the sheets in warm water, immersing the sheets in a solution of soap, then immersing the sheets in a magnesium chloride solution, placing the sheets in a mixture of glycerine and water, and then drying them.

2,106,469
CONVEYER MECHANISM FOR ELECTRIC FURNACES
Gilbert E. Seil, Cynwyd, Pa., assignor, by mesne assignments, to Buffalo Electric Furnace Corporation, Buffalo, N. Y., a corporation of New York
Application March 18, 1936, Serial No. 69,450
3 Claims. (Cl. 214—21)

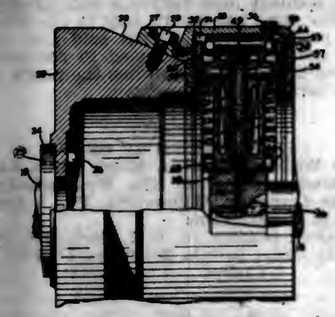


1. A core feeding means for electric furnaces comprising, a frame, a second frame, pivotally mounted at one end on said first frame, endless flexible conveyer belts mounted in said frames and having coacting faces thereof arranged parallel to and spaced apart from each other, means for driving said flexible conveyer belts simultaneously and at the same speed, and with the coacting faces movable in the same direction, and means for locking said second frame relative to the said first frame, whereby to maintain the coacting faces of the endless conveyer belts parallel to each other.

2,106,470
DEVICE FOR APPLYING GRANULAR MATERIALS
Orlando D. Shennard, Upper Montclair, N. J., assignor to Joseph Dixon Crucible Company, Jersey City, N. J., a corporation of New Jersey
Application January 14, 1937, Serial No. 120,547
9 Claims. (Cl. 221—32)

1. A device for applying granular materials to surfaces comprising, a cylindrical reservoir for containing the granular material, said reservoir being composed of resilient material whereby when its sides are compressed the granular material is expressed from the reservoir, said reservoir having a closed end and an open end, a resilient plug closing the open end of the reservoir and having a central bore, and a nozzle structure having a collar adapted to lie adjacent the outer end of the resilient plug, a tubular nozzle extending outwardly from the center of the collar, and a tubular inner portion with a closed inner end extending inwardly from the collar and constituting a prolongation of the nozzle, said inner portion of the nozzle being received within the central bore in the resilient plug, said nozzle structure being rotatable in the resilient plug and having an open position and a shut position, said inner tubular portion of the nozzle having a relatively small hole adapted to be closed by the plug when the nozzle structure is turned to shut position, and the inner end of the resilient plug having a hole of substantially the same size as the hole in the inner tubular portion of the nozzle, said hole in the nozzle portion being arranged to communicate with the hole in the plug when the nozzle structure is turned to open position.

2,106,471
FLUID PRESSURE BRAKE
Arthur William Simmons, King's Cross, London, England, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application October 16, 1936, Serial No. 105,964
In Great Britain December 17, 1935
7 Claims. (Cl. 303—74)



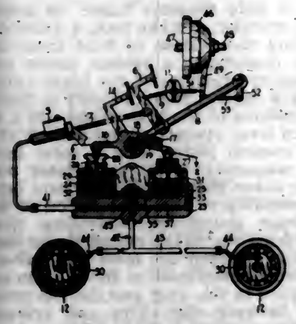
1. In a fluid pressure brake, in combination, a brake cylinder, a brake pipe, a valve device for controlling the release of fluid from the brake cylinder comprising a release piston subject to the opposing pressures of the brake cylinder and a spring, a control piston subject to the opposing fluid pressures of the brake pipe and a chamber, a pivoted lever operatively connected at one end to said control piston, and a valve having lost motion connection with said release piston and with the other end of said lever and being operative according to the joint action of said lever and release piston for controlling the release of fluid from the brake cylinder, the lost motion connection between the lever and valve permitting a limited movement of the valve in one direction relative to the lever and the lost motion connection between the valve and release piston permitting movement of the release piston in the same direction relative to the valve and for permitting movement of the release piston in the opposite direction relative to the valve.

2,106,472
FLUID PRESSURE CONTROLLED CLUTCH
Burton S. Aikman, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Original application July 30, 1932, Serial No. 626,504. Divided and this application June 22, 1934, Serial No. 731,856
2 Claims. (Cl. 192—85)

1. A clutch device comprising a rotatable shaft

having a passage therein through which fluid may flow, a disc mounted on said shaft for rotation therewith, a diaphragm mounted on said disc, a guide member having guide openings therein and carried by said disc for clamping said diaphragm to said disc so as to provide a fluid-tight chamber between said disc and said diaphragm for receiving fluid under pressure from

said passage in said shaft, a follower for said diaphragm having operating pins extending through the guide openings in said guide member, a clutch member operated by said follower through the medium of said pins, a second rotatable shaft, and a clutch member carried by said second rotatable shaft for cooperating with said first clutch member and thereby effecting a driving connection between said shafts.



2,106,473

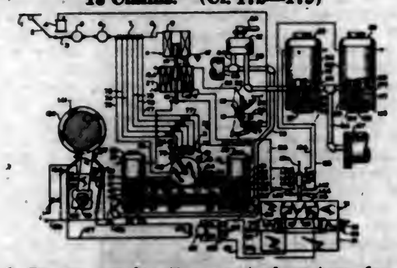
BRAKE AND CLUTCH CONTROL DEVICE

Burton S. Aikman, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania

Application August 29, 1936, Serial No. 98,517

13 Claims. (Cl. 192—13)

1. In a brake and clutch control apparatus for an automotive vehicle, means constituting a hydraulic pressure system, a clutch device, fluid pressure operated means for effecting application and release of the brakes, and means responsive to a certain predetermined increase in the pressure in the hydraulic system for effecting only the disengagement of the clutch device and responsive to an increase in pressure in the hydraulic system greater than said certain increase for effecting disengagement of the clutch device and the supply of fluid under pressure to the fluid pressure operated means to cause application of the brakes.



2,106,474

ACCELERATION CONTROL SYSTEM

George W. Baughman, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania

Original application June 12, 1934, Serial No. 730,231. Divided and this application July 25, 1936, Serial No. 92,675

18 Claims. (Cl. 172—179)

1. In an acceleration control system for vehicles, an electric motor for driving the vehicle, an acceleration controller for automatically and progressively increasing the power supplied to said motor during acceleration thereof, a current limiting relay responsive to a predetermined current flow through said motor for temporarily interrupting the operation of said acceleration controller, and electroresponsive means actuated in accordance with changes in the speed of said vehicle for decreasing the setting of said limiting switch upon a predetermined rate of acceleration of the vehicle.

2,106,475

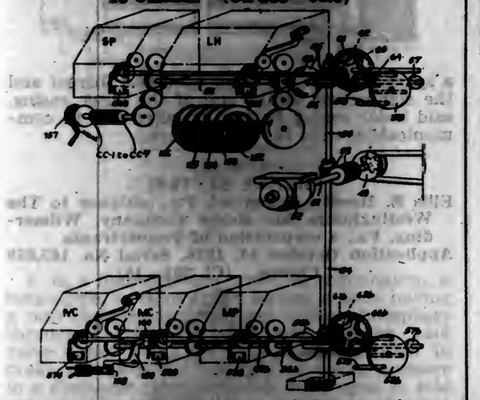
CONTAINER FOR CIGARS OR THE LIKE

Edward G. Brandwein, Chicago, Ill., assignor to Crystal Tube Mfg. Co., Chicago, Ill., a corporation of Illinois

Application April 30, 1936, Serial No. 75,264

2 Claims. (Cl. 131—11)

2. A container comprising a tube formed from a tough flexible transparent sheet of cellulose material with the longitudinal edges thereof arranged in overlapping relation and secured together by a thin layer of transparent adhesive, and a tearing thread positioned within said tube along the underlying one of said overlapped longitudinal edges in contact with the edge portion only of said layer of adhesive substantially throughout its length, one end of said thread projecting freely from said tube in a position to be readily grasped for pulling the same longitudinally with respect to said tube to tear open the side thereof.



2,106,476

ACCOUNTING MACHINE

James W. Bryce, Bloomfield, N. J., assignor, by mesne assignments, to International Business Machines Corporation, New York, N. Y., a corporation of New York

Application May 7, 1932, Serial No. 609,883

18 Claims. (Cl. 235—61.6)

3. An accounting machine of the record controlled type, including entry receiving means receiving from a record the amount of the multiplier, the amount of the multiplicand, and a supplemental amount, final result receiving means, means controlled by the foregoing entry receiving means for multiplying the multiplier and the multiplicand and for setting up the product in the result receiving means, transfer means controlled by the supplemental amount receiving means for causing the introduction of the supplemental amount into the result receiving means, and means for controlling said last mentioned transfer means so that the supplemental amount is either additively or subtractively entered whereby the final result receiving means ultimately receives an amount representative of the product with the supplemental amount derived from the record added to or subtracted therefrom.

2,106,477

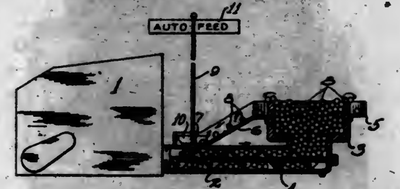
ACCOUNTING MACHINE

James W. Bryce, Bloomfield, N. J., assignor, by mesne assignments, to International Business Machines Corporation, New York, N. Y., a corporation of New York

Application August 24, 1933, Serial No. 685,513

23 Claims. (Cl. 235—61.6)

2. A record controlled accounting machine with means for passing records in a common run therethrough including groups of data containing records and intervening records which have a distinctive characteristic, means for receiving and accumulating data from the data containing records, recording means controlled through intervening means by said last mentioned means for recording summaries set up in the receiving means upon said records with the distinctive characteristic, and means called into action by the record with a distinctive characteristic and under the control of such distinctive characteristics of such record for calling the recording means into operation to record upon the record which initiated the recording of the summarized data related to the data upon the data containing records in the common run.



2,106,478

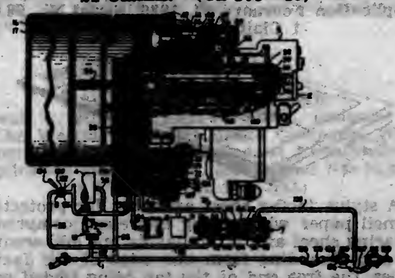
DEMONSTRATING DEVICE

Edward N. Curran, St. Louis, Mo., assignor to Harry Richards, St. Louis, Mo.

Application November 2, 1936, Serial No. 108,772

10 Claims. (Cl. 35—13)

1. In combination, a stoker of the class described, including a retort and a fuel-feeding conveyor leading thereto, and means for receiving fuel-simulating elements from the rim of said retort and conducting them back to said conveyor.



2,106,479

FLUID PRESSURE BRAKE

Ellery R. Fitch, Irwin, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania

Application October 17, 1936, Serial No. 106,029

21 Claims. (Cl. 303—40)

1. In a locomotive brake equipment, in combination, valve means operative to effect an application of the brakes on the locomotive, delay means operative to limit the rate at which the application of the brakes is effected, and means operative upon separation of the locomotive from another vehicle to render said delay means ineffective to limit the rate of brake application on the locomotive.

2,106,480

FLUID PRESSURE BRAKE

Ellery R. Fitch, Irwin, and Glenn T. McClure, McKeesport, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania

Application October 22, 1936, Serial No. 107,212

21 Claims. (Cl. 303—23)

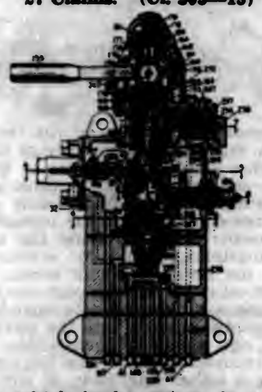
1. In a fluid pressure brake, in combination, a brake pipe, a brake controlling valve device op-

erative upon a reduction in brake pipe pressure first to a quick service position to effect a local reduction in brake pipe pressure and then to an application position to effect an application of the brakes and operative upon a subsequent increase in brake pipe pressure in steps or increments to graduate the release of the brakes, means operative for rendering the brake control-

ling valve device ineffective to effect a reduction in brake pipe pressure when, in graduating the release of the brakes, the brake controlling valve device assumes said quick service position, and valve means operative upon movement of the brake controlling valve device from said quick service position to application position for effecting the operation of said means.

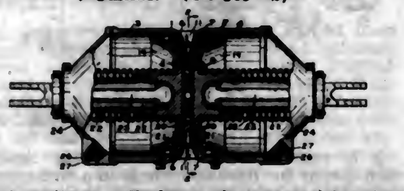
2,106,481
STYLUS FACING SHEET ASSEMBLY
George Arthur Giles, Bensenville, Ill., assignor of one-half to Lawrence T. Barnett, Glencoe, Ill.
Application February 27, 1936, Serial No. 66,049
1 Claim. (Cl. 41—3.5)

A stylus facing sheet assembly for protecting stencil paper when being impressed comprising a facing sheet and a tab having one end secured to and extending from one edge of the facing sheet, the free end of the tab being folded parallel to the said edge of the facing sheet to form a trough adapted to receive the upper edge of a unit comprising a backing sheet and a stencil sheet to removably align the facing sheet on the stencil sheet.



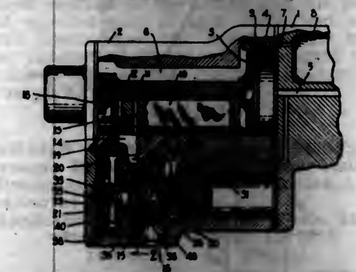
2,106,482
MUFFLER
Harold L. Hargnett, Turtle Creek, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application August 27, 1936, Serial No. 98,131
8 Claims. (Cl. 181—35)

1. In a silencer for compressors, in combination, an outer casing having an open end adapted to be connected to the intake of a fluid compressor, and a closed end, an inner casing of lesser dimension than the first named casing extending through the closed end of the first named casing and through substantially the full length of said first named casing member and terminating at a point adjacent to but spaced from said open end of said outer casing to form



a space between the inner open end thereof and the compressor intake end of the outer casing, said inner casing having its outer end in communication with the atmosphere.

2,106,483
BRAKE SYSTEM
Ellis E. Hewitt, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application October 15, 1936, Serial No. 105,659
27 Claims. (Cl. 303—15)

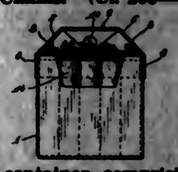


1. In a vehicle brake system, in combination, a brake equipment comprising a straight air portion and an automatic portion, a brake valve device having a mechanism for controlling said straight air portion and a separate mechanism for controlling said automatic portion, and selective means movable between two positions to render one or the other of said two brake valve mechanisms effective in controlling said brake equipment.

2,106,484
DUPLEX BRAKE CYLINDER
Ellis E. Hewitt, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application February 27, 1937, Serial No. 128,086
7 Claims. (Cl. 309—2)

1. A unitary cylinder casing comprising two longitudinally spaced axially aligned cylinder portions and an annular head V-shaped in crosssection and integrally connecting said cylinder portions.

2,106,485
INSECT EXCLUDER
Ellis E. Hewitt, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application May 4, 1937, Serial No. 140,597
15 Claims. (Cl. 303—1)

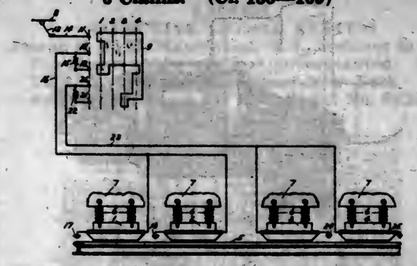


1. In a fluid pressure brake, in combination, a brake pipe, a valve device having a body having a vent chamber therein open to the atmosphere through a relatively large vent opening, said valve device being operable on a reduction in brake pipe pressure to vent fluid under pressure to a discharge passage in said body open to said vent chamber, and means to prevent interference with the venting of fluid through said discharge passage, said means comprising a foraminous member mounted in said vent chamber and separating the portion of the vent chamber at the end of the discharge passage from the portion of the vent chamber open to the vent opening.

2,106,486
THE PRODUCTION OF ANION-EXCHANGE RESINS FROM M-PHENYLENEDIAMINE
Willard H. Kirkpatrick, Chicago, Ill., assignor to National Aluminate Corporation, Chicago, Ill., a corporation of Delaware
No Drawing. Application December 3, 1936, Serial No. 113,986
2 Claims. (Cl. 260—130)

1. The process of producing a special type of m-phenylenediamine resin which comprises dissolving freshly distilled m-phenylenediamine in sufficient concentrated hydrochloric acid to form a solution of m-phenylenediamine dihydrochloride containing a slight excess of free acid, adding formaldehyde thereto, allowing the resultant mixture to form a gel, breaking up the gel, and drying the same at a temperature not exceeding 115° C.

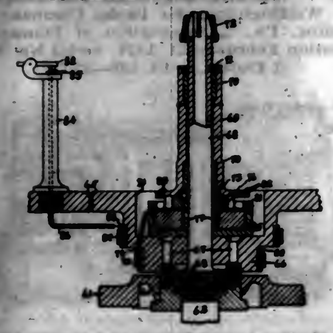
2,106,487
DISPLAY CASE
Carl C. Lamry, Shenandoah, Iowa, assignor to Mount Arbor Nurseries, Shenandoah, Iowa, a corporation of Iowa
Application March 13, 1936, Serial No. 68,599
4 Claims. (Cl. 206—44)



4. A plant container comprising a substantially rectangular box, a cover telescopically mounted on said box and extending above the walls thereof to provide plant growth space, a marginal knock-out panel forming the top edge of the front wall of said box and extending below the telescoping part of said cover and enabling display of the contents of said box when removed, said cover above said box having a substantially flat imperforate top portion and perforated sloping sides.

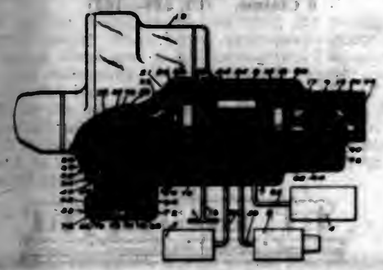
2,106,488
COMPRESSOR
Joseph C. McCune, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application February 24, 1934, Serial No. 712,731
3 Claims. (Cl. 230—211)

3. A fluid compressor comprising a casing, a plurality of radially disposed cylinders mounted in said casing, a fluid compressing piston in each cylinder, a crank shaft operatively connected to said pistons for operating the said pistons in their respective cylinders, and a motor for driving said crank shaft, said casing having an outer arcuate wall, an inner arcuate wall forming a crank case chamber for said crank shaft, and an intermediate arcuate wall forming at one side thereof a cooling chamber for said cylinders and at the opposite side thereof a fluid discharge chamber for said cylinders.



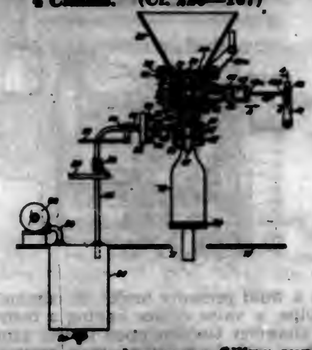
2,106,489
MAGNETIC TRACK BRAKE
Joseph C. McCune, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application December 20, 1935, Serial No. 55,453
6 Claims. (Cl. 188—165)

1. In a brake equipment for vehicles, the combination with a plurality of spring suspended magnetic brake shoes, of control means for effecting the energization of said several shoes, said control means being arranged to effect energization of only certain of said track shoes to a certain degree to bring said shoes into engagement with the track rail and to thereafter increase the degree of energization thereof, to thereafter effect energization of other of said track shoes



to a certain degree to bring them into engagement with the track rail and to thereafter increase the degree of energization thereof.

2,106,490
CONTROL MEANS FOR WEB WRAPPING MACHINES
Edward G. Parvin, Roselle, N. J., assignor to Syncro Machine Company, Newark, N. J., a corporation of New Jersey
Application December 18, 1936, Serial No. 115,134
13 Claims. (Cl. 117—45)

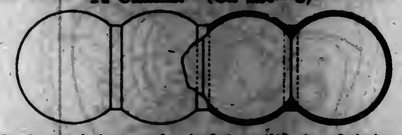


1. In a machine for feeding a web from a cop, the combination comprising a rotatable cop sleeve having at least a magnetizable portion, a stator positioned adjacent the cop sleeve having a winding, means including an alternating current source for energizing the winding whereby the tension on the web fed from the cop remains constant as the cop loses diameter, and automatic means for increasing the magnetization of the winding when the web breaks to bring the cop sleeve to an immediate stop.

2,106,491
FLUID PRESSURE BRAKE
Everett P. Sexton, East McKeesport, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application November 5, 1936, Serial No. 109,272
11 Claims. (Cl. 303—46)

1. In a fluid pressure brake equipment, in combination, a brake cylinder, a brake pipe, valve means operative on a reduction in brake pipe pressure for supplying fluid under pressure to the brake cylinder, and means subject to the opposing pressures of the fluid in the brake pipe and of fluid in the brake cylinder and operated on a predetermined relationship of said pressures to restrict rate of the supply of fluid to the brake cylinder by said valve means.

2,106,492
VACUUM AND PRESSURE FILLING APPARATUS FOR FLUID, PLASTIC, OR VARIOUS OTHER MATERIALS
Charles F. Adams, New York, N. Y.
Application February 26, 1936, Serial No. 65,776
4 Claims. (Cl. 226—107)



2. In a vacuum and pressure filling apparatus, the combination of a measuring and charging cylinder, a reciprocating piston in said cylinder, means to lead a material to said cylinder to be drawn into the same, said means also functioning to lead the material from the cylinder, a vacuum hood positioned to receive the discharge of said material from the cylinder, a reciprocating table axially in line with said hood supporting a container to be filled with said material, said table at the upper end of its stroke locating said container in said hood in proper position, means to produce a partial vacuum in said hood and container and means to release the vacuum.

2,106,493
SPEED CONTROL DEVICE
Thomas A. Byers, Spokane, Wash.
Application March 17, 1936, Serial No. 69,369
1 Claim. (Cl. 192—92)

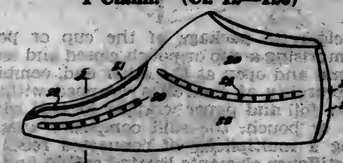
A speed controlling device comprising a pump having a casing, upper and lower walls of the casing being formed with a lower inlet and an upper outlet, impeller gears rotatably mounted in said casing between the inlet and the outlet and having meshing teeth, one gear having a shaft projecting from a side wall of the casing and adapted to be rotated from a rotary shaft of a machine to be controlled, a reservoir for liquid disposed vertically at the opposite side of the casing from said shaft in spaced relation to the casing, an unobstructed pipe line leading from the bottom of said reservoir and extending under the pump casing and connected with the inlet thereof and serving as a support for the reservoir, an upper pipe line leading upwardly from the outlet of the pump casing and extending over the reservoir and opening into the reservoir through the top thereof, the upper pipe line serving as an upper brace for the reservoir, a manually adjustable valve in the upper pipe line for controlling flow of liquid through the same from the pump to the reservoir, a bridging pipe associated with the upper pipe line and communicating with end portions thereof in spaced relation to the casing and the reservoir and opposite ends of said valve, and a check valve intermediate the length of the bridging pipe yieldably held closed and adapted to open in the direction of the reservoir when subjected to excessive pressure.

2,106,494
HOLLOW VESSEL FOR HIGH PRESSURES
Hermann Deber, Munich, Germany, assignor to Dominion Oxygen Company, Limited, a corporation of Canada
Application May 31, 1930, Serial No. 458,435
In Germany October 12, 1929
14 Claims. (Cl. 220—3)

1. A container adapted to withstand internal pressure comprising a casing consisting of a plurality of interconnected and intersecting hollow spherical zones, the distance between successive planes of intersection being substantially equal to the diameter of the planes of intersection.

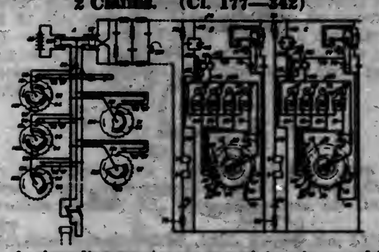
2,106,495
METHOD OF MAKING PRESSURE VESSELS
Hermann Deber, Munich, Germany, assignor to Dominion Oxygen Company, Limited, a corporation of Canada
Application June 14, 1933, Serial No. 675,631
Renewed October 13, 1936. In Germany July 1, 1932
15 Claims. (Cl. 29—148.2)

1. The method of producing containers for compressed gases comprising expanding a hollow cylindrical blank at properly spaced intervals to form spherically expanded zones separated by constrictions or portions having a diameter substantially less than the diameter of said spherical zones; and, increasing the wall thickness of the portions corresponding to the subsequent constrictions.



2,106,496
METHOD OF MAKING CONTAINERS
Hermann Deber, Munich, Germany, assignor to Dominion Oxygen Company, Limited, a corporation of Canada
Original application May 31, 1930, Serial No. 458,435. Divided and this application July 27, 1933, Serial No. 682,325. Renewed July 8, 1937. In Germany October 12, 1929
15 Claims. (Cl. 29—148.2)

1. The method of making a metallic container adapted to withstand internal pressures, said container consisting of a plurality of metallic spheroidal hollow bodies in intersecting relation, the wall thickness of said container being enlarged at the peripheral intersections, and the major axes of the planes of intersection of said bodies being considerably less than the greatest internal diameter of said bodies, whereby the surface of said spheroidal bodies tends to approximate that of a



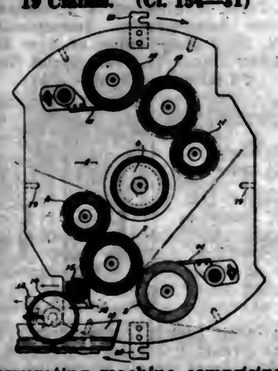
sphere, which method includes the step of casting metal into a suitable mold which is shaped in such a manner that there results a concentration of metallic material at the peripheral intersections of said hollow bodies, whereby the resistance of the peripheral intersections to the effects of internal pressure is caused to substantially approximate the resistance inherent in the spheroidal portions.

2,106,497
SHOE FORM
William J. De Witt, Auburn, N. Y., assignor to Shoe Form Co., Inc., Auburn, N. Y., a corporation of New York
Application July 16, 1936, Serial No. 90,850
1 Claim. (Cl. 12—128)

A shoe form comprising a toe portion, side walls and a heel portion, said heel portion being formed by rearwardly extended ends of the side walls, said ends overlapping and means intermediate the top and bottom of the form for joining said overlapping ends while permitting relative rocking thereof to decrease the width of the shoe form at the base of the heel portion, said means comprising a rivet passed through both said overlapping ends.

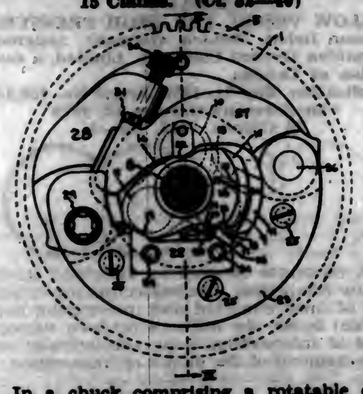
2,106,498
SELECTIVE SIGNAL SYSTEM
Joseph C. Field, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 11, 1936, Serial No. 68,232
2 Claims. (Cl. 177—342)

1. A signaling system comprising in combination, a line circuit, a selector controlled over said line circuit, a local circuit controlled by said selector, a signaling device in said local circuit,



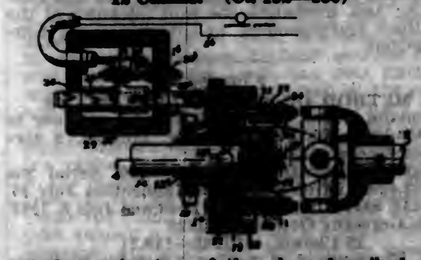
said signaling device being of the self-interrupting type and having normally closed contacts in said local circuit operated by said signaling device, a relay having its operating winding in said local circuit, a normally open bridge across said line circuit, a winding in said normally open bridge, said winding being inductively associated with the operating winding of said relay, contacts in said normally open bridge, said contacts being controlled by said relay to establish an inductive connection between said local circuit and said line circuit, and a holding circuit for said relay comprising a resistance in shunt of said signaling device to hold said relay operated during the open periods of the contacts operated by said signaling device.

2,106,499
CIGARETTE PACKAGE AND BLANK OR WRAPPER THEREFOR
Ferris Le Roy Francisco, New York, N. Y.
Application May 8, 1935, Serial No. 20,502
7 Claims. (Cl. 229—67)



1. A cigarette package of the cup or pouch type, comprising a cup or pouch closed and sealed at one end and open at the other end, combined with a plurality of cigarettes wrapped within a composite foil and paper wrapper located within the cup or pouch, the said composite wrapper including a multiplicity of connected relatively narrow stiffener elements located within and extending longitudinally of the package and capable of permitting lengthwise folding thereof while increasing the resistance to transverse bending strains, the end closure portions of said package being formed of flexible, foldable material.

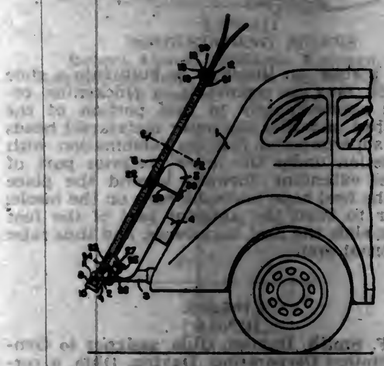
2,106,500
DUPLEX SINGLE FACER
Henry B. Greenwood, Glen Arm, Md., assignor to F. X. Hooper Company, Inc., Glen Arm, Md., a corporation of Maryland
Application December 20, 1935, Serial No. 55,406
19 Claims. (Cl. 154—31)



2. A corrugating machine comprising a main frame, an oscillable carrier therein, two pairs of corrugating rolls in said carrier, one above the other, means to drive the lower pair of said rolls and means to interchange the position of said pairs of rolls by oscillating said carrier to disconnect the driving means from the rolls previously driven and to connect them to those previously idle.

2,106,501
CHUCK
William F. Greene, Cincinnati, Ohio, assignor to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a corporation of Delaware
Application August 17, 1936, Serial No. 96,356
15 Claims. (Cl. 82—40)

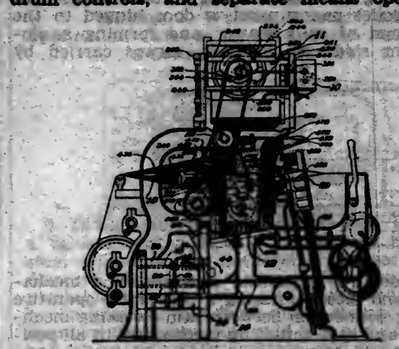
1. In a chuck comprising a rotatable chuck body, and chucking means at both ends of said body, said chucking means comprising each a plurality of locating means axially displaced and at one side of the axis of rotation of the chuck body having fixed, interspaced areas accurately positioned relative to said axis for effective angularly related engagement with respective angularly related areas accurately located on opposite sides of a work piece relative to a proper center turning of the work piece, the aggregate effective engagement of the areas at both sides serving to locate the work piece in proper centered, axial aligned, and indexed position relative to said chuck body, and means on said chuck body to clamp the work piece to said areas whereby said work piece is held in said chuck body at a plurality of longitudinally interspaced points.



2,106,502
POWER CONTROL MECHANISM
Paul E. Hawkins, Lakewood, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a corporation of Ohio
Application September 5, 1936, Serial No. 99,679
12 Claims. (Cl. 196—150)

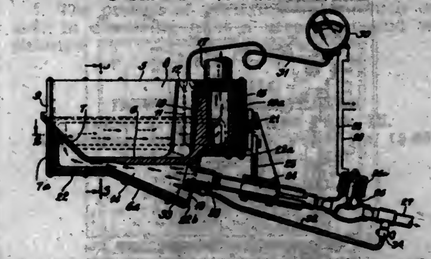
1. In mechanism of the class described, the combination of a rotatably mounted member

adapted to be drivingly connected to a mechanism for handling loads, a driving member in concentric relation to said first mentioned member, one of said members being movable relative to the other member in the direction of its axis, a spring mechanism connected to one of said members and engaging the other member and normally tending to move said members toward each other, and interlocking means between and engaging said members and operating to transmit power from said driving member to said first mentioned member, but arranged to move said axially movable member away from the other member when said driving member rotates relative to said first mentioned member.



2,106,503
AUTOMOBILE CARRIER FOR LENGTHY ARTICLES
Robert W. Hendrick, Newtonville, Mass.
Application February 6, 1937, Serial No. 124,412
5 Claims. (Cl. 224—30)

4. A ski carrier, adapted to be mounted upon the rear end of an automobile, comprising a frame having side bars connected at their lower ends by cross bars forming a channel to receive the lower ends of the skis, means extending across said channel dividing said channel into a plurality of sockets, complementary cross bars connecting the upper ends of said side bars, one of which is fixedly secured to the under edge of the side bars, and provided with spacing means corresponding to the spacing means of said channel, and the other of which is provided at one end with a strap hinge, one of the straps of which is pivotally mounted upon one of the side bars and is provided at its other end with means adapted to be detachably locked to the other side bar, and means for detachably securing said carrier to members rigid with the rear end of the automobile.

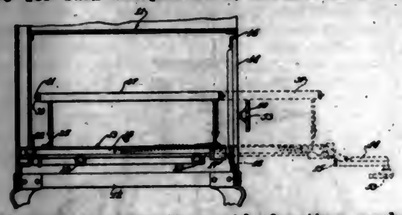


2,106,504
LOOM
Frank D. Lindquist, Worcester, Mass.
Application November 24, 1933, Serial No. 644,459
Renewed July 2, 1937
9 Claims. (Cl. 139—65)

1. A loom comprising a main shaft, a drop box and head motion drum controls operated respectively from the main shaft in timed relation therewith, a drop box lifting mechanism, a harness motion, electrical circuits for predetermined-ly controlling the two mechanisms from the drum controls, and separate means operating

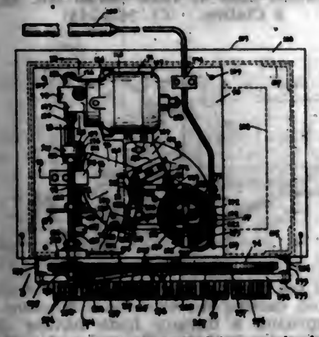
through said circuits to render each of the mechanisms capable of manual preselection.

2,106,505
POT FOR DIE CASTING MACHINES
Louis H. Morin, Bronx, N. Y., assignor to Whitehall Patents Corporation, New York, N. Y., a corporation of New York
Application July 1, 1936, Serial No. 88,363
8 Claims. (Cl. 262—14)



1. In a die casting machine, a pot for supplying heated casting material to a machine, said pot comprising a unitary body having spaced inner and outer bottom, side and end walls, the space between said walls forming a circulating chamber through which products of combustion may be circulated longitudinally of the pot in at least two directions, the inner bottom wall being horizontally arranged, the outer bottom wall extending downwardly in the direction of one end of the pot and terminating in a flared admission opening through which products of combustion may be introduced for circulation through said chamber, the inner bottom wall being directly exposed to the products of combustion to provide direct heat transfer to the material contained within said pot, and means at the top of the pot for discharging products of combustion from said chamber.

2,106,506
BROILER
Harry Fletcher, Mark Bishop, and Benjamin C. Jones, Joliet, Ill., assignors to The Moore Corporation, Joliet, Ill., a corporation of Delaware
Application November 23, 1935, Serial No. 51,166
8 Claims. (Cl. 126—41)



2. In a range having a broiling compartment, a broiler drawer slidably mounted in said compartment, a broiler pan support in said drawer,

elevating mechanism carried by said drawer for supporting and varying the vertical position of said broiler pan support, a door hinged to the front end of said drawer and forming a closure for said compartment, means carried by

said door for actuating said elevating mechanism, and means forming a constantly operative driving connection between said elevating mechanism and said actuating mechanism in all positions of said door.

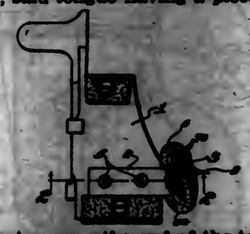
2,106,507
THERMOMETER
Clifford C. Schweize, Minneapolis, Minn., assignor to O. B. McClintock Company, Minneapolis, Minn., a corporation of Minnesota
Application April 2, 1934, Serial No. 718,551
11 Claims. (Cl. 177—351)

1. A control device comprising a pivoted member, a switch carried by said pivoted member, a pivoted arm for operating said switch, an actuating device having a swinging part, a link between said swinging part and said arm, pivots for pivoting said link to said swinging part and said arm, and means for varying the lever arm of one of said pivots.

5. A control device for a thermometric indicator which includes a plurality of successively operated indicating members, said control device comprising a horizontal support and a vertical support, a plurality of switch elements carried by said vertical support and arranged in concentric relation about a horizontal axis, a shaft coaxially disposed with reference to the axis of said switch elements, complemental switch means for coacting with said switch elements, and forming in conjunction therewith a plurality of switches, means carried by said shaft for operating said switches, a gear secured to said shaft, a shaft overlying said horizontal support, a gear on said second named shaft meshing with said first named gear, reversible drive means for rotating said second named shaft in either direction, a third shaft overlying said horizontal support, drive means between said second and third shafts, an actuating device mounted on said horizontal support and adapted to occupy different positions and moved into said positions by said third shaft, thermostatic means adapted to occupy positions corresponding with the positions of said actuating device, and switch means conjointly controlled by said actuating device and said thermostatic means and controlling the operation of said drive means.

2,106,508
INSOLE
Robert W. Shaw, London, Ontario, Canada
Application August 18, 1933, Serial No. 685,767
4 Claims. (Cl. 36—71)

1. In a shoe, an insole to be built into a shoe or which may be removable, a thickening restricted approximately to that portion of the insole that underlies the outer metatarsal heads of the superimposed foot, in combination with a depression under the inner posterior part of the heel extending forward beyond the place where the heel bone normally rests on the insole, in order to twist the anterior part of the foot inwards, slide the heel backwards, and thus raise the internal arch.



2,106,509
HINGE
Harry F. Smith, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Original application April 20, 1931, Serial No. 533,996. Patent No. 1,979,291, dated November 6, 1934. Divided and this application August 30, 1934, Serial No. 742,136
3 Claims. (Cl. 16—126)

3. As an article of manufacture a door hinge comprising a single member of flexible material having an eye portion provided with a cavity for receiving a supporting pin, and integral projecting means extending from the eye portion, one of said projecting means adapted to support the door or closure member and the other projecting means providing spring means for resiliently holding the door member in a closed position.

2,106,510
SHUTTLE GUARD ATTACHMENT FOR LOOMS
Horace J. Tyree, Clyde Talley, and George A. Gill, Menia, Tex.
Application May 20, 1937, Serial No. 143,691
1 Claim. (Cl. 139—193)

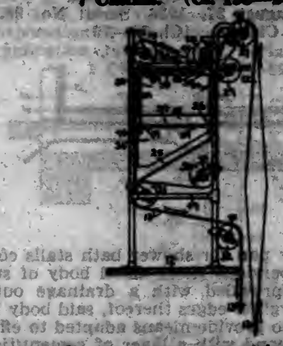
A shuttle guard attachment for looms, in combination with the shuttle box mouth plate of the loom, said attachment comprising a metal plate having an elongated body and a tongue projecting from the body at substantially right angles thereto, said body having apertures for fastening the body of the plate to the shuttle box mouth plate of the loom, said tongue having a piece of metal

secured thereto across the end of the tongue, one end of said piece being curved outwardly from the tongue and a covering of resilient yieldable material embracing said curved piece of metal and said tongue, and means for holding the covering in position.

2,106,511
BOOKBINDING MEANS
Robert Alonzo Williams, Chicago, Ill.
Application June 30, 1936, Serial No. 88,471
16 Claims. (Cl. 281—25)

2. A book comprising: a plurality of folded sheets gathered in groups with their fold portions in superposed relation and having lateral slots cut into said sheets across the fold portions thereof at an oblique angle relative to the long axes of the fold edges of said sheets; a cover member including cover boards hingedly joined and having a cut-away portion in registration with the said slots in said folding sheets; a plurality of key members each having a bottom wall and a pair of oppositely disposed side walls with a key part extended between the said side walls at an oblique angle to the said bottom wall, said key members being fitted upon said folded sheets and cover members in assembled relation so that the said key parts are fitted into the said registered slots with the said bottom walls thereof fitted substantially against the folded edges of said sheets and the hinge part of said covers thereon; and a binding member in the form of a longitudinally extensive channel piece having bottom and side walls and fitted onto the said folded sheets and cover member with the bottom wall thereof in confrontation with the said bottom wall of said key members and the said hinge member, and having its side walls clamped upon the said hinge member and sheets therein in the region adjoining the said fold parts, the edge extremities of the said bottom and side walls of said channel member being bent back upon themselves to form lip parts for limiting the movement of said key members.

2,106,512
AIR VENT
William J. Woolley, Chicago, Ill.
Application October 16, 1934, Serial No. 747,736
3 Claims. (Cl. 137—139)

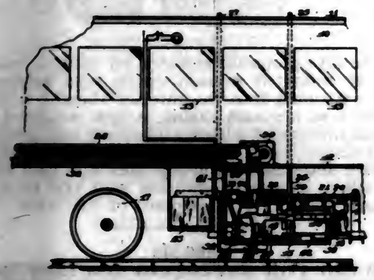


1. In an automatic radiator air vent, a casing, a valve mounted in said casing and having a stem extending into the interior thereof, a float disposed within said casing, a link mounted for pivotal movement within said casing and pivotally connected to said float, and a channel shaped member interconnecting said link and said valve and whose side walls embrace said link to serve as guide means for movements of the valve.

2,106,513
PROCESS FOR EFFECTING BACTERICIDAL ACTION BY THE AID OF CHLORINE
William M. Allison, New York, N. Y.
No Drawing. Original application May 16, 1934, Serial No. 724,914. Divided and this application February 14, 1935, Serial No. 6,517
12 Claims. (Cl. 210—23)

1. The process of purifying water which consists in dissolving in it a urea compound with chlorine.

2,106,514
DOUBLE BELT CARRIER
James L. Baldwin, Oak Park, Ill.
Application April 15, 1935, Serial No. 16,009
7 Claims. (Cl. 198—195)



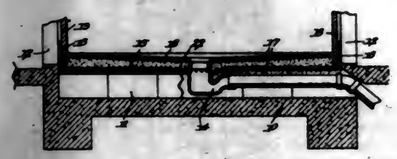
4. A belt conveyor comprising an upright frame, article receiving and sending platforms in the upper and lower parts thereof respectively, an article-depositing belt drive leading to the receiving platform, an article dispatching belt drive leading from the sending platform, and means to lower the receiving platform to direct received articles upon the sending platform for transfer to the dispatching belt drive.

2,106,515
AIR CONDITIONING SYSTEM
Ernest Wanamaker, Chicago, Ill.
Application July 21, 1934, Serial No. 735,735
10 Claims. (Cl. 257—7)

1. Air conditioning apparatus of the character described for a vehicle having an internal com-

bustion engine, including: heat transfer means in said car, said means being adapted to have a heat transfer medium flow therethrough; a heat exchanger adapted to have the exhaust gases of said engine pass therethrough; a flow circuit for said medium including said engine, said heat exchanger, and said heat transfer means, whereby said car is heated and said engine cooled; cooling means; a second flow circuit for said medium in-

cluding said heat transfer means and said cooling means whereby said car is cooled; selective means for rendering either of said flow circuits operative; a radiator for cooling said engine, and means for establishing communication between said engine and said radiator when said second circuit is operative, and for cutting off such communication when said first flow circuit is operative.



2,106,516

SHOWER BATH AND PAN

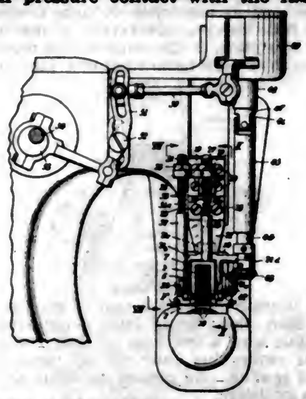
Allan Cheney, Cynwyd, Pa.

Application August 27, 1936, Serial No. 98,241

12 Claims. (Cl. 72—70)

11. A shower pan for shower bath stalls comprising an impervious sheet metal body of substantial area provided with a drainage outlet within the marginal edges thereof, said body being deformed to provide means adapted to effect a mechanical bond with a layer of cementitious material on opposite sides thereof and to permit draining of water from all portions of its area toward said drainage outlet.

2,106,517



FABRIC FEEDING MECHANISM FOR SEWING MACHINES

Norman V. Christensen, Charles F. Rubel, Clarence C. Smith, Chicago, and Harold J. Le Vesconte, Western Springs, Ill., assignors to Union Special Machine Company, Chicago, Ill., a corporation of Illinois

Application June 5, 1935, Serial No. 25,004

26 Claims. (Cl. 112—212)

1. Feeding mechanism for sewing machines comprising an endless belt; yielding means for holding the belt with capacity for angular movement, in pressure contact with the fabric be-

ing seamed in the sewing machine; and means for driving the belt to progress the fabric.

2,106,518

MANUFACTURE OF COLORED LACQUERS AND COATING COMPOSITIONS

Achille Cassetti, Basel, Switzerland, assignor to the firm J. R. Geigy A. G., Basel, Switzerland

No Drawing. Application September 25, 1935, Serial No. 42,136. In Germany January 20, 1934

10 Claims. (Cl. 134—79)

1. A process for the manufacture of complex compounds containing a triarylmethane dyestuff, a metal selected from the group consisting of Cu, Fe, Co and Ni and a cellulose derivative, comprising treating the dyestuff acid of a triarylmethane dyestuff which contains at least once in the molecule the groups OH and COOH in ortho position to one another, in presence of a cellulose ester lacquer with an acetate of a metal selected from the group consisting of Cu, Fe, Co and Ni.

2,106,519

MANUFACTURE OF COLORED LACQUERS AND FILM-FORMING COATINGS

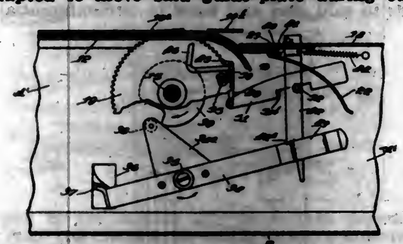
Achille Cassetti, Basel, Switzerland, assignor to firm of J. R. Geigy A. G., Basel, Switzerland

No Drawing. Application October 23, 1935, Serial No. 46,444. In Germany February 1, 1934

21 Claims. (Cl. 134—79)

1. A process for the manufacture of a colored composition comprising treating a hydroxymonoazodyestuff in presence of a lacquer constituent selected from the group consisting of cellulose derivatives, artificial and natural resins, chlorocaoutchouc and gelatine with a compound of the group consisting of chromic acid, alkali bichromate, and acetates of Fe, Cu, Co and Ni.

2,106,520



REFOLDING MECHANISM FOR DUPLICATING MACHINES

Allen B. Cooke, Danville, Ill., assignor to United Autographic Register Co., a corporation of Illinois

Application April 26, 1937, Serial No. 139,095

16 Claims. (Cl. 282—16)

10. In an autographic register having a record compartment and a platen over which a strip of forms, provided in alternate forms with detector perforations, may be fed from a zig-zag folded supply packet to said record compartment; a drive shaft journalled in said casing and provided with a feed-wheel and an operating crank; a pivotally mounted guide plate having a driving connection with said drive shaft which is adapted to move said guide-plate during each

rotation of the drive shaft; a latching dog adapted to hold the guide-plate against substantial movement; a rock-arm adapted to hold said dog in guide-holding position; and detector mechanism controlled by the stationery, for controlling operative engagement of the latching dog and rock-arm.

2,106,521

CONTINUOUS METHOD OF REACTING LIQUID REAGENTS

Richard M. Deanesly, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application September 9, 1935, Serial No. 39,909

18 Claims. (Cl. 260—99.12)

1. A process for continuously reacting an organic liquid reagent reactive with another liquid reagent in which it has a low physical solubility which comprises continuously adding said reagents to a reaction mixture of a composition with respect to the elements in the feed which is different from the composition of the total feed, continuously removing reaction mixture from the reaction zone without substantially changing its composition, separating at least a part of the reaction product corresponding to that formed in the reaction and continuously returning sufficient of a remaining component of the reaction mixture to said reaction zone to maintain said composition difference between the total feed and the reaction mixture.

2,106,522

TRIETHANOLAMINE RESIN

Carleton Ellis, Montclair, N. J., assignor to Ellis-Foster Company, a corporation of New Jersey

No Drawing. Application December 31, 1934, Serial No. 760,046

22 Claims. (Cl. 260—6)

1. A resin comprising the reaction product of phthalic anhydride, triethanolamine and a drying oil fatty acid.

2,106,523

COMPLEX RESINOUS BODY AND PROCESS OF MAKING SAME

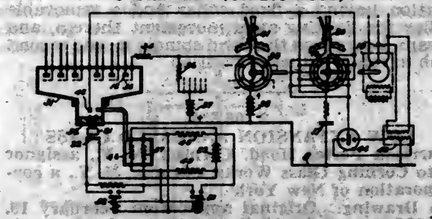
Carleton Ellis, Montclair, N. J., assignor to Ellis-Foster Company, a corporation of New Jersey

No Drawing. Application July 31, 1935, Serial No. 34,050

6 Claims. (Cl. 260—6)

1. The process which comprises reacting a relatively small amount of a urea with a polyhydric alcohol, a polycarboxylic acid and a glyceride oil.

2,106,524



ELECTRON DISCHARGE DEVICE CONTROL SYSTEM

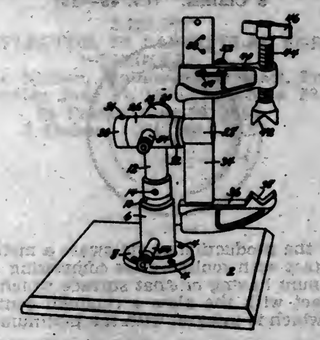
Arthur Gaudenzi, Baden, Switzerland, assignor to Aktiengesellschaft Brown Boveri & Cie, Baden, Switzerland, a joint-stock company of Switzerland

Application January 11, 1934, Serial No. 706,189

In Germany January 20, 1933

9 Claims. (Cl. 175—363)

4. The combination with an electron discharge device comprising a main anode, an auxiliary anode and a cathode of vaporizable material, of means for vaporizing material of said cathode to reduce the dielectric strength of the space thereabout, means comprising a source of current connected with said auxiliary anode and cathode for initiating discharges therebetween, a second source of current connected with said main anode and said cathode to cause a flow of current therebetween upon initiation of said discharge, and means operable responsive to and in dependence on the vapor pressure within said device for controlling the action of the first said means.



2,106,525

UNIVERSAL TOOL HOLDER

Eugene E. Henry, Upper Darby, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a corporation of Pennsylvania

Application July 23, 1936, Serial No. 92,071

1 Claim. (Cl. 29—99)

A tool holder comprising a base formed with a vertically arranged tubular socket, a bearing arranged in and extending above said socket, a vertical spindle having its lower portion rotatably mounted in said bearing and its upper end portion formed to provide an elongated hub portion, a collar adjustably secured to said spindle and engaging the upper face of the bearing to support the spindle, means projecting through said tubular socket into engagement with the spindle to lock said spindle in rotatably adjusted position, a second spindle formed at one end with an elongated hub portion, said second spindle being seated in and extending through and beyond the

first named hub portion and having an annular shoulder adjacent its hub portion engaged with one end of the first named hub portion to limit movement of the spindle in one direction, a removable collar on the projecting end of said second spindle abutting the adjacent part of the first named hub portion to limit movement of the second spindle in the opposite direction, and a third spindle having a tool carrier at one end thereof extending through the second named hub portion having a fixed collar and a removable collar for limiting axial movement therein, and means for locking the third spindle in said second hub in rotary adjusted position.

2,106,526

LOW EXPANSION ANNEALED GLASS

Harrison Porter Hood, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York

No Drawing. Original application February 19, 1935, Serial No. 7,301. Divided and this application November 22, 1935, Serial No. 51,172

7 Claims. (Cl. 106—39.1)

1. An annealed glass article having a minimum thickness of at least six inches and composed of a glass having a thermal expansion coefficient not greater than .0000030 which will not devitrify when heated for more than 10 days at temperatures in the annealing range of the glass, and which consists of silica, boric oxide, alumina and alkali, the silica content being between 75% and 87%, the alumina being between .1% and 1.% as shown by analysis and the total alkali content being between .5% and 2.5%.

2,106,527

REFRACTORY FOR CONTACTING MOLTEN GLASS

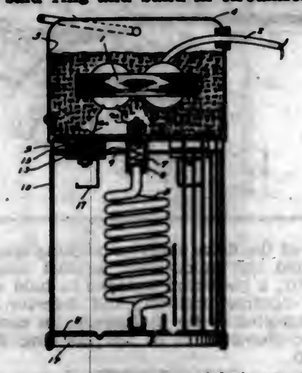
John C. Hostetter, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York

Application June 27, 1936, Serial No. 87,781

8 Claims. (Cl. 49—35)

1. In the production of glassware a metal part for contact with molten glass comprising a body of platinum having on that surface which is not in contact with the glass a rhodium containing casing which is integral with the platinum.

2,106,528



INSECT ELECTROCUTOR

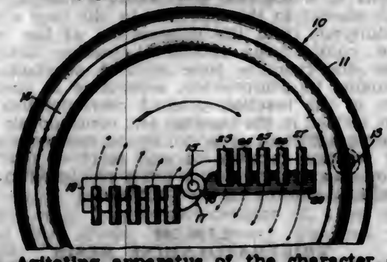
Lloyd Theodore Jones and Joe Keebele Ellsworth, Berkeley, Calif.

Application August 7, 1935, Serial No. 35,143

5 Claims. (Cl. 43—112)

1. An insect electrocuting device comprising a cylindrical housing, insulating posts projecting from the underside of said housing, a first electrocuting cage comprising a ring secured to said insulating posts, electrocuting wires secured at their upper ends to said ring in circumferentially spaced relation and depending downwardly, a second electrocuting cage comprising a ring secured to the underside of said housing, a circular band spaced downwardly from the housing beyond the lower ends of the electrocuting wires of the first cage, electrocuting wires secured at their opposite ends to said ring and band in circumferentially

spaced relation and interposed between the electrocuting wires of the first cage and in circumferentially spaced relation relative thereto, the electrocuting wires of both cages being arranged in substantially the same peripheral plane about the axis of the housing, and a luminescent tube arranged centrally within said cages below said housing.



2,106,529

AGITATOR FOR MASH TANKS

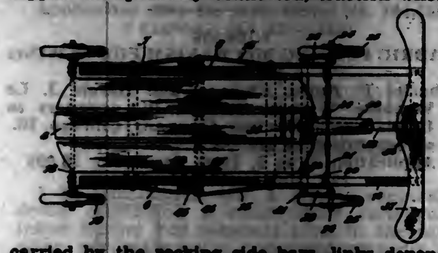
Andreas R. Keller, Lombard, Ill.

Application July 23, 1937, Serial No. 155,239

3 Claims. (Cl. 259—107)

1. Agitating apparatus of the character described for a tank adapted to hold a mixture comprising fluid and solids, including: a vertical rotatable shaft; a pair of horizontal blades mounted on said shaft and extending in opposite directions therefrom, said blades being laterally inclined and having their lower edges on the forward side and closely adjacent the bottom of said tank; and a plurality of inclined tubular scoops mounted on said blades, said scoops all having their lower ends forward and progressively decreasing in diameter toward the ends of said blades.

2,106,530



CONVERTIBLE COASTER WAGON AND SLED

Andrew J. Kelly, Richmond, Va.

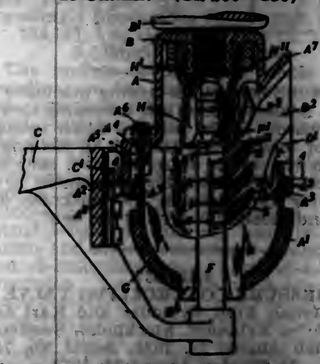
Application March 15, 1937, Serial No. 131,025

11 Claims. (Cl. 280—9)

1. In a convertible coaster wagon and sled, a body structure, runners for supporting said structure, a rock shaft extending transversely of the structure and provided with terminal crank arms, rocking bars disposed at opposite sides of the structure and having their inner ends overlapped and pivotally connected, traction wheels

carried by the rocking side bars, links depending from the crank arms and pivotally connected with the overlapping ends of the rocking side bars, and an operating handle connected with one of said crank arms.

2,106,531



ELECTRIC CIRCUIT BREAKER

Bruce Hamer Loosen, Tynemouth, and Robert William Wild, Low Fell, England, assignors to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England, a company of Great Britain

Application December 1, 1936, Serial No. 113,716

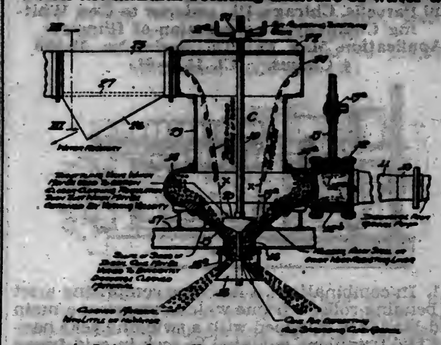
In Great Britain December 14, 1935

16 Claims. (Cl. 200—150)

1. An arc-control device for a liquid-insulated alternating current electric circuit-breaker, comprising cooperating relatively movable contacts, and an enclosure of insulating material surrounding such contacts and having at one side a series of aligned vents leading into a common discharge passage whereby a relatively high pressure will be developed in the enclosure by the arc formed on separation of the contacts to cause a blast of deionizing fluid to be discharged through the arc path and out from the enclosure through the vents and discharge passage, the discharge passage being so shaped as to deflect the discharge from certain vents past the discharge openings of other vents so that a discharge of fluid through a vent will by ejector action set up a suction at the other vents.

2,106,532

METHOD AND APPARATUS FOR SEPARATING GRAVEL, AND THE LIKE



Andrew M. Lochtt, New Orleans, and Herman H. McKenny, Austin, Tex.

Application November 29, 1932, Serial No. 596,894

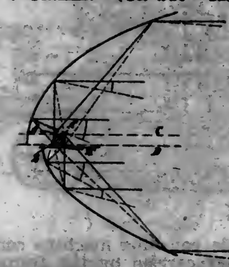
6 Claims. (Cl. 209—211)

1. The method of separating gravel from trash

of lesser density than said gravel, consisting in delivering a mixture of water, gravel and trash tangentially into the lower outer portion of a substantially cylindrical body of confined water under an impetus sufficient to engender in the combined mass of said mixture and body of confined water centrifugal action to develop a vortex having an unobstructed cavity of inverted frustro-conical shape within said vortex and having upper and lower circular passages in direct communication with the exterior of said vortex, and continuously elevating and withdrawing by said centrifugal action the annular rotating mixture of water and

separated trash collected adjacent to and surrounding said upper circular passage, and simultaneously washing the gravel by agitating and frictionally engaging the gravel and water precipitated and rotating in the annular section of said vortex below the point of tangential delivery of said mixture of water, gravel and trash, and uninterruptedly gravitating the washed gravel continuously collecting, and rotating with decreasing linear velocity within the lowest annular section of said vortex freely through the lower circular passage of said unobstructed cavity.

2,106,533

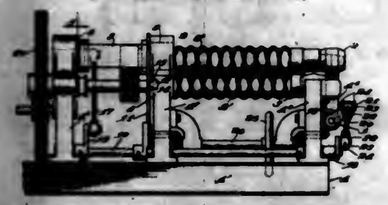


REFLECTOR, IN PARTICULAR FOR VEHICLES

Frédéric Nielsen, Mulhouse-Brunstatt, France

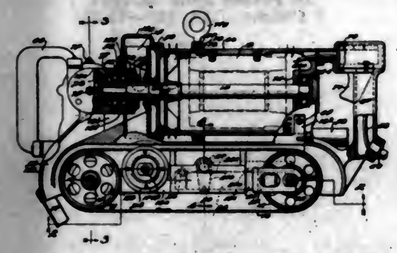
Application June 27, 1935, Serial No. 28,717

In France June 30, 1934



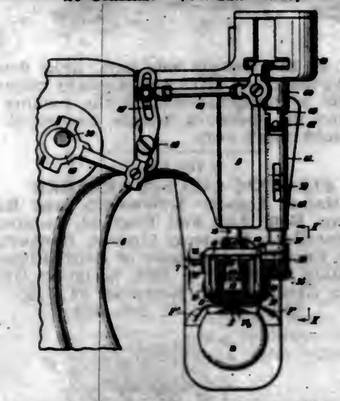
7 Claims. (Cl. 240—41.37)

1. A reflecting system comprising a source of light and a reflector, said reflector being composed of an upper part and a lower part, said parts lying on opposite sides of the reflector axis, each part having an outer limb and an inner limb, the outer limbs comprising in section parabolic curves having focal points which lie on a line extending above and parallel to said axis, said inner limbs comprising in section curves continuous with said outer limbs from



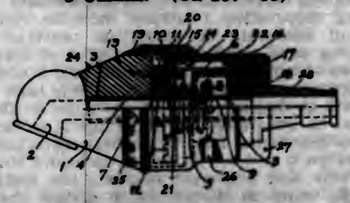
tangent points lying on planes extending normal to said axis and passing through the focal points of said outer limbs, said source of light being positioned below said line, and said parts being adapted and arranged to reflect all light rays entering said reflector parallel to said axis so that they do not enter the space between the focal points of said outer limbs and the lower end of said source of light.

2,106,534
BENDING ROLLS MACHINE
Paul Parcells, Chicago, Ill., assignor to Geo. Whiting Company, a corporation of Illinois
Application May 15, 1936, Serial No. 79,995
4 Claims. (Cl. 153—61)



1. In combination: a machine comprising a set of bending rolls, a frame which comprises a main end-standard equipped with a swinging yoke having two trunnions mounted to rock in said frame and provided with an eccentric bearing to receive one end of one of the rolls, an outwardly and downwardly swinging pivoted standard provided with a bearing for the other end of said roll, and means comprising an oscillatable shaft provided with cranks for moving the pivoted standard bearing from engagement with the roll and moving said roll by rocking said yoke when said pivoted standard is pulled outwardly by hand.

2,106,535
PORTABLE POLISHING MACHINE
Herbert J. Pattison, Detroit, and William K. Barton, Grosse Pointe Park, Mich., assignors to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application February 19, 1936, Serial No. 64,668
7 Claims. (Cl. 51—170)



1. A portable polishing machine comprising a frame, a pulley carried by the frame, a guide block carried by the frame and provided with a pair of parallel holes directed away from the pulley and a transverse hole offset from but intersecting the parallel holes, a pair of cylinders slidable in the parallel holes and having gear teeth spaced along their length, a gear-like cylinder rotatable in the transverse hole with its teeth engaging the teeth on the slidable cylinders, manually operable means for rotating the rotatable cylinder, an idler pulley carried by the slidable cylinders, a polishing belt around the pulleys, and resilient means urging the slidable cylinders and the idler pulley away from the other pulley.

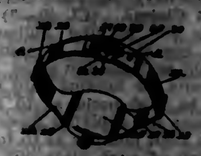
2,106,536
FABRIC FEEDING MECHANISM FOR SEWING MACHINES
Charles F. Rubel, Chicago, and Harold J. Le Vesconte, Western Springs, Ill., assignors to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application June 5, 1935, Serial No. 25,095
29 Claims. (Cl. 112—212)

1. Feed mechanism for sewing machines comprising a flexible endless belt extending forwardly and rearwardly of the point of stitch formation; means for maintaining the belt in yielding contact with the fabric being seamed, said means having capacity for angular movement to compensate for variations in the thickness of the fabric; and means for driving the belt.

2,106,537
PRESSURE CONTROLLING VALVE
Anders Johan Emil Rylander and Karl Gustav Vilhelm Rylander, Stockholm, Sweden
Application August 24, 1934, Serial No. 741,320
In Sweden August 24, 1933
5 Claims. (Cl. 137—53)

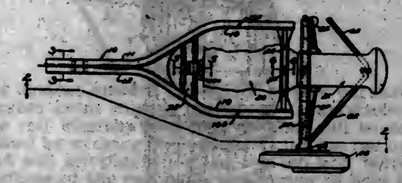
1. A pressure relief and indicating valve of the character described comprising a casing having a compressed air conduit extending therethrough, a recessed valve seat surrounding said conduit and having its recess in constant communication with the interior of said conduit, a constantly loaded valve also surrounding said conduit and normally seated upon said recessed valve seat, means for adjusting the effective area of the recess in said valve seat covered by said valve, and said casing having an opening for the escape of air therefrom when said valve is raised from its seat.

2,106,538
EXTENSION SHELF
Paula F. Schmitt, St. Louis, Mo., assignor to Anna Fowler, St. Louis, Mo.
Application May 24, 1937, Serial No. 144,260
2 Claims. (Cl. 211—153)



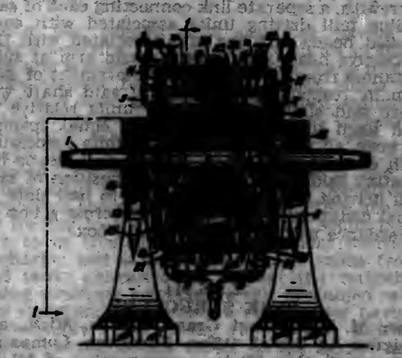
1. In combination with a grill, a supporting device comprising a substantially rectangular frame having side members lying in the same plane, one end member projecting upwardly beyond the plane of the side members, and the other end member having spaced portions projecting upwardly beyond the plane of the side members, and an intermediate portion extending downwardly below the plane of the side members.

2,106,539
STABLE DIAZO SALT PREPARATIONS AND PROCESS OF PREPARING THEM
Karl Schmidhammer, Offenbach-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application July 7, 1934, Serial No. 734,197. In Germany July 13, 1933
5 Claims. (Cl. 23—350)



1. The process of preparing stable diazosalt preparations on the basis of diazonium sulfates which comprises separating in solid form diazonium sulfates from aromatic monoamines of the benzene series selected from the group consisting of mono-, di- and polyhalogenaminobenzenes, nitroaminobenzenes, dihalogentoluidines and dihalogenaminophenol ethers, 1-amino-4-methyl-3-halogenbenzenes, 1-amino-2-methyl-3-halogenbenzenes, 1-amino-5-chloro-2-alkoxy- and aryloxybenzenes, 1-amino-2-nitro-4- and -5-halogenbenzenes, 1-amino-4-chloro-3-nitrobenzene, 1-amino-2-chloro-4-nitrobenzene, 1-amino-3-methyl-4-nitro- and -6-nitrobenzene, 2-amino-4-nitro- and 4-amino-3-nitro-1-phenolethers, by diluting with organic liquids miscible with sulfuric acid the diazo solutions obtainable by diazotising these amines in sulfuric acid of high concentration, isolating the separated diazonium sulfates and mixing them with the quantity of a mild alkaline agent which corresponds to the sulfuric acid mechanically adhering to the diazonium sulfate plus the quantity equivalent to the acidity of the acid diazonium sulfate.

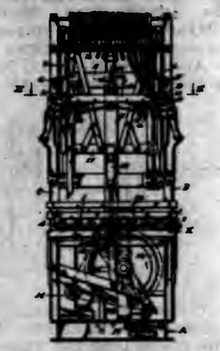
2,106,540
WRIST WATCH BAND
Herbert K. Smith, Inglewood, Calif.
Application March 26, 1937, Serial No. 133,239
4 Claims. (Cl. 24—77)



1. A separable fastener for the members of a split band of a wrist watch comprising an upstanding lug on one member, the other member having a perforation to receive the lug, a keeper slidable on the free ends of said members and provided with a tongue having a perforation also to receive the lug, said lug having a forwardly projecting finger engageable over the outer face of tongue to prevent said tongue from becoming disengaged from the lug.

2,106,541
ENGINE MOUNTING
John Tjaarda, Birmingham, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application April 9, 1934, Serial No. 719,656
11 Claims. (Cl. 180—54)

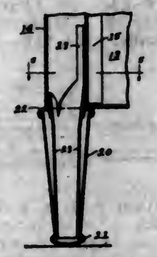
1. A motor vehicle having a frame and a propulsion unit adjacent the rear end thereof, said propulsion unit supporting the rear portion of said frame and comprising a unitary casing containing an engine and transmission mechanism, said casing having a forwardly extending bearing, a resilient engine mounting secured to the vehicle frame adjacent the forward end of said casing and adapted to receive said bearing, suspension means connecting the frame and casing intermediate the ends of said casing, and spring means supported directly by the driving wheels of the vehicle and directly connected with said casing rearwardly of said suspension means.



2,106,542
ELECTROMAGNETIC APPARATUS
Anthony Winther, Kenosha, Wis.
Application July 20, 1936, Serial No. 91,176
15 Claims. (Cl. 171—252)

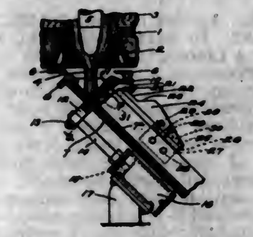
1. In apparatus of the class described, a rotor, a stator, said rotor having teeth adjacent the stator, a coil located peripherally of one of said members and forming a toric flux field passing through both of them and engendering opposite polarity at adjacent surfaces between the rotor and stator, at least one peripheral water circu-

lating passage about the stator and at least one heat transmitting wall in said passage adapted to accommodate said flux.



2,106,543
CRATE LIDDING MACHINE
Herbert E. Twomley, Riverside, Calif., assignor, by mesne assignments, to Food Machinery Corporation, a corporation of Delaware
Application August 10, 1934, Serial No. 739,275
4 Claims. (Cl. 1—10)

1. In a machine for applying a series of wood strips as a cover to a box, a nailing table for supporting a box ready to receive said strips, a nailing head for each end of said box extending across said nailing table in alignment with the ends of a box on said nailing table; nail driving units associated with each of said nailing heads, one for each of the strips employed to cover a single box, means fixedly mounting one of said nail driving units on each of said heads in a predetermined alignment relative to the rear of said nailing table to nail the rearmost strip in predetermined fixed relation to the rear side of said box, means mounting the others of said nail driving units for sliding movement relative to said fixed nailing units, a rotatable shaft extending between said nailing heads and having an arm thereon for each of said nailing heads, said arms being rigidly attached to said shaft for rotation therewith, a separate link connecting each of said sliding nail driving units associated with each of said heads with the arm associated with the respective head, and engaging said arm at such distances from said shaft that movement of said arm in response to rotation of said shaft will move said sliding nail driving units relative to said fixed unit but maintaining equal spacing between all of the nail driving units associated with each of said heads, and manual means for rotating said shaft to adjust the position of said nail driving units to adapt them to nail slats at equal distances from each other across a box in accordance with the width of said box.

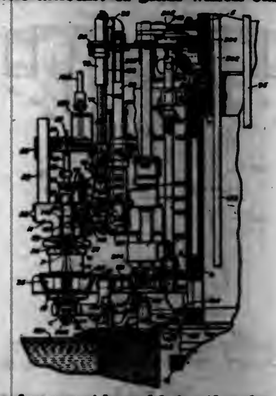


2,106,544
DESK STRUCTURE
Peter M. Were, East Grand Rapids, Mich., assignor to Metal Office Furniture Company, Grand Rapids, Mich., a corporation of Michigan
Application June 13, 1935, Serial No. 26,290
2 Claims. (Cl. 45—6)

1. A drawer pedestal including a skeleton frame provided with tubular corner posts, tubular members having upper portions longitudinally split and compressibly fitted within and depending from each tubular corner post, tubular sleeves fitted on the tubular members, and means

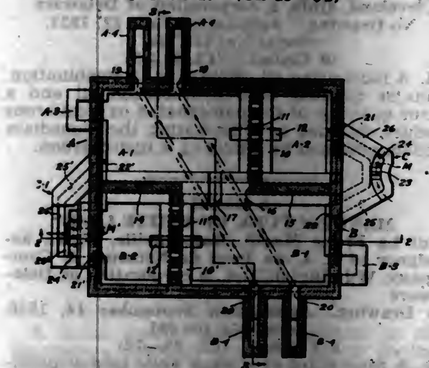
carried by the upper ends of the sleeves and supporting the skeleton frame.

2,106,545
GLASS FEEDING APPARATUS
Lloyd G. Bates, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware
Application April 29, 1936, Serial No. 76,985
10 Claims. (Cl. 49—55)



1. Glass feeding apparatus comprising a trough or chute and a supplemental glass supporting member for cooperating with said trough or chute to support the lower end portion of a column or stream of glass below an outlet from which such glass has issued, means for varying the distance below said outlet at which said trough or chute and said supplemental member support said glass, and means for effecting relative opening and closing movements between said trough or chute and said supplemental member.

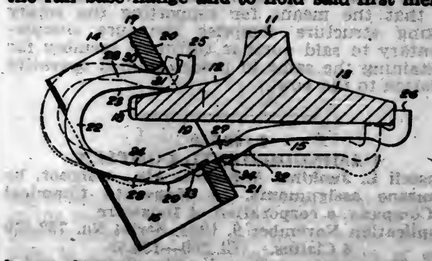
2,106,546
APPARATUS FOR FORMING GLASSWARE
Robert W. Canfield and Thomas Waugh, West Hartford, Conn., assignors to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware
Application February 14, 1935, Serial No. 6,424
14 Claims. (Cl. 49—5)



1. Apparatus for making hollow glassware, comprising in combination a mold, means for filling said mold with molten glass, a measuring receptacle, means for holding said receptacle in such relation to said mold as to receive glass therefrom, means for applying force to the glass in said mold in such manner as to force the central core portion of such glass out of the mold and into said measuring receptacle to fill said receptacle, and means for adjustably varying the

capacity of said receptacle for thereby predetermining the amount of glass which can be forced

thereinto from said mold in the forming of a glass article.



2,106,547
GLASS MELTING FURNACE
Robert W. Canfield, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware
Application September 12, 1936, Serial No. 100,407
15 Claims. (Cl. 49—54)

1. A glass melting furnace comprising a pair of juxtaposed tanks, each having longitudinally aligned glass melting and glass refining compartments, each of said tanks being reversed endwise with respect to the other, so that its glass refining portion is located along side of the glass melting portion of the other tank and a glass level equalising connection between the melting compartment of the tanks.

2,106,548
RAIL ANCHOR
Francis W. Cooper, Montreal, Quebec, Canada, assignor to The Stend Rail Anchor Company, Limited, Montreal, Quebec, Canada, a corporation of Canada
Application October 23, 1930, Serial No. 490,635
25 Claims. (Cl. 238—329)

1. A rail anchor comprising a member formed to engage the bottom surface of one base flange of a rail and the relatively inclined top surface only of the other base flange of the rail and adapted to be moved transversely of the rail, and a second member adapted to engage the lower surface of said other rail base flange and thereby to be positioned on said other rail base flange and to engage the upper surface of said first member at a point above the rail base and outwardly of the engagement of the first member with the top of the rail base flange and to hold said first member against upward movement at said outwardly located point during movement transversely of the rail whereby said first member will be tensioned by wedging co-operation with the rail base and will grippingly engage the top and bottom surfaces of the rail base, and means to hold the first member against movement in a reverse direction to that causing tension of said first member.

2,106,549
CLASSIFIER
Harold Boyd Coulter, Mamaroneck, N. Y., assignor to The Dorr Company, Inc., New York, N. Y., a corporation of Delaware
Application May 1, 1935, Serial No. 19,218
Renewed November 10, 1937
11 Claims. (Cl. 209—465)

1. A two compartment classifier having a lower classifying tank provided with an inclined deck and a solids agitating and conveying mechanism therein for advancing settled solids up along said deck, an upper bowl-shaped sedimentation compartment having associated therewith a rotatable raking structure provided with rotatable rake arms carrying raking blades and adapted for operation with respect to a load of settled solids in the bowl, means for operatively supporting the rotatable raking structure, means for feeding to the classifier a liquid solids mixture to be treated therein, an effluent overflow discharge, and a discharge for the solids from said tank; characterized in that the rotatable raking structure comprises a self-contained rake arm structure constituting a rigid spider having substantially radial arms rigidly and directly interconnected at the center of the spider, and by and from which arms the raking blades are supported; and in that the rotatable structure further comprises a movable annular turntable member, a hollow torsion member of a suitable width and coaxial with and rigidly interconnecting said turntable member and the self-contained rake arm structure, which hollow torsion member thus overlies the center portion of the

spider and thereby defines inner and outer rake arm portions of the spider, the width of said torsion member being such as to establish a ratio of lengths of outer to inner rake arm portions by virtue of which ratio the rotatable raking structure is adapted to assure a desired rigidity and operating stability with regard to stress reaction from the operating load; and furthermore in that the means for supporting the rotary raking structure comprise structure complementary to said annular turntable member for sustaining the same in predetermined operative relation to the bowl.

2,106,550

4-AMINODIPHENYL COMPLEX

Russell L. Jenkins, Anniston, Ala., assignor, by mesne assignments, to Monsanto Chemical Company, a corporation of Delaware

Application November 9, 1934, Serial No. 752,220

5 Claims. (Cl. 260—130.5)

4. The addition salt of 4-aminodiphenyl and a compound selected from the class consisting of phenol, hydroquinone and pyrogallol.

2,106,551

4-AMINODIPHENYL COMPOUNDS

Russell L. Jenkins, Anniston, Ala., assignor, by mesne assignments, to Monsanto Chemical Company, a corporation of Delaware

Application January 24, 1935, Serial No. 3,265

2 Claims. (Cl. 260—130.5)

1. As a chemical compound the addition product of 4-aminodiphenyl and beta naphthol, said addition product being characterized by the fact that upon the addition of acid thereto 4-aminodiphenyl acid addition salt and beta naphthol are liberated.

2,106,552

THIOCARBANILIDE DERIVATIVES

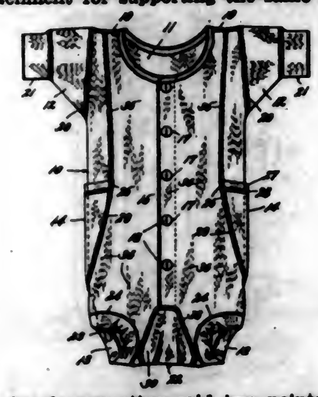
Russell L. Jenkins, Kirkwood, Mo., and Max M. Levine, Rochester, N. Y., assignors, by mesne assignments, to Monsanto Chemical Company, a corporation of Delaware

No Drawing. Application March 30, 1936, Serial No. 71,684

3 Claims. (Cl. 260—125)

3. A chemical compound consisting of the reaction product of carbon disulfide with an amine selected from the group consisting of 2,4-diphenylaniline and 4,4'-dichloro-2-aminodiphenyl.

2,106,553



DROP SEAT GARMENT

Joseph H. Le Coney, Bedford, Mass., assignor to Earnshaw Knitting Company, Newton, Mass., a corporation of Massachusetts

Application September 7, 1935, Serial No. 39,587

2 Claims. (Cl. 2—78)

1. A garment comprising a cylindrical body portion having front and back parts, a drop seat attached at its bottom edge to the bottom edge of said front part to form a crotch portion and having an elastic top edge, the two ends of which are secured to said front part at the waist line thereof at points intermediate the center and sides of said front part, the width of said drop seat increasing in an upward direction to form side portions overlapping the sides of said front part, the side edges of said side portions being free and unattached between said elastic top edge and the bottom edge of the drop seat, reinforcements in said front part extending from the shoulder seams of said body portion to said points of attachment for supporting the same and an

elastic band connecting said two points of attachment to hold the same in normal relation when said drop seat is closed.

2,106,554

LUBRICATING OILS

Bert H. Lincoln and Alfred Henriksen, Ponca City, Okla., assignors, by mesne assignments, to The Lubri-Zol Development Corporation, Cleveland, Ohio, a corporation of Delaware

No Drawing. Application June 22, 1932, Serial No. 618,704

10 Claims. (Cl. 87—9)

1. A lubricating oil comprising in combination, a major quantity of a hydrocarbon oil and a minor quantity of the halogenated oxygeniferous product obtained by chlorinating the immediate product obtained by oxidizing a hydrocarbon.

2,106,555

MANUFACTURE OF WHITE LEAD

Paul La Frene Magill, Ransomville, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

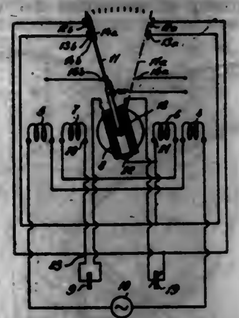
No Drawing. Application September 14, 1936, Serial No. 100,681

9 Claims. (Cl. 23—72)

1. A process for producing white lead comprising exposing an alkali metal-lead alloy to the action of an aqueous reagent capable of reacting with lead to form the basic carbonate thereof.

2,106,556

ALTERNATING CURRENT APPARATUS



Aage Valdemar Petersen, Copenhagen, Denmark, assignor to F. L. Smidth & Company, New York, N. Y., a corporation of New Jersey

Application February 27, 1937, Serial No. 126,141

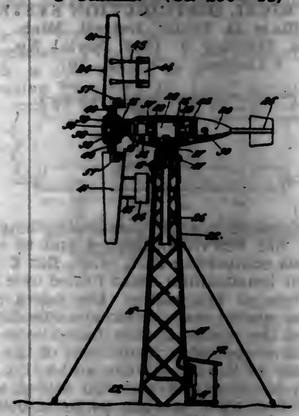
In Great Britain January 14, 1936

8 Claims. (Cl. 175—183)

1. In an alternating-current deflectional instrument, a primary circuit including a primary winding for connection to a fixed alternating-current supply line, a secondary circuit including in series a secondary winding, a moving coil and a reactance subject to variation, said secondary winding and said moving coil being magnetically coupled to said primary winding, the current in said reactance being only that induced by said primary winding, a pointer attached to said moving coil and movable therewith in two directions, and capacitive means retaining said pointer

against movement in either direction until said reactance attains a preselected value.

2,106,557



AERO-ELECTRIC GENERATION SYSTEM

Palmer C. Putnam, Harwich, Mass.

Application June 22, 1935, Serial No. 27,917

Renewed December 7, 1937

5 Claims. (Cl. 290—44)

5. In an electric generating system, in combination, a propeller type wind motor having a blade of variable angle of attack, an electric generator driven by said motor, and means controlled by the temperature of said generator for changing the angle of attack of said blade.

2,106,558

XANTHATES OF RESIN ALCOHOLS AND METHOD FOR THEIR PRODUCTION

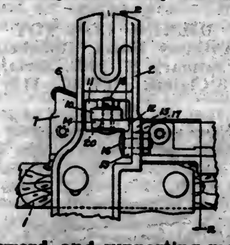
Philip A. Ray, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application May 14, 1935, Serial No. 21,483

18 Claims. (Cl. 260—99.11)

1. A xanthate of an alcohol produced by carboxylic reduction of a resin acid.

2,106,559



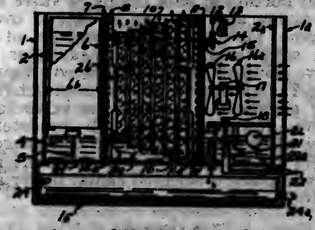
ADJUSTABLE BOX PLATE

James M. Tuten, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine

Application September 2, 1937, Serial No. 162,693

5 Claims. (Cl. 139—183)

1. In a loom, the combination of a lay sword, a lay beam fixed to the front face of said sword below the top thereof, a shuttle box including a back shuttle guiding plate positioned in front of said sword above said lay beam, said plate having a lug extending rearwardly through an opening in said sword, and supporting means located at the back of the sword for supporting said lug and thereby said plate, said means being adjustable to adjust the vertical inclination of said plate.



2,106,560

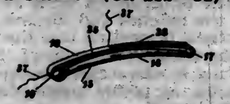
HUMIDITY AND AIR COOLING MACHINE

Joseph M. Barrett, East Cleveland, Ohio

Application August 26, 1932, Serial No. 630,493

3 Claims. (Cl. 261—92)

1. In an air conditioning apparatus, the combination of a side and bottom wall structure forming water storage space, an air accelerating means, a pair of pulley units located one above the other, the lower unit placed so that a portion of its surface will be submerged in water in said storage space, endless belt means interconnecting the pulley units, means for revolving said pulleys, and a refrigerating means placed in such a position that part of its surface is subjected to air currents from the air accelerating means and a portion of said means submerged in the water storage space.



2,106,561

HAIR CLIP

Frank Belter, Long Island City, N. Y.

Application February 8, 1936, Serial No. 62,928

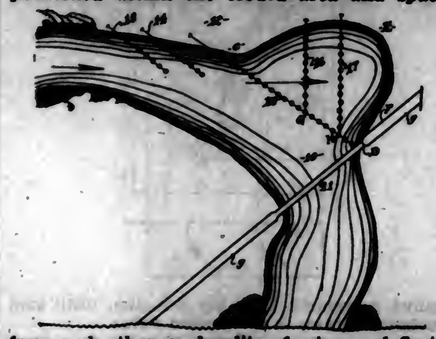
1 Claim. (Cl. 132—31)

In a hair clip having inner and outer bow-shaped resilient members integrally connected at one end by a U-shaped loop, an inreaching curved hook on the opposite free end of said outer member, the terminal portion of said hook containing a substantially triangular opening, a prong on the free end of said inner member engageable in the mentioned opening, a longitudinal reenforcing rib on said inner member, serrations on both longitudinal edges of said outer member,

a strand of hair closely coiled around said outer member to entirely cover it, said hair engaging in the serrations, and means to secure the ends of said hair strands.

2,106,562
MILKING COW TOY
Mark Anthony Bucci, Hoboken, N. J.
Application January 27, 1937, Serial No. 122,523
2 Claims. (Cl. 46—115)

1. A milking cow toy comprising material formed to simulate a cow and having perforated teats, a hollow cylindrical casing within said cow figure and extending from the teat portion to the hind portion, a liquid bottle within said cow figure and having an outlet pipe connecting with the lower portion of said casing, a valve slidable in said casing and adapted to extend over said outlet pipe to control the passage of liquid through said teats, resilient means for urging said valve upwards, a tail for the cow figure and carrying radial fingers of different lengths selectively engageable against the valve to move the valve downwards through predetermined distances when the tail is moved downwards, and means for holding said tail in different rotated positions to place a selected radial finger against said valve.



2,106,563
GARMENT HANGER
Bernard Cahn, San Diego, Calif.
Application July 22, 1936, Serial No. 91,873
1 Claim. (Cl. 223—88)

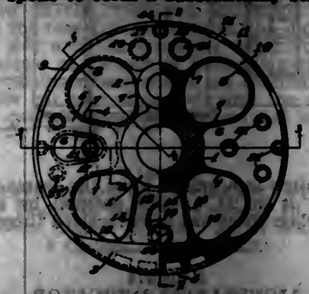
A hanger formed from pressed fiber board and comprising a relatively rigid shoulder section and a cross bar, the cross bar being formed from a relatively light fiber board provided with notches in its ends, the latter board being folded over on each side of the notches and the free ends of the shoulder sections projecting into the notches and secured to the folded-over sides of the cross bar, and reinforcing blocks secured between the folds of the cross bar at points substantially midway of the length thereof.

2,106,564
CURRENT DIVERSION MEANS
Leonard E. Fisk and Leroy E. Lucas, Topeka, Kans.
Application October 29, 1936, Serial No. 108,124
4 Claims. (Cl. 61—3)

2. In a system of permeable obstacles in the bed of a stream, a plurality of obstacles connected to a cable comprising a string, a main deflector string positioned across the mouth of an eroded area, a plurality of secondary deflector strings positioned within the eroded area and spaced

from each other, a plurality of primary deflector strings spaced from each other and positioned near the upstream end of the main deflector string.

2,106,565
ELECTRICAL DISTRIBUTION SYSTEM
William H. Frank, Detroit, Mich.
Application January 9, 1936, Serial No. 58,207
2 Claims. (Cl. 191—39)

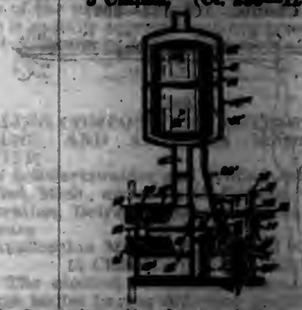


1. A continuous bus run comprising lengths of thin, wide, flat bus ribbon joined end to end by splice means comprising thin, wide, flat C straps having their longitudinal edges folded over longitudinal edges of bus ribbon, the edges of the straps being spaced apart a considerable distance, the folds of the straps having formations interlocking with cooperating formations of the longitudinal edges of the bus ribbon, and a thin, wide, flat ribbon of insulation material folded around the bus ribbon with its edge portions being directed towards each other so as to lie substantially alongside of the bus ribbon so as to cover all but a narrow stripe on one flat side of the bus ribbon, the external dimensions of the folded splice straps being substantially no greater than the external dimensions of the bus ribbon at points remote from the splices, the insulator enclosing the splice straps, with the gaps between the edges of the splice straps registering with the gap between the edges of the insulation ribbon and with the longitudinal edges of the insulation being alined with the longitudinal edges of the splice straps.

2,106,566
WHEEL
Einar G. Hallquist, Wallingford, Pa., assignor to General Steel Castings Corporation, Granite City, Ill., a corporation of Delaware
Application July 17, 1933, Serial No. 680,726
3 Claims. (Cl. 295—23)

1. A locomotive driving wheel structure including a hub annulus of solid cross-section, spokes radiating therefrom, each being of hollow box-section with the inner ends of all of its walls merging with said solid cross-section annulus

and with the outer ends of each of its walls, which extend transversely of the wheel structure, terminating in a substantially quarter circle arc to merge with the corresponding wall of an adjacent spoke to form a substantially semi-circu-



lar arch connecting the spokes, and a peripheral rim web spaced outwardly from the arch forming portions of the spoke transverse walls to form a hollow box-section rim portion between the main axes of adjacent spokes.

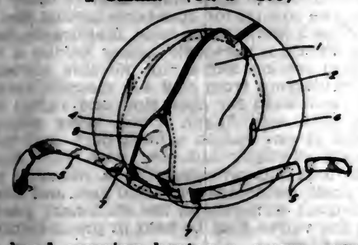
2,106,567
JOINT AND METHOD OF MAKING THE SAME
George H. Hufford, Detroit, Mich., assignor to Thompson Products Incorporated, Detroit, Mich., a corporation of Ohio
Application February 18, 1935, Serial No. 7,013
15 Claims. (Cl. 29—153)

1. The method of making joints having a headed stud member freely rotatable and tiltable in a socket member which comprises providing an annular ring of a relatively soft workable metal in the socket member, and pressing the stud head into the ring to form a bearing surface thereon for the stud head.

2,106,568
WATER SHOWER TEMPERATURE REGULATOR
Nunzio Inclima, New York, N. Y.
Application April 17, 1936, Serial No. 74,973
5 Claims. (Cl. 236—12)

1. An automatic shower temperature regulator, comprising a hot and cold water supply discharging into a mixing passage and then into a circulating chamber, valves for controlling said supplies and connected together to operate oppositely simultaneously, a compressed air or gas container within said chamber, a diaphragm controlled by said air or gas, means for translating the movements of said diaphragm to move said valves, and means for counterweighting the action of said diaphragm, said diaphragm being housed within a telescopic casing having a bottom fixed section and a top movable section, a finger projecting from said top movable section, and a valve stem for operating said valves connected with said finger, a rod being pivotally mounted at one end to a fixed part, and intermediately pivotally mounted with said finger, and its free end provided with a movable seat, and a chain connected with said arm and adapted to engage elements on the stationary part by which the valves may be held in pre-determined fixed positions.

2,106,569
BRASSIÈRE
Siegfried Leffmann, London, England, assignor to Kops Brothers, Inc., New York, N. Y., a corporation of New York
Application June 9, 1937, Serial No. 147,201
1 Claim. (Cl. 2—42)



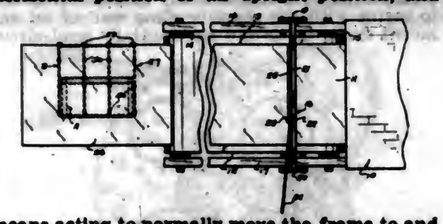
A brassière comprising a body encircling member having a pair of bust pockets inter-connected by non-elastic fabric, and an elastic band extending freely in a diagonal direction across the lower portion of each pocket, each of said bands having one end thereof secured at a point between said pockets and the other end secured at a lower point along substantially the vertical center-line of the related pocket, the length of each of such bands being such as to cause puckering of the super-posed portions of the pockets.

2,106,570
HEAD COVERING
Ruby Lipton, New York, N. Y.
Application May 18, 1937, Serial No. 143,277
4 Claims. (Cl. 2—196)

1. A new article of headwear comprising a crown having a radial open ended slit in the side thereof forming an adjustable opening, a brim, a tongue for said opening carried by said crown and having the lower portion thereof extending outwardly beyond the periphery of the crown, and adjustable tying members attached to the brim on each side of the opening for adjusting the size of the hat to the head of the wearer, said tying members cooperating and interengaging with the lower portion of the tongue to retain the same in flattened condition on the head of the wearer.

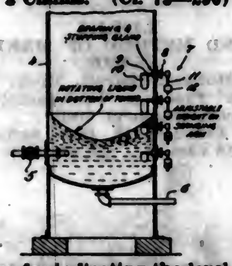
2,106,571
HAT
Ruby Lipton, New York, N. Y.
Original application May 18, 1937, Serial No. 143,277. Divided and this application October 19, 1937, Serial No. 169,573
1 Claim. (Cl. 2—198)

A head covering having a crown, means to open the crown into two portions, hookless slide fastener elements adapted to effect closure of part of the said opening, and size adjusting elements adapted to complete the closure comprising ribbons attached to either side of the opening adjacent the base of the crown, the said ribbons being adapted to be wound in opposite direction about the outside of the head covering and suitably fastened there as trim in position determined by the size of the head of the wearer.



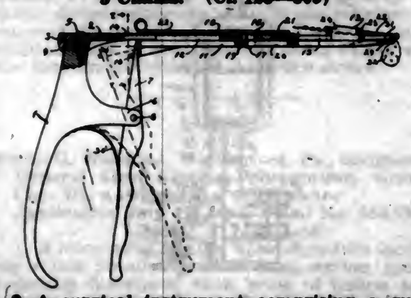
2,106,572
PROPORTIONING VALVE
Andrew Charles Meagher, Los Angeles, Calif.
Application May 14, 1934, Serial No. 725,666
Renewed July 7, 1937
6 Claims. (Cl. 137—166)

1. In a valve of the class described, a housing with an inner wall therein defining a chamber, an inlet opening in said chamber for a fluid material, a member having a lateral surface slidable within said inner wall, said member having two chambers formed therein each having an outlet opening on opposite ends of said member, at least one port of predetermined length appurtenant each chamber in the lateral wall of said member, ports in said inner wall of said predetermined length but spaced apart the distance between said first-mentioned ports less said predetermined length, and means for moving said member longitudinally of said housing for effecting a variable amount of registry between said ports and a different apportionment of the fluid material admitted into said first chamber between the two chambers in said member.



2,106,573
SHEET GLASS HANDLING APPARATUS
John H. Meiler, Charleston, W. Va., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application February 20, 1936, Serial No. 64,323
8 Claims. (Cl. 214—130)

1. In apparatus for handling glass sheets, a movable carriage, a tilting frame freely pivoted to said carriage and adapted to assume either a horizontal position or an upright position, and



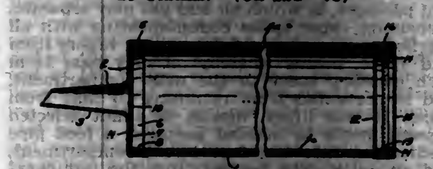
means acting to normally move the frame to and maintain it in its upright position by gravity when a glass sheet has been received thereon.

2,106,574
LIQUID LEVEL INDICATOR
Francis Reed Meore, Augusta, Kans., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application November 25, 1936, Serial No. 112,695
3 Claims. (Cl. 73—290)

1. A device for indicating the level of a moving liquid within a vessel, comprising means within the vessel adapted to be angularly displaced from a normal position when submerged within a moving liquid, means without the vessel to indicate the displacement of the internal means, means connecting the internal displaced means and the external indicating means, and weight means, external to said vessel, acting to prevent displacement of said internal means when unsubmerged or when submerged in a substantially motionless liquid.

2,106,575
TONSILLOTOME
John T. Moore, Tampa, Fla.
Application February 17, 1936, Serial No. 64,361
5 Claims. (Cl. 128—309)

2. A surgical instrument comprising a guide member, a blade-carrying member adapted for



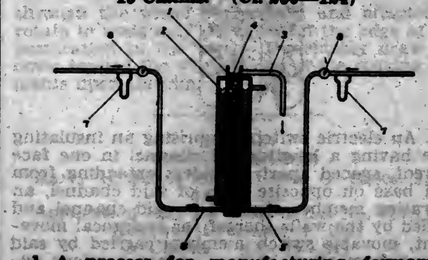
sliding engagement with said guide member and having a T-shaped projection at one end, an operating lever bearing against said end of said carrier and having a slot near its end for the stem portion of the T-shaped projection, the cross-bar of the T-shaped projection bearing against the rear side of the lever, the dimensions of the slot and the cross-bar being such that upon release of the carrier from the guide member permitting movement of the carrier to bring the cross bar into alinement with the slot, the carrier can be disconnected from the lever.

2,106,576
SUPPORT FOR REINFORCING STEEL
Frank D. Holland, Chicago, Ill.
Application August 9, 1937, Serial No. 158,262
6 Claims. (Cl. 72—123)

1. A supporting unit of the character described comprising a length of wire corrugated laterally so that all portions of its upper surface will lie in a horizontal plane, and supporting chairs secured to the wire at spaced intervals.

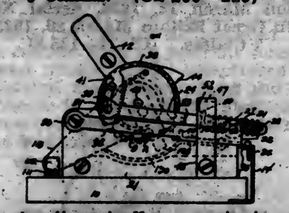
2,106,577
DISPENSING RECEPTACLE FOR PLASTIC SUBSTANCES
William E. Sherbondy, Shaker Heights, Ohio
Application December 16, 1936, Serial No. 54,616
16 Claims. (Cl. 221—73)

1. In a dispensing receptacle for plastic material, a tube of relatively yieldable material, rigid annular means, having a flange peripherally and continuously embracing one end of the tube and directly engaging the yieldable material thereof, and closure means concentric with the aforesaid means and disposed inside the tube radially opposite the annular means, the radial distance between the two means being less than the thickness of the tube wall whereby the material of the tube is radially squeezed and compressed between the two means to form a seal.



2,106,578
SEALING COMPOSITION, METHOD OF USING SAME, AND ARTICLES MADE THEREWITH
Karl Schwartzwalder and William Shuford Kirk, Flint, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 4, 1936, Serial No. 77,674
14 Claims. (Cl. 123—169)

1. The method of securing together heat resistant bodies having different coefficients of expansion which consists in preparing a pulverized mixture of glass and graphite, applying the mixture to the bodies in position to form a joint therebetween, and heating the material to fusion



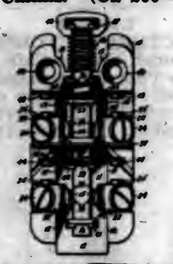
causing it to unite with said bodies and form a durable bond.

2,106,579
MANUFACTURE OF FORMAMIDE
Walter Barr Tanner, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application March 30, 1936, Serial No. 71,727
19 Claims. (Cl. 260—124)

1. A process for manufacturing formamide comprising reacting an alkyl formate with anhydrous ammonia in a liquid reaction medium comprising a mixture of formamide and an aliphatic alcohol at a pressure not substantially greater than one atmosphere.

2,106,580
CIRCUIT BREAKER
Alfred J. Thomson, Detroit, Mich., assignor to Bulldog Electric Products Company, Detroit, Mich., a corporation of West Virginia
Original application March 6, 1933, Serial No. 659,714. Divided and this application January 9, 1936, Serial No. 58,428
9 Claims. (Cl. 200—116)

1. In a circuit controller, a contact, quick acting circuit opening and closing mechanism positively connected thereto and so constructed as to have a normal tendency to move the contact and thus open the circuit when permitted so to do, holding means for the mechanism and arranged to release it on overload and permit it to operate for circuit opening, a handle for operating the mechanism for circuit opening or closing even when the mechanism is held by the holding means, and rigid but releasable means normally



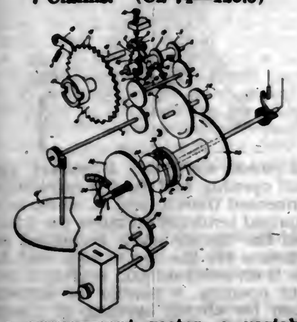
positively connecting the handle and the mechanism and automatically released by overload release movement of the holding means for disconnecting the handle and the mechanism, whereby the mechanism may operate the contact for circuit opening free of the handle and even if the latter be held, the holding means for the mechanism being separate and independent of the rigid but releasable means for connecting the mechanism and the handle and also being remote from such rigid and releasable means.

2,106,581

ELECTRIC SWITCH

Kenneth J. Unwin, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application October 31, 1936, Serial No. 108,604
8 Claims. (Cl. 200—16)



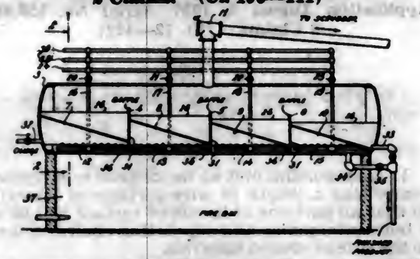
1. An electric switch comprising an insulating base having a longitudinal channel in one face thereof, spaced apart shoulders extending from said base on opposite sides of said channel, an operating member disposed in said channel and guided by the walls thereof for reciprocal movement, movable switch members carried by said operating member having contact portions extending outwardly from said channel between said spaced apart shoulders, and fixed switch members mounted on said shoulders having contact portions between said shoulders engageable with the contact portions of said movable switch members and having guide portions extending inwardly from said shoulders for slidably retaining said operating member in said channel.

2,106,582

PREPAYMENT METER FOR ELECTRICITY, GAS, AND LIKE COMMODITIES

George Wall, Manchester, England, assignor to General Electric Company, a corporation of New York

Application March 12, 1936, Serial No. 68,544
In Great Britain March 26, 1935
7 Claims. (Cl. 74—125.5)



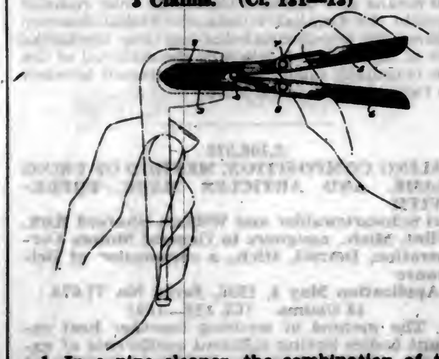
1. In a prepayment meter, a variable ratio mechanism for connecting the commodity side of a prepayment mechanism to a meter rotor, said variable ratio mechanism comprising a rotatable ratchet wheel, a rotatable member carrying a pawl adapted to engage said ratchet wheel, and a pair of means for alternately engaging said pawl with said ratchet wheel and disengaging the pawl from the ratchet wheel during each revolution of one of them.

2,106,583

APPARATUS FOR PRODUCING ASPHALT

Carroll C. Webb, Augusta, Kans., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York

Application April 17, 1936, Serial No. 74,841
2 Claims. (Cl. 196—111)



2. Apparatus for the production of asphalts by oxidation comprising a vessel, means for heating said vessel, in said vessel a series of liquid compartments, means in each compartment defining a confined vertical passage, means to admit a gaseous medium to each passage to entrain oil therein and lift oil therethrough, individual overflow means for catching oil from each of said passages, in which oil and gas may separate, a common vapor space communicating with all overflow means, means for removing vapors from said space, means whereby oil may pass from each overflow space to the next compartment, and is prevented from returning to that from which it was lifted, means to admit selected gaseous media to selected passages, a feed pipe discharging into the first liquid compartment, and an outlet pipe leading from the last overflow space.

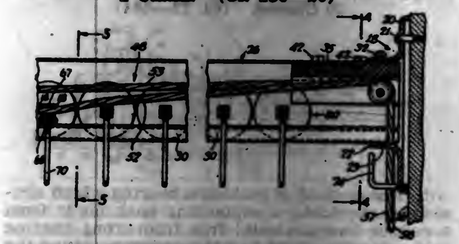
2,106,584

PIPE CLEANER

Jasper Whiting, Boston, Mass.

Application March 24, 1936, Serial No. 70,560
3 Claims. (Cl. 131—13)

1. In a pipe cleaner, the combination of two jaws, each of said jaws consisting of one-piece



channel members, handles connected to said jaws for operating them, said handles being of channel section and the handles being pivoted to their respective jaws so that they may be swung into folded relationship to the jaws, said handles being of such dimensions as to receive and to substantially enclose said jaws when the parts are in their folded relationship, both said jaws and said handles being disposed substantially back to back when the device is in its open or unfolded condition, each of said jaws having intermediate their lengths parts projecting toward the other channel member and apertures between said parts, and a pin passing through said parts and lying substantially within the apertures.

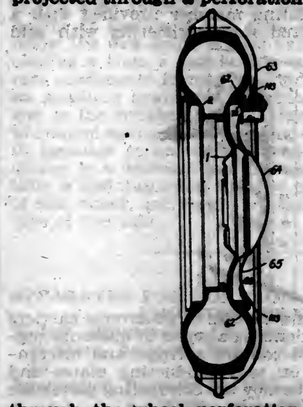
2,106,585

SHOWER CURTAIN SUSPENSION DEVICE

George S. Woolstrom, New York, N. Y.

Application January 23, 1937, Serial No. 121,784
1 Claim. (Cl. 196—20)

A curtain suspension device comprising a pair of socketed brackets, an elongated casing having the ends thereof received within the socket portions of said brackets, said casing having a top wall, side walls and a bottom wall formed with a central longitudinal slot; a pair of pulleys at one end of the casing, a single pulley at the other end of the casing, a pull cord having portions passing over the pair of pulleys, portions extending from said first portions and passing through said casing, and a portion interconnecting the last named portions and passing around the single pulley, a pair of centrally located rollers each having an axle, each axle having a member formed with an opening through which a portion of the pull cord passes, a pair of hooks pivoted to said member for gripping said cord portion, a supporting hook on each roller adapted to engage a curtain, and a plurality of rollers disposed between each of said pair of rollers and the ends of the casing, said last mentioned rollers being disposed within the casing and each having a hook projecting through said longitudinal slot for engagement with said curtains, a hook on each bracket for engagement with a curtain, each of the rollers in said casing having a pair of wheels contacting the bottom wall of said casing and disposed on opposite sides of said slot.



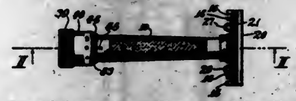
2,106,586

SPARE WHEEL AND TIRE COVER

Oscar U. Zerk, Chicago, Ill.

Application April 24, 1935, Serial No. 18,015
3 Claims. (Cl. 150—54)

1. The combination with an automotive vehicle wheel of the type having a perforation therein; and a spare tire thereof, of a sheet metal cover for the wheel and tire comprising a central wheel covering portion, a plurality of spacing elements secured to the inner face of the cover and engageable with circumferentially spaced portions of the wheel rim and spacing the cover axially from all parts of the wheel and tire, a rotatable securing element comprising a wedge-shaped head projected through a perforation in the cover and



through the wheel perforation and adapted to rotate to wedgingly engage with the edge of the perforation in the wheel to yieldably draw the cover toward the wheel to press the spacing elements upon the rim.

2,106,587

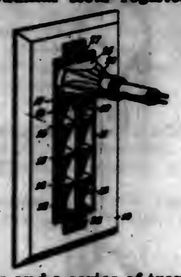
SAFETY RAZOR

Harry H. Bates and William O. Bates, Jr., Joliet, Ill.

Application May 25, 1934, Serial No. 727,417
Renewed December 7, 1937
5 Claims. (Cl. 30—34)

1. In a safety razor, the combination with a transversely flexible blade having a longitudinal cutting edge, of a blade holder, a blade cap having a stem, means for positioning the blade between said blade holder and said cap, a handle having one end in threaded connection with said stem for adjusting the vertical distance between said blade cutting edge and said blade holder, calibrated measuring means rotatively mounted on the other end of said handle, a rod extending from said calibrated means axially through said handle, said rod having an external screw in operative contact with an internal screw in said handle, and tension means compressed between said calibrated measuring means and one end of said handle to effect sliding frictional resistance to rotative movement of said external screw relative to said internal screw.

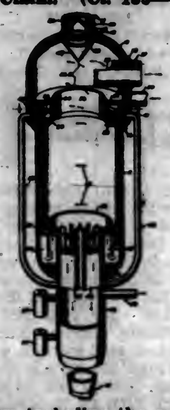
2,106,588



ELECTRIC RECEPTACLE

George B. Benander, Yalesville, Conn., assignor to Monowatt Electric Corporation, Bridgeport, Conn., a corporation of Connecticut

Application June 8, 1934, Serial No. 729,666
2 Claims. (Cl. 172—330)

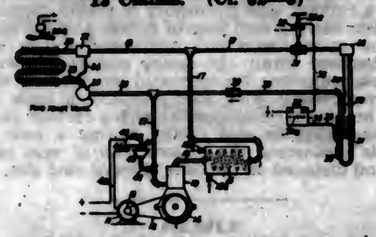


1. In a receptacle, a body member of insulating material having a pair of parallel longitudinal recesses in the top face thereof, a conducting plate mounted edgewise in each of said recesses and held thereby against lateral displacement, a

terminal member on each of said plates, a plurality of contact springs on each of said plates projecting above the same, a face plate secured to the top face of said body member including a rectangular insulating member provided with a pair of longitudinal slots registering with said

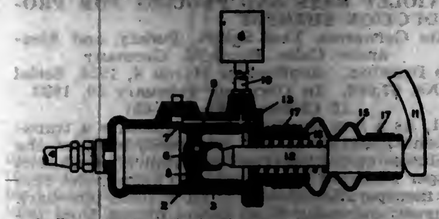
pair of recesses and a series of transverse barriers across said slots defining a series of openings registering with said contact springs, and interengaging portions on said conducting plates and said face plate whereby the conducting plates are clamped in said recesses.

2,106,589
BOILER DRUM
Trafford W. Bigger and Frank L. Hargrove, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application July 22, 1936, Serial No. 91,946
1 Claim. (Cl. 183—83)



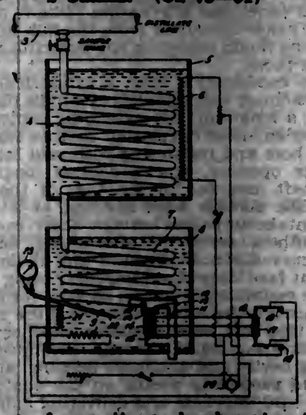
A boiler drum including the combination of a cylindrically shaped vertically disposed drum having an upper portion, an intermediate portion and a lower portion, the diameter of the intermediate portion being smaller than that of the upper but considerably larger than that of the lower portion, an annular chamber formed within and supported on the upper portion, conduit means for conducting heated liquid to the chamber, the chamber having a bottom with a ring of nozzles for discharging fluid into the intermediate portion and for causing the fluid to flow in a helical path along the surface of the intermediate portion whereby the liquid by the action of centrifugal force is forced outward forming a layer on the surface of the intermediate portion and causing the vapor to be forced radially inward, means including a vapor discharge conduit connected to the upper drum portion and a central opening formed by the annular chamber for conducting vapor from the intermediate portion through the upper portion to a consumer, means disposed in the lower end of the intermediate portion and including an extension of the lower portion projecting into the intermediate portion and a plurality of rows of blades for directing the liquid in a vertical path into the lower portion, and means for conducting liquid particles separated from the vapor in the upper portion into the lower portion comprising grooves formed between the chamber and the wall of the upper portion and conduits between the grooves and the lower portion.

2,106,590
BEARING AND METHOD
Alfred L. Boegehold, Detroit, and Alfred W. Schlichter, Dearborn, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application April 29, 1935, Serial No. 18,768
10 Claims. (Cl. 22—204)



1. The method of making a bearing which consists in providing a supporting back made from a copper base material free from iron; heating said supporting back to a temperature around the temperature at which plastic bronze melts; supplying molten plastic bronze to said supporting back; applying a cooling liquid to said back to thereby cool the same and said liquid plastic bronze rapidly from a temperature above the freezing temperature of said plastic bronze to a temperature below said freezing temperature; and forming a finished bearing from said supporting back and plastic bronze.

2,106,591
REFRIGERATING SYSTEM
Harold F. Briggeman and Roger A. Fuller, Fort Wayne, Ind., assignors to General Electric Company, a corporation of New York
Application February 19, 1935, Serial No. 7,210
13 Claims. (Cl. 62—3)



5. A refrigerating system having a plurality of refrigerant evaporators, each of said evaporators having a refrigerant outlet, means including a refrigerant liquefying unit for supplying liquid refrigerant to said evaporators, conduits connecting the outlets of said evaporators to said liquefying unit in parallel relationship, control means responsive to the refrigerant pressure prevailing at the outlet of one of said evaporators and including a valve at the outlet of said one of said evaporators for maintaining the temperature thereof within a predetermined range of relatively high temperatures, means including an expansion valve located at the inlet of another of said evaporators for throttling the flow of refrigerant therethrough, and a second control means shutting off the flow of refrigerant through said last mentioned evaporator and dependent upon the temperature produced by said last mentioned evaporator for maintaining the temperature thereof within a predetermined range of relatively low temperatures, said second control means being independent of said first named control means.

2,106,593
LIQUID PRESSURE MECHANISM
Burns Dick, Ferguson, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware
Application July 24, 1930, Serial No. 470,292
3 Claims. (Cl. 60—54.6)

1. In a hydraulic brake system, a master cylinder, a piston reciprocable therein, a plunger for actuating the piston, a swivel connection between the plunger and the piston, a flexible boot attached at one end to the plunger and enclosing the rear side of the piston, said boot being adapted to contain a fluid, and means for positively moving the plunger and piston in one direction to produce a fluid pressure in the cylinder, said means movable in the opposite direction independently of the retractile movement of the plunger and piston.

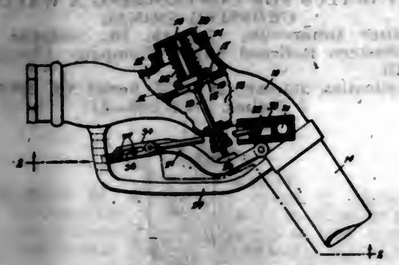
2,106,602
APPARATUS FOR DETERMINING THE DEW POINT OF A VAPOR PRODUCT
Robert F. Danielson, Mount Vernon, Ill., and Wendell P. Hawthorne, Augusta, Kans., assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application May 5, 1936, Serial No. 77,942
2 Claims. (Cl. 73—61)

1. Means for continuously observing the dew point of a continuously flowing stream of vaporizable substance comprising means for continuously sampling said stream, means for converting said sample to a slightly superheated vapor, a tube through which said vapor flows, a heater to maintain said tube at a temperature below the dew point of said vapor, said tube including a trap, a pan in said trap, means to direct condensate formed in said tube on said pan, an auxiliary heater for said tube, means responsive to the weight of the condensate in said pan to control said auxiliary heater to add more heat in response to an increase and less heat in response to a decrease in condensate, whereby said tube is maintained at the dew point temperature of said vapor, and means to observe the temperature of the tube.

2,106,594
APPARATUS FOR CONTROLLING A WAVING CROSSING SIGNAL
Walter Dinnerville, Chicago, Ill., assignor to Western Railroad Supply Company, Chicago, Ill.
Application January 28, 1937, Serial No. 122,764
5 Claims. (Cl. 200—6)

1. As part of a control apparatus for a waving crossing signal, a mounting carrying in insulating relationship a pair of relatively fixed contacts, a laterally shiftable member positioned between said contacts and carrying contacts to cooperate with the relatively fixed contacts to control circuits through electro-magnets associated with said signal, a yieldingly mounted plunger carried in the end of said shiftable member and having a wearing end thereof extending beyond said member so as to be engaged by a cam surface on a part of a signal mechanism, a member carrying a contact behind said shiftable member, a spring member extending between the last mentioned member and the shiftable member and carrying a contact and having a bumper adapted to be engaged by another cam surface on a part of the signal mechanism to bring the last two mentioned contacts into engagement for the purpose described.

2,106,595
ELECTRICAL TERMINAL
Arthur M. Draving, Philadelphia, Pa., assignor to Hugh H. Eby, Inc., Philadelphia, Pa.
Application January 11, 1936, Serial No. 58,624
4 Claims. (Cl. 173—324)



2. A terminal device of the type described constituted by a strip of metal having a pair of com-

plementary threaded depressions, each depression being separated from the end of the strip by an opening, said strip being folded midway thereof to place said depressions in complementary rela-

tion to constitute a screw-receiving socket and the end margins of said openings being bent at right angles to the socket to constitute a supporting collar.

2,106,596
DELIVERY NOZZLE
John Duff, Jr., New Bedford, Mass.
Application May 21, 1937, Serial No. 143,957
5 Claims. (Cl. 226—127)

1. Apparatus of the character described, including a casing, a spring-pressed valve in the casing normally closing the passage therethrough, a stem on the valve projecting outside of the casing, a manually movable pivoted lever adapted to engage the stem and open the valve when the lever is moved in one direction, a fixed member having a series of teeth thereon adapted to be engaged by the free end of the lever, a wedge having sliding engagement with the lever at its free end, a cylinder in open communication with the outlet end of the casing, a plunger in the cylinder, and a rod operatively connecting the plunger and the wedge so that when the plunger is caused to move by the pressure of the liquid in the cylinder the wedge will engage the fixed member to force the other end of the lever out of engagement with the teeth and allow said valve to close.

2,106,597
CATALYTIC MATERIAL AND PROCESS OF MAKING THE SAME
John S. Ferguson, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application May 6, 1936, Serial No. 78,197
6 Claims. (Cl. 23—212)

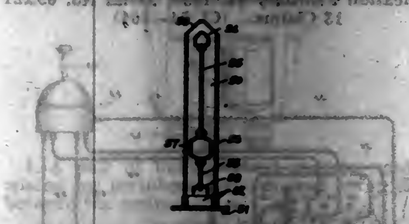
1. An active catalyst for chemical reactions consisting of a sized mass of hard, porous particles of a reduction product having disrupted grain boundaries, said mass being the resultant of compressing, under a pressure of at least about 500 pounds per square inch, a substance comprising finally divided metallic oxide having inherent (latent) catalytic activity, then heating the compressed substance in an oxidizing atmosphere to a temperature of at least about 500° C. but below substantial fusion of said substance, then crushing and sizing the heat-treated substance, and finally chemically reducing the sized substance.

2,106,598
CERAMIC COMPOSITIONS AND METHODS OF MAKING THE SAME
Albra H. Fessler, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
No Drawing. Application June 6, 1934, Serial No. 729,244
19 Claims. (Cl. 49—79)

1. The method of making a non-plastic ceramic composition consisting chiefly of mullite and cordierite which consists in preparing a mixture of alumina and silica in substantially the mullite ratio, together with magnesia, fusing the mixture and permitting it to cool slowly, so as to produce mullite and cordierite in a glassy matrix.

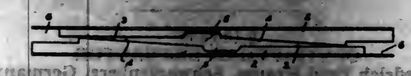
2,106,599
MATERIAL IMPERMEABLE TO ULTRA-VIOLET RAYS AND PROCESS FOR PRODUCTION THEREOF
Otto Gerngross, Yeni-Schiro, Turkey, and Alexander Calle, Bernhild, Germany
No Drawing. Application March 4, 1936, Serial No. 67,982. In Germany February 29, 1933
12 Claims. (Cl. 91—68)

1. As a new product of manufacture a translucent material of the cellulosehydrate or the cellulose derivative type for instance translucent paper rendered impermeable to ultra-violet rays by incorporation therein of an aqueous pine bark extract and being freed before drying from the coloring and tanning constituents of the same by thorough washing of pine bark extract therein.



2,106,600
ROTARY PUMP
Edward W. Hepler, Springdale, Pa.
Application October 12, 1936, Serial No. 105,393
6 Claims. (Cl. 103—88)

1. An impeller wheel having a central hub and a series of annularly spaced curvingly disposed concaved vanes and alternating radially disposed flat face vanes extending from the hub providing alternating liquid engaging and centrifugally discharging faces.



2. The combination with a cylindrical casing having endmost suction inlets, a middle discharge opening, a longitudinally extending central bore, annularly enlarged circulation cavities surrounding said bore and registering with said inlets and discharge opening, and a central longitudinal drive shaft mounted in the ends of the casing beyond the suction inlet cavities, of a pair of rotary intake impellers on the shaft each provided with a series of alternating annularly spaced curved concaved vanes and radially disposed flat face vanes, said impellers being aligned with the endmost circulation cavities for drawing liquid through the suction inlets and the endmost cavities into said bore, a rotary impeller on the shaft delivering liquid through the middle surrounding cavity and discharge opening, and helical liquid propelling means on the shaft rotating with said impellers and delivering liquid from the intake impellers to the discharge one thereof with a rotational velocity in the same direction as the rotation of said impeller and imparting uniformly increasing axial velocity to the liquid before entering the discharge impeller.

2,106,601
FENCE
Percy E. Hunter, Pittsburgh, Pa., L. T. Copeland and Fidelity Trust Company, administrators of said Percy E. Hunter, deceased, assignors to Hunter Steel Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application July 18, 1936, Serial No. 91,309
4 Claims. (Cl. 256—13.1)

1. A fence comprising posts, vertically spaced metal rails connected to the posts, the rails being formed of standard channels having their webs bent backwardly along longitudinally extending lines to bring their flanges into parallel planes, and pickets secured to said flanges.

2,106,602
METHOD OF MAKING FENCE POSTS
Percy E. Hunter, Pittsburgh, Pa.; L. T. Copeland and Fidelity Trust Company, administrators of said Percy E. Hunter, deceased, assignors to Hunter Steel Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application January 23, 1937, Serial No. 122,744
3 Claims. (Cl. 29—155)

1. The method of making posts and the like, which comprises dividing the web of an H-beam along longitudinally-extending lines, to form two T members which are substantially duplicates and each of which has the edge of the major part of its stem at one side of its longitudinal mid point approximately parallel to the head of the T and that portion of the stem at the other side of said point cut on a diagonal line, and then bending each of said members about a transverse axis such distance that the stem portions of each member are brought into abutting engagement.

2,106,603
AUTOMATIC VARIABLE SPEED GEAR
Emile Jacques, Paris, France
Application April 20, 1935, Serial No. 16,257
In France April 27, 1934
1 Claim. (Cl. 74—689)

Automatic change speed mechanism whose speed reduction ratio is a function of the resisting torque, comprising a driving shaft, a driven shaft, differential gear means with a high ratio of reduction including a small sun wheel fast on the driving shaft, an orbit wheel fast on the driven shaft and having a greater diameter than the said sun wheel, planet pinion means engaging said two wheels; a disc mounted idly on the driving shaft and including an internally toothed crown gear, pinions integral with the said planet pinion means and engaging said crown gear, the tooth ratio of said pinions and crown gear being

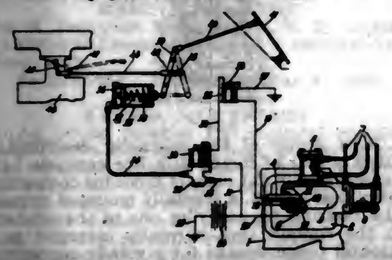
different from, but close to the tooth ratio of the planet pinion means and the orbit wheel, and a slippable clutch operative between said disc and the orbit wheel, said clutch being adapted to transmit when slipping a torque equal to the maximum torque applied to the driven shaft.

2,106,604
RESISTOR
Claude A. Jagger, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application March 12, 1936, Serial No. 68,412
2 Claims. (Cl. 201—67)

1. A resistor comprising an insulating member, a resistance conductor wound around said member and provided with a flexible connection lead, having a portion extending outwardly from said member, a tubular member surrounding said portion of the lead having an annular flange adjacent said member and an enamel coating on the insulation member, the conductor and the tubular member.

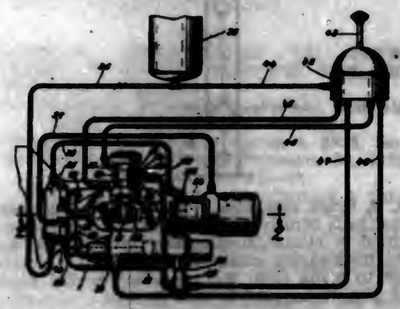
2,106,605
DISTURBANCE RESPONSIVE SWITCH
Frederick B. Johnson and Irvin Jacobson, Kansas City, Mo.
Application November 3, 1934, Serial No. 752,406
7 Claims. (Cl. 200—52)

1. In a device of the character described, a housing, a pair of facing disk-like contacts having substantially flat contact faces for controlling an electrical circuit, a pivotally mounted support in the housing for carrying one of the contacts with the contact face normally arranged in a horizontal plane, means for pivotally supporting the other contact on said pivotally mounted support with its contact face in a horizontal plane in normally spaced relation and in axial registry with the first named contact, and means for engaging one of the contact supports to selectively



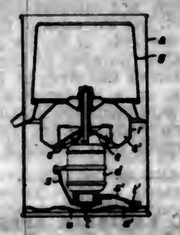
prevent movement of said supports, said contacts being movable in peripheral contacting relation with each other responsive to vibratory movement of said supports.

2,106,606
SAFETY DEVICE AND VALVE THEREFOR
Seuren Kazanjian, Woodside, Long Island, N. Y.
Application May 21, 1936, Serial No. 80,969
2 Claims. (Cl. 251—138)



1. In a device of the class described feelers, each comprising a pair of telescopic members arranged with the inner one projecting from one end, means for fixedly mounting the outer of said members, resilient means urging said inner member outwards so as to be depressed when it strikes something, a valve piston on said inner member and controlling a supply of compressed air or the like to operate an auxiliary device, and a dash pot means for delaying said valve piston in returning to its original position when it is depressed, comprising a one way valve through which air or fluid may be forced, several needle control bypasses adjusted to various capacities arranged to permit the return of the air or fluid, and a means for rendering all of said bypasses inoperative except one.

2,106,607
THROTTLE AND TRANSMISSION INTERLOCK
Oliver K. Kelley, Pontiac, Mich., assignor, by mesne assignments, to Yellow Truck and Coach Manufacturing Company, Pontiac, Mich., a corporation of Maine
Application August 22, 1935, Serial No. 37,325
5 Claims. (Cl. 74—472)

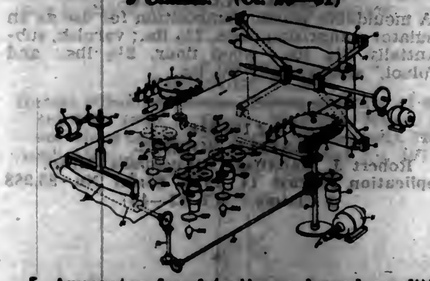


1. The combination with engine throttle actuating linkage having a lost motion connection and selective speed gear setting mechanism, of a fluid pressure actuated device controlling the action of said lost motion connection, an electrically actuated valve controlling fluid pressure supply to said device, and means associated with the selective speed gear setting mechanism controlling the flow of electric current in the circuit containing said electrically actuated valve in accordance with predetermined settings of said mechanism.

2,106,608
POWER SHIFT TRANSMISSION
Oliver K. Kelley, Pontiac, Mich., assignor, by mesne assignments, to Yellow Truck and Coach Manufacturing Company, Pontiac, Mich., a corporation of Maine
Application February 24, 1936, Serial No. 65,221
13 Claims. (Cl. 74—364)

1. In a power shift transmission of the character described, a series of shift rails, means selectively engageable with the rails to shift the same, a pair of pressure responsive devices associated with the selector means to operate the same, a source of fluid pressure, means communicating one of said devices with the pressure source and means controlled by a predetermined response of the last mentioned device to communicate the other device in series relation therewith.

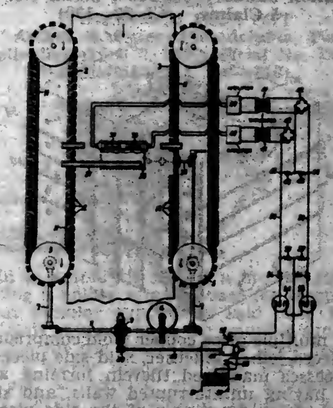
2,106,609
CENTRIFUGAL EXTRACTOR
Friedrich Emil Krauss, Schwarzenberg, Germany
Application April 26, 1934, Serial No. 722,495
In Germany April 28, 1933
2 Claims. (Cl. 210—71)



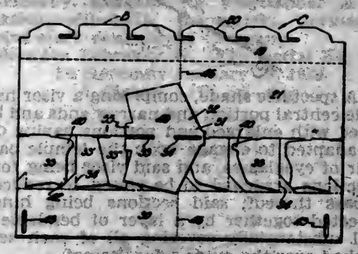
2. A centrifugal extractor comprising, in combination, a housing, a motor therein, means for resiliently supporting the motor in said housing, a prolonged shaft to the motor, a fan mounted on said shaft, a basket in said housing, a bearing carried by the basket fitting on and freely rotatable on said prolonged motor shaft, fans carried by the basket, a cowl housing the basket fans, said basket fans being concentric to the motor fan to drive the basket differentially in relation to the motor.

2,106,610
BUFFING SECTION UNIT AND ASSEMBLY
Lester W. Krallick and Herbert R. Taylor, Fremont, Ohio, assignors to The Yerges Manufacturing Company, Fremont, Ohio, a corporation of Ohio
Application May 2, 1937, Serial No. 140,439
7 Claims. (Cl. 51—193)

1. A pair of buffing wheel sections medially spaced for peripheral venting, and a fan device between the sections.



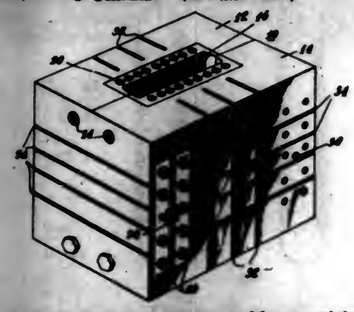
2,106,611
APPARATUS FOR CORRECTING SKEW AND BOW IN WOVEN MATERIAL
Cramer W. La Pierre, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application July 24, 1936, Serial No. 92,416
9 Claims. (Cl. 26—51)



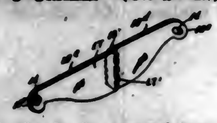
5. Apparatus for detecting a bowed condition of the weft members of a strip of woven material comprising a plurality of photoelectric devices, means for directing a narrow light beam through said material on each of said devices, means engaging the edges of said strip for moving the same longitudinally, means for moving each of the light beams transversely of the strip whereby the beams are intercepted by the weft members of the material, the lines of movement of the beams on the material being spaced apart laterally of and similarly inclined to the edge of the strip and apparatus responsive to the difference in frequency of output of said devices for moving forward the central portion of the strip faster than the edges thereof.

2,106,612
STRAIGHTENER FOR WOVEN MATERIAL
Cramer W. La Pierre and Francis B. Manger, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application August 6, 1935, Serial No. 34,933
12 Claims. (Cl. 26—93)

1. In apparatus of the character described, the combination of means for supporting material having warp and weft members normally at right angles to each other, a source of light arranged to illuminate a portion of said material, a plurality of photoelectric devices arranged each to receive a beam of light from said source controlled by one of said members, means for moving said beams over said material in opposed oblique directions to said warp members and a device responsive to a difference in frequency of impulses from said devices.



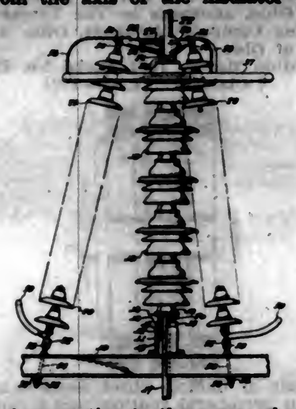
2,106,613
FOLDING EGG CARTON
David Levkoff, New York, N. Y.
Application January 20, 1936, Serial No. 59,867
5 Claims. (Cl. 229—29)



1. A collapsible egg carton comprising a single rectangular blank of cardboard cut, folded and set up to provide a carton having a front wall, a rear wall, a bottom wall, a central longitudinal partition, a cover, and spaced cross partitions hinged to said front and rear walls adjacent the top thereof; said blank of cardboard being weakened on a line midway of and for the length thereof, the weakened line extending on a plane between the two spaced central cross partitions to enable breaking of the carton into two separate carton units along the weakened line, one of the central cross partitions constituting an end wall for one of the carton units, a connecting bridge piece between the front and rear walls at the adjacent end of the other carton unit, a separate supplementary cardboard cross partition, and means on the severed end of the other last mentioned carton unit for securing said supplementary cross partition in position against said bridge piece for closing said end.

2,166,614
METAL MOLD
Karl A. Lindner, Baltimore, Md., assignor to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey
Application January 30, 1936, Serial No. 61,449
5 Claims. (Cl. 22—139)

1. A multiple piece copper mold comprising two side pieces joined together, said side pieces having recesses machined therein forming a mold cavity having uninterrupted walls, and slots in the outside surfaces only of the side pieces extending to a substantial depth therein to form expansion spaces for the relief of distortional strains produced in the metal incident to casting operations.



2,166,615
SPECTACLE EYESHADE
Edward D. Maurer, New York, N. Y.
Application April 6, 1936, Serial No. 72,913
5 Claims. (Cl. 2—12)

1. A spectacle shade, comprising a visor having a wide central portion and narrow ends and being formed with enlarged end portions having openings adapted to engage upon the temple bars of a pair of eyeglasses, and said visor being formed of sections arranged to be closed to reduce the compass thereof, said sections being hingedly connected together by a layer of bendable material substantially covering all of each section attached over the outer sides thereof.

2,166,616
SWITCH AND BUS INSULATOR STACK
Robert L. McCoy, Baltimore, Md., assignor to Locke Insulator Corporation, a corporation of Maryland
Application November 6, 1935, Serial No. 48,590
6 Claims. (Cl. 173—318)

6. An insulator assembly comprising a base, a socketed bearing member mounted on the base, an insulator rockably mounted on said bearing member, a yoke carried by the upper end of the insulator having a plurality of circumferentially spaced radially extending arms, a plurality of insulator members arranged in a circumferential series about the insulator, fittings at the upper ends of said insulator members pivotally connected with the yoke arms and fittings at the lower ends of said insulator members pivotally connected to said base, said insulator members extending at an acute angle to the insulator and having their points of connection to the base farther from the axis of the insulator than the

points of connection to the arms, whereby they serve to hold said insulator under compression and from sidewise movement on its support.

2,166,617
INSULATING COMPOSITION
Eberhard F. Mess, Milwaukee, Wis.
No Drawing. Application May 20, 1936, Serial No. 80,791
1 Claim. (Cl. 106—18)

A mouldable plastic composition for use as an insulator comprising rosin, 7½ lbs.; varnish, substantially 2¼ lbs.; wood flour, 2½ lbs.; and "Toluol," substantially 2¼ lbs.

2,166,618
CASTING BOBBER
Robert J. Mehaffey, Minneapolis, Minn.
Application August 14, 1936, Serial No. 95,988
3 Claims. (Cl. 43—49)

1. A fishing bobber comprising a body constructed of buoyant material having a longitudinal line receiving slit extending from its periphery inwardly for some distance, and a pair of guide eyes, one at each end of said body and each comprising a piece of wire having a pair of widely spaced prongs extending longitudinally and anchored in said body, the portion of said wire between said prongs being bent into a

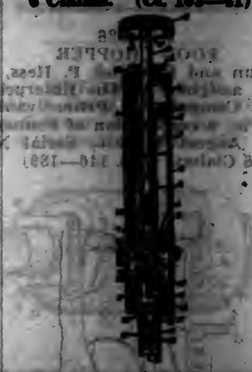


figure 8 shape with one loop of said figure 8 disposed in alignment with the inner end wall of said slit portion and with the other loop of said figure 8 defined by over-lapping curved portions which form an entrance for the insertion of a line into said first mentioned loop portion.

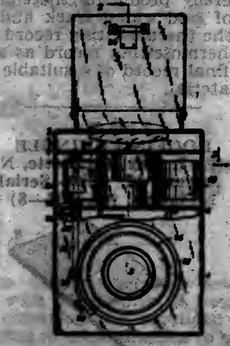
2,166,619
WASHING APPARATUS
Wilbur L. Merrill, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application May 1, 1935, Serial No. 19,290
8 Claims. (Cl. 141—9)

1. Washing apparatus comprising a cabinet provided with a front opening therein, washing apparatus within said cabinet comprising a vat, a supporting shaft within said cabinet, means mounting said vat on said shaft for swinging movement to and from said cabinet through said opening, and a door for said front opening secured to said vat and supported solely thereby so that when said vat is moved into said cabinet said door is moved to close said front opening.

2,166,620
PRESSURE PUMP
Harold Nilson, Wayzata, Minn., assignor of one-third to John A. Hadley, Wayzata, Minn., and one-third to Emil Berglund, Minneapolis, Minn.
Application October 24, 1934, Serial No. 749,631
6 Claims. (Cl. 103—41)



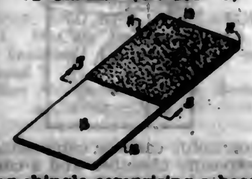
1. In an apparatus of the class described, a casing having a reservoir and a valve chamber provided with an outlet adapted to be connected to a device to be operated, a valve normally closing the outlet, a disk valve floatingly supported in the valve chamber and normally closing a fluid passage between the valve chamber and the reservoir, a cylinder having a piston operable therein for forcing the fluid from the reservoir through the valve chamber and outlet to the device, and said valves being so related to one another and to the piston, that when the latter is moved to a predetermined position in one direction, said valves are opened to allow the fluid to return to the reservoir from the device.

2,166,621
UNDERFEED FIRE POT
Arthur E. Paige, Philadelphia, Pa.
Application April 8, 1927, Serial No. 183,664
3 Claims. (Cl. 126—146)

3. In an automatic stoker, a fire pot structure including a hollow annular base for reception of air; an annular support in said base for the lower ends of grate bars; an annular support in said base for the upper ends of grate bars and having a larger diameter than said first support; and an annular grate of upwardly outwardly flaring configuration including a circular series of sectoral grate bars having circumferentially overlapping edges forming air passages between said bars, all extending tangentially in the same direction with respect to the circular configuration of the grate; whereby, air supplied to the interior of said base escapes through the grate to the interior thereof in vertical, vertical streams.

2,166,622
PHOTOGRAPHIC CAMERA
Karl Fritschow and Hans Deglmann, Brunswick, Germany, assignors to Voigtländer & Sohn Aktiengesellschaft, Brunswick, Germany, a joint-stock company of Germany
Application February 15, 1936, Serial No. 64,321
In Germany January 19, 1935
7 Claims. (Cl. 95—44)

1. A photographic camera, comprising a casing having an exposure chamber and a camera lens, a finder chamber, a finder within said finder chamber adapted to produce an image of the subject to be photographed circumscribed so as to correspond to the image produced by the said camera lens on the sensitized surface and comprising an inclined mirror adapted to reflect the rays impinging thereon in the direction of the line of sight into a direction perpendicular thereto, two reflecting systems adapted to direct



spaced pencils of rays emanating from complementary parts of the subject to be photographed one beside the other on said inclined mirror, said systems comprising a pair of mirrors disposed one at either side of said finder chamber and inclined forwardly and outwardly and in position for being impinged upon by said complementary pencils of rays emanating from the subject to be photographed and reflecting the same inwardly, a pair of mirrors in front of said first named inclined mirror disposed angularly of each other and of the line of sight and in position for reflecting the complementary pencils of rays reflected by said mirrors disposed at the sides of said finder chamber towards said first named mirror, means to adjust one of said reflecting systems in accordance with the distance of said subject to be photographed and so that the said complementary pencils of rays are combined on the said first named mirror into a correct image of the said complementary parts of the subject to be photographed, and means to adjust said camera lens for focusing.

2,106,622
PROCESS FOR MAKING PHONOGRAPHIC RECORDS
Barton A. Procter, Larchmont, and Ferdinand C. W. Thiede, Hempstead, N. Y., assignors to R. A. Procter Company, Inc., New York, N. Y., a corporation of New York
Application March 22, 1934, Serial No. 716,916
5 Claims. (Cl. 18—48.3)

1. The method of making phonographic records which consists in inscribing a sound track upon a planiform blank having a hard, smooth, tough, impression-retaining surface and capable of withstanding heat and pressure of the order employed in the molding of thermosetting materials, using said inscribed blank as a matrix and molding directly against the inscribed surface thereof, an intermediate negative record of thermosetting material thereby producing thereon a negative impression of said sound track and then after the cure of the thermosetting record is complete, using said thermosetting record as a matrix for obtaining a final record of a suitable impression-retaining material.

2,106,624
ROOFING SHINGLE
George I. Ray, Charlotte, N. C.
Application August 17, 1936, Serial No. 96,503
1 Claim. (Cl. 108—8)

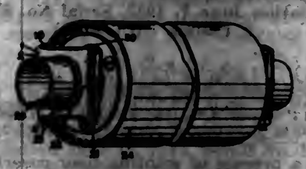
A roofing shingle comprising a base member, a sheet of metal covering the upper side and the side edges and the bottom edge of said member and extending beneath the member, a second member disposed on and covering the lower side of said base member and a third member secured to and covering the upper portion of said base member and projecting in overlapping relation above the upper end of the sheet of metal.

2,106,625
BALL DRIVING DEVICE
Horace A. Bedge, White Plains, N. Y.
Application August 5, 1936, Serial No. 94,334
5 Claims. (Cl. 272—120)

1. A ball-driving device comprising a tubular standard having a base member at its lower end and provided intermediate its ends with a slot extending through an outer wall thereof, a driving-head having an upwardly projecting arm provided with an inwardly bent portion extending through the slot in said standard, a guide-block slidably mounted within said tubular standard and engaging the inwardly bent portion of the driving-head arm, an operating handle slidable in the upper end of said tubular standard and connected at its lower end to the inwardly bent portion of the driving-head arm, and a compression spring disposed within said tubular standard and between said base member and guide-block and normally adapted to raise said operating handle and retract said driving-head, and upon the manual downward movement of the operating handle to compress said spring and outwardly project said driving-head from said standard to drive the ball.

2,106,626
FOOD CHOPPER
Sylvan Braun and Frederick P. Hess, Philadelphia, Pa., assignors to The Enterprise Manufacturing Company of Pennsylvania, Philadelphia, Pa., a corporation of Pennsylvania
Application August 1, 1936, Serial No. 93,906
6 Claims. (Cl. 146—139)

5. In a device of the character described including a barrel portion having its inner wall flaring outwardly adjacent the discharge end and terminating in a cylindrical portion of larger diameter, a peripherally slotted perforated die plate arranged for removable insertion in the larger diameter cylindrical portion of the barrel,

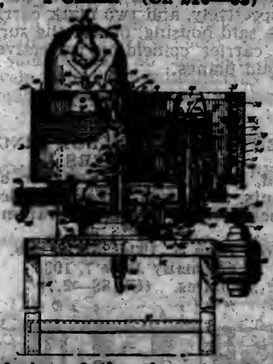


said barrel having an axial groove formed in the end face of said larger diameter cylindrical portion and extending in the outer surface of the barrel inwardly beyond the larger cylindrical portion, and a key member arranged for insertion in said groove to substantially fill the same, said groove extending entirely through the said larger cylindrical portion and being of such depth in its other portion that the bottom of the groove intersects the inner wall of the barrel in the outwardly flaring portion thereof inwardly of the larger cylindrical portion so that a substantial part of the length and depth of said key projects into said larger cylindrical portion for engagement with the slot in said perforated die plate to prevent rotation of the latter with respect to the barrel.

2,106,627
SPRAYING DEVICE
John H. Brennan, Minneapolis, Minn.
Application August 18, 1937, Serial No. 159,636
5 Claims. (Cl. 299—86)

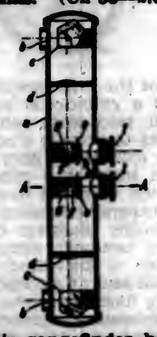
1. In a fluid pressure spraying apparatus, a chamber provided with a fluid inlet and outlet vents to the surrounding atmosphere, a plurality of ducts passing through said chamber and forming circumferential openings in said vents, and means for supplying a liquid to be sprayed to said ducts.

2,106,628
MUFFLER CLAMP
John J. Cooper, Baltimore, Ohio
Application February 27, 1937, Serial No. 128,154
4 Claims. (Cl. 285—188)



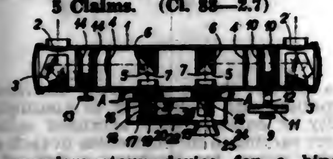
1. In a muffler pipe clamp for connecting the muffler to a pipe through which exhaust gases are conducted, a pair of clamping members having concave semi-circular inwardly protruding edge parts and end portions that extend tangentially to the semi-circular edge parts, and means for engaging end portions of the clamping members to clamp the members about the pipe and sleeve of the muffler and centrally for the clamping members to force the overlapping protruding tangential end edge portions of the protruding parts against the outer of the clamped parts.

2,106,629
MERCHANDISING PACKAGE
Walter E. Cox, Chicago, Ill.
Application September 1, 1936, Serial No. 98,974
5 Claims. (Cl. 221—75)



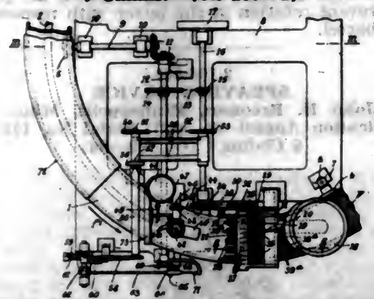
1. A device of the type described comprising a base part and a cylindrical part rotatably related therewith, said parts being so constructed and arranged as to provide a container for plastic material, a cylindrical liner including a bottom positioned inside the cylindrical part and fixedly connected with the base part, said liner including an integral extension having a length equal to the inside diameter of the liner, said extension being bendable along a line coinciding with the axis of the cylindrical part, to provide a fixed wall and an extruding element, said fixed wall being fixedly connected with said bottom, and an operating connection between the extruding element and said cylindrical part for actuating the extruding element upon rotation of the base part or the cylindrical part relatively to the other, the latter being provided with an outlet opening.

2,106,630
METHOD OF AND APPARATUS FOR REMOVING FOREIGN MATTER FROM LIQUIDS
Charles Deering and Henry Deering, Chicago, Ill.
Application September 22, 1934, Serial No. 745,057
1 Claim. (Cl. 210—63)



In a device of the character described, the combination with a plurality of housings, of a plurality of concentrically arranged cylindrical strainers varying in mesh fineness in each of said housings, means for directing a flow of liquid along a predetermined path, means for mounting said strainer housings for successive displacement in said path of liquid flow, indexing means for successively maintaining said strainer housings in said path of liquid flow, means for rotating the strainer housing in said path to more effectively pass the liquid therethrough, said housings having corrugated interior wall surfaces, and cooling coils mounted in said housing walls and adjacent said corrugated surfaces.

2,106,631
STEREOSCOPIC RANGE FINDER HAVING STATIONARY MEASURING MARKS
Otto Eppenstein, Jena, Germany, assignor, by mesne assignments, to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application September 30, 1936, Serial No. 103,307
In Germany October 5, 1935
3 Claims. (Cl. 88—2.6)



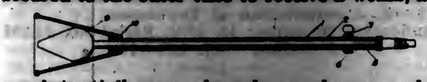
1. A stereoscopic rangefinder having a housing, this housing being provided with two stationary objectives and two eye-pieces displaceable in the directions of their optical axes, two reflecting systems for displacing the pencils of imaging rays of the said objectives parallel to themselves, stationary measuring marks disposed in the said housing and lying in planes containing those of the images produced by the said objectives which correspond to objects whose distances from the rangefinder correspond to the apparent distances of stereoscopic marks due to combination in pairs of the said measuring marks, these measuring marks lying in two planes inclined to the focal planes of the two objectives, respectively, and two mark carriers disposed in the said housing, one of the surfaces of each mark carrier coinciding respectively with these last said planes.

2,106,632
SUPPLEMENTARY DEVICE FOR BINOCULAR RANGE FINDERS
Otto Freund, Jena, Germany, assignor, by mesne assignments, to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application June 5, 1936, Serial No. 83,693
In Germany June 7, 1935
5 Claims. (Cl. 88—2.7)

1. A supplementary device for a binocular rangefinder having a device for removing errors of height, the said supplementary device comprising a housing, this housing having two apertures in one side and a third aperture in the opposite side, the distance apart of the two first said apertures corresponding to the interocular distance of the two eye-pieces of the said rangefinder, optical means for lateral deflection of at least the light rays entering through the one of the two first said apertures, optical means for combining the two pencils of light rays entering through the two first said apertures, optical means for altitudinal deflection of at least the light rays entering through the one of the two first said apertures, and mechanical means for displacing the last said optical means, the said optical means being disposed in the said housing.

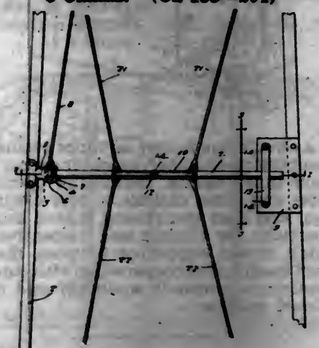
2,106,633
MACHINE FOR THE MANUFACTURE OF BISCUITS
Marius Ernest Giredin, Quimper, France
Application February 26, 1937, Serial No. 127,844
In France March 6, 1936
7 Claims. (Cl. 107—1)

2. A machine for the manufacture of biscuits of the type described comprising a movable heating surface, a first series of spaced nozzles adapted to deliver paste upon said heating surface so as to form a first series of spaced parallel continuous strips of paste, a second series of spaced nozzles located at a distance behind said first series of nozzles in the direction of travel of said heating surface and adapted to deliver paste so as to form a second series of spaced parallel continuous strips of paste between the strips of said first series of strips, said second series of strips forming by union with said first series of strips a continuous film of paste, means adapted to helically wind said film of paste after baking so as to form a tube and means adapted to cut up said tube into sections.



2,106,634
PRINTING OF FIBROUS MATERIALS BY IMPREGNATION
Melvin R. Greiner, Cincinnati, Ohio, assignors to Carthage Mills Incorporated, Carthage, Ohio, a corporation of Ohio
Application June 7, 1933, Serial No. 674,723
2 Claims. (Cl. 8—5)

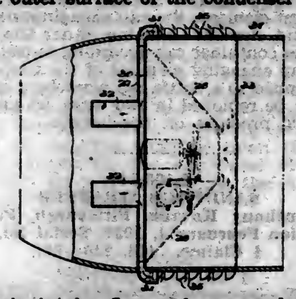
1. In a process of printing floor covering materials having a deep fibrous body, by impregnation, the steps of treating a fibrous web at one station with a mordant liquid to the extent of wetting said web generally, moving said web to another station and treating said web while wet with said mordant, with a selective color application without mordant.



2,106,635
VETERINARIAN'S INSTRUMENT
Perry J. Harder, Newalla, Okla.
Application August 14, 1936, Serial No. 96,167
1 Claim. (Cl. 128—239)
A surgical instrument comprising an outer tube,

an inner tube adjustably mounted in the outer tube, means for connecting the inner tube to a liquid supply, a substantially conical-shaped cup secured to the outer tube to receive a womb, and

a substantially pear-shaped spreader secured to the inner tube and located in and movable outwardly of the cup to enter and spread the womb, said spreader having a passage therethrough communicating with the inner tube.

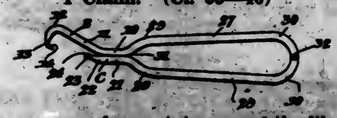


2,106,636
BRAKE OPERATING MECHANISM
Clark J. Harlow, Deer Park, Ohio
Application June 4, 1937, Serial No. 146,516
3 Claims. (Cl. 188—204)

1. A brake operating mechanism for vehicles comprising a transverse shaft having one end pivotally and rockably connected to one side of a vehicle, a plate on the other side of said vehicle, the other end portion of the shaft resting on said plate, spring pressed rods slidably mounted in said plate, a bar mounted on said rods and engaged with said other end portion of the shaft for yieldingly securing same against the plate, means connected to the pivoted end of the shaft for rocking said shaft, members pivotally mounted on opposite sides of the shaft at an intermediate point, flexible members adapted to connect one of the first named members to the front brakes of the vehicle, and flexible members adapted to connect the other of said first named members to the rear brakes of the vehicle.

2,106,637
TRUCK REFRIGERATOR
Walter E. Hauser, Rochester, N. Y.
Application June 17, 1937, Serial No. 148,778
2 Claims. (Cl. 62—117)

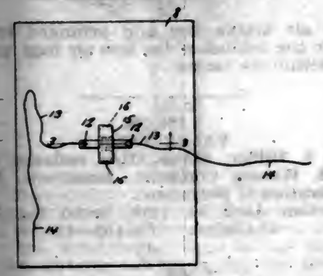
2. In combination with a vehicle of the closed body type, the body of which is provided with an air intake and an air outlet and has means for forcibly directing air into said inlet and from said outlet during normal running of the vehicle, a mechanical refrigerating unit within said body comprising a refrigerant compressor, a condenser and means for pulling air through the condenser from its outer to its inner side, a casing in which said unit is housed having communication at one side with the air outlet, and means forming an air flue within the vehicle leading from the air intake to the opposite side of said casing, the said condenser being set into the wall of the casing at its last-mentioned or intake side, with the outer surface of the condenser exposed



to the air intake flue and arranged to form through the condenser the sole air inlet into the space within the casing.

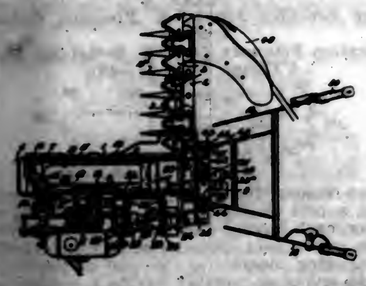
2,106,638
VALVE STEM
Robert E. Hillier, Akron, Ohio, assignor to The F. H. Watson Company, Jonesboro, Ark., a corporation of Delaware
Application April 30, 1932, Serial No. 608,503
12 Claims. (Cl. 152—12)

8. A valve stem comprising a rubber body portion provided with a through passage constricted near the tip of the stem to provide a downwardly faced shoulder, a valve element normally seated against said shoulder to close said passage, and a relatively rigid band substantially surrounding said shoulder to resist distention thereof.



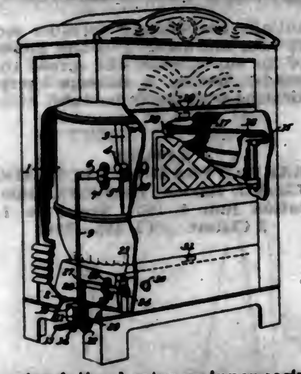
2,106,639
CAP REMOVER FOR CONTAINERS AND THE LIKE
George Brockley Jenkinson, Prescott, Ontario, Canada
Application February 24, 1936, Serial No. 65,505
1 Claim. (Cl. 65—46)

A cap remover for containers and the like comprising a pair of bar-like elements abutting one another, each having a shank connecting with a handle, one of said elements being formed with a cap engaging member at one end of the shank, said cap engaging member having a portion projecting at an incline to the plane of the shank, a second portion bent substantially at right angles to the first portion and a third portion bent substantially at right angles to the second portion so as to extend substantially parallel with the first portion, said third portion being of lip-like character to engage the edge or top of a container cap, the second element having a cap engaging



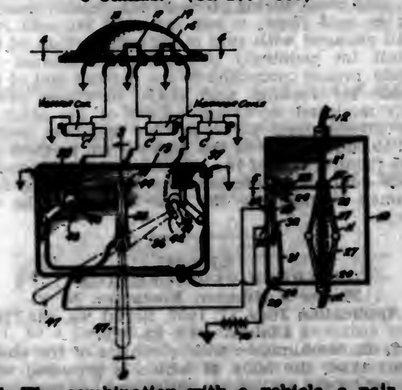
member in the form of a projecting lip in alignment with the shank and terminating intermediate the length of the cap engaging member of the first element, the cap engaging member of the second element engaging either the edge or top of the container cap according to the position of the cap engaging member of the first element when applied to a bottle cap whereby a container cap may be removed in two ways, by upward or downward pressure on the handle.

2,106,640
SANDWICH WRAPPER
Anthony Kovalik, Pittsburgh, Pa.
Application February 4, 1937, Serial No. 124,116
4 Claims. (Cl. 229—87)



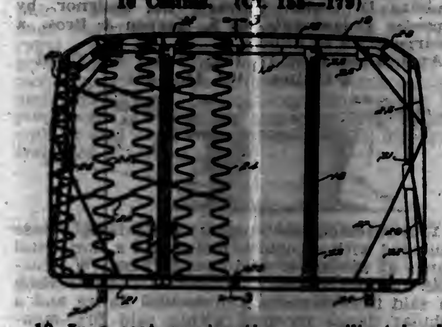
1. As a component part of a lunch packaging assembly of the class described, a tying device comprising a length of rubber, reinforcing metal cleats attached to the opposite ends thereof, said cleats being apertured, and a pair of cords knotted at their inner ends and passing through the apertured cleats, the free ends of the cords being adapted to be tied together in the manner and for the purposes described.

2,106,641
MOWING MACHINE
George Alexander Leitch, Birmingham, England, assignor to Charles H. Pugh Limited, Birmingham, England, a company of Great Britain
Application March 3, 1937, Serial No. 129,675
In Great Britain August 24, 1936
16 Claims. (Cl. 56—25)



1. A mowing or grass-cutting machine comprising a frame supported during the cutting operation by two wheels, namely, by a main or front ground wheel and by a smaller second ground wheel disposed behind the said main or front ground wheel, a power unit mounted upon the frame, and a reciprocating cutter or knife-bar driven by the said power unit.

2,106,642
CIRCULATING HEATER
George D. Matthews, Chattanooga, Tenn., assignor to Tennessee Stove Works, Chattanooga, Tenn., a corporation of Tennessee
Application December 12, 1935, Serial No. 54,291
3 Claims. (Cl. 126—67)

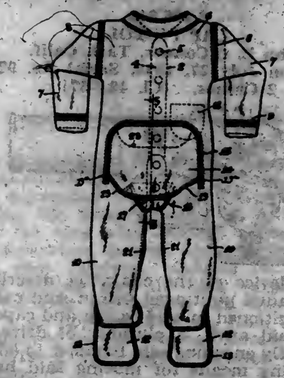


1. In a circulating heater an inner casing forming a combustion chamber, an outer casing spaced from said inner casing, registering openings in said inner and outer casings, a door closing said openings, said door comprising spaced inner and outer portions for closing said respective openings, latch means supported between the inner and outer casing, and cooperating with said inner door portion to normally maintain said door in tight closed position.

2,106,643
SIGNAL DEVICE
George Mellen, Diamond Head, and Leslie A. Hicks, Honolulu, Territory of Hawaii
Application June 4, 1936, Serial No. 83,558
3 Claims. (Cl. 177—339)

1. The combination with a vehicle, a pair of electrically operable direction indicating signals mounted thereon in locations visible to pedestrians and drivers of other vehicles, a control panel for said signals including a pair of contacts electrically connected, one to each signal, a source of electrical energy, a circuit maker and breaker connected to said source, a switch lever pivoted on said panel to swing into contact with either of said contacts and electrically connected to said circuit maker and breaker, means for locking said switch lever in contact with either of said contacts when the lever is in contacting position therewith, means operably connected to the vehicle and movable in accordance with the speed of the vehicle to close the circuit from said source through said circuit maker and breaker and said switch lever and the signal having its control contact in contact with said lever, said circuit maker and breaker closing either signal circuit between predetermined upper and lower limits of vehicle speed only, and means operable by the circuit closing means to release said locking means when the speed of the vehicle rises beyond said upper limit to a predetermined higher speed.

2,106,644
FRAME AND SEAT
Clarence H. Monge, Detroit, Mich., assignor to The Murray Corporation of America, a corporation of Delaware
Application May 27, 1935, Serial No. 23,587
10 Claims. (Cl. 155—179)



10. In a seat construction, a resilient border frame including front and rear border frame elements each having a groove therein, resilient frame members having their ends secured in said grooves and extending between the ends of said border frame elements to form a complete resilient border frame and resilient sinuous arcuately disposed spring elements extending across said border frame and having their ends locked in the grooves in said border frame members.

2,106,645
FERTILIZER DISTRIBUTOR
Walter A. Moorhead, Sandy Springs, S. C.
Application June 18, 1937, Serial No. 147,956
4 Claims. (Cl. 275—3)

1. A fertilizer distributor comprising a beam, a hopper mounted upon the beam and having an outlet opening in its bottom, an end thrust bearing mounted upon the beam, a spout passing through the end thrust bearing and arranged beneath the hopper and having its upper end receiving the fertilizer from the hopper, a horizontal bevel-gear mounted upon the spout above the end thrust bearing, a vertical bevel-gear mounted upon the beam and engaging the horizontal bevel-gear, a wheel for supporting the beam, a horizontal shaft extending through the hopper, an agitator mounted upon the shaft, gearing connecting the horizontal shaft and wheel, and gearing connecting the horizontal shaft and vertical bevel-gear.

2,106,646
CHILD'S GARMENT
William Murphey, Chattanooga, Tenn.
Application June 10, 1936, Serial No. 84,543
1 Claim. (Cl. 2—33)

A garment of the type described having a cut out portion adjacent the waist in the rear of the garment, and a back flap body having its upper edge secured to the garment above said opening, said back flap body having its side edges secured to the side portions of the body of the garment, and having a tapered extension depending freely toward the crotch, a triangular flap having a convex base, the said convex base being stitched to the bottom edge of the aforesaid tapered extension so as to provide considerable extra fullness in the lower portion of the back flap body, said triangular flap extending around the crotch of the garment and having its apex adjustably fastened to the front of the garment, whereby the length of the body of the garment may be adjusted as the wearer increases in height.

2,106,647
PROCESS FOR THE MANUFACTURE OF INSULATOR HEADS
Gustav C. Neck, Nassjoe, Sweden
Application March 13, 1936, Serial No. 68,537
In Sweden May 10, 1935
1 Claim. (Cl. 207—10)

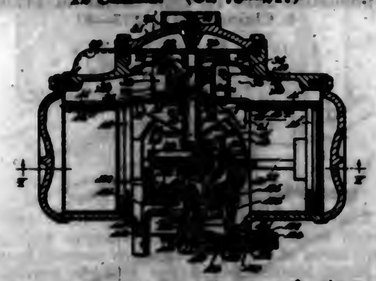
A process for the manufacture of a malleable cup-shaped member having a dome like hollow top projection by forging a heated blank of malleable material over a mandrel by means of a die, consisting in compressing the edge portions of the blank between said die and the root of said mandrel to prevent the material from flowing outwardly, and forcing the surplus of material of the blank upwardly beyond the end of the mandrel, where it is subjected radially as well as

axially to external pressure only, without counteracting internal forces, thus forming a cup-shaped projection opening into the cavity of the main body of the cup-shaped member and provided with walls and bottom of greater thickness than the initial thickness of the blank as well as of the main body of the cup-shaped member.

2,106,648
CAP PISTOL
John L. O'Connor, Taft, Calif.
Application July 27, 1936, Serial No. 92,908
2 Claims. (Cl. 42—57)

1. In a device of the character described, a casing, an anvil positioned within said casing, a hammer positioned in said casing and capable of engaging said anvil, a plurality of driven lugs intermittently engaging said hammer to effect its action, spring means for moving said hammer against said anvil, a guide having one end adjacent said anvil and having a channel formed therethrough, said guide supporting a percussion tape spanning said channel, a plurality of pins rotatably mounted above said channel and capable of successively piercing said tape, and means for rotating said pins to advance said tape when said hammer is reciprocated.

2,106,649
MEASURING DEVICE
Charles J. Officer, Jr., Tillamook, Oreg.
Application February 15, 1937, Serial No. 125,917
8 Claims. (Cl. 221—110)



1. In a measuring device, a structure providing a liquid measuring chamber and a liquid discharge spout leading from and communicating with the outer end of the latter, the inner end of said chamber being open, said structure including means to provide an intake valve seat at the inner end of the chamber and an outlet valve seat at the outer end of the chamber, intake and outlet valves arranged in said chamber for engaging said seats, an inwardly and outwardly slidable spring controlled valve stem disposed within said structure and passing through and extended from said spout, said stem extending through and having a sliding fit with said valves, a spring carried by the stem and interposed between and normally tending to urge said valves towards their seats and for maintaining the valves in spaced relation, and said spout being formed with an air port adjacent the point of the passage of the stem through the spout.

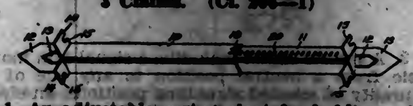
2,106,650
REVOLVING SEAT
Thomas D. Owler, Chicago, Ill., assignor, by mesne assignments, to S. Karpen & Bros., a corporation of Illinois
Application June 17, 1935, Serial No. 27,091
2 Claims. (Cl. 155—96)

1. A revolving seat-support comprising a base equipped with a tubular flange and a horizontal flange at the top of said tubular flange, a rotatable member having a horizontal flange resting on said first-mentioned horizontal flange and a tubular flange received within said first-mentioned tubular flange, and seat-supporting arms having their inner ends turned downwardly, said arms being secured both to the top side of the horizontal flange and to the inside of the tubular flange of said rotatable member.

2,106,651
PISTON METER
Walter H. Parker, Pittsburgh, and Nelson J. Seibert, Wilkinsburg, Pa., assignors to Pittsburgh Equitable Meter Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application April 9, 1934, Serial No. 719,788
12 Claims. (Cl. 73—247)

1. In a fluid meter, a valve cage having a cylindrical valve seat therein and connecting bars joining the upper and lower flanges thereof, a hub centrally supported by spokes integral with said lower flange, a spider removably secured to the upper flange of said cage, a crank shaft rotatably journalled in said hub and spider, a collar pinned to said shaft to limit downward movement thereof, a valve seated in said cage, a longitudinal pin in said collar and fitting into a recess in said valve for driving the same.

2,106,652
LOAD INDICATOR DEVICE
Martin I. Pinson, Phoenix, Ariz., assignor of one-half to Ray A. Pinson, Charlotte, Mich.
Application June 2, 1937, Serial No. 146,127
3 Claims. (Cl. 265—40)

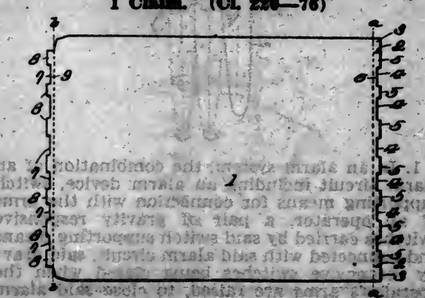


1. A load indicator for vehicles including a pair of arms pivotally connected adjacent their ends, one of said arms being bifurcated and carrying a suitable scale on a bifurcation beyond its pivot point, the other of said arms, which is mounted between the bifurcations, being continuous and having a pointer extending beyond its pivot point, and bearing means on the opposite ends of said arms for attaching to the axle and frame of a vehicle.

2,106,653
TRUING TOOL FOR WATCH BALANCE WHEELS
Walter Pedgurski, Philadelphia, Pa.
Application September 3, 1936, Serial No. 99,224
6 Claims. (Cl. 33—203)

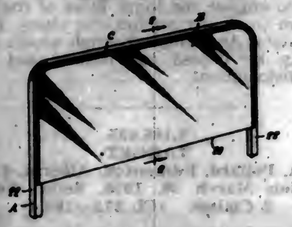
1. In a balance wheel truing tool comprising two jaws adjustable toward and away from each other and provided with bearings for the ends of a wheel staff; a slotted bar, slidably mounted for movement independently of and across said jaws, a screw adjustment to minutely control said movement, clamping means to fixedly hold said bar in an adjusted position, a slide adapted for movement within the slot in said bar, a feeler adjustably mounted within said slide and adapted for movement at right angles to said slot, and means to fixedly hold the slide and the bar in place after adjustment in both directions.

2,106,654
ADJUSTABLE CARTON CLEAT
Alfred L. Poe, Jacksonville, Fla.
Application February 8, 1937, Serial No. 124,902
3 Claims. (Cl. 206—1)



1. An adjustable carton cleat for holding articles in pasteboard cartons when being shipped, comprising members connected together for endwise adjustment and adapted to be placed upon the articles to confine the same against the bottom of the carton, two-part barbs on the outer ends of the members adapted to be punched through the sides of the carton and bent in opposite directions upon the outer faces of the sides of the carton, wings integral with the barbs and adapted to engage the inner faces of the sides of the carton to rigidly anchor the clamp in place, and means on the wings through which a lacing cord may be passed to confine said articles against dislodgment.

2,106,655
TARGET
John A. Pollard, Edmonton, Alberta, Canada
Application March 30, 1936, Serial No. 71,720
3 Claims. (Cl. 273—105.4)

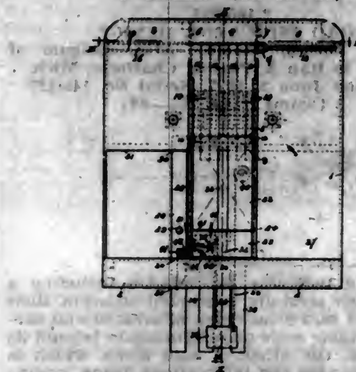


1. A flying target comprising a body including a substantially dome-shaped portion, an annular flange depending therefrom, a ring loosely surrounding the flange, means for detachably securing the ring with respect to the flange to allow separation thereof, and ratchet teeth providing shot receiving surfaces on the dome-shaped portion and the ring respectively, the shot receiving surfaces of the ring being disposed in an opposed direction from those of the dome-shaped portion whereby certain hits on the said surfaces will cause separation of the ring and body.

2,106,656
SIDE SEAM FOR METAL CAN BODIES
William F. Punte, Syracuse, N. Y., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application August 12, 1935, Serial No. 35,864
1 Claim. (Cl. 220—76)

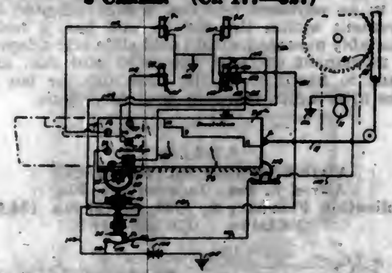
A metal can body having its edges joined by a side seam including interengaging folded hook portions which are spaced from each other lengthwise of the seam and abutted hook portions between the interengaging portions, the portions of the can body in the region of the abutted folded hook portions being bumped so as to contact with the folded hook portions and a solder bond uniting the contacting portion throughout the entire limits of the side seam.

2,106,657
METALLIC BED
Solomon Radunz, Brooklyn, N. Y.
Application December 7, 1936, Serial No. 114,599
9 Claims. (Cl. 5—280)



1. A metallic bed end construction capable of withstanding substantial changes in temperatures without creation of stress and having sound-deadening properties, comprising an inverted U-shaped unsplit tubular frame, a sheet metal panel covering said U and extending between the legs and base thereof and devoid of rigid connection to said frame, and a holder for the panel attached to said tubular frame, said holder consisting of a folded metal strip having a flattened U-cross section and spot welded at one side to said tubular frame and said panel being inserted into said fold and being clamped between said folds.

2,106,658
ALARM SYSTEM
Alexander J. Rakos, Chicago, Ill.
Application June 11, 1936, Serial No. 84,756
2 Claims. (Cl. 177—314)



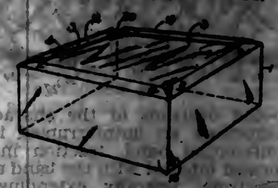
1. In an alarm system, the combination of an alarm circuit including an alarm device, switch supporting means for connection with the arms of an operator, a pair of gravity responsive switches carried by said switch supporting means and connected with said alarm circuit, said gravity responsive switches being closed when the operator's arms are raised, to close said alarm circuit, and a pair of pressure operated switches carried by said switch supporting means between the operator's body and arms, to be closed when the operator's arms are pressed against the body for closing the alarm circuit in the open position of the gravity responsive switches, the pressure responsive switch on one arm being connected in series with the gravity responsive switch on the other arm so that the alarm circuit will be closed when either arm is raised and the other arm pressed against the operator's body.

2,106,659
PHOTOGRAPHIC APPARATUS
Pierre Joseph Rentmeesters, Brussels, Belgium
Application November 21, 1935, Serial No. 50,256
In France December 31, 1934
9 Claims. (Cl. 88—16)

1. In a photographic apparatus for taking on one photographic plate a series of photographic views arranged in rows, in combination with a frame, a row of cameras arranged side by side in the same horizontal line, a series of shutters, each shutter comprising a single strip pierced by an aperture and provided on its upper part with a flange bent at right angles, a cross member on which the photographic plate rests, and means cooperating with said cross member to shift the latter and the photographic plate by one row of photographs after each impression of the plate on one row, a ledge provided with a widened part to support the shutters under the flanges at their upper part in their set position; and means to withdraw the said widened part to cause the successive release of the shutters and to return to position under the said flanges after the raising of the shutters.

2,106,660
DIRECTION SIGNAL FOR AUTOMOBILES
William Rees, San Diego, Calif., assignor of one-third to Bernard F. J. Sterten, San Diego, Calif.
Application June 6, 1935, Serial No. 25,237
3 Claims. (Cl. 177—337)

3. A vehicle signal including a signal arm movable from a neutral position to any one of a plurality of selected signalling positions, an electric motor having a field winding, means operatively connecting the motor to the arm to shift the latter, a plurality of manually operable switches connected each by conductors in a normally open circuit with the motor and adapted to close the circuit through the motor and a source of current, each switch when closed operating the motor to shift the arm to a predetermined signalling position, means for automatically breaking the circuit through the motor and the actuated switch when the arm has reached its predetermined position, a manually operable switch electrically connected to the motor and the source of current and when operated closing a circuit in a reverse direction through the motor to return it to its initial position, means for automatically breaking the last named circuit through the motor when the arm has reached its initial neutral position, an electric lamp carried by the arm, and means for automatically closing a circuit through the lamp and the source of current when the motor has ceased to rotate and the arm has reached its selected predetermined signalling position and automatically breaking said last named circuit immediately that the motor begins to operate and to return the arm to its initial position.



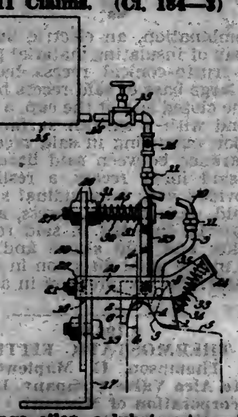
2,106,661
MOTOR FUEL COMPOSITION
Will R. Savage, Omaha, Nebr., assignor of one-half to Harry S. Hass, Chicago, Ill.
No Drawing. Original application July 31, 1934, Serial No. 737,357. Divided and this application May 3, 1937, Serial No. 140,503
2 Claims. (Cl. 44—9)

1. A motor fuel composition composed of gasoline and approximately less than one per cent of a mixture consisting of acetone and naphthalene combined in substantially the proportions of eight parts of acetone and one part of naphthalene.

2,106,662
MOTOR FUEL COMPOSITION
Will R. Savage, Omaha, Nebr., assignor of one-half to Harry S. Hass, Chicago, Ill.
No Drawing. Original application July 31, 1934, Serial No. 737,357. Divided and this application May 3, 1937, Serial No. 140,507
2 Claims. (Cl. 44—9)

1. A motor fuel composition composed of gasoline and approximately less than one per cent of a mixture consisting of acetone and alcohol combined in substantially the proportions of one part of alcohol and one part of acetone.

2,106,663
BOX
Alfred A. Schlegel, Akron, Ohio, assignor to The Jaite Company, Jaite, Ohio, a corporation of Ohio
Application October 1, 1935, Serial No. 43,092
2 Claims. (Cl. 206—44)



2. A box comprising a body portion having side walls, a top member extending across the top of the body portion beyond the side walls, and a securing member comprising a rectangular open ended frame fitting over the upper end of the body portion and forcing the edges of the top member down against the side walls of the body portion and tightly holding the same, and an inwardly and upwardly extending resilient collar member formed on said securing member.

2,106,664
BATHING ACCESSORY
Harry Shoglow, Cambridge, Mass., assignor to Patent Products Corp., Boston, Mass., a corporation of Massachusetts
Application September 14, 1936, Serial No. 100,737
9 Claims. (Cl. 135—1)

5. A bathing accessory comprising a tubular body, open at the top, said top opening being of sufficient width to admit a human body and means for contracting the top opening.

2,106,665
FLANGE OILER
John G. Skinner, Anaconda, Mont.
Application June 22, 1936, Serial No. 86,645
11 Claims. (Cl. 184—3)

1. In a flange oiler, a lubricant-applying element and means for mounting said element with respect to the flange of a wheel, said mounting means including a bracket appropriately supported adjacent the wheel, an arm supported by said bracket and arranged for vertical adjustment with respect to said wheel, a suspension member carried by said arm and movable with respect thereto, said suspension member carrying said lubricant-applying element, and means associated with said bracket and including resilient means cooperating with said lubricant-ap-

plying element for normally maintaining the latter in cooperative relation to the wheel flange, said mounting means serving to support said lubricant-applying element in such manner that said element may accommodate itself within predetermined limits to axial, radial and circumferential movements of said wheel.

2,106,666
ELECTRIC SWITCH
Edwin Stewart, Philadelphia, Pa.
Application September 17, 1937, Serial No. 164,469
10 Claims. (Cl. 200—48)

1. In an electric switch, a support, an arm rotatably mounted on said support, a pair of spaced links pivotally attached to said arm, a switch blade pivotally attached to said links so as to rock said links on said arm during longitudinal movement of the blade, the blade being rotatable about a pivot of one of said links, and another link pivotally connected to said support and to said blade.

2,106,667
MOUNTING OF ELECTRIC INSULATORS
Leon Thiry, Huy, Belgium
Application November 8, 1934, Serial No. 751,983
In Germany December 2, 1933
2 Claims. (Cl. 173—321)

1. In combination, an electric insulator comprising a cap of insulating material provided with an inner frusto-conical recess having smooth walls, the large base of said recess being directed towards the closed end of the cap, a bracket having one end with a smooth surface of circular cross section extending in said recess and leaving a clearance between said bracket and said walls of said inner recess, a resilient metallic sleeve provided with longitudinal slots arranged against said walls of said recess, and a ring of elastic material inserted in said recess between said bracket and said sleeve and considerably elongated in the axial direction in compensation for a considerable compression in a radial direction.

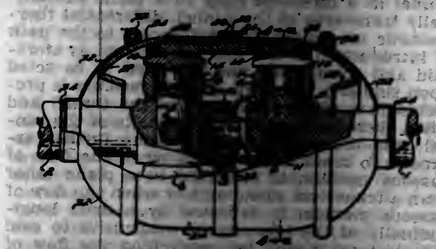
2,106,668
THERMOSTATIC FITTING
Parke H. Thompson, II, Maplewood, Mo., assignor to Alco Valve Company, Inc., St. Louis, Mo., a corporation of Missouri
Application November 21, 1935, Serial No. 50,921
7 Claims. (Cl. 297—3)

2. Thermostatic fitting comprising a conduit, a thermostatic bulb in said conduit, a hollow post supporting said bulb in spaced relation to said conduit, the material of said post being of minimum cross sectional area to throttle the exchange of heat through its metallic mass, and auxiliary supporting means comprising spacing pieces of thermally non-conductive material surrounding said post and engaging said bulb and conduit.

2,106,669
NUT LOCK
Stuart B. Thornton, Oakland, Calif.
Application May 7, 1935, Serial No. 20,235
3 Claims. (Cl. 151—2)

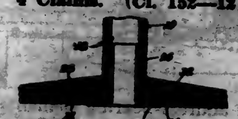
1. In combination with a screw threaded bolt having a longitudinally extending groove of V-shaped formation, a nut for cooperating therewith, said nut having closely related and annularly arranged resilient fingers formed integrally with one end thereof and converging in the direction of the bore of the nut having their free ends within the area of the said bore of the nut for a distance at least equalling the depth of the threads of the nut and adapted to be flexed by the nut being threaded onto the bolt so that one after another of said fingers may ride into and out of the groove during the rotation of the nut on the bolt and adapted to secure the nut against accidental rotation on the bolt in either direction by any one of said fingers engaging in the groove.

2,106,670
ANTISKID OVERSHOE
Thomas M. Walker, Auburn, N. Y.
Substitute of application Serial No. 27,256, June 18, 1935. This application October 11, 1937, Serial No. 168,523
1 Claim. (Cl. 152—16)



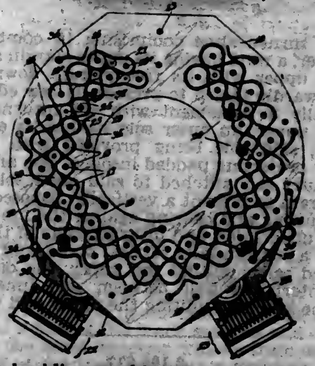
An anti-skid overshoe of the character described, comprising an uninterrupted imperforate circumferential band, traction increasing elements formed integral with the band and projecting therefrom, laterally extending straps integral with the band on opposite sides thereof and arranged in staggered relation, a traction increasing element rising from the band at the inner end of each strap to reinforce the latter, a continuous band of a diameter smaller than the circumferential band connecting the lateral straps on one side of the circumferential band, strap sections connecting the other lateral straps, strap tighteners for certain strap sections and separable fasteners for connecting the remaining strap sections.

2,106,671
VALVE STEM AND CHECK VALVE THEREFOR
Frank H. Watson, Jonesboro, Ark.
Application August 18, 1932, Serial No. 628,953
31 Claims. (Cl. 152—12)



4. A valve stem comprising an integral elongated rubber body provided with a base flap for attachment to an inner tube, said body and flap being traversed by a passage which extends longitudinally of said body, said passage being constricted adjacent its end remote from said flap to provide an integral annular shoulder of the body material faced toward said flap, and a movable valve body cooperating with said shoulder to seal said passage, said stem being of such flexibility in its portion between said constriction and flap as to permit it to bend and withdraw through a rim opening in use without being torn from the tube.

2,106,672
UNIVERSAL JOINT MECHANISM
Hans Wellner, Detroit, Mich., assignor to Universal Products Co., Inc., a corporation of Delaware
Application May 15, 1935, Serial No. 21,516
12 Claims. (Cl. 64—21)



13. Universal joint mechanism comprising, in combination, a longitudinally extending housing; first and second shaft sections angularly displaceable relative to said housing and having their inner ends interconnected and received within said housing; said housing having a first pair of longitudinal interior raceway portions formed adjacent one end thereof and a second pair of longitudinal interior raceway portions formed adjacent the other end thereof; a driver for each shaft section extending transversely thereof with its ends slidably received in the raceway portions of the associated pair and cooperable therewith to transmit axial rotative force between said housing and said shaft sections; and means connecting said shaft sections to said housing so as to retain said shaft sections within said housing.

2,106,673
TIRE AND VALVE STEM
Lewis C. Broecker, Bridgeport, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn., a corporation of Connecticut
Application April 27, 1932, Serial No. 608,814
Renewed May 11, 1937
4 Claims. (Cl. 152—12)

1. The new article of manufacture which comprises a rubber tire tube and a valve stem with the base of the valve stem integrated with the rubber tire tube between the wall thereof and a tire-patch and with an outwardly flanged bushing also integrated with the rubber tube with its flange at the inner face of the tube wall and with the bushing projecting through the inflation hole of the rubber tube snugly into the bore of the valve stem.

2,106,674
METHOD AND APPARATUS FOR PRODUCING BRAID
Conrad J. Basch, Wyomissing, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application May 23, 1936, Serial No. 81,356
19 Claims. (Cl. 66—8)

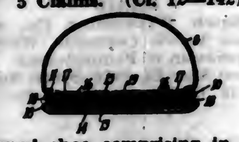
1. In a braiding machine, the combination with a plurality of carriers and a pair of communicating raceways providing definite limits of travel for said carriers, of means for reversing selected carriers at a point spaced from one limit of travel as the unselected carriers traverse to said one limit of travel.

2,106,675
REPEAT PRINTING ATTACHMENT FOR ADDRESSING MACHINES
Harmon P. Elliott, Watertown, Mass., assignor to The Elliott Addressing Machine Company, a corporation of Massachusetts
Application March 29, 1937, Serial No. 133,494
5 Claims. (Cl. 101—48)

1. In an addressing machine comprising a printing zone, a magazine for holding a vertical stack of thin, rectangular address-bearing elements, guides which extend from the bottom of said magazine to said printing zone through which said address-bearing elements may be suc-

cessively fed, and a reciprocating member for pushing the element in normal position at the bottom of such stack at any one time along said guides into the printing zone, manually controllable means located wholly outside of the path of said reciprocating member for holding all of

said stack of address-bearing elements except the bottom one temporarily suspended while said bottom one is being slid out from under said remaining portion of the stack; whereby the feeding of successive printing elements to said printing zone may be suspended though all of the machine parts continue in normal operation.



2,106,676

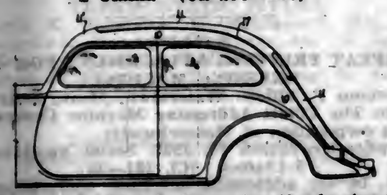
SHOE AND METHOD OF MAKING THE SAME

James A. Green, Dolgeville, N. Y., assignor to Daniel Green Company, Dolgeville, N. Y., a corporation of Massachusetts

Application March 4, 1937, Serial No. 128,901

5 Claims. (Cl. 12—142)

1. A turned shoe comprising in combination an upper, a rand having its upper margin stitched to the upper with its free margin downwardly and inwardly folded to present its raw edge substantially in alinement with the inturned edge of the upper, an outer sole having its edge inturned, said sole being provided with an upwardly projecting padded insole of less area than said outer sole stitched to said outer sole inside its margin to present a vertically disposed shoulder abutting and bearing against the inner edges of the upper, welt and inturned edge of the outer sole in a substantially vertical plane, and a single stitched seam uniting the upper, the outer sole and interposed welt between said inner edges and the stitching uniting the upper and welt.



2,106,677

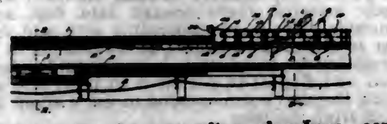
VEHICLE BODY CONSTRUCTION

Joseph Ledwinka, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania

Application January 31, 1935, Serial No. 4,256

1 Claim. (Cl. 296—137)

In a metal vehicle body construction having two side panel stampings including the side quarters of the roof and of the rearwardly and downwardly inclined rear wall, and a central unitary sheet metal stamping extending transversely the greater portion of the roof and from adjacent the windshield rearwardly over the relatively flat portion of the roof and sweeping downwardly at the rear through a downwardly and rearwardly inclined portion to the rear, the improvement comprising a final assembly joint between said stampings wherein said stampings are formed in their margins with downwardly offset portions adapted to overlap and spot welded together in said overlap to form an outwardly facing channel, a metallic weather sealing material filling said channel flush with the face of the stampings whereby the joint becomes invisible after painting, one of said stampings being further inwardly extended beyond said overlap to provide an inward continuous extension of angular cross section, whereby the joint serves as a longitudinally arched stiffening beam extending continuously from adjacent the windshield through the roof and rear walls.



2,106,678

DRIFT CONTROLLING APPARATUS FOR GLASSWARE ANNEALING LEHRS

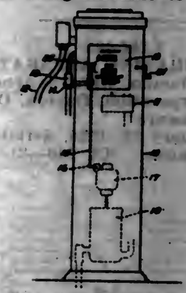
Donald G. Merrill, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware

Application March 2, 1937, Serial No. 128,640

7 Claims. (Cl. 49—47)

1. Apparatus for annealing glassware, comprising an elongate tunnel, means for conveying glassware therethrough, drift controlling means associated therewith including means for projecting a gaseous medium into the tunnel at a temperature substantially different from the tunnel atmosphere at the point at which such means project the gaseous medium thereinto, said gaseous medium being projected into the tunnel in a direction lying in a plane substantially transverse of the tunnel, differential thermostatic means positioned adjacent to the path of introduction of the gaseous medium as aforesaid and constructed and arranged to be acted upon similarly when the gaseous medium is projected in a plane transverse of the tunnel and when there is no drift longitudinally of the tunnel, said thermostatic means being further arranged to react differentially when the flow of gaseous medium is projected in a plane other than a transverse plane and/or when the flow of gaseous medium is deflected by a drift longitudinally of the lehr, means responsive to said thermostatic means for controlling the flow of tunnel atmosphere longitudinally of the lehr, and means for adjustably varying the angle of introduction of the gaseous medium longitudinally of the lehr to establish a desired condition of drift or flow of gaseous medium longitudinally of the lehr.

2,106,679



GASOLINE DISPENSER

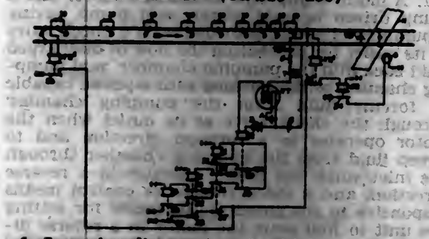
Charles Pfeuthner, Buffalo, N. Y., assignor to Martin & Schwartz, Inc., Buffalo, N. Y.

Application June 26, 1936, Serial No. 87,293

6 Claims. (Cl. 221—95)

1. In a dispenser having a motor driven pump, a meter driven register provided with a set-back mechanism, and a control lever for the pump movable from inoperative to an operative position, the combination of a lock member connected to said lever, a latch adapted to lock said member and accompanying lever in said inoperative position, a dog on said member for retaining said latch out of locking engagement therewith, said member being movable to release said dog

from said latch when said lever is moved to an operative position, and being engaged by the released latch when restored to its initial position, and means operated by said set-back mechanism for moving said latch out of engagement with said member and into engagement with said dog.



2,106,680

HIGHWAY CROSSING SIGNALING SYSTEM

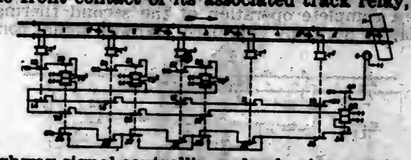
Wade H. Reichard, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.

Application April 17, 1936, Serial No. 74,924

12 Claims. (Cl. 246—130)

1. In a signaling system for highway crossings on railroads, a track section traversed by trains approaching the highway crossing, means increasing the electrical resistance of the track section at points lineally spaced by distances decreasing from the entrance to the exit of the track section, a source of energy connected across the rails at the exit end of the track section, detecting means responsive to changes in current supplied by the source of energy to the track section as caused by a train passing said points of increased resistance in the track section, and means for initiating, and continuing, the operation of a highway crossing signal in accordance with the frequency of response of the detecting means.

2,106,681



HIGHWAY CROSSING SIGNALING SYSTEM

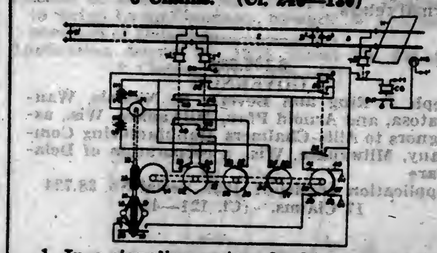
Stuart J. Mackay, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.

Application February 26, 1936, Serial No. 66,232

7 Claims. (Cl. 246—130)

1. In a signaling system for highway crossings on railroads, a plurality of track circuit sections each having a normally energized track relay in the portion of the railroad traversed by trains approaching the highway, a slow releasing timing means associated with each track section, a pick up circuit for all the timing means including series front contacts of all the track relays, a stick circuit for each timing means including the front contact of its associated track relay, a

highway signal controlling relay having a pick up circuit including series front contacts of all the track relays and series front contacts of all the timing means, and a stick circuit for the signal controlling relay including series front contacts of the track relays with a back contact of each timing means in multiple with the front contact of the next forward track relay.



2,106,682

HIGHWAY CROSSING SIGNALING SYSTEM

Oscar S. Field and Joseph E. Willing, Rochester, N. Y., assignors to General Railway Signal Company, Rochester, N. Y.

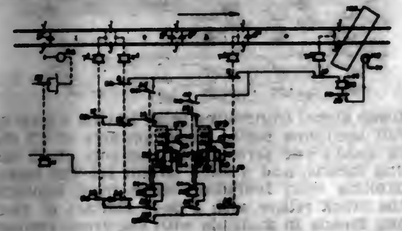
Application February 29, 1936, Serial No. 66,422

6 Claims. (Cl. 246—130)

1. In a signaling system for highway crossings on railroads, in combination, a portion of railway track intersected by a highway and divided into track sections traversed successively by trains approaching the highway, a time measuring device having a normal starting position, means operating the device in one direction while a train traverses a first of the track sections and operating it in the other direction while a train occupies a second of the track sections, a highway signal, means energizing the signal upon occupancy of the second track section unless otherwise prevented, circuit means for the signal so governed by the device upon movement in said one direction beyond a given point as to prevent energization of the signal and so governed by the device upon movement in the other direction beyond the given point as to energize the signal, and circuit means so controlled by the device upon moving in the other direction to a point beyond the normal starting position as to deenergize the signal.

2,106,683

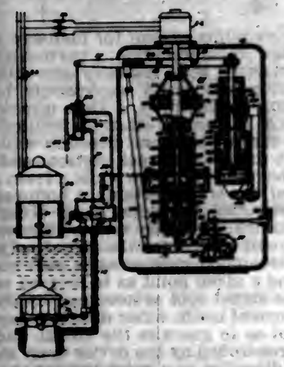
HIGHWAY CROSSING SIGNALING SYSTEM



Joseph E. Willing, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.

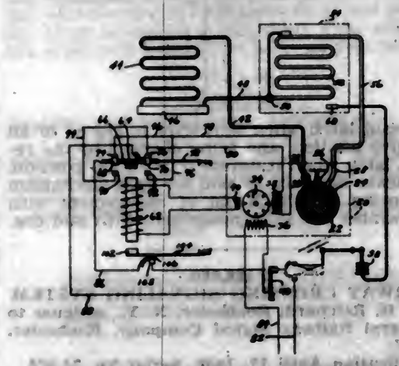
Application February 28, 1936, Serial No. 66,233

6 Claims. (Cl. 246—130)



4. In a signaling system for highway crossings on railroads, a plurality of track sections occupied successively by a train approaching the

highway, a first thermal relay set into operation when a train enters the first of the track sections, a first stick relay energized by a complete operation of the first thermal relay, a second thermal relay set into operation when the first stick relay is energized while a train occupies the first track section, a second stick relay energized by a complete operation of the second thermal relay, a normally energized highway signal con-

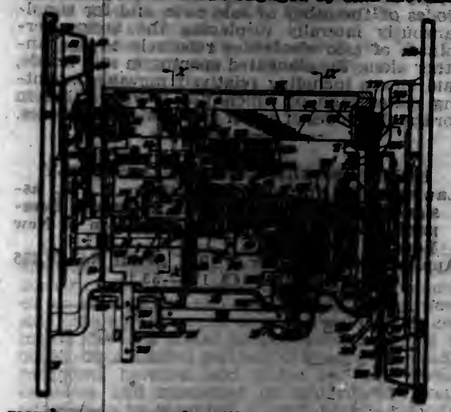


trol relay, means for de-energizing the signal control relay when a train enters the second or the third or the fourth track sections according as the first and the second stick relays are de-energized or the first stick relay only is energized or the second stick relay is energized, a signal governing train movements toward the highway, and means controlling the signal in accordance with the condition of the first and the second thermal relays.

2,106,634
GOVERNOR
Joseph J. Ring and Beverly R. Nichols, Wauwatosa, and Arnold Pfau, Milwaukee, Wis., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application August 31, 1935, Serial No. 38,724
17 Claims. (Cl. 121—42)

1. In a speed governor of the centrifugally actuated type, a spindle driven by a machine to be governed, means driven by said spindle and longitudinally movable directly proportional to the speed thereof and to the centrifugal force acting thereon, a servo-motor, means driven by said spindle and operable by longitudinal movement of the first said means to control operation of said servo-motor, means for multiplying and for transmitting the action of said servo-motor to a machine to be governed, a rod connected with the machine to be governed, a dashpot connected with the machine and with said rod to compensate for sudden changes in operation of said speed responsive means, and a yielding connection connecting said dashpot with said rod to compensate at different rates both for slow and for sudden changes in the rate of speed of the machine.

2,106,635
REFRIGERATING APPARATUS
Rolf M. Smith, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application February 29, 1936, Serial No. 66,461
12 Claims. (Cl. 230—2)



1. A motor pump unit including a motor and a pump driven by said motor, said pump having a pumping chamber provided with a check valve at its outlet for preventing the flow of discharged fluid back into the pumping chamber, said pumping chamber being provided with a piston capable of forcing fluid from the pumping chamber through the check valve at its outlet when the motor operates in a forward direction and to sweep fluid from the pumping chamber through the inlet when the motor operates in a reverse direction, and a speed responsive control means responsive to the speed of the motor for setting the unit to first start the motor in a reverse direction to unload the pump and then setting the unit to operate the motor in the forward direction during the remainder of each operating period.

2,106,636
LOCATING, LOCKING, AND INDICATING MEANS FOR A SHIFTABLE GEAR
Joseph C. Woodford, Haverford, Pa., assignor to John Wood Manufacturing Company, Inc., Conshohocken, Pa., a corporation of Delaware
Application October 31, 1934, Serial No. 750,895
4 Claims. (Cl. 74—345)

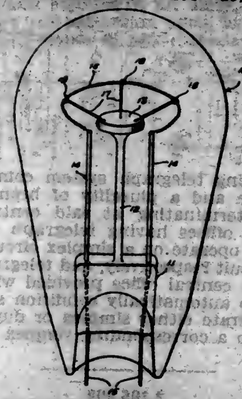
1. In a computing registering mechanism the combination with a rotary dial carrying a circular series of numbers; of a cylindrical rotary member, connected to turn with said dial and having recesses in its circumference, spaced both circumferentially, in correspondence with the numbers on said dial, and longitudinally with respect to its axis; and interlocking means including a movable member which is manually adjustable axially with respect to said recessed member and transversely with respect to said recessed member, to be engaged selectively with the one of said recesses presented in registry therewith in accordance with the rotary position of said dial

and recessed member; whereby any recess presented in position to be engaged by said movable

member corresponds with the numerical factor displayed by said dial.

2,106,637
STORAGE BATTERY TESTING DEVICE
Carl G. Eisele, St. Paul, Minn., assignor to National Battery Company, St. Paul, Minn., a corporation of Delaware
Application April 29, 1935, Serial No. 18,706
5 Claims. (Cl. 209—39)

1. In a device for connecting a test circuit to a binding post of a storage battery, the combination with a socket adapted to receive one of said binding posts and to fit snugly thereon, a switch housing mounted on said socket, switch contact members enclosed in said housing and a handle disposed in straight alignment with said socket for thrusting the latter upon said post, said handle being operatively connected to one of said contacts to close said switch by a thrust directed toward a post in said socket.

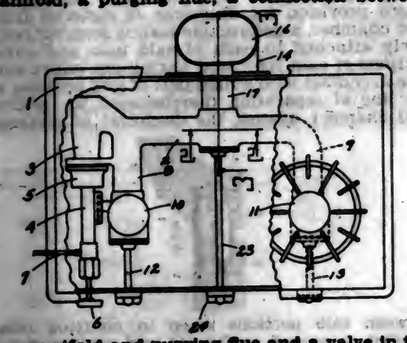


2,106,638
CENTRIFUGAL MACHINE
Wilmer H. Heath, West Conshohocken, Pa., assignor to The Sharples Specialty Company, Philadelphia, Pa., a corporation of Delaware
Application February 27, 1935, Serial No. 8,459
2 Claims. (Cl. 233—27)

2. In a centrifugal machine, the combination comprising a centrifugal rotor having a separating chamber defined by a base portion and a cover portion extending annularly about the axis of the rotor and mounted to be movable relative to each other only in an axial direction and normally retained in abutting relationship to prevent the discharge of material from said chamber, means for separating said portions to afford provision for discharge of material from said chamber, a deformable sealing member positively attached to each of said base and cover portions of said rotor and having one entire surface in contact with a rigid part of said portions at the line of separation therebetween for sealing said chamber against the discharge of material

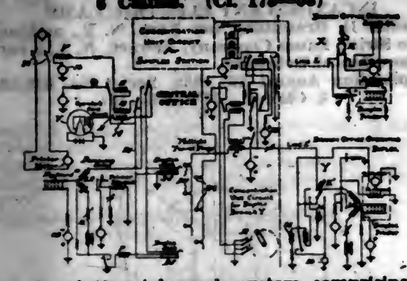
between said portions when in abutting relationship, a second surface of said sealing members being exposed to the pressure within said rotor by means of which the same are distorted into sealing engagement, the abutting surfaces of said sealing members terminating in the radial plane containing the free edges of the rotor portions when in abutting relation.

2,106,639
INCANDESCENT ELECTRIC LAMP
Chester H. Braselton, New York, N. Y., assignor to Sirian Lamp Company, Newark, N. J., a corporation of Delaware
Application August 25, 1932, Serial No. 630,230
2 Claims. (Cl. 176—40)



2. An incandescent electric lamp comprising a globe having electric circuit leads, a filament of tantalum electrically connected at opposite ends directly with said leads, and means for heating said tantalum filament to temperatures in excess of its normal lighting temperature comprising a tungsten filament electrically connected at its opposite ends with said leads in complete electrical parallelism with said tantalum filament and in contact therewith throughout its length.

2,106,640
ODOR CONTROL FOR LIQUID FUEL BURNING STOVES
Sheldon Coleman and Boyd W. Tullis, Wichita, Kans.
Application February 15, 1936, Serial No. 64,137
4 Claims. (Cl. 158—53)

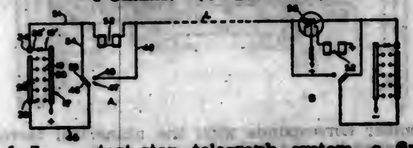


1. In a device of the class described a burner

manifold, a purging flue, a connection between

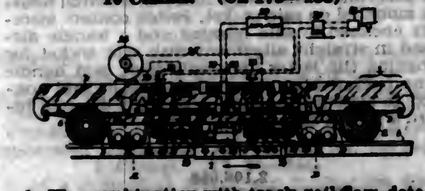
the manifold and purging flue and a valve in the connection.

2,106,691
PRINTING TELEGRAPH SYSTEM
Eugene A. Demenet, Brooklyn, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application June 30, 1934, Serial No. 33,412
6 Claims. (Cl. 178—58)



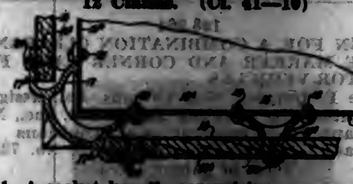
1. A printing telegraph system comprising a central office and a plurality of branch offices with lines terminating at said central office, said branch offices having telegraph apparatus arranged to operate on a simplex circuit and on a duplex circuit respectively, and telegraph apparatus at the central office provided with means operating to automatically condition said apparatus to operate either simplex or duplex when connected to a corresponding simplex or duplex line circuit.

2,106,692
GAS-ARC TORCH
Rowland Embleton, Swinton, England, assignor to General Electric Company, a corporation of New York
Application July 23, 1936, Serial No. 92,034
In Great Britain July 26, 1935
5 Claims. (Cl. 219—14)



1. A gas-arc torch comprising a nozzle having an elongated discharge opening therein, a plurality of pairs of electrodes projecting into said nozzle with their arcing terminals adjacent the elongated opening therein, said electrodes being arranged in two rows with the electrodes of each pair occupying corresponding positions in said rows, and means for collectively moving the electrodes of one of said rows relatively to the electrodes of the other of said rows and for simultaneously laterally displacing the arcing terminals of said electrodes relatively to one another along the elongated opening in said nozzle, said means including relatively movable mounting plates each of which has openings therein for the electrodes of one of said rows of electrodes.

2,106,693
HOME RECORD CUT-OUT ASSEMBLY
Lawrence W. Franklin, Delawanna, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application September 5, 1935, Serial No. 39,355
6 Claims. (Cl. 178—53.1)



1. In a start-stop telegraph system, a first station, a second station, a line circuit extending from said first station to said second station, a telegraph transmitting apparatus in said circuit at said first station, a printer in said circuit and normally responsive to both transmitted and received code impulses, a contact assembly in said transmitting apparatus comprising a start contact and a plurality of selecting impulse transmitting contacts, means for operating said start and selecting impulse transmitting contacts to transmit character code combinations over said line circuit, and means for rendering said printer unresponsive to said transmitted selecting impulses while maintaining it in condition to receive all incoming impulses from said second station said means comprising a circuit arrangement for shunting said transmitted selecting impulses around said printer directly to said line circuit.

2,106,694
TRACK RAIL FLAW DETECTING APPARATUS
William H. Grindall and Arthur E. F. Billstein, Altoona, Pa., assignors to The Pennsylvania Railroad Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 22, 1935, Serial No. 32,696
10 Claims. (Cl. 175—183)

1. The combination with track-rail flaw-detecting and indicating apparatus movable along the track, of an actuator device carried by said detecting and indicating apparatus adjacent a rail of said track and mounted for diverse movements, one way by engagement with rail-joint-bars and another way by engagement with obstructions along the track, such as highway crossings, cross-overs, and switches, and means actuated by one of the aforesaid movements of said actuator device to temporarily render said apparatus inoperative, so as to avoid undesired indications, but unaffected by the other of the aforesaid movements of said actuator device.

2,106,695
ART OF CASKET ORNAMENTATION
Raymond Larson, Chicago, Ill., assignor to Central Metallic Casket Co., Chicago, Ill., a corporation of Illinois
Application April 20, 1936, Serial No. 77,187
12 Claims. (Cl. 41—10)

11. A casket handle comprising an ornamental element supported on the casket walls at each corner of the casket, an ornamental plate mounted on each of the two casket side walls between said ornamental corner elements, said corner elements and said plates having recesses formed in outwardly extended portions of the body, a handle extending between said plates and said corner elements and supported in said recesses, caps adapted to be mounted on said handle opposite said recesses, and means for securing said caps and handle to said corner elements and plates.

2,106,696
EXTENSOMETER
Robert B. Lewis, Philadelphia, Pa., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa., a corporation of Pennsylvania
Application May 31, 1935, Serial No. 24,176
3 Claims. (Cl. 33—147)

1. An instrument for indicating changes in length, comprising a frame clampable to the test specimen, two specimen engaging members on the frame, and means movable to a position to contact with the test specimen to prevent one of said members engaging the specimen during the initial clamping operation and movable to

another position to guide such member into contact with the specimen and thereby maintain a fixed and definite distance between said members when the frame is clamped to the specimen by the members.

2,106,697
PROCESS FOR THE MANUFACTURE OF ACETAMIDE
Wendell P. Munro, Bound Brook, Elmore H. Northey and Harry E. Lesher, Plainfield, N. J., assignors to The Calco Chemical Company, Inc., Bound Brook, N. J., a corporation of Delaware
No Drawing. Application April 13, 1936, Serial No. 74,194
5 Claims. (Cl. 260—124)

1. A process of producing acetamide which comprises reacting aqueous ammonia with an acetic acid ester of a lower monohydric paraffin alcohol having good solvent power for water, distilling off alcohol formed, unchanged ammonia and unreacted ester and water, washing the product with fresh ester followed by washing with a small amount of an inert organic liquid having low solvent action upon water and using the washing liquor as raw material for the next batch.

DESIGNS

JANUARY 25, 1938

106,662

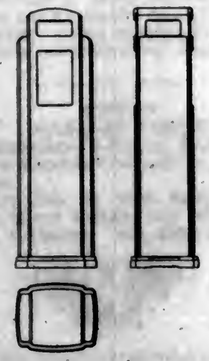
DESIGN FOR ELASTIC FABRIC OR SIMILAR ARTICLE

Harry Aull, Philadelphia, Pa., assignor to Friedberger-Aaron Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania

Application October 13, 1936, Serial No. 65,283

Term of patent 7 years

The ornamental design for elastic fabric or similar article as shown and described.



106,663

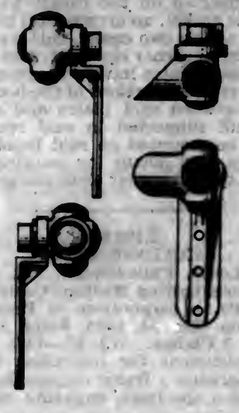
DESIGN FOR A DISPENSING CASING

Eric H. Bradley, Spring Lake, Mich., assignor to John Wood Manufacturing Company, Inc., Conshohocken, Pa., a corporation of Delaware

Application December 4, 1937, Serial No. 73,375

Term of patent 14 years

The ornamental design for a dispensing casing, as shown.



106,664

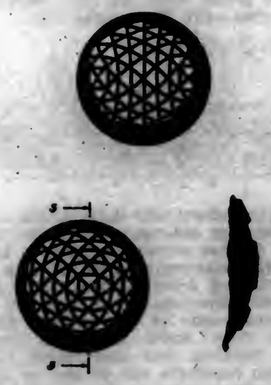
DESIGN FOR A COMBINATION CLEARANCE SIDE MARKER AND CORNER LAMP FOR MOTOR VEHICLES

George F. Burgess, New Orleans, La., assignor to Automotive Lighting Equipment, Inc., New Orleans, La., a corporation of Louisiana

Application October 30, 1937, Serial No. 72,538

Term of patent 7 years

The ornamental design for a combination clearance side marker and corner lamp for motor vehicles, as shown.



106,665

DESIGN FOR A GOLF BALL OR THE LIKE

Frank H. Cavignac, New York, N. Y.

Application November 15, 1937, Serial No. 72,996

Term of patent 14 years

The ornamental design for a golf ball or the like as shown.

106,666

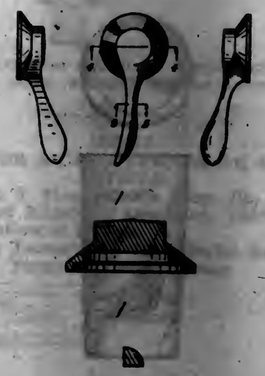
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE

Marcel Christen, New York, N. Y.

Application November 10, 1937, Serial No. 72,761

Term of patent 3½ years

The ornamental design for a textile fabric or similar article as shown.



106,667

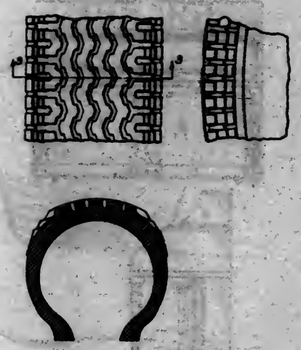
DESIGN FOR A VALVE HANDLE

Herbert B. Glassmann, Sturgis, Mich., assignor to Scovill Manufacturing Company, Sturgis, Mich.

Application November 19, 1937, Serial No. 73,026

Term of patent 14 years

The ornamental design for a valve handle, as shown.



106,668

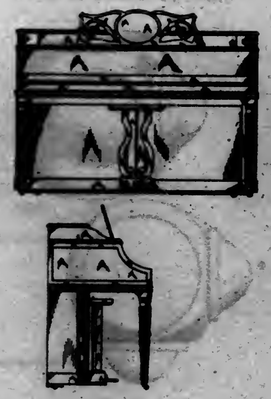
DESIGN FOR A TIRE

Burgess Darrow, San Marino, Calif., assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware

Application December 3, 1937, Serial No. 73,339

Term of patent 14 years

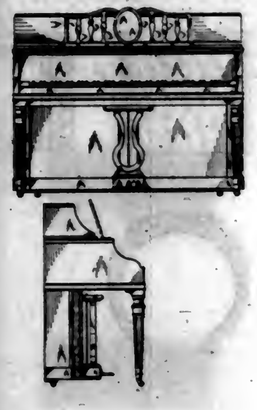
The ornamental design for a tire, as shown.



106,669

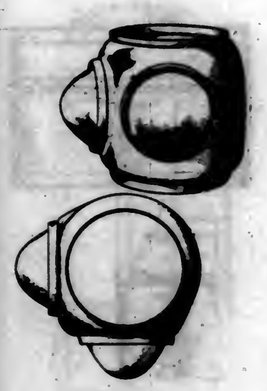
DESIGN FOR A PIANO CASE

Wilbur M. Day, Cincinnati, Ohio, assignor to The Baldwin Company, Cincinnati, Ohio



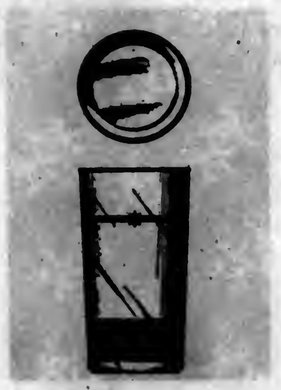
Application December 4, 1937, Serial No. 73,402

Term of patent 7 years



The ornamental design for a piano case, as shown.

106,070
DESIGN FOR A PIANO CASE
Wilbur M. Day, Cincinnati, Ohio, assignor to The Baldwin Company, Cincinnati, Ohio
Application December 16, 1937, Serial No. 73,521
Term of patent 3½ years



The ornamental design for a piano case, as shown.

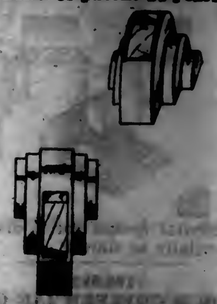
106,071
DESIGN FOR A LANTERN CHIMNEY
Edwin J. Fraser, Chicago, Ill.
Application March 3, 1937, Serial No. 67,961
Term of patent 14 years

The ornamental design for a lantern chimney as shown and described.

106,072
DESIGN FOR A TUMBLER
Edwin W. Fuerst, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application November 26, 1937, Serial No. 73,183
Term of patent 7 years

The ornamental design for a tumbler substantially as shown and described.

106,073
DESIGN FOR A TUMBLER
Edwin W. Fuerst, Toledo, Ohio, assignor to Libbey Glass Company, Toledo, Ohio, a corporation of Ohio
Application November 26, 1937, Serial No. 73,186
Term of patent 7 years

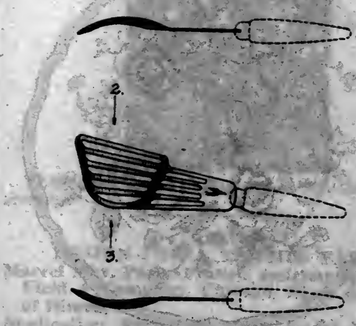


The ornamental design for a tumbler substantially as shown and described.

106,074
DESIGN FOR A BOTTLE
Robert C. Gennaro, Vincent L. Gennaro, and Emil L. Gennaro, Hamilton, Pa.
Application October 16, 1937, Serial No. 72,244
Term of patent 14 years

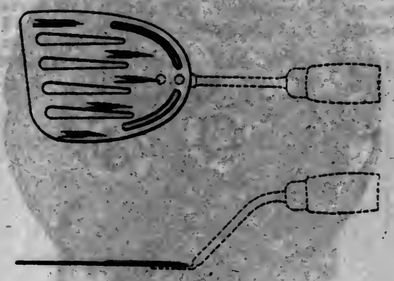
The ornamental design for a bottle, as shown.

106,075
DESIGN FOR A DIAL HOUSING FOR A WEIGHING SCALE
Stan L. Hansen, Andrew P. Olsen, and Albert A. Schmid, Chicago, Ill., assignors to Marius H. Hansen and Stan L. Hansen, both of Chicago, Ill.
Application September 27, 1937, Serial No. 71,824
Term of patent 14 years



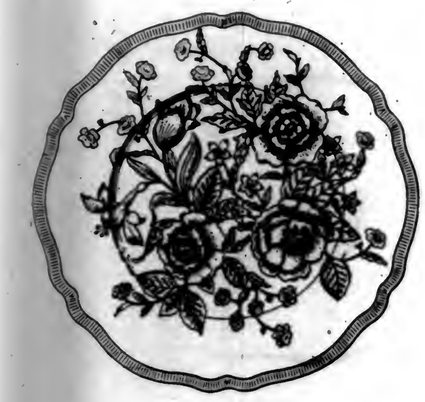
The ornamental design for a dial housing for a weighing scale, substantially as shown.

106,076
DESIGN FOR A CAKE TURNER OR SIMILAR ARTICLE
Clarence R. T. Hess, Prairie View, Ill., assignor to Edward Katzinger Company, Chicago, Ill., a corporation of Illinois
Application January 22, 1937, Serial No. 67,219
Term of patent 14 years



The ornamental design for a cake turner or similar article, as shown.

106,077
DESIGN FOR A BATTER WHIP OR SIMILAR ARTICLE
Clarence R. T. Hess, Prairie View, Ill., assignor to Edward Katzinger Company, Chicago, Ill., a corporation of Illinois
Application January 22, 1937, Serial No. 67,220
Term of patent 14 years



The ornamental design for a batter whip or similar article, as shown.

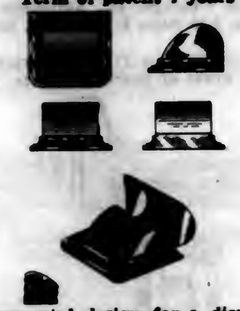
106,078
DESIGN FOR A CAKE TURNER OR SIMILAR ARTICLE
Clarence R. T. Hess, Prairie View, Ill., assignor to Edward Katzinger Company, Chicago, Ill., a corporation of Illinois
Application January 22, 1937, Serial No. 67,221
Term of patent 14 years

The ornamental design for a cake turner or similar article as shown and described.

168,079
DESIGN FOR A PLATE OR SIMILAR ARTICLE
George J. Higginson, New York, N. Y.
Application November 10, 1937, Serial No. 72,773
Term of patent 7 years

The ornamental design for a plate or similar article, as shown.

168,080
DESIGN FOR A PLATE OR SIMILAR ARTICLE
George J. Higginson, New York, N. Y.
Application November 10, 1937, Serial No. 72,774
Term of patent 7 years



The ornamental design for a plate or similar article, as shown.

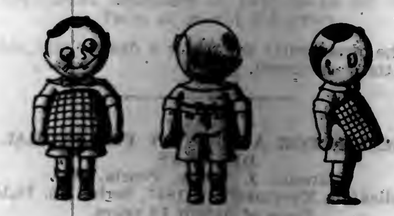
168,081
DESIGN FOR A JAR
Ely Jacques Kahn, New York, N. Y., assignor to Hirsutra Laboratories, New York, N. Y., a corporation of New York
Application April 16, 1937, Serial No. 68,817
Term of patent 14 years

The ornamental design for a jar, substantially as shown.

168,082
DESIGN FOR A DISPLAY BOX FOR RINGS
Benjamin S. Katz, Cincinnati, Ohio, assignor to The Gruen Watch Company, Cincinnati, Ohio, a corporation of Ohio
Application February 24, 1937, Serial No. 67,829
Term of patent 7 years

The ornamental design for a display box for rings, substantially as shown.

168,083
DESIGN FOR A COVERED JAR OR SIMILAR ARTICLE
Robert A. Kelly, East Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1937, Serial No. 72,789
Term of patent 3½ years



The ornamental design for a covered jar or similar article, substantially as shown.

168,084
DESIGN FOR A DOLL
Russell B. Kingman, Orange, N. J., assignor to Metal Textile Corporation, a corporation of Delaware
Application December 6, 1937, Serial No. 73,391
Term of patent 3½ years

The ornamental design for a doll, as shown.

168,085
DESIGN FOR A DOLL
Russell B. Kingman, Orange, N. J., assignor to Metal Textile Corporation, a corporation of Delaware
Application December 6, 1937, Serial No. 73,392
Term of patent 3½ years

The ornamental design for a doll, as shown.

168,086
DESIGN FOR A TEXTILE FABRIC
Marcel Mey, Paris, France, assignor to Marshall Field & Company, Chicago, Ill., a corporation of Illinois
Application August 23, 1937, Serial No. 71,266
Term of patent 3½ years

The ornamental design for a textile fabric as shown and described.

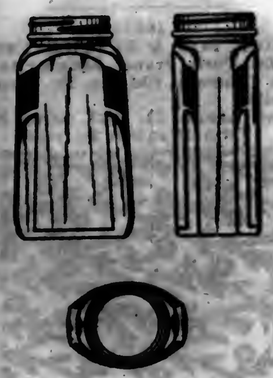
168,087
DESIGN FOR A TEXTILE FABRIC
Marcel Mey, Paris, France, assignor to Marshall Field & Company, Chicago, Ill., a corporation of Illinois
Application August 23, 1937, Serial No. 71,270
Term of patent 3½ years

The ornamental design for a textile fabric as shown.

168,088
DESIGN FOR A TEXTILE FABRIC
Marcel Mey, Paris, France, assignor to Marshall Field & Company, Chicago, Ill., a corporation of Illinois
Application August 23, 1937, Serial No. 71,274
Term of patent 3½ years

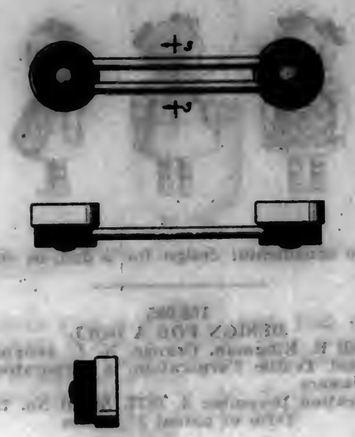
The ornamental design for a textile fabric as shown.

168,089
DESIGN FOR A TEXTILE FABRIC
Marcel Mey, Paris, France, assignor to Marshall Field & Company, Chicago, Ill., a corporation of Illinois
Application August 23, 1937, Serial No. 71,284
Term of patent 3½ years



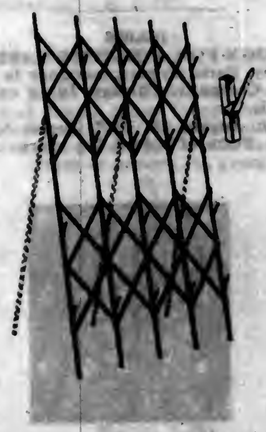
The ornamental design for a textile fabric as shown and described.

168,890
DESIGN FOR A TEXTILE FABRIC
Marcel May, Paris, France, assignor to Marshall Field & Company, Chicago, Ill., a corporation of Illinois
Application August 23, 1937, Serial No. 71,236
Term of patent 3½ years



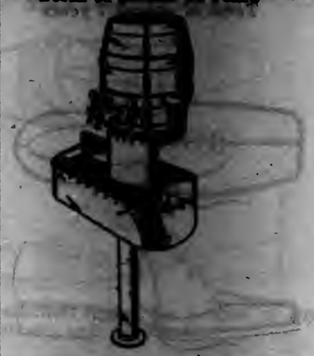
The ornamental design for a textile fabric as shown.

168,891
DESIGN FOR A JAR
Olbert C. Noble, Washington, Pa., assignor to Tygart Valley Glass Company, Washington, Pa., a corporation of West Virginia
Application December 7, 1937, Serial No. 73,417
Term of patent 7 years



The ornamental design for a jar, as shown.

168,892
DESIGN FOR A DRAWER PULL
Henry L. Pehrson, Rockford, Ill., assignor to Anderson Brass Shops, Inc., Rockford, Ill., a corporation of Illinois
Application December 6, 1937, Serial No. 73,287
Term of patent 3½ years



The ornamental design for a drawer pull, substantially as shown.

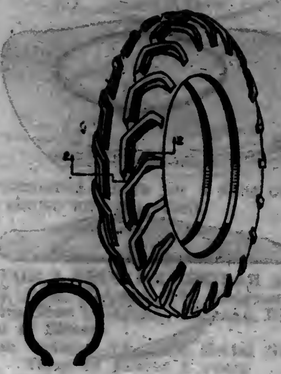
168,893
DESIGN FOR A SUPPORT FOR FLORAL DISPLAYS
Clarence J. White, Peoria, Ill.
Application November 22, 1937, Serial No. 73,131
Term of patent 14 years

The ornamental design for a support for floral displays, as shown.

168,894
DESIGN FOR A COMBINED BEVERAGE COOLER AND DISPENSER
Fred G. Wilson, [illegible], N. Y.
Application April [illegible], Serial No. 69,956
Term of [illegible] years

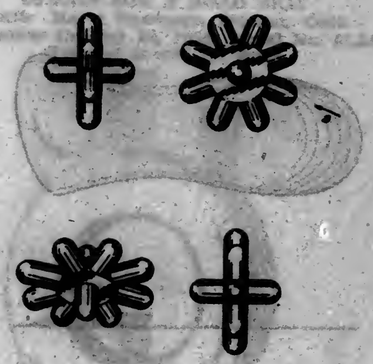
The ornamental design for a combined beverage cooler and dispenser, as shown.

168,895
DESIGN FOR A LACE FABRIC OR SIMILAR ARTICLE
Gustav Zellweger, Palisades, N. J.
Application December 17, 1937, Serial No. 73,676
Term of patent 3½ years



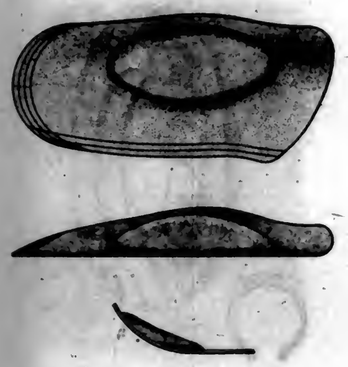
The ornamental design for a lace fabric or similar article as shown and described.

168,896
DESIGN FOR A LACE INSERT OR SIMILAR ARTICLE
Gustav Zellweger, Palisades, N. J.
Application December 17, 1937, Serial No. 73,677
Term of patent 3½ years



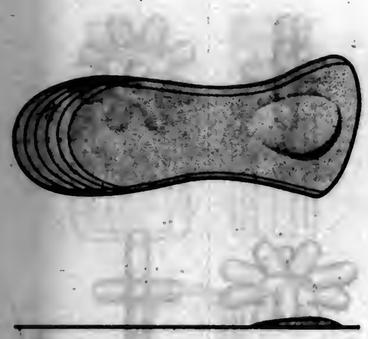
The ornamental design for a lace insert or similar article as shown and described.

168,897
DESIGN FOR A TIRE
Elmer F. Brunner, Silver Lake, Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
Application December 2, 1937, Serial No. 73,299
Term of patent 14 years



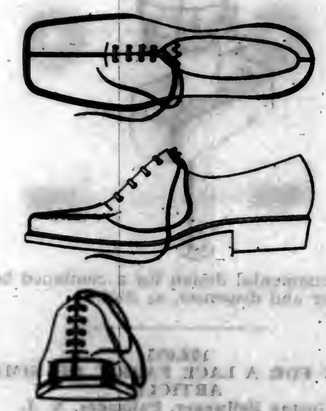
The ornamental design for a tire, as shown.

168,898
DESIGN FOR A STRUCTURAL TOY ELEMENT
Alfred C. Gilbert, Hamden, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a corporation of Maryland
Application April 20, 1937, Serial No. 69,051
Term of patent 14 years



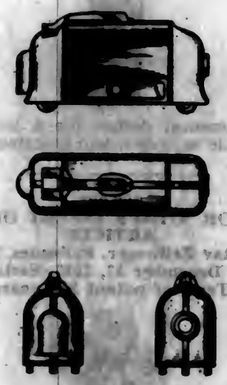
The ornamental design for a structural toy element substantially as shown and described.

100,099
DESIGN FOR A LONGITUDINAL ARCH SUPPORT
Rose H. Johnson, Indianapolis, Ind.
Application January 8, 1937, Serial No. 66,983
Term of patent 14 years



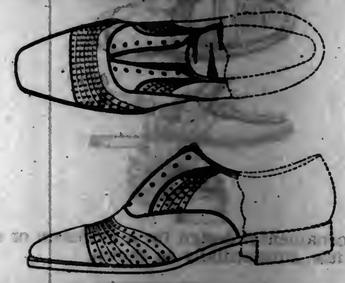
The ornamental design for a longitudinal arch support, as shown and described.

100,100
DESIGN FOR AN ADJUSTABLE METATARSAL INSOLE
Rose H. Johnson, Indianapolis, Ind.
Application February 8, 1937, Serial No. 67,569
Term of patent 14 years



The ornamental design for an adjustable metatarsal insole, as shown and described.

100,101
DESIGN FOR A SHOE
Josef Lanz, Salzburg, Austria, assignor to The Stetson Shoe Company, Inc., Weymouth, Mass., a corporation of Massachusetts
Application September 25, 1937, Serial No. 71,799
Term of patent 7 years

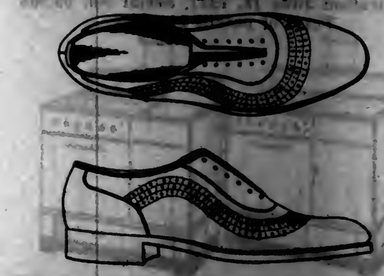


The ornamental design for a shoe, substantially as shown.

100,102
DESIGN FOR A VACUUM CLEANER CASING
Harley J. McAllister, Chicago, Ill.
Application June 11, 1937, Serial No. 69,262
Term of patent 3½ years

The ornamental design for a vacuum cleaner casing as shown and described.

100,103
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Oswald M. Fick, Chicago, Ill., assignor to The Fleischheim Shoe Company, Chicago, Ill., a corporation of Illinois
Application October 20, 1937, Serial No. 72,511
Term of patent 7 years



The ornamental design for a shoe or similar article as shown and described.

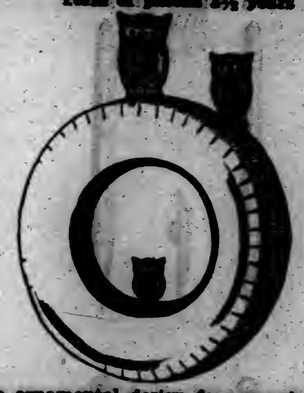
100,104
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Oswald M. Fick, Chicago, Ill., assignor to The Fleischheim Shoe Company, Chicago, Ill., a corporation of Illinois
Application October 22, 1937, Serial No. 72,512
Term of patent 7 years

The ornamental design for a shoe or similar article, as shown and described.

100,105
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Oswald M. Fick, Chicago, Ill., assignor to The Fleischheim Shoe Company, Chicago, Ill., a corporation of Illinois
Application October 20, 1937, Serial No. 72,513
Term of patent 7 years

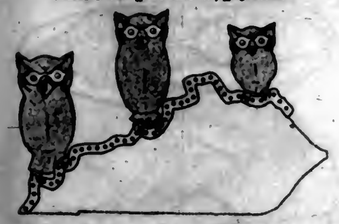
The ornamental design for a shoe or similar article, as shown.

100,106
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Oswald M. Fick, Chicago, Ill., assignor to The Fleischheim Shoe Company, Chicago, Ill., a corporation of Illinois
Application October 29, 1937, Serial No. 72,514
Term of patent 7 years



The ornamental design for a shoe or similar article as shown and described.

100,107
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Oswald M. Fick, Chicago, Ill., assignor to The Fleischheim Shoe Company, Chicago, Ill., a corporation of Illinois
Application October 29, 1937, Serial No. 72,515
Term of patent 7 years

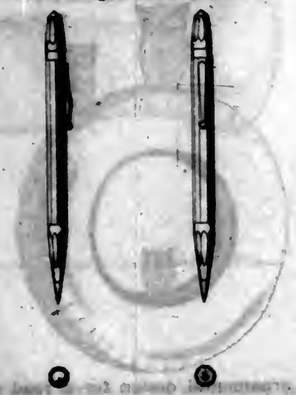


The ornamental design for a shoe or similar article as shown.

100,108
DESIGN FOR A ROAD SIGN
Lottie Marie Summers, Dayton, Ohio
Application October 28, 1936, Serial No. 65,549
Term of patent 3½ years

The ornamental design for a road sign, substantially as shown and described.

166,109
DESIGN FOR A ROAD SIGN
Lettie Marie Strammers, Dayton, Ohio
Original application October 28, 1936, Serial No. D-66,549. Divided and this application September 11, 1937, Serial No. D-71,566
Term of patent 3½ years



The ornamental design for a road sign, substantially as shown and described.

166,110
DESIGN FOR A BARBER'S CABINET OR SIMILAR ARTICLE
Ross H. Trickle, Newark, Ohio
Application April 7, 1936, Serial No. 61,996
Term of patent 3½ years

The ornamental design for a barber's cabinet or similar article as shown.

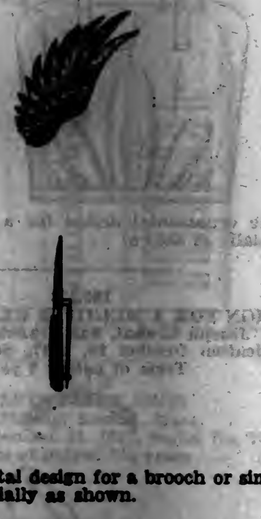
166,111
DESIGN FOR A PENCIL
Martin E. Trollen, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a corporation of Minnesota
Application April 9, 1937, Serial No. 68,039
Term of patent 14 years

The ornamental design for a pencil, as shown.

166,112
DESIGN FOR A MOCCASIN OR SIMILAR ARTICLE
Edward J. Bial, Brockton, Mass.
Application December 17, 1937, Serial No. 73,089
Term of patent 3½ years

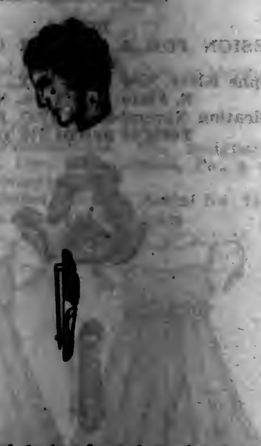
The ornamental design for a moccasin or similar article, substantially as shown.

166,113
DESIGN FOR A BOTTLE
Darrell E. Briner, Winchester, Ind., assignor to Parsons Ammonia Company, Inc., New York, N. Y., a corporation of New York
Application December 15, 1937, Serial No. 73,835
Term of patent 14 years



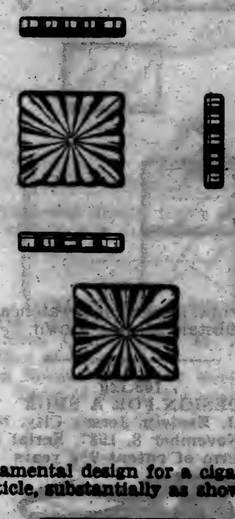
The ornamental design for a bottle, substantially as shown.

166,114
DESIGN FOR A RANGE
Herbert T. Barrow, Beaver Dam, Wis., assignor to Malleable Iron Range Company, Beaver Dam, Wis., a corporation of Wisconsin
Application June 18, 1937, Serial No. 69,905
Term of patent 14 years



The ornamental design for a range, as shown and described.

166,115
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Fulco di Verdura, New York, N. Y., assignor to Paul E. Flato, New York, N. Y.
Application November 27, 1937, Serial No. 73,217
Term of patent 3½ years



The ornamental design for a brooch or similar article substantially as shown.

166,116
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Fulco di Verdura, New York, N. Y., assignor to Paul E. Flato, New York, N. Y.
Application November 27, 1937, Serial No. 73,218
Term of patent 3½ years

The ornamental design for a brooch or similar article, substantially as shown.

166,117
DESIGN FOR A CIGARETTE CASE OR SIMILAR ARTICLE
Fulco di Verdura, New York, N. Y., assignor to Paul E. Flato, New York, N. Y.
Application December 7, 1937, Serial No. 73,419
Term of patent 3½ years

The ornamental design for a cigarette case or similar article, substantially as shown.

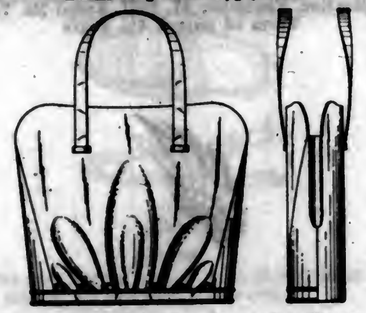
166,118
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Fulco di Verdura, New York, N. Y., assignor to Paul E. Flato, New York, N. Y.
Application November 27, 1937, Serial No. 73,219
Term of patent 3½ years

The ornamental design for a brooch or similar article, substantially as shown.

168,119
DESIGN FOR A WATCHCASE OR SIMILAR ARTICLE
Falco di Verdura, New York, N. Y., assignor to Paul E. Flato, New York, N. Y.
Application November 27, 1937, Serial No. 73,220
Term of patent 3½ years

The ornamental design for a watchcase or similar article, substantially as shown.

168,120
DESIGN FOR A SHOE
Louis J. Epstein, Jersey City, N. J.
Application November 8, 1937, Serial No. 72,688
Term of patent 3½ years



The ornamental design for a shoe, substantially as shown and described.

168,121
DESIGN FOR A BOTTLE OR SIMILAR CONTAINER
Paul H. Ganz, New York, N. Y.
Application December 3, 1937, Serial No. 73,332
Term of patent 7 years

The ornamental design for a bottle or similar container, substantially as shown.

168,122
DESIGN FOR A HANDBAG
Samuel R. Goldsmith, New York, N. Y.
Application December 28, 1937, Serial No. 73,911
Term of patent 3½ years

The ornamental design for a handbag, substantially as shown.

168,123
DESIGN FOR A MULTIPLE GEM MOUNTING
Joseph Granat, San Francisco, Calif.
Application October 29, 1937, Serial No. 72,501
Term of patent 7 years

The ornamental design for a multiple gem mounting, substantially as shown.

168,124
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolphe Klety, New York, N. Y., assignor to Paul E. Flato, New York, N. Y.
Application November 27, 1937, Serial No. 73,222
Term of patent 3½ years

The ornamental design for a brooch or similar article, substantially as shown.

168,125
DESIGN FOR A BOTTLE
Leslie A. Lauman, Jr., Haddonfield, N. J., assignor to Fairmont Automatic Company, Inc., New York, N. Y., a corporation of New York
Application December 15, 1937, Serial No. 73,636
Term of patent 14 years

The ornamental design for a bottle, substantially as shown.

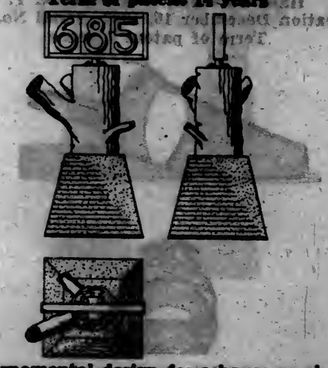
168,126
DESIGN FOR A SHOE
Roy Maling, Boston, Mass.
Application December 13, 1937, Serial No. 73,548
Term of patent 3½ years

The ornamental design for a shoe, as shown.

168,127
DESIGN FOR A DRESS
Mary Mullen, Philadelphia, Pa., assignor to Rosenau Bros. Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application December 14, 1937, Serial No. 73,619
Term of patent 3½ years

The ornamental design for a dress as shown.

168,128
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Oswald M. Fish, Chicago, Ill., assignor to The Fleischein Shoe Company, Chicago, Ill., a corporation of Illinois
Application November 15, 1937, Serial No. 72,865
Term of patent 7 years



The ornamental design for a shoe or similar article as shown and described.

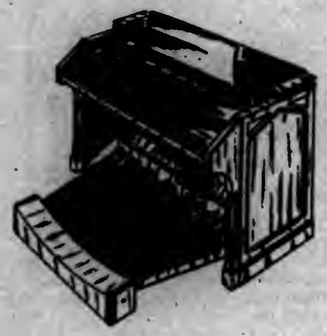
168,129
DESIGN FOR A SHOE
Henning Odemerania, St. Louis, Mo., assignor to Valley Shoe Corporation, St. Louis, Mo., a corporation of Missouri
Application November 8, 1937, Serial No. 72,676
Term of patent 3½ years

The ornamental design for a shoe, substantially as shown.

168,130
DESIGN FOR A HOUSE MARKER
Woodrow Patty and Melvin Brooks, Santa Fe, N. Mex.
Application December 6, 1937, Serial No. 73,407
Term of patent 14 years

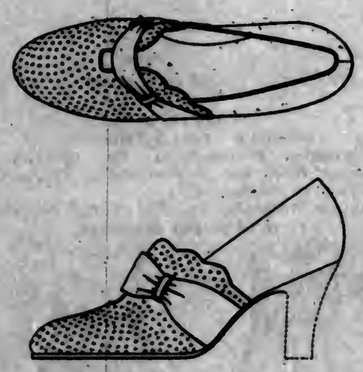
The ornamental design for a house marker, as shown.

106,121
DESIGN FOR A SCRAPING TOOL
Clarence Wheaton Reid, Rochester, N. Y.
Application June 26, 1937, Serial No. 70,658
Term of patent 14 years



The ornamental design for a scraping tool, as shown.

106,122
DESIGN FOR A SLIPPER OR SIMILAR ARTICLE
Hans Springer, New York, N. Y.
Application December 16, 1937, Serial No. 73,658
Term of patent 7 years



The ornamental design for a slipper or similar article as shown and described.

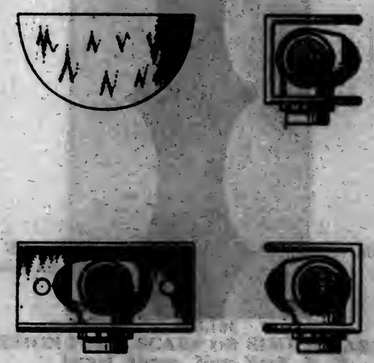
106,123
DESIGN FOR AN ELECTRIC ORGAN
George E. Stephens, Glenview, Ill., assignor to Hammond Instrument Company, Chicago, Ill., a corporation of Delaware
Application December 9, 1937, Serial No. 73,491
Term of patent 14 years

The ornamental design for an electric organ, as shown.

106,124
DESIGN FOR A SHOE
Samuel Weinstat, New York, N. Y., assignor to Bancroft Walker Company, Waltham, Mass., a corporation of Massachusetts
Application December 13, 1937, Serial No. 73,694
Term of patent 3½ years

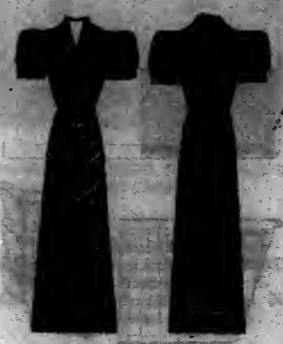
The ornamental design for a shoe substantially as shown and described.

106,125
DESIGN FOR A BILLFOLD
Herman B. Welch, West Bend, Wis., assignor to Amity Leather Products Co., West Bend, Wis., a corporation of Wisconsin
Application June 11, 1937, Serial No. 69,796
Term of patent 7 years



The ornamental design for a billfold, as shown and described.

106,126
DESIGN FOR A MANTEL OR SIMILAR ARTICLE
Dwight J. Baum, New York, N. Y., assignor to Curtis Companies Incorporated, Clinton, Iowa, a corporation of Iowa
Application October 18, 1937, Serial No. 72,272
Term of patent 7 years

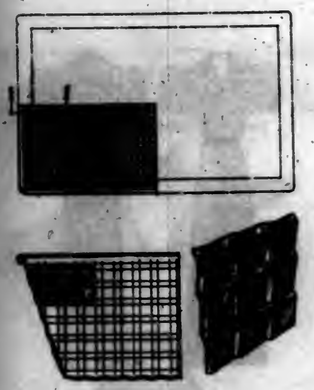


The ornamental design for a mantel or similar article substantially as shown.

106,127
DESIGN FOR A COMBINATION CLEARANCE AND SIDE MARKER LAMP FOR MOTOR VEHICLES
George F. Burgess, New Orleans, La., assignor to Automotive Lighting Equipment, Inc., New Orleans, La., a corporation of Louisiana
Application October 20, 1937, Serial No. 72,537
Term of patent 7 years

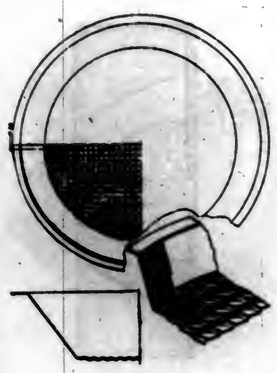
The ornamental design for a combination clearance and side marker lamp for motor vehicles, as shown.

106,128
DESIGN FOR A DRESS
Ben Greenstein, New York, N. Y.
Application December 3, 1937, Serial No. 73,327
Term of patent 3½ years



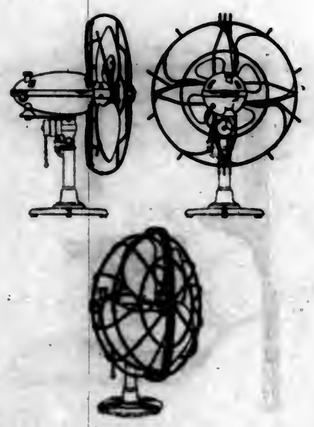
The ornamental design for a dress substantially as shown.

106,139
DESIGN FOR A RIBBON
John D. Ehsing, New York, N. Y.
Application December 20, 1937, Serial No. 73,732
Term of patent 7 years



The ornamental design for a ribbon, substantially as shown.

106,140
DESIGN FOR A BAKING PAN
Joseph G. Jackson, Oak Park, Ill., assignor to The Edward Katzinger Company, Chicago, Ill., a corporation of Illinois
Application January 2, 1937, Serial No. 66,868
Term of patent 14 years

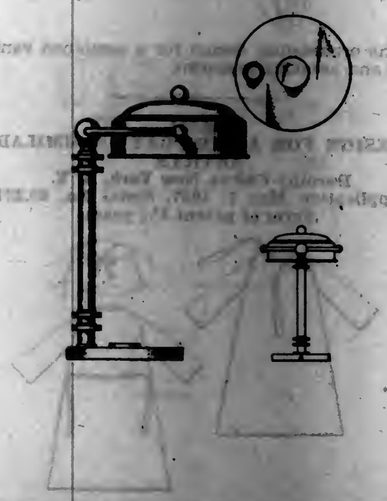


The ornamental design for a baking pan, as shown and described.

106,141
DESIGN FOR A BAKING PAN
Joseph G. Jackson, Oak Park, Ill., assignor to The Edward Katzinger Company, Chicago, Ill., a corporation of Illinois
Application January 2, 1937, Serial No. 66,869
Term of patent 14 years

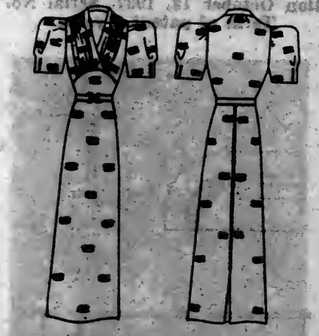
The ornamental design for a baking pan, as shown and described.

106,142
DESIGN FOR AN ELECTRIC FAN
Gustav H. Koch, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application August 14, 1937, Serial No. 71,089
Term of patent 7 years



The ornamental design for an electric fan substantially as shown and described.

106,143
DESIGN FOR A WRENCH MEMBER
Sigmund Mandl, Milwaukee, Wis., assignor to Blackhawk Mfg. Co., Milwaukee, Wis., a corporation of Wisconsin
Application February 27, 1937, Serial No. 67,905
Term of patent 7 years



The ornamental design for a wrench member, as shown and described.

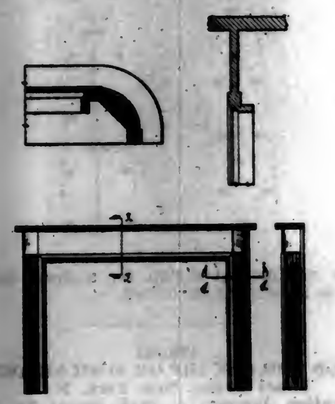
106,144
DESIGN FOR A PORTABLE ELECTRIC LAMP
Henry M. Peters, Chicago, Ill.
Application August 2, 1937, Serial No. 70,810
Term of patent 3½ years

The ornamental design for a portable electric lamp, as shown.

106,145
DESIGN FOR A DRESS
Marie Pons, New York, N. Y.
Application December 4, 1937, Serial No. 73,366
Term of patent 3½ years

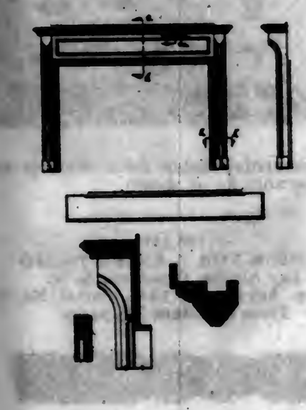
The ornamental design for a dress substantially as shown and described.

106,146
DESIGN FOR A SCARF OR SIMILAR ARTICLE
Israel Aberg, New York, N. Y.
Application January 4, 1938, Serial No. 74,071
Term of patent 3½ years



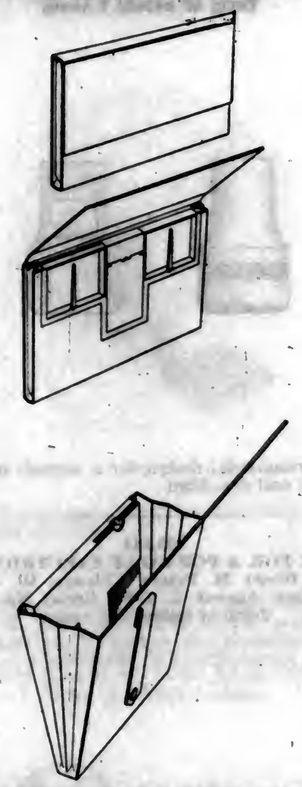
The ornamental design for a scarf or similar article substantially as shown.

106,147
DESIGN FOR A SNAKE BRAID
Jay Alpine, Brooklyn, N. Y.
Application August 12, 1937, Serial No. 71,045
Term of patent 3½ years



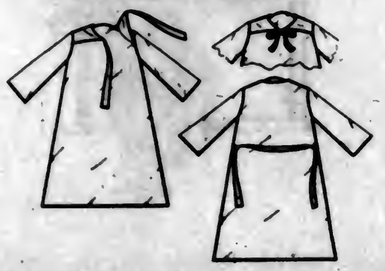
The ornamental design for a snake braid substantially as shown and described.

106,148
DESIGN FOR A MANTEL OR SIMILAR ARTICLE
Dwight J. Baum, New York, N. Y., assignor to Curtis Companies Incorporated, Clinton, Iowa, a corporation of Iowa
Application October 18, 1937, Serial No. 72,266
Term of patent 7 years



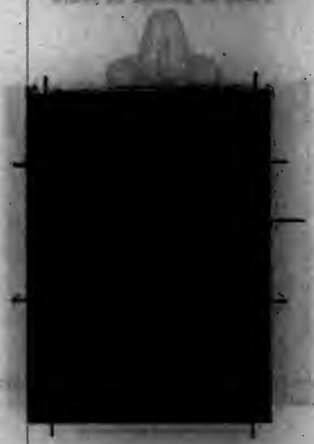
The ornamental design for a mantel or similar article substantially as shown.

106,149
DESIGN FOR A MANTEL OR SIMILAR ARTICLE
Dwight J. Baum, New York, N. Y., assignor to Curtis Companies Incorporated, Clinton, Iowa, a corporation of Iowa
Application October 18, 1937, Serial No. 72,267
Term of patent 7 years



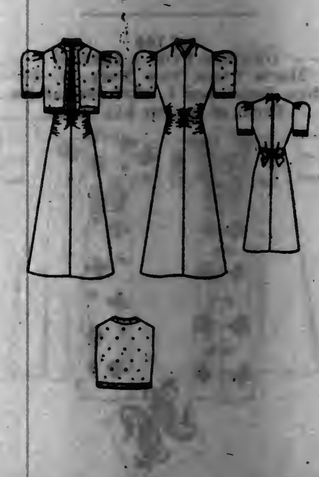
The ornamental design for a mantel or similar article substantially as shown.

106,150
DESIGN FOR A COMBINED VANITY UNIT AND HANDBAG
Pedro Bautista, Brooklyn, N. Y.
Application January 11, 1937, Serial No. 67,007
Term of patent 7 years



The ornamental design for a combined vanity unit and handbag as shown.

106,151
DESIGN FOR A RAINCOAT OR SIMILAR ARTICLE
Dorothy Cairns, New York, N. Y.
Application May 7, 1937, Serial No. 69,221
Term of patent 3½ years

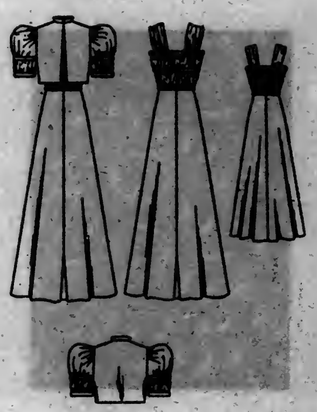


The ornamental design for a raincoat or similar article substantially as shown and described.

106,152
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Marcel Christian, New York, N. Y.
Application November 17, 1937, Serial No. 72,954
Term of patent 3½ years

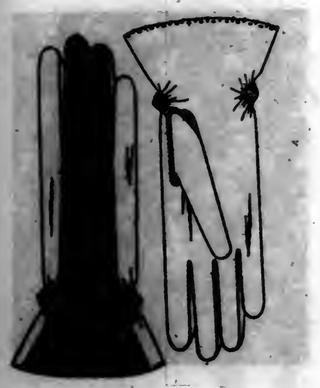
The ornamental design for a textile fabric or similar article, as shown and described.

106,153
DESIGN FOR A DRESS ENSEMBLE
Pauline Fraschia, New York, N. Y.
Application December 9, 1937, Serial No. 73,495
Term of patent 3½ years



The ornamental design for a dress ensemble, substantially as shown.

106,154
DESIGN FOR A TEXTILE FABRIC
Jacob Gramowitz, New York, N. Y.
Application December 30, 1937, Serial No. 73,973
Term of patent 3½ years



The ornamental design for a textile fabric, substantially as shown and described.

106,155
DESIGN FOR A DRESS ENSEMBLE
Mercedes Hall, New York, N. Y.
Application November 18, 1937, Serial No. 72,930
Term of patent 3½ years

The ornamental design for a dress ensemble, substantially as shown.

106,156
DESIGN FOR A GLOVE
Julius A. Higier, Gloversville, N. Y.
Application December 8, 1937, Serial No. 73,431
Term of patent 3½ years

The ornamental design for a glove, substantially as shown and described.

106,157
DESIGN FOR A TEXTILE FABRIC
Solomon Horowitz, New York, N. Y.
Application January 4, 1938, Serial No. 74,972
Term of patent 3½ years

The ornamental design for a textile fabric substantially as shown and described.

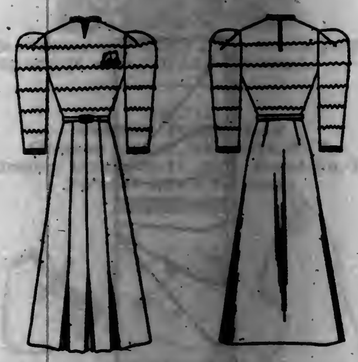
106,158
DESIGN FOR AN AGITATOR CAP
Thomas J. Litle, Jr., Syracuse, N. Y., assignor to Easy Washing Machine Corporation, Syracuse, N. Y., a corporation of Delaware
Application November 1, 1937, Serial No. 72,562
Term of patent 14 years

The ornamental design for an agitator cap substantially as shown.

106,159
DESIGN FOR A WRENCH OR THE LIKE
Sigmund Mandl, Milwaukee, Wis., assignor to Blackhawk Mfg. Co., Milwaukee, Wis., a corporation of Wisconsin
Application February 27, 1937, Serial No. 67,904
Term of patent 7 years

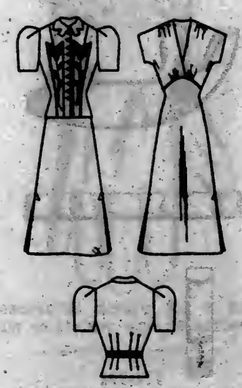
The ornamental design for a wrench or the like, as shown and described.

106,160
DESIGN FOR A DRESS
Marie Pesce, New York, N. Y.
Application December 4, 1937, Serial No. 73,367
Term of patent 3½ years



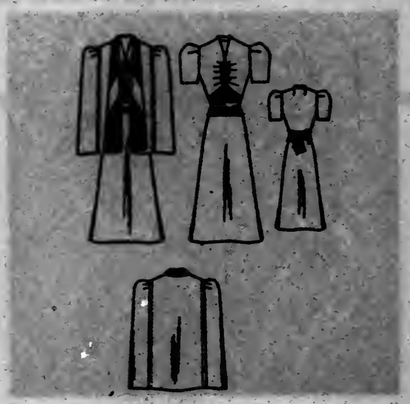
The ornamental design for a dress substantially as shown and described.

106,161
DESIGN FOR A TEXTILE FABRIC
Walter Rose, New York, N. Y.
Application December 20, 1937, Serial No. 73,976
Term of patent 3½ years



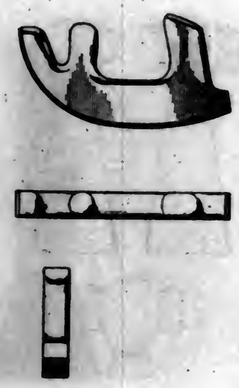
The ornamental design for a textile fabric substantially as shown and described.

106,162
DESIGN FOR A DRESS
Philip Schlossel, New York, N. Y.
Application December 4, 1937, Serial No. 73,249
Term of patent 3½ years



The ornamental design for a dress, substantially as shown, and described.

106,163
DESIGN FOR A DRESS ENSEMBLE
Marie Eileen Smith, New York, N. Y.
Application December 23, 1937, Serial No. 73,886
Term of patent 3½ years



The ornamental design for a dress ensemble, substantially as shown, and described.

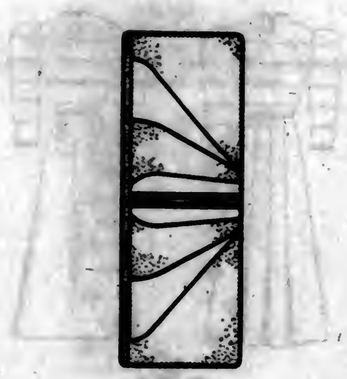
106,164
DESIGN FOR A DRESS ENSEMBLE
Marie Eileen Smith, New York, N. Y.
Application December 23, 1937, Serial No. 73,887
Term of patent 3½ years

The ornamental design for a dress ensemble, substantially as shown and described.

166,165
DESIGN FOR A FILE
Rocco Stephens, Folsom City, Calif.
Application September 8, 1937, Serial No. 71,567
Term of patent 7 years

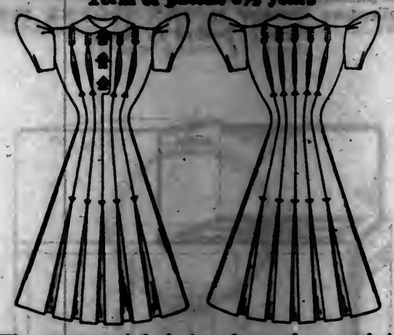
The ornamental design for a file as shown.

166,166
DESIGN FOR A TEXTILE FABRIC
Mark Turpan, West New York, N. J.
Application December 27, 1937, Serial No. 73,881
Term of patent 3½ years



The ornamental design for a textile fabric substantially as shown.

166,167
DESIGN FOR A TEXTILE FABRIC
Mark Turpan, West New York, N. J.
Application December 27, 1937, Serial No. 73,882
Term of patent 3½ years



The ornamental design for a textile fabric substantially as shown.

166,168
DESIGN FOR A BILLFOLD
Herman B. Welch, West Bend, Wis., assignor to Amity Leather Products Co., West Bend, Wis., a corporation of Wisconsin
Application June 11, 1937, Serial No. 69,795
Term of patent 7 years

The ornamental design for a billfold, as shown and described.

166,169
DESIGN FOR A DRESS
Samuel M. Werber, University City, Mo.
Application December 3, 1937, Serial No. 73,335
Term of patent 3½ years

The ornamental design for a dress, substantially as shown.

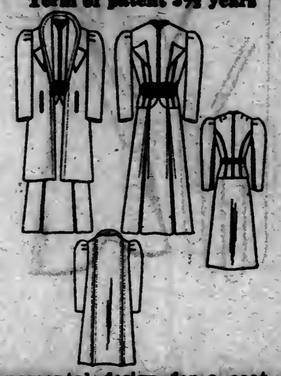
166,170
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Arnold Zavell, New York, N. Y.
Application December 24, 1937, Serial No. 73,855
Term of patent 3½ years

The ornamental design for a textile fabric or similar article as shown and described.

166,171
DESIGN FOR A HAT
Gershon Ammiel, New York, N. Y.
Application December 11, 1937, Serial No. 73,539
Term of patent 3½ years

The ornamental design for a hat, substantially as shown.

166,172
DESIGN FOR A KNITTED GLOVE
Helen de Bosque, New York, N. Y.
Application December 20, 1937, Serial No. 73,723
Term of patent 3½ years



The ornamental design for a knitted glove, substantially as shown, and described.

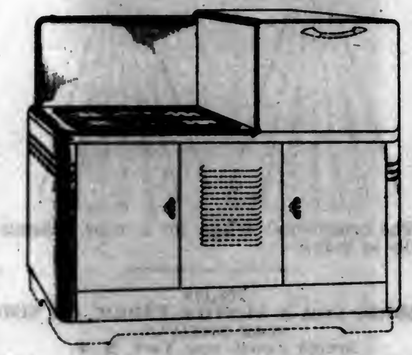
166,173
DESIGN FOR A BLOUSE
Henriette de Bernard, St. Louis, Mo.
Application December 8, 1937, Serial No. 73,448
Term of patent 3½ years

The ornamental design for a blouse, substantially as shown, and described.

166,174
DESIGN FOR A COAT ENSEMBLE
Thomas di Prstero, New York, N. Y.
Application December 13, 1937, Serial No. 73,584
Term of patent 3½ years

The ornamental design for a coat ensemble, substantially as shown, and described.

168,175
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Robert E. Fatheriey, Darien, Conn., assignor to Yale Fabrics Corp., New York, N. Y.
Application December 23, 1937, Serial No. 73,832
Term of patent 3½ years

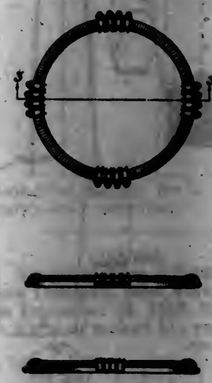


The ornamental design for a textile fabric or similar article as shown and described.

168,176
DESIGN FOR A GLOVE
Herman C. Heyman, New York, N. Y.
Application December 30, 1937, Serial No. 73,998
Term of patent 3½ years

The ornamental design for a glove, substantially as shown and described.

168,177
DESIGN FOR A RANGE
Rudolph Hoffmann, Rocky River, Ohio, assignor to American Stove Company, St. Louis, Mo., a corporation of New Jersey
Application October 28, 1937, Serial No. 72,485
Term of patent 14 years

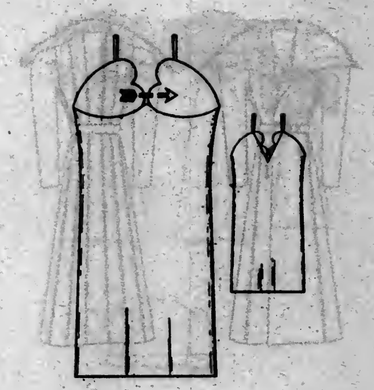


The ornamental design for a range as shown and described.

168,178
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Fred Jaske, Alameda, and Carl M. Johnson, San Francisco, Calif.; Alvina Jaeshke administratrix of said Fred Jaske, deceased
Application April 18, 1936, Serial No. 62,205
Term of patent 3½ years

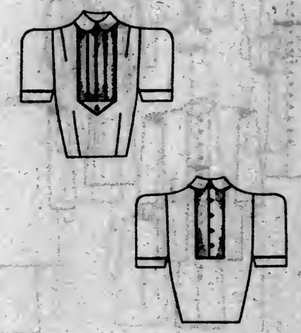
The ornamental design for a brooch or similar article, substantially as shown.

168,179
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Fred Jaske, Alameda, and Carl M. Johnson, San Francisco, Calif.; Alvina Jaeshke administratrix of said Fred Jaske, deceased
Application April 18, 1936, Serial No. 62,206
Term of patent 3½ years



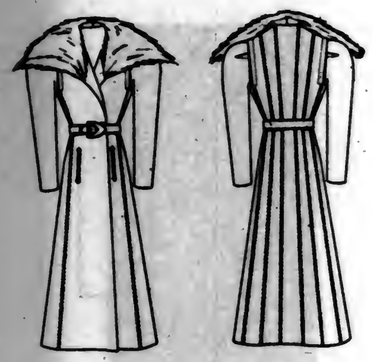
The ornamental design for a brooch or similar article, substantially as shown.

168,180
DESIGN FOR A TEXTILE FABRIC
Benjamin M. Kaufman, New York, N. Y.
Application December 14, 1937, Serial No. 73,604
Term of patent 3½ years



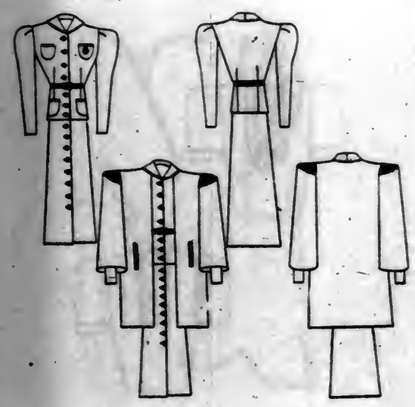
The ornamental design for a textile fabric substantially as shown and described.

168,181
DESIGN FOR A SLIP OR SIMILAR ARTICLE
David Levy, New York, N. Y.
Application December 17, 1937, Serial No. 73,678
Term of patent 7 years



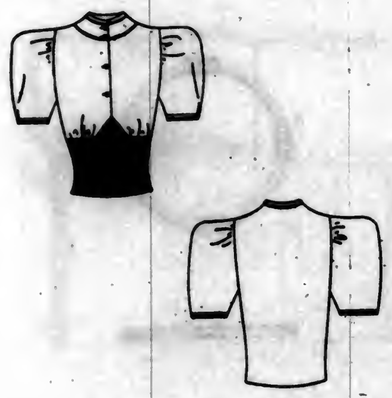
The ornamental design for a slip or similar article, as shown.

168,182
DESIGN FOR A BLOUSE
Sidney Levy, New York, N. Y.
Application December 28, 1937, Serial No. 73,896
Term of patent 3½ years



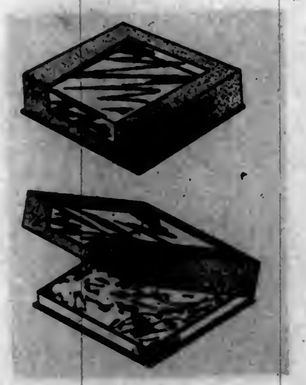
The ornamental design for a blouse substantially as shown and described.

166,183
DESIGN FOR A COAT
Isaac Marks, New York, N. Y.
Application December 30, 1937, Serial No. 73,997
Term of patent 3½ years



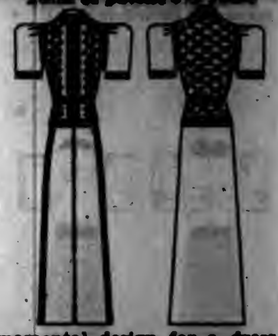
The ornamental design for a coat, substantially as shown and described.

166,184
DESIGN FOR A SUIT ENSEMBLE
Henry Miller, New York, N. Y.
Application November 22, 1937, Serial No. 73,664
Term of patent 3½ years



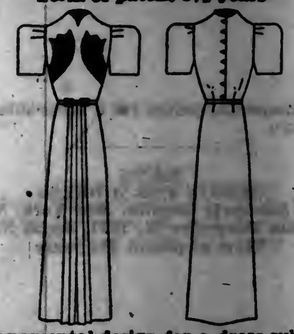
The ornamental design for a suit ensemble, substantially as shown.

166,185
DESIGN FOR A BLOUSE
Murray Pressluff, New York, N. Y.
Application January 4, 1938, Serial No. 74,068
Term of patent 3½ years



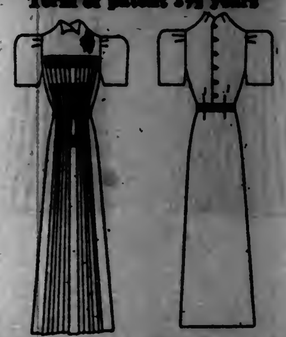
The ornamental design for a blouse, substantially as shown and described.

166,186
DESIGN FOR A DISPLAY BOX
Lewis Douglas Young, Providence, R. I., assignor to Douglas Young, Inc., a corporation of Rhode Island
Application December 11, 1937, Serial No. 73,542
Term of patent 14 years



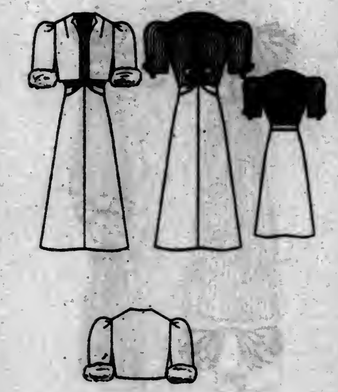
The ornamental design for a display box substantially as shown.

166,187
DESIGN FOR A DRESS
Tera Coleman, New York, N. Y.
Application December 20, 1937, Serial No. 73,975
Term of patent 3½ years



The ornamental design for a dress substantially as shown and described.

166,188
DESIGN FOR A DRESS
Tera Coleman, New York, N. Y.
Application December 28, 1937, Serial No. 73,893
Term of patent 3½ years

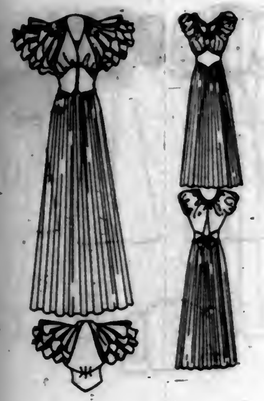


The ornamental design for a dress substantially as shown.

166,189
DESIGN FOR A DRESS
Tera Coleman, New York, N. Y.
Application December 28, 1937, Serial No. 73,895
Term of patent 3½ years

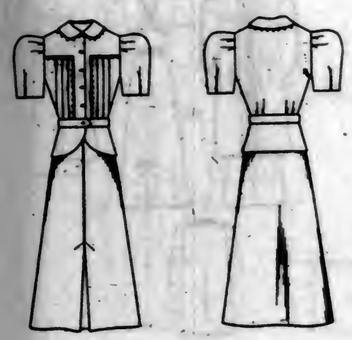
The ornamental design for a dress substantially as shown.

166,190
DESIGN FOR A DRESS ENSEMBLE
Simon Etkin, New York, N. Y.
Application December 31, 1937, Serial No. 74,010
Term of patent 3½ years



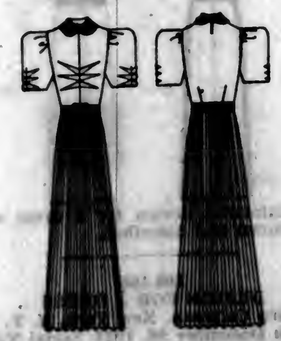
The ornamental design for a dress ensemble, substantially as shown.

166,191
DESIGN FOR A DRESS ENSEMBLE
Simon Etkin, New York, N. Y.
Application December 31, 1937, Serial No. 74,011
Term of patent 3½ years



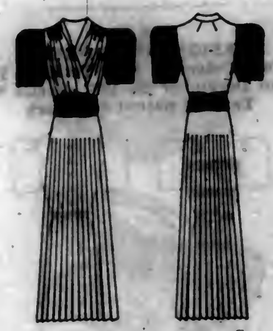
The ornamental design for a dress ensemble, substantially as shown.

106,192
DESIGN FOR A DRESS ENSEMBLE
Josh Greenman, New York, N. Y.
Application December 28, 1937, Serial No. 73,891
Term of patent 3½ years



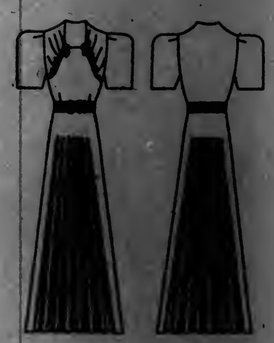
The ornamental design for a dress ensemble, substantially as shown.

106,193
DESIGN FOR A DRESS
Dorothy Lamis, New York, N. Y.
Application December 30, 1937, Serial No. 73,995
Term of patent 3½ years



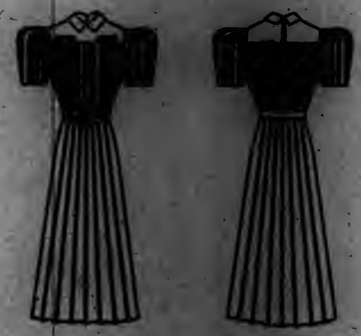
The ornamental design for a dress, substantially as shown.

106,194
DESIGN FOR A DRESS
Nan Schwartz Shedlin, New York, N. Y.
Application December 31, 1937, Serial No. 74,001
Term of patent 3½ years



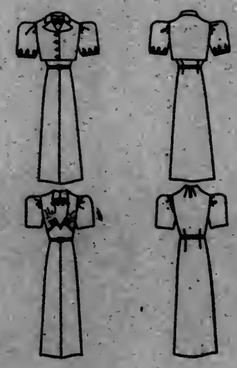
The ornamental design for a dress substantially as shown.

106,195
DESIGN FOR A DRESS
Nan Schwartz Shedlin, New York, N. Y.
Application December 31, 1937, Serial No. 74,002
Term of patent 3½ years



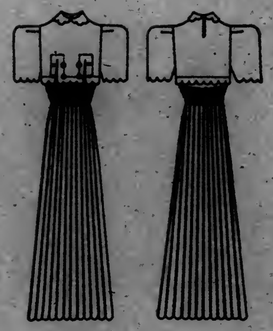
The ornamental design for a dress substantially as shown.

106,196
DESIGN FOR A DRESS
Nan Schwartz Shedlin, New York, N. Y.
Application December 31, 1937, Serial No. 74,003
Term of patent 3½ years



The ornamental design for a dress substantially as shown.

106,197
DESIGN FOR A DRESS
Marie Eileen Smith, New York, N. Y.
Application December 30, 1937, Serial No. 73,992
Term of patent 3½ years



The ornamental design for a dress substantially as shown, and described.

106,198
DESIGN FOR A DRESS ENSEMBLE
Hannah Snyder, New York, N. Y.
Application December 30, 1937, Serial No. 73,974
Term of patent 3½ years

The ornamental design for a dress ensemble substantially as shown.

106,199
DESIGN FOR A DRESS
Hanna Snyder, New York, N. Y.
Application January 6, 1938, Serial No. 74,109
Term of patent 3½ years

The ornamental design for a dress substantially as shown.

Timme, Otto, deceased. (See Biva, Lucien, assignor.)
Timm, Leonard L., Aurora, Ill. Power driven tool unit. 108,252; Feb. 1.
Tuman, John, Mount Vernon, N. Y. Dress. 108,272; Feb. 1.
Turpan, Mark, West New York, N. J. Textile fabric. 108,307; Feb. 1.
Turpan, Mark, West New York, N. J. Textile fabric. 108,308; Feb. 1.
Uncas Manufacturing Company. (See Barbieri, Nicholas, assignor.)
Underwood, John A., assignor to Montgomery Ward & Co., Incorporated, Chicago, Ill. Heater. 108,253; Feb. 1.
United States Glass Company. (See Kelly, Robert A., assignor.)
Westfield Manufacturing Company, The. (See Fogarty, Charles J., assignor.)
Wheary, George H., assignor to Wheary Trunk Company, Racine, Wis. Hand luggage case. 108,254; Feb. 1.
Wheary Trunk Company. (See Wheary, George H., assignor.)
White Motor Company, The. (See de Sakhnoffsky, Alexis, assignor.)
Wilde, Hans W., North Bergen, N. J. Textile fabric. 108,309; Feb. 1.
Wilkins, E. J., Co. (See St. Thomas, William, assignor.)
Winstrom, Enoch R., Long Beach, Calif. File tray. 108,273; Feb. 1.
Witlin & Schneider. (See Ellenbogen, Margaret, assignor.)
Wolsfeld, Albert H., Philadelphia, Pa. Combined clock face and metronome. 108,274; Feb. 1.
Worrall, John H., assignor to Liberty Lace and Netting Works, New York, N. Y. Lace. 108,310; Feb. 1.
Writzmann, Alex A. (See Millermaster, R. A., and Writzmann.)
Zaretsky, Oscar, New York, N. Y. Combination dress. 108,311; Feb. 1.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 1ST DAY OF FEBRUARY, 1938

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbott Laboratories. (See Bateles, G. W., and Clemence, assignors.)
Adams, Chester E., and F. W. Sullivan, Jr., Hammond, Ind., and J. A. Anderson, Chicago, Ill., assignors to Standard Oil Company, Chicago, Ill. Dewaxing lubricating oils. 2,107,137; Feb. 1.
Agfa Ansco Corporation. (See Wagner, Gerd, assignor.)
Agricola, Alfred, Berlin-Neutempelhof, assignor to Allgemeine Elektricitäts Gesellschaft, Berlin-Tempelhof, Germany. Variable inductance radio frequency coil. 2,107,172; Feb. 1.
Aiken, Frank L., Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Flexible drive. 2,106,828; Feb. 1.
Alderfer, Sterling W., assignor of one-half to H. D. Andrews, Akron, Ohio. Rubber material and making same. 2,107,067; Feb. 1.
Allegheny Steel Company. (See Otte, Otho M., assignor.)
Allgemeine Elektricitäts Gesellschaft. (See Agricola, Alfred, assignor.)
Allis-Chalmers Manufacturing Company. (See Winegrad, Harold, assignor.)
Alox Corporation. (See Burwell, Arthur W., assignor.)
Altpeter, Herman B. and R. J., South Bend, Ind., assignors to Oliver Farm Equipment Company. Potato digger chain. 2,107,021; Feb. 1.
Altpeter, Rudolph J. (See Altpeter, Herman B. and R. J.)
Aluminum Company of America. (See Brown, Robert H., assignor.)
American Cyanamid & Chemical Corporation. (See Davis, C. F., Brush, and Peck, assignors.)
American Forging and Socket Company, The. (See Black, John O., assignor.)
American Largi Corporation. (See Bantz, T., Grave, and Oppen, assignors.)
American Machine & Foundry Company. (See Goerke, H. E., Bystrom, and Schmale, assignors.)
American Machine & Foundry Company. (See Jensen, T., and Van Veen, assignors.)
American Tap-Bush Company. (See Rice, Frank E., assignor.)
American Telephone and Telegraph Company. (See Curtis, Harold E., assignor.)
American Telephone and Telegraph Company. (See Lang, W. Y., and Watson, assignors.)
American Telephone and Telegraph Company. (See Southworth, George C., assignor.)
American Tractor Equipment Corporation. (See Knapp, John F., assignor.)
American Tractor Equipment Corporation. (See Price, Robert B., assignor.)
American Tractor Equipment Corporation. (See Yount, Willis H., assignor.)
Anchor Cap & Closure Corporation. (See Gibbs, John C., assignor.)
Anderson, Adolph G. (See Campbell, D. J., and Anderson.)
Anderson, John A. (See Adams, C. E., Sullivan, and Anderson.)
Andrews, Edward D. (See Alderfer, Sterling W., assignor.)
Arcturus Development Company. (See Horn, Clarence A., assignor.)
Armour and Company. (See Ralston, A. W., and Bauer, assignors.)
Ash, Charles S., Milford, assignor to Kelsey-Hayes Wheel Company, Detroit, Mich. Brake drum. 2,107,229; Feb. 1.
Associated Electric Laboratories, Inc. (See Mercer, Richard, assignor.)
Associated Electric Laboratories, Inc. (See Sands, Roy G., assignor.)
Atlantic Refining Company, The. (See Smith, L. B., Funston, and Field, assignors.)
Aubert, Léandre, St. Adèle, Quebec, Canada. Ski clamping device. 2,107,196; Feb. 1.
Auer, Laszlo, Budapest, Hungary, assignor to J. R. Newman, Washington, D. C. Manufacture of modified organic isocolloid materials. 2,106,768; Feb. 1.
Augustadt, Herbert W., Valley Stream, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electric filter. 2,106,759; Feb. 1.
Aukerman, James A., Peru, Ind. Brooder. 2,106,760; Feb. 1.
Austenal Laboratories, Inc. (See Prange, C. H., and Zahn, assignors.)
Bacharach Industries Instrument Company. (See Stein, J. A., and Semans, assignors.)
Badenhausen, John P., assignor of one-half to Day and Zimmermann, Incorporated, Philadelphia, Pa. Steam generator. 2,107,022; Feb. 1.
Bagno, Samuel. (See Leventhal, J. F., and Bagno.)
Bahr, Gustave F., Fairfield, assignor to Casco Products Corporation, Bridgeport, Conn. Splash guard. 2,106,962; Feb. 1.
Baker, Clarence H. (See De Motte, M. P., and Baker.)
Baker, Paulina, et al. (See Clary, Charles A., assignor.)
Baker, Webster E. B., Lock Haven, Pa. Paper and process for the manufacture of paper. 2,106,780; Feb. 1.
Ball Brothers Company. (See Moorehead, Thomas C., assignor.)
Ball Brothers Company. (See Moorehead, T. C., and Dorman, assignors.)
Balton, James, assignor of one-fourth to J. Shapiro, Baltimore, Md., one-fourth to I. Shapiro, Chicago, Ill., one-fourth to N. Shapiro, and one-fourth to S. Shapiro, Chelsea, Mass. Label placing apparatus and method. 2,106,964; Feb. 1.
Bamigan, Thomas F., Kenmore, N. Y., assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Pellicles and process relating to same. 2,106,786; Feb. 1.
Bantz, Theodor, Frankfort-on-the-Main-Fraunheim, G. Grave, Frankfort-on-the-Main-Heddernheim, and E. Oppen, Hanover-Kirchrode, Germany, assignors to American Largi Corporation, New York, N. Y. Method and apparatus for electrostatic preparation. 2,106,985; Feb. 1.
Barnes, William B., Indianapolis, Ind. Overspeed drive tie back lockout. 2,106,966; Feb. 1.
Barthelmess, Emil. (See Falkenstein, E., and Barthelmess.)
Bartlett, John N., Tonawanda, N. Y. Amusement apparatus. 2,107,196; Feb. 1.
Barton, Frederick C., Haddonfield, N. J., assignor to Radio Corporation of America. Phonograph turntable driving mechanism. 2,106,710; Feb. 1.
Basler, George T., Louisville, Ky. Mechanical movement. 2,106,787; Feb. 1.
Bauer, Stewart T. (See Ralston, A. W., and Bauer.)
Bauer, William, assignor to The Tappan Stove Company, Mansfield, Ohio. Electric range and control system therefor. 2,107,173; Feb. 1.
Baxter, John P., Widnes, and L. J. Burrage, Liverpool, England, assignors to Imperial Chemical Industries Limited. Production of carbon disulphide. 2,107,264; Feb. 1.
Bayne, George M., Hamilton, Ontario, Canada, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electric toaster. 2,106,824; Feb. 1.
Beehler, Vernon D., Evanston, and R. D. McIntosh, River Forest, assignors to The Imperial Brass Manufacturing Company, Chicago, Ill. Automatic rotor valve. 2,106,942; Feb. 1.
Bell Telephone Laboratories, Incorporated. (See Augustadt, Herbert W., assignor.)
Bell Telephone Laboratories, Incorporated. (See Bowen, Arnold E., assignor.)
Bell Telephone Laboratories, Incorporated. (See Burton, Everett T., assignor.)
Bell Telephone Laboratories, Incorporated. (See Dudley, Homer W., assignor.)
Bell Telephone Laboratories, Incorporated. (See Hearn, Richard R., assignor.)
Bell Telephone Laboratories, Incorporated. (See Ives, Herbert E., assignor.)
Bell Telephone Laboratories, Incorporated. (See King, Ralph E., assignor.)
Bell Telephone Laboratories, Incorporated. (See Kleinkauf, J. D., and Martin, assignors.)
Bell Telephone Laboratories, Incorporated. (See Lang, W. Y., assignor, and Watson.)
Bell Telephone Laboratories, Incorporated. (See Lewis, Herbert A., assignor.)
Bell Telephone Laboratories, Incorporated. (See Ransler, Ralph E., assignor.)
Bell Telephone Laboratories, Incorporated. (See Romanow, Frank F., assignor.)
Bell Telephone Laboratories, Incorporated. (See Southworth, G. C., and King, assignors.)
Bell Telephone Laboratories, Incorporated. (See Tidd, Warren H., assignor.)
Bemis Bro. Bag Co. (See Brady, Charles V., assignor.)
Bemis Bro. Bag Co. (See Rowe, William W., assignor.)
Bender, Max, Astoria, N. Y., assignor, by mesne assignments, to United Acoustigraph Corporation. Sound recorder and reproducer. 2,107,050; Feb. 1.
Bendix Westinghouse Automotive Air Brake Company. (See Eaton, W. A., and Vorech, assignors.)
Benedict, T. N., Manufacturing Company. (See Tofte, Harold, assignor.)

Berg, Hilmer F., Port Angeles, Wash. Towing logs. 2,106,906; Feb. 1.
Berg, Roy E. (See Bruce, D. S., and Berg.)
Berkman, Herbert A., Chicago, Ill. Food cutter. 2,106,711; Feb. 1.
Bernarde, Henry L., Kearny, N. J., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electronic remote metering system. 2,106,825; Feb. 1.
Bertrand, Frederic E., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Sole fitting machine. 2,106,712; Feb. 1.
Bertsch, Margaret, Philadelphia, Pa. Service platter. 2,107,023; Feb. 1.
Best, Frank A., East Windsor, Ontario, Canada. Metal-working machine. 2,106,866; Feb. 1.
Best, John G., Toronto, Ontario, Canada, assignor to Varilux Holding Corporation, Limited, Nassau, Bahamas. Illuminated sign. 2,106,699; Feb. 1.
Betz, Carl E., Park Ridge, assignor to Magnaflux Corporation, Chicago, Ill. Paste of paramagnetic particles for use in the examination of paramagnetic materials for flaws by the magnetic method. 2,106,882; Feb. 1.
Beusch, Christian, Wadenswil, Switzerland. Hydraulic brake. 2,107,257; Feb. 1.
Beverage, Harold H. (See Latimer, C. W., Finch, and Beverage.)
Beyer, Fred H., Lockport, N. Y. Dispensing container for styptic powder. 2,107,100; Feb. 1.
Binckley, George S., Los Angeles, Calif. Gas gravitometer. 2,106,966; Feb. 1.
Bingham, Eugene C., Easton, Pa., and D. Figlioli, assignors to Boorum & Pease Company, Brooklyn, N. Y. Fluid conductor for ruling machines and the like. 2,107,230; Feb. 1.
Binney & Smith Co. (See Eckhoff, Violet M., assignor.)
Bird, Lester F., assignor to Hanovia Chemical and Manufacturing Company, Newark, N. J. Electric switch. 2,107,138; Feb. 1.
Bittner, Joseph R., assignor to Griffith Tool Works, Philadelphia, Pa. Wrench. 2,107,231; Feb. 1.
Black, John O., Detroit, assignor to The American Forging and Socket Company, Pontiac, Mich. Battery installation for motor vehicles. 2,106,883; Feb. 1.
Black, Norman F. (See Harris, J. M., Jr., and Black.)
Blackburn, George, and Sons Limited. (See Start, Harry W. and E., assignors.)
Blakeway, Arthur H., assignor to The Metal Box Company, Ltd., London, England. Sheet metal container. 2,107,232; Feb. 1.
Blandford, Glen G., Grand Rapids, Mich. Washing machine. 2,107,139; Feb. 1.
Bliss, Sherwood C., assignor to Houde Engineering Corporation, Buffalo, N. Y. Seal for pump structures. 2,106,894; Feb. 1.
Boice, John E., Toledo, Ohio. Jigsaw. 2,107,174; Feb. 1.
Bonanno, Joseph L., Forest Hills, assignor to The Lionel Corporation, New York, N. Y. Articulated toy train. 2,106,698; Feb. 1.
Bonanno, Joseph L., Forest Hills, assignor to The Lionel Corporation, New York, N. Y. Coupling device for toy trains. 2,107,024; Feb. 1.
Boorum & Pease Company. (See Gingham, E. C., and Figlioli, assignors.)
Borg-Warner Corporation. (See Fawick, Thomas L., assignor.)
Borg-Warner Corporation. (See Swennes, Benjamin A., assignor.)
Borg-Warner Corporation. (See Terrell, Ralph A., assignor.)
Borman, Emil, Chicago, Ill. Pneumatic heel. 2,106,788; Feb. 1.
Boech, Max, Berlin-Reinickendorf, Germany, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electric current conversion system. 2,106,826; Feb. 1.
Boss, Edward R., Rutherford, assignor to United Cork Companies, Lyndhurst, N. J. Heat-insulated wall construction. 2,107,258; Feb. 1.
Bostic, Ralph R., Los Angeles, Calif. Gauge. 2,106,993; Feb. 1.
Bourne, Willard A. (See McCulloch, N. E., and Bourne.)
Bowen, Arnold E., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave-meter. 2,106,713; Feb. 1.
Boyd, Arthur C., Maywood, Ill. Injecting mechanism. 2,106,789; Feb. 1.
Brady, Charles V., Webster Groves, assignor to Bemis Bro. Bag Co., St. Louis, Mo. Laminated material. 2,106,867; Feb. 1.
Bredtschneider, Walter, Berlin, Germany. Indirect generating of superheated steam. 2,107,101; Feb. 1.
Breeckx, Rudolph S., Cranford, and E. J. Meagher, Newark, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y. Method and device for measuring. 2,106,790; Feb. 1.
Briney, Ottis R., Pontiac, Mich. Bushing locating and rotating means. 2,107,061; Feb. 1.
Brinton, H., Co. (See Holmes, Henry H., assignor.)
Brisson, Louis C., Neuilly-sur-Seine, assignor to Société Anonyme: Société des Freins Hydrauliques S. de Lavaud, Paris, France. Resilient diaphragm. 2,106,791; Feb. 1.
Bristow, Clyde J., Oakmont, Pa., assignor to Pittsburgh Plate Glass Company. Store front construction. 2,106,885; Feb. 1.
Britton, Joseph W. (See Le Fevre, W. J., and Britton.)
Brock, Charles. (See Hamilton, A., and Brock.)
Brom and Wade Limited. (See Walker, W. J., and Gimkey, assignors.)
Brown Company. (See Richter, George A., assignor.)
Brown Company. (See Richter, G. A., and Vannah.)
Brown, Robert H., New Kensington, assignor to Aluminum Company of America, Pittsburgh, Pa. Aluminum alloy. 2,104,827; Feb. 1.
Bruce, Donald S., Somerville, and R. E. Berg, Plainfield, N. J., assignors to Johns-Manville Corporation, New York, N. Y. Making vibration-damped structure. 2,106,792; Feb. 1.
Bruckner, Richard. (See Buschbeck, W., and Bruckner.)
Brugger, Emile, Valley Stream, N. Y. Automatic radio station selector. 2,106,714; Feb. 1.
Brugger, Emile, Valley Stream, N. Y. Automatic radio control. 2,106,715; Feb. 1.
Brunhuber, Rudolf. (See Locke, K., and Brunhuber.)
Brunt & Company. (See Brunt, J. P., and Maston, assignors.)
Brunt, John P., Chicago, and E. E. Maston, Wilmette, assignors to Brunt & Company, Chicago, Ill. Box. 2,106,907; Feb. 1.
Brunt, John P., Chicago, and E. E. Maston, Wilmette, assignors to Brunt & Company, Chicago, Ill. Channel-vented box. 2,106,908; Feb. 1.
Brush, John G. (See Davis, C. F., Brush, and Peck.)
Bruson, Herman A., assignor to Röhm & Haas Company, Philadelphia, Pa. Sulphonated alkyl-aryloxy-alkylols. 2,106,716; Feb. 1.
Bucyrus-Erie Company. (See Paulsen, Thomas R., assignor.)
Burgess, J. A. (See Knight, Jesse L., assignor.)
Burrage, Leslie J. (See Baxter, J. P., and Burrage.)
Burt Machine Company. (See Wild, Charles H., assignor.)
Burton, Everett T., Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Filter including space discharge device. 2,106,793; Feb. 1.
Burwell, Arthur W., Niagara Falls, assignor to Alox Corporation, New York, N. Y. Top cylinder lubricant. 2,107,233; Feb. 1.
Buschbeck, Werner, and R. Bruckner, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Electrical coupling arrangement. 2,107,025; Feb. 1.
Bush, A. G. (See Criner, Harry J., assignor.)
Butignot, André, Creil, assignor to Compagnie Nationale de Matieres Colorantes et Manufactures de Produits Chimiques du Nord Réunies, Etablissements Kuhlmann, Paris, France. Preparation of wetting emulsifying, dispensing or cleansing agents and products obtained by this process. 2,107,197; Feb. 1.
Button, George W., Corporation. (See Sierad, Milton, assignor.)
Bystrom, Gustave A. (See Goerke, H. E., Bystrom, and Schmale.)
Cadman, Addi B., Beloit, Wis. Brake. 2,106,717; Feb. 1.
Calco Chemical Co. (See Klipstein, Kenneth H., assignor.)
Campbell, Donald J., and A. G. Anderson, assignors to Campbell, Wyant and Cannon Foundry Company, Muskegon Heights, Mich. Apparatus for coating molds. 2,106,701; Feb. 1.
Campbell, Donald J., Spring Lake Township, Ottawa County, Mich. Brake drum cooling device. 2,106,702; Feb. 1.
Campbell, Wyant and Cannon Foundry Company. (See Campbell, D. J., and Anderson, assignors.)
Canada Cycle & Motor Company. (See Peace, Harvey W., assignor.)
Carborundum Company, The. (See Melton, Romie L., assignor.)
Carruthers, Thomas F. (See Cox, H. L., and Carruthers.)
Carson, Benjamin R., Haddonfield, and A. G. Zimmerman, Westmont, N. J., assignors to Radio Corporation of America. Sound reproducing apparatus. 2,106,718; Feb. 1.
Casco Products Corporation. (See Bahr, Gustave F., assignor.)
Caswell, John A., Somerville, and C. A. Robinson, Salem, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J. Fastening-inserting machine. 2,106,719; Feb. 1.
Caterpillar Tractor Co. (See Rosén, Carl G. A., assignor.)
Catron, Joseph W., Jr., Fortescue, Mo. Eyeshade. 2,107,102; Feb. 1.
Catron, Joseph W., Jr., Fortescue, Mo. Eyeshade. 2,107,103; Feb. 1.
Celanese Corporation of America. (See Elvin, W. J., and Killoran, assignors.)
Chambers, James E., West Palm Beach, Fla. Pull rod support. 2,107,234; Feb. 1.
Chandler & Price Company, The. (See Johnson, Lawrence R., assignor.)
Chantry, Allan J., United States Navy. Power transmission means. 2,106,720; Feb. 1.
Chapman, Arthur W., London, England. Physical exerciser. 2,106,904; Feb. 1.
Chappell, Eugene L., Pittsburgh, Pa. Making a lined container. 2,106,828; Feb. 1.

Chermendy, Carl V., assignor to F. Csermendy, Chicago, Ill. Ignition breaker. 2,106,721; Feb. 1.
Chicago Pump Company. (See Nordell, Carl H., assignor.)
Chisholm, Harry L., Jr., assignor to Houde Engineering Corporation, Buffalo, N. Y. Stabilizer structure for automobiles. 2,106,886; Feb. 1.
Christenson, George, Plainfield, N. J., assignor to Johns-Manville Corporation, New York, N. Y. Packing assembly. 2,106,829; Feb. 1.
Church, Franklin O., assignor to Dunlop Tire and Rubber Corporation, Buffalo, N. Y. Seat construction. 2,107,052; Feb. 1.
Cincinnati Milling Machine Co., The. (See Roehm, Erwin G., assignor.)
Cirelli, Frank, Philadelphia, Pa. Shoe stretcher. 2,107,140; Feb. 1.
Clar, Carl. (See Tramm, H., Clar, Kühnel, and Schuff.)
Clary, Charles A., assignor of one-half to C. A. Clary, Jr., and P. Baker, Los Angeles, Calif. Headlight. 2,106,995; Feb. 1.
Clary, Charles A., Jr., et al. (See Clary, Charles A., assignor.)
Clemence, Le Roy W. (See Raizies, G. W., and Clemence.)
Cleveland Graphite Bronze Company, The. (See Swartz, Carl E., assignor.)
Cleveland Pneumatic Tool Company, The. (See De Mooy, John, assignor.)
Cleveland Rock Drill Company, The. (See Feucht, Albert, assignor.)
Cobb, Boughton, Hewlett, assignor to The Esmond Mills, New York, N. Y. Fabric. 2,106,794; Feb. 1.
Collins & Aikman Corporation. (See Drobile, Albert W., assignor.)
Collison, Edward E., and E. Nyman, Fort Wayne, Ind. Speed changing device for phonograph turntables. 2,106,722; Feb. 1.
Collison, Robert W., Takoma Park, Md. Quick closing and sealing valve. 2,106,723; Feb. 1.
Colony, Myron W., Los Angeles, Calif., assignor to Petroleum Conversion Corporation, New York, N. Y. Converting hydrocarbons in the vaper phase. 2,107,235; Feb. 1.
Colt, George H., London, England. Squash-racket court and the like. 2,107,141; Feb. 1.
Commercial Solvents Corporation. (See Legg, D. A., and Tarvin, assignors.)
Compagnie Nationale de Matieres Colorantes et Manufactures de Produits Chimiques du Nord Réunies, Etablissements Kuhlmann. (See Butignot, André, assignor.)
Coney, James D., assignor to Star-Service Hanger Company, Detroit, Mich. Garment hanger. 2,107,026; Feb. 1.
Connolly, Bernard F. (See Jeansen, Jens O., assignor.)
Consolidated Expanded Metal Companies, The. (See Cross, Leonard W., assignor.)
Consolidated Machine Tool Corporation. (See Forward, Worthy J. F., assignor.)
Constantine, Platon, New York, N. Y. Hair waving wrapper pad. 2,107,175; Feb. 1.
Coons, Ural R., assignor of one-half to H. L. Somers, Fort Wayne, Ind. Refrigeration. 2,107,053; Feb. 1.
Cope, Burton R., Smithfield, Ohio. Connecter. 2,106,724; Feb. 1.
Corning Glass Works. (See Hood, Harrison P., assignor.)
Corning Glass Works. (See Hood, H. P., and Nordberg, assignors.)
Cory, Harvey, Chicago, Ill. Brewing coffee. 2,107,236; Feb. 1.
Courtinande, François, New York, N. Y. Direction signal for vehicles. 2,107,104; Feb. 1.
Cover, Harvey S., South Bend, Ind. Respirator. 2,106,795; Feb. 1.
Cox, Henry L., and T. F. Carruthers, South Charleston, W. Va., assignors to Union Carbide and Carbon Corporation. Mixed ester derivatives of glycol. 2,106,703; Feb. 1.
Crilley, William W., Cleveland, Ohio. Forging machine. 2,106,830; Feb. 1.
Crimer, Harry J., assignor of one-half to A. G. Bush, Davenport, Iowa. Grinder. 2,107,105; Feb. 1.
Crook, James M., Huntington, W. Va. Closure for containers of liquid or semiliquid substances. 2,107,106; Feb. 1.
Crosman, Loring P., Maplewood, assignor to Gardner Company, Orange, N. J. Listing adding machine. 2,107,142; Feb. 1.
Cross, Leonard W., assignor to The Consolidated Expanded Metal Companies, Wheeling, W. Va. Apparatus for manufacturing expanded metal. 2,106,967; Feb. 1.
Csermendy, Frieda. (See Chermendy, Carl V., assignor.)
Curtis, Harold E., East Orange, N. J., assignor to American Telephone and Telegraph Company. Dielectric guide system. 2,106,725; Feb. 1.
Daly, George F., Johnson City, assignor, by mesne assignments, to International Business Machines Corporation, New York, N. Y. Tabulating machine. 2,107,143; Feb. 1.
Dannheiser, Joseph M., San Francisco, Calif. Emergency power supply system. 2,106,968; Feb. 1.
Danzer, Catherine, et al., executors. (See Lederer, Anton.)
Danzer, Katherine, et al., executors. (See Lederer, Anton.)
Dauwalter, Raymond R., Birmingham, Ala., assignor to W. S. Dickey Clay Manufacturing Company, Kansas City, Mo. Perforating machine. 2,107,088; Feb. 1.
Davan, James M., Rossville, Ill. Trailer. 2,107,107; Feb. 1.
Davies, Lynn E., assignor to White Cap Company, Chicago, Ill. Package sealing. 2,107,237; Feb. 1.
Davis, Clarke F., Short Hills, and J. G. Brush, Westfield, N. J., and R. H. Peck, West New Brighton, Staten Island, N. Y., assignors, by mesne assignments, to American Cyanamid & Chemical Corporation. Doweled slab. 2,107,144; Feb. 1.
Davis, Clarke F., Short Hills, J. G. Brush, Westfield, and R. H. Peck, Elizabeth, N. J., assignors to American Cyanamid & Chemical Corporation, New York, N. Y. Doweled slab construction. 2,107,145; Feb. 1.
Davis, Frederick E. (See Hague, F. T., and Davis.)
Davis, Garland H. B., Elizabeth, N. J., assignor to Standard Oil Development Company. Separating waxy constituents from oils. 2,106,969; Feb. 1.
Davis, Henry K. B., Springfield, Mass. Golf ball. 2,106,704; Feb. 1.
Dawson, John W., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electric control system. 2,106,831; Feb. 1.
Day, J. H., Company, The. (See Bechtin, C. R., and Jantsch, assignors.)
Day and Zimmermann, Incorporated. (See Badenhausen, John F., assignor.)
De Boer, Jan H., and K. H. Klaassens, assignors to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Obtaining photographic contrasts. 2,106,869; Feb. 1.
Deere & Company. (See Tuft, Miles H., assignor.)
De Laval Separator Company, The. (See Hall, Selden H., assignor.)
De Mooy, John, Shaker Heights, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio. Rotary tool. 2,107,108; Feb. 1.
De Motte, Mauric P., and C. H. Baker, Indianapolis, Ind., assignors, by mesne assignments, to Union Carbide and Carbon Corporation. Acetylene generator. 2,106,970; Feb. 1.
De Motte, Maurice P., Indianapolis, Ind., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Acetylene generator. 2,106,971; Feb. 1.
De Motte, Maurice P., Indianapolis, Ind., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Acetylene generator. 2,106,972; Feb. 1.
Dennison, Brook J. (See Sherts, J. H., and Dennison.)
Des Roches, Hilton H., Butte, Mont. Rock drill joint. 2,107,238; Feb. 1.
Desrosiers, Albert J., New Bedford, Mass. Water bubbler. 2,107,109; Feb. 1.
De Vault, Ralph P., South Pasadena, Calif. Peeler. 2,106,796; Feb. 1.
Dickey, W. S., Clay Manufacturing Company. (See Dauwalter, Raymond R., assignor.)
Dinhofer, Julius, New York, N. Y. Watchcase. 2,107,176; Feb. 1.
Dixie-Vortex Company. (See Krein, Frederick T., assignor.)
Doane, Leroy C., assignor to The Miller Company, Meriden, Conn. Indirect lighting unit. 2,107,027; Feb. 1.
Doane, Leroy C., assignor to The Miller Company, Meriden, Conn. Direct lighting fixture. 2,107,028; Feb. 1.
Doane, Leroy C., assignor to The Miller Company, Meriden, Conn. Lighting fixture. 2,107,029; Feb. 1.
Dorman, Edgar P. (See Moorshead, T. C., and Dorman.)
Dow Chemical Company, The. (See Le Fevre, W. J., and Britton, assignors.)
Draeger, Rupert H., United States Navy. Film spool and container. 2,106,726; Feb. 1.
Dransfeld, Hubert, Berlin-Siemensstadt, Germany, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Centrifuge. 2,106,832; Feb. 1.
Dreher, Elmer H., Brooklyn, assignor to Remington Rand Inc., Buffalo, N. Y. Combined tabulating and punching mechanism. 2,107,030; Feb. 1.
Dreher, Thomas B., Pottsville, Pa. Burning brick. 2,107,146; Feb. 1.
Dreyfus, Henry, London, England. Production of cellulose from lignocellulosic materials. 2,106,797; Feb. 1.
Dreyfus, Henry, London, England. Making lower aliphatic acid anhydrides and aldehydes. 2,106,798; Feb. 1.
Drobile, Albert W., Wayne, assignor to Collins & Aikman Corporation, Philadelphia, Pa. Loom. 2,106,727; Feb. 1.
Dudley, Homer W., East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Stranded conductor. 2,107,177; Feb. 1.
Dunlop Rubber Company Limited. (See Murphy, E. A., and Taylor, assignors.)
Dunlop Tire and Rubber Corporation. (See Church, Franklin O., assignor.)
Duplate Corporation. (See Sherts, J. H., and Dennison, assignors.)
Du Pont, E. I., de Nemours & Company. (See Banigan, Thomas F., assignor.)
Du Pont, E. I., de Nemours & Company. (See Elley, H. W., and Walker, assignors.)

Du Pont, E. I., de Nemours & Company. (See Kepfer, Raymond J., assignor.)

Du Pont, E. I., de Nemours & Company. (See Lewis, H. A., and Wilson, assignors.)

Du Pont, E. I., de Nemours & Company. (See Martone, Thomas A., assignor.)

Eames, William F., Edgewood, Pa., assignor to Westinghouse Electric Elevator Company, Chicago, Ill. Moving stairway. 2,106,833; Feb. 1.

Earle, Theodore. (See Fischer, O., Earle, and Haffey.)

Earle, Theodore, Pacific Palisades, Calif. Treating ores. 2,106,837; Feb. 1.

Earle, Theodore, Pacific Palisades, Calif. Separatory flotation method. 2,106,838; Feb. 1.

Eaton, Wilfred A., and S. Verech, assignors to Bendix Westinghouse Automotive Air Brake Company, Pittsburgh, Pa. Power operating mechanism. 2,107,110; Feb. 1.

Eckhoff, Violet M., Warrensburg, Mo., assignor to Binney & Smith Co., New York, N. Y. Paint box. 2,107,239; Feb. 1.

Eckstein, Isidore, et al. (See Tavin, F., and Haas, assignors.)

Economic Machinery Company. (See Fenner, James O., assignor.)

Edwards, William K., Big Spring, Tex. Bottom tubing plug for oil wells. 2,106,906; Feb. 1.

Ellerton, Lee W., assignor to I. F. Laucks, Inc., Seattle, Wash. Construction unit. 2,107,240; Feb. 1.

Elsenbut, August. (See Pier, M., and Elsenbut.)

Electric Controller & Manufacturing Company, The. (See Wright, D. C., and Wilcox, assignors.)

Electro-Bohner G. m. b. H. (See Pfleghar, Alfons, assignor.)

Elley, Harold W., and H. W. Walker, assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Gum inhibitors for gasoline. 2,107,147; Feb. 1.

Ellis, Carleton, Montclair, N. J., assignor to Standard-I-G. Company. Hydrogenation of high oxygen coal. 2,106,973; Feb. 1.

Elvin, William J., Camberland, Md., and J. L. Killoran, Drummondville, Quebec, Canada, assignors to Celanese Corporation of America. Package core holder for yarn packaging device. 2,106,799; Feb. 1.

Esmond Mills, The. (See Cobb, Boughton, assignor.)

Etchison, James W., Cleveland, Ohio. Hydraulic brake apparatus. 2,107,111; Feb. 1.

Evans, Charles S., Oakland, assignor to Forderer Cornice Works, San Francisco, Calif. Refrigerator. 2,106,909; Feb. 1.

Evans, Gordon M., Dearborn, Mich. Heat transferring tube structure. 2,107,031; Feb. 1.

Evans, Theodore, Berkeley, assignor to Shell Development Company, San Francisco, Calif. Stabilisation of allphatic symmetrical isoethers. 2,107,069; Feb. 1.

Ewald, Charles J., Columbus, Ohio. Attachment for beds. 2,106,834; Feb. 1.

Fackler, Ceta M., assignor of one-half to W. O. Weiskotten, San Diego, Calif. Hat stand. 2,107,178; Feb. 1.

Falkenstein, Engelbert, Dusseldorf-Gerresheim, and E. Barthelmess, Dusseldorf-Oberkassel, Germany. Drier for granular and like materials. 2,106,869; Feb. 1.

Faries Manufacturing Company. (See McDonald, Edward F., assignor.)

Fawick, Thomas L., Akron, assignor to Borg-Warner Corporation, Chicago, Ill. Transmission. 2,107,112; Feb. 1.

Fenner, James O., assignor to Economic Machinery Company, Worcester, Mass. Bottle labelling machine. 2,106,997; Feb. 1.

Fenton, Paul E., Thomaston, assignor to Scovill Manufacturing Company, Waterbury, Conn. Separable fastener. 2,106,728; Feb. 1.

Fenebt, Albert, Garfield Heights, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Feeding mechanism for rock drills. 2,107,198; Feb. 1.

Fichtel, James J., Pottstown, Pa. Tailor's measuring device. 2,106,729; Feb. 1.

Field, Hugh W. (See Smith, L. B., Funsten, and Field.)

Fleux, Jean, assignor of one-half to Schneider & Cie, Paris, France. Tachymetric correcting device, more particularly for use in connection with sighting apparatus for artillery. 2,106,998; Feb. 1.

Figlioli, Daniel. (See Bingham, E. C., and Figlioli.)

Finch, James L. (See Latimer, C. W., Finch, and Beverage.)

Finn, John, Jr., assignor of one-tenth to P. Frohwitter, Berkeley, Calif. Catalytic device. 2,106,910; Feb. 1.

Fischer, Albert C., Chicago, Ill. Composition material. 2,106,943; Feb. 1.

Fischer, Albert C., Chicago, Ill. Paving. 2,106,944; Feb. 1.

Fischer, Edwin L., Jackson Heights, Long Island, assignor to United Research Corporation, Long Island City, N. Y. Film driving mechanism. 2,106,974; Feb. 1.

Fischer, Oscar, Denver, Colo., T. Earle, Pacific Palisades, Calif., and E. F. Haffey, Tacoma, Wash. Concentration of ores. 2,106,800; Feb. 1.

Flarsheim, Edwin S. (See Liebel, J. G. H., and Flarsheim.)

Fleury, Werner, assignor to Societe Anonyme Adolphe Saurer, Arbon, Switzerland. Shaft coupling. 2,107,070; Feb. 1.

Floss, Carl W., Detroit, Mich. Transmission. 2,106,870; Feb. 1.

Folmer Graflex Corporation, The. (See Hineline, Edson S., assignor.)

Forderer Cornice Works. (See Evans, Charles S., assignor.)

Forward, Worthy J. F., assignor to Consolidated Machine Tool Corporation, Rochester, N. Y. Tool head for milling machines. 2,106,835; Feb. 1.

Forward, Worthy J. F., assignor to Consolidated Machine Tool Corporation, Rochester, N. Y. Machine tool. 2,106,836; Feb. 1.

Foster, Warren D., Washington Township, Bergen County, N. J., assignor to Kinatome Patents Corporation, New York, N. Y. Machine control. 2,106,730; Feb. 1.

Francis, Eldon E., Bakersfield, Calif. Sliding screw adjustable wrist pin. 2,106,945; Feb. 1.

Francis, Joseph N., Woburn, assignor to Standard Coin Wrappers, Incorporated, Boston, Mass. Article feeding and packaging mechanism. 2,106,975; Feb. 1.

Frank, Joseph, Brooklyn, N. Y. Light screen for automobiles. 2,106,889; Feb. 1.

Frederickson, Clayton E., Chicago, Ill. Differential mechanism. 2,106,946; Feb. 1.

Freer, Phelps M., Detroit, Mich. Packing ring. 2,107,241; Feb. 1.

Frohwitter, Phyllas. (See Finn, John, Jr., assignor.)

Fuchs, Julius assignor of one-half to H. F. Hellman, Cleveland, Ohio. Electric switch. 2,106,837; Feb. 1.

Funsten, Stanard R. (See Smith, L. B., Funsten, and Field.)

Gallimore, Keith F., assignor to Giddings & Lewis Machine Tool Co., Fond du Lac, Wis. Speed-change mechanism. 2,106,731; Feb. 1.

Gammeter, John R., Akron, Ohio, assignor, by mesne assignments, to United States Rubber Company, New York, N. Y. Rubber thread. 2,107,032; Feb. 1.

Garbell, Max, assignor to Victor Adding Machine Company, Chicago, Ill. Cash register. 2,107,033; Feb. 1.

Gardner Company. (See Crosman, Loring P., assignor.)

Garfinkel, Emile, Newark, N. J. Luggage handle. 2,106,911; Feb. 1.

Gastrich, Gustav, assignor to Textile Machine Works, Wyomissing, Pa. Straightening knitting needles and the like. 2,107,253; Feb. 1.

Gates, Henry S., Sharon, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electrical apparatus. 2,106,838; Feb. 1.

Gates, Lovell, Idaho Falls, Idaho. Pressure feeder for materials. 2,107,242; Feb. 1.

Gaugler, Richard S., assignor to General Motors Corporation. Dayton, Ohio. Heating and cooling system. 2,107,199; Feb. 1.

Gaus, George E., Washington, D. C., assignor to Secretary of Agriculture of the United States of America. Bale identification tag and affixing the same. 2,107,071; Feb. 1.

Gay, Norman H., Los Angeles, Calif. Air conditioning apparatus. 2,107,243; Feb. 1.

Gehrke, Max. (See Schwenk, E., Gehrke, and Hildebrandt.)

General Aniline Works, Inc. (See Hilpert, Richard, assignor.)

General Aniline Works, Inc. (See Schubert, Friedrich, assignor.)

General Motors Corporation. (See Gaugler, Richard S., assignor.)

General Motors Corporation. (See Gould, Richard E., assignor.)

General Railway Signal Company. (See Preston, Neil D., assignor.)

General Railway Signal Company. (See Willing, Joseph E., assignor.)

George, Ralph W. (See Trevor, B., and George.)

Gibbs, John C., Brooklyn, assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y. Closure cap. 2,107,179; Feb. 1.

Giddings & Lewis Machine Tool Co. (See Gallimore, Keith F., assignor.)

Gihon, Harry D., 3rd, Trenton, N. J. Hand luggage. 2,107,180; Feb. 1.

Gilbert, A. C., Company, The. (See Gilbert, Alfred C., assignor.)

Gilbert, Alfred C., Hamden, assignor to The A. C. Gilbert Company, New Haven, Conn. Merchandising display stand. 2,106,839; Feb. 1.

Gilbert, Harold H., Sacremento, Calif. Rail expansion joint. 2,106,705; Feb. 1.

Gillette Safety Razor Company. (See Muros, Joseph, assignor.)

Gilliland, Theodore R., Washington, D. C. Closure. 2,107,244; Feb. 1.

Gimkey, Siegfried F. (See Walker, W. J., and Gimkey.)

Goedike, John G., San Antonio, Tex. Water feed for rotary offset and lithographic presses. 2,106,732; Feb. 1.

Goerke, Henry E., Floral Park, and G. A. Bystrom and H. W. Schmale, Brooklyn, N. Y., assignors to American Machine & Foundry Company. Hand operated wrapping machine. 2,106,999; Feb. 1.

Gogan, Joseph, Lakewood, Ohio. Hardness testing machine. 2,107,113; Feb. 1.

Gogan, Joseph, Lakewood, Ohio. Hardness testing device. 2,107,114; Feb. 1.

Goldsborough, Thaddeus R., Merchantville, N. J., assignor to Radio Corporation of America. Speed changing mechanism. 2,106,733; Feb. 1.

Gollmar, Herbert A., Union Township, N. J., assignor, by mesne assignments, to Koppers Company. Gas purification process. 2,106,734; Feb. 1.

Gordon, Robert H., Detroit, Mich., assignor to Parker Rust Proof Company. Conveyor mechanism. 2,106,706; Feb. 1.

Gould, Richard E., assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,106,840; Feb. 1.

Grave, Georg. (See Banta, T., Grave, and Oppen.)

Gretener, Edgar, Berlin-Siemensstadt, Germany, assignor to Opticolor Aktiengesellschaft, Glarus, Switzerland. Reflector arc lamp for the projection of colored pictures. 2,107,148; Feb. 1.

Greth, August, Los Angeles, Calif. Sanitary medical treatment means. 2,106,709; Feb. 1.

Griffith Tool Works. (See Bittner, Joseph R., assignor.)

Griswold, Walter R., assignor to Packard Motor Car Company, Detroit, Mich. Motor vehicle. 2,106,841; Feb. 1.

Guffra, Joseph A., Portola, Calif. Automatic locomotive flange oiler. 2,106,924; Feb. 1.

Guthrie, Charles C., Pittsburgh, Pa. Converter cartridge. 2,107,034; Feb. 1.

Guyton, William R. A., Pittsburgh, Pa. Denture. 2,107,181; Feb. 1.

Gwynn, Marion H., Boundbrook, N. J. Catalytic hydrogenation of crude benzene derivatives. 2,106,735; Feb. 1.

Haas, Hans. (See Tavin, F., and Haas.)

Haas, Walter H., United States Navy. Valve assembly. 2,106,736; Feb. 1.

Haffey, Earl F. (See Fischer, O., Earle, and Haffey.)

Hagler, Lydia A., Otis Orchards, assignor of one-half to S. E. Smith, Opportunity, Wash. Circuit controller for indicators. 2,106,925; Feb. 1.

Hague, Floyd T., Pittsburgh, and F. R. Davis, Irwin, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Current-collection apparatus. 2,106,842; Feb. 1.

Hahn, Wilhelm, Heidenheim-on-the-Brenz, Germany. Power transmission gear for rail vehicles. 2,106,843; Feb. 1.

Hafre, Homer H., Washington, D. C. Flexible connecter. 2,106,737; Feb. 1.

Halbach, Howard L., Clarksburg, W. Va., assignor to Pittsburgh Plate Glass Company. Apparatus for making sheet glass. 2,106,890; Feb. 1.

Hall, Selden H., Poughkeepsie, assignor to The De Laval Separator Company, New York, N. Y. Closed centrifugal separator. 2,107,035; Feb. 1.

Hamilton, Alexander, and C. Brock, St. Joseph, Mo. Garment hanger attachment. 2,106,947; Feb. 1.

Hammell, Charles E., Red Bank, N. J. Door closer. 2,106,926; Feb. 1.

Hammer, Hyman C., assignor to Price Brothers, Inc., Chicago, Ill. Illuminated sign. 2,106,891; Feb. 1.

Hammerl, Jacob, assignor to Packard Motor Car Company, Detroit, Mich. Motor vehicle. 2,107,115; Feb. 1.

Hanovia Chemical and Manufacturing Company. (See Bird, Lester F., assignor.)

Harder, Edwin L., and L. J. Hibbard, Forest Hills, and W. R. Taliaferro, Pittsburgh, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Railway control system. 2,106,844; Feb. 1.

Harrington, Lou, San Antonio, Tex. No screed tile clip. 2,106,948; Feb. 1.

Harris, John M., Jr., and N. F. Black, Baton Rouge, La., assignors to Standard Oil Development Company. Neutralisation of acid treated oil. 2,106,976; Feb. 1.

Harrison, John K. M., Ogontz, Pa. Paper and analogous material container. 2,106,738; Feb. 1.

Harrison, John K. M., Ogontz, Pa. Container bottom and top applying and sealing machine. 2,106,739; Feb. 1.

Hartman, William W., Los Angeles, Calif. Bread slicer feed. 2,106,949; Feb. 1.

Harydictak, Joseph, Brooklyn, N. Y. Shoe last. 2,107,250; Feb. 1.

Haywood, Loomis M., Cincinnati, Ohio. Fuel unit. 2,107,054; Feb. 1.

Hasel, Claude E., assignor to The United Gas Improvement Company, Philadelphia, Pa. Stopping service and other gas pipes. 2,107,200; Feb. 1.

Hearn, Richard B., Hollis, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Signal distortion indicating and measuring device for printing telegraph systems. 2,107,140; Feb. 1.

Heckendorn, Clarence. (See Treadway, S. C., and Heckendorn.)

Heddon's, James, Sons. (See McArthur, Joseph, assignor.)

Heinemann, Arthur S., Los Angeles, Calif. Article dividing and packaging machine. 2,107,036; Feb. 1.

Heising, William F., assignor to W. A. Sheaffer Pen Company, Fort Madison, Iowa. Fountain pen. 2,107,150; Feb. 1.

Hellman, Henry F. (See Fuchs, Julius, assignor.)

Henderson, Albert J., Hampfield Township, Westmoreland County, Pa., assignor to Walworth Patents Inc., Boston, Mass. Valve. 2,107,182; Feb. 1.

Hepke, William C., assignor to Thomas M. Royal & Co., Philadelphia, Pa. Paper-bag machine attachment. 2,106,740; Feb. 1.

Hepke, William C., assignor to Thomas M. Royal & Co., Philadelphia, Pa. Paper-bag-machine attachment. 2,107,249; Feb. 1.

Herbert, Joseph F., Audubon, N. J. Bushing remover. 2,106,741; Feb. 1.

Herrington, Arthur W., assignor to Marmon-Herrington Company, Inc., Indianapolis, Ind. Multiaxle drive vehicle. 2,107,072; Feb. 1.

Herrington, Arthur W., assignor to Marmon-Herrington Company, Inc., Indianapolis, Ind. Motor vehicle drive steering wheel axle structure. 2,107,073; Feb. 1.

Hersberg, Albert C., Memphis, Tenn. Held wire reminder for telephones. 2,106,912; Feb. 1.

Heymer, Gerd, Wolfen, Kreis Bitterfeld, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y. Multicolor filter. 2,107,116; Feb. 1.

Hibbard, Lloyd J. (See Harder, E. L., Hibbard, and Taliaferro.)

Higginson, George M., Hawthorne, Calif. Load compensation in oil well pumps. 2,107,151; Feb. 1.

Hildebrandt, Friedrich. (See Schwenk, E., Gehrke, and Hildebrandt.)

Hilpert, Richard, Frankfort-on-the-Main-Hoechst, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Acid wool dyestuffs of the anthraquinone series. 2,107,000; Feb. 1.

Hineline, Edson S., assignor to The Folmer Graflex Corporation, Rochester, N. Y. Copying Corporation, Rochester, N. Y. Copying camera equipment unit. 2,107,074; Feb. 1.

Hinkle, Raymond, Hanover, Pa. Sifting device. 2,106,742; Feb. 1.

Hobart, Louis C., Southington, Conn., assignor, by mesne assignments, to M. M. Munsill. Electric sharpening device for safety razor blades. 2,106,977; Feb. 1.

Hobbs Sales & Service Station, Inc. (See Minkow, Robert, assignor.)

Hoehn, John J., Camden, N. J., assignor to Radio Corporation of America. Power transmission device. 2,106,743; Feb. 1.

Hopsett, Herbert A., Pomona, Calif. Poultry fountain. 2,106,871; Feb. 1.

Holm, Melvin M. (See Shiffler, W. H., Holm, and Miller.)

Holmes, Henry H., Leicester, assignor, by mesne assignments, to H. Brinton Co., Philadelphia, Pa. Circular knitting machine. 2,106,872; Feb. 1.

Holtz, Frederick C., assignor to Sangamo Electric Company, Springfield, Ill. Combination enclosure for electric meters and pull boxes. 2,106,950; Feb. 1.

Hood, Harrison P., assignor to Corning Glass Works, Corning, N. Y. Preparation of silica for glass batches. 2,106,745; Feb. 1.

Hood, Harrison P., and M. E. Nordberg, assignors to Corning Glass Works, Corning, N. Y. Treated borosilicate glass. 2,106,744; Feb. 1.

Hoover Company, The. (See Snyder, Eugene L., assignor.)

Hoover Company, The. (See White, Harry B., assignor.)

Hopkins, Raymond E., Weymouth, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Manufacture of shoe bottom units. 2,106,845; Feb. 1.

Hopkinson, Lawrence T., Washington, D. C. Producing oil from oil containing protein material. 2,107,245; Feb. 1.

Horn, Clarence A., Roselle Park, assignor to Arcturus Development Company, Newark, N. J. Electric tube construction. 2,107,254; Feb. 1.

Hosinski, John, Detroit, Mich. Grain cleaner for threshing machines. 2,106,746; Feb. 1.

Houdaille-Hershey Corporation. (See Short, Bladen M., assignor.)

Houde Engineering Corporation. (See Bliss, Sherwood C., assignor.)

Houde Engineering Corporation. (See Chisholm, Harry L., Jr., assignor.)

Houston Compress Company. (See Sinclair, Henry L., assignor.)

Houston, Robert L., New York, N. Y. Record controlled machine. 2,106,802; Feb. 1.

Houston, Robert L., West Brattleboro, Vt. Record controlled machine. 2,106,801; Feb. 1.

Hoyt, Worthington. (See Stowell, Edward R., assignor.)

Hubbard, Joseph G., Youngstown, Ohio. Open hearth valve. 2,106,913; Feb. 1.

Hubbell, Allan C., Long Beach, Calif. Door lock. 2,106,951; Feb. 1.

Huber, Matthew W., assignor to Tuthill Pump Company, Chicago, Ill. Reversible fuel pump. 2,107,152; Feb. 1.

Huntman, Charles B., Plainfield, N. J. Stabilising means for motor vehicles. 2,107,183; Feb. 1.

Hurrle, Charles G., San Francisco, Calif. Eraser holder for typewriters. 2,107,001; Feb. 1.

Hutaff, George H., Jr. (See O'Neal, George R., assignor.)

Hydraulic Brake Company. (See Oliver, Wallace F., assignor.)

Hydraulic Press Corporation, The. (See Shaw, Victor S., assignor.)

I. D. Manufacturing Co. (See Tavin, F., and Haas, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Pier, M., and Eisenhut, assignors.)
Ihara, Seytiro, Nakaku, Nagoya, assignor to Nippon Geishi Kabushiki Kaisha, Nagoya, Japan. Corrosion resisting pump and blower. 2,107,260; Feb. 1.
Imperial Brass Manufacturing Company, The. (See Beehler, V. D., and McIntosh, assignors.)
Imperial Chemical Industries Limited. (See Baxter, J. P., and Burrage, assignors.)
Ingersoll-Rand Company. (See Kirgan, John, assignor.)
International Business Machines Corporation. (See Daly, George F., assignor.)
International Business Machines Corporation. (See Oldenbloom, Derk J., assignor.)
International Business Machines Corporation. (See Page, Ralph E., assignor.)
International Business Machines Corporation. (See Reingruber, Engelbert, assignor.)
International Business Machines Corporation. (See Weinlich, H. A., and Kölm, assignors.)
Ives, Herbert E., Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Multiple channel electro-optical image production using mirror helix. 2,107,153; Feb. 1.
Jackson, John G., assignor to Square D Company, Detroit, Mich. Circuit breaker. 2,107,246; Feb. 1.
Jantsch, Richard. (See Bechtin, C. R., and Jantsch.)
Jellinghaus, Norman K., Philadelphia, Pa. Smoking pipe. 2,106,747; Feb. 1.
Jensen, Jens O., Miami Beach, Fla., assignor to B. F. Connolly, Mount Vernon, N. Y. Shaving device. 2,107,055; Feb. 1.
Jensen, Thormod, Laurelton, and A. Van Veen, Brooklyn, N. Y., assignors to American Machine & Foundry Company. Helical single knife type bread slicer. 2,107,002; Feb. 1.
Johns-Manville Corporation. (See Bruce, D. S., and Berg, assignors.)
Johns-Manville Corporation. (See Christenson, George, assignor.)
Johnson, Allen M., Greenfield, Ohio. Garment protector for garment hangers. 2,107,003; Feb. 1.
Johnson, Charles B., Monroe, assignor to Woodall Industries Incorporated, Detroit, Mich. Visor construction. 2,107,247; Feb. 1.
Johnson, Fred V., Baltimore, Md., and R. R. Nydegger, Wilmington, Del., assignors to Western Electric Company, Incorporated, New York, N. Y. Apparatus for handling strands. 2,106,803; Feb. 1.
Johnson, John W., Manhasset, N. Y. Roller bearing for printing machines. 2,107,117; Feb. 1.
Johnson, Lawrence R., assignor to The Chandler & Price Company, Cleveland, Ohio. Sheet registering device for printing presses. 2,107,248; Feb. 1.
Johnston, Charles E. (See Olesen, Jens A., assignor.)
Junkers Flugzeug- und Motorenwerke Aktiengesellschaft. (See Wilcken, Karl, assignor.)
Kamenstein, Meyer, Brooklyn, N. Y. Closure operating mechanism for waste cans. 2,106,892; Feb. 1.
Kameram, Sonti, New Forest, Debra Dun, British India. Wood preservative composition. 2,106,978; Feb. 1.
Karnes, James C., Buffalo, N. Y., and G. J. Kessenich, Madison, Wis. Container. 2,106,748; Feb. 1.
Katz, Sidney, Boston, Mass. Football card game. 2,106,846; Feb. 1.
Kaufmann, Frank H., Elkins Park, assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa. Device for warp leasing. 2,107,004; Feb. 1.
Kavanaugh, Robert H., Brewer, Maine. Protection of bodies for sandblasting ornamentation. 2,106,979; Feb. 1.
Kavanaugh, Robert H., Brewer, Maine. Sandblast ornamentation. 2,106,980; Feb. 1.
Kavanaugh, Robert H., Brewer, Maine. Stencil for use in sandblasting. 2,106,981; Feb. 1.
Kay-Brunner Steel Products Inc. (See Low, John J., assignor.)
Kelsey-Hayes Wheel Company. (See Ash, Charles S., assignor.)
Kemp, Lebbeus C., Jr. (See Kuhn, W. E., and Kemp, assignors.)
Kennon, Louis H., Houston, Tex. Valve. 2,107,200; Feb. 1.
Kepfer, Raymond J., Lakewood, Ohio, assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Galvanizing flux. 2,106,982; Feb. 1.
Kessenich, Gregory J. (See Karnes, J. C., and Kessenich.)
Killoran, Joseph L. (See Elvin, W. J., and Killoran.)
Kinatome Patents Corporation. (See Foster, Warren D., assignor.)
King, Archie P. (See Southworth, G. C., and King.)
King, Ralph E., East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone signaling system. 2,107,154; Feb. 1.
Kinnear, Mary A., Worcester, Mass. Combination crib and cradle. 2,106,927; Feb. 1.
Kippenberg, Hermann, and P. Künzer, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Radio mounting device. 2,107,037; Feb. 1.
Kirgan, John, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Regulating device for thermo-compressors. 2,106,904; Feb. 1.
Kirsch, Walter S. (See Yacker, J., and Kirsch.)
Kistner, Herman H., Baltimore, Md., assignor to Kistner Lock & Appliance Company. Casement window and door lock. 2,107,056; Feb. 1.
Kistner Lock & Appliance Company. (See Kistner, Herman H., assignor.)
Klaassens, Klaas H. (See de Boer, J. H., and Klaassens.)
Kleinknuf, James B., East Orange, and D. K. Martin, West Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Radio directional indicator. 2,107,155; Feb. 1.
Klipstein, Kenneth H., Short Hills, assignor to Calco Chemical Co., Inc., Bound Brook, N. J. Wood preservative. 2,106,983; Feb. 1.
Knapp, John F., Oakland, Calif., assignor to American Tractor Equipment Corporation. Earth moving device. 2,107,118; Feb. 1.
Knapp-Monarch Company. (See Smith, Howard A., assignor.)
Kniephamp, Heinrich, Berlin-Pankow, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany. Electric discharge apparatus. 2,106,847; Feb. 1.
Knight, Jesse L., Powellton, assignor of one-half to J. A. Burgess, Montgomery, W. Va. Combination mining bit gauge and wrench. 2,106,749; Feb. 1.
Koch, Nicholas E., Los Angeles, Calif. Safety apparatus for liquid fuel containers. 2,106,750; Feb. 1.
Kölm, Ulrich. (See Weinlich, H. A., and Kölm.)
König, Hermann T. J., Dordrecht, Netherlands, assignor to N. V. Stikstofbindingsindustrie "Nederland". Producing anhydrous alkali metal sulphides. 2,106,952; Feb. 1.
Koppers Company. (See Gollmar, Herbert A., assignor.)
Kops Brothers, Inc. (See Kops, Waldemar, assignor.)
Kops, Waldemar, assignor to Kops Brothers, Inc., New York, N. Y. Foundation garment. 2,107,121; Feb. 1.
Krein, Frederick T., Park Ridge, assignor to Dixie-Vortex Company, Chicago, Ill. Making frozen confections. 2,106,893; Feb. 1.
Krupa, Victor, New York, N. Y., assignor to Peerless Film Processing Corporation. Film processing. 2,106,751; Feb. 1.
Krupp, Louis, Boston, Mass. Handbag and purse combination. 2,107,201; Feb. 1.
Kuhn, Wayne E., and L. C. Kemp, Jr., Port Arthur, Tex., assignors to The Texas Company, New York, N. Y. Mineral oil distillation. 2,107,156; Feb. 1.
Kühnel, Paul. (See Tramm, H., Clar, Kühnel, and Schulz.)
Künser, Paul. (See Kippenberg, H., and Künser.)
Küppenbender, Heins, assignor to Zeiss Ikon Aktiengesellschaft, Dresden, Germany. Photographic camera. 2,106,894; Feb. 1.
Lalee, Clemens A., Tenafly, N. J. Composition of matter. 2,107,122; Feb. 1.
Land, Edwin H., Wellesley Farms, Mass., assignor to Sheet Polarizer Company, Inc., Union City, N. J. Field divider. 2,106,752; Feb. 1.
Landau, Morris, et al. (See Tavin, F., and Haas, assignors.)
Lang, William E., Lexington, Ky. Apparatus for treating depleted oil sands. 2,107,006; Feb. 1.
Lang, William E., Lexington, Ky. Increasing recovery from oil sands. 2,107,007; Feb. 1.
Lang, Wilmarth Y., Towaco, N. J., and E. F. Watson, Larchmont; said Lang assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., and said Watson assignor to American Telephone and Telegraph Company, Teletypewriter. 2,106,905; Feb. 1.
Lasker, William W., Brooklyn, assignor to Remington Rand Inc., Buffalo, N. Y. Bowden wire. 2,107,184; Feb. 1.
Lasker, William W., Jr., Brooklyn, N. Y. Sensing device. 2,107,008; Feb. 1.
Latimer, Chester W., West Orange, N. J., and J. L. Finch, Patchogue, and H. H. Beverage, Riverhead, N. Y., assignors to Radio Corporation of America. Relay system. 2,106,906; Feb. 1.
Laucks, I. F., Inc. (See Ellertsen, Leo W., assignor.)
Le Coq, Martha W. (See Le Coq, William L. and M. W.)
Le Coq, William L. and M. W., Philadelphia, Pa. Garment pattern. 2,106,895; Feb. 1.
Lederer, Anton, deceased, Vienna, Austria; C. Danser and C. Randa, executors, assignors to E. A. Lederer, Glen Ridge, N. J. Electric discharge tube or lamp. 2,106,753; Feb. 1.
Lederer, Anton, deceased, by K. Danser and C. Randa, Vienna, Austria, executors, assignors to E. A. Lederer, Glen Ridge, N. J. Electric discharge device. 2,106,754; Feb. 1.
Lederer, Ernest A. (See Lederer, Anton, assignor.)
Lee, Charles M., Falls City, Nebr. Air or watercraft propulsion. 2,106,928; Feb. 1.
Le Fevre, Walter J., and J. W. Britton, assignors to The Dow Chemical Company, Midland, Mich. Cellulose ether recovery. 2,107,008; Feb. 1.
Legg, David A., Terre Haute, and N. R. Tarvin, Brazil, assignors to Commercial Solvents Corporation, Terre Haute, Ind. Fermentation of beet molasses. 2,107,261; Feb. 1.
Legg, David A., Terre Haute, and N. R. Tarvin, Brazil, assignors to Commercial Solvents Corporation, Terre Haute, Ind. Beet molasses fermentation. 2,107,262; Feb. 1.

Lennard, McLennan, Regent's Park, London, England. Projection screen. 2,107,038; Feb. 1.
Leventhal, Jacob F., and S. Bagno, assignors to Leventhal Patents, Inc., New York, N. Y. Ribbon feeding mechanism. 2,107,039; Feb. 1.
Leventhal Patents, Inc. (See Leventhal, J. F., and Bagno, assignors.)
Lewis, Harold A., Wilmington, Del., and F. R. Wilson, Bloomfield, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Explosive. 2,107,157; Feb. 1.
Lewis, Herbert A., Bayside, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,107,158; Feb. 1.
Liebel-Flarsheim Company, The. (See Liebel, J. G. H., and Flarsheim, assignors.)
Liebel, John G. H., and R. S. Flarsheim, assignors to The Liebel-Flarsheim Company, Cincinnati, Ohio. Surgical apparatus. 2,107,057; Feb. 1.
Lionel Corporation, The. (See Bonanno, Joseph L., assignor.)
Lock, Ritchie H., Chigwell, England. Glycerol monolactate triacetate and making same. 2,107,202; Feb. 1.
Lock, Ritchie H., Chigwell, England. Application of a plasticising agent for cellulose derivatives. 2,107,203; Feb. 1.
Locke, Karl, and R. Brunhuber, Berlin-Tempelhof, Germany. Zero resetting mechanism for registers. 2,106,807; Feb. 1.
Lockwood, Edwin H., Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Removable oven vent grille for electric ranges. 2,106,848; Feb. 1.
Lomax, Frank B., Chicago, Ill. Filtering eggs. 2,107,040; Feb. 1.
Long, Robert B., Dayton, Ohio. Fire alarm box. 2,106,840; Feb. 1.
L'Orange, Prosper, Stuttgart-Feuerbach, Germany. Internal combustion engine. 2,106,914; Feb. 1.
Low, John J., Los Angeles, Calif., assignor to Kay-Brunner Steel Products Inc. Implement mounting for road working machines. 2,107,123; Feb. 1.
Ludewig, Richard, Leipzig, Germany. Cross folding machine. 2,106,983; Feb. 1.
Ludwig, Leon R. (See Klapian, J., and Ludwig.)
Luhrman, Albert H., Cincinnati, Ohio. Battery grid casting machine. 2,107,041; Feb. 1.
Lyman, Kenneth B., Lake Forest, Ill. Automatic clutch. 2,107,075; Feb. 1.
Mace, Charles E., assignor of one-half to H. S. Vinson, Ottumwa, Iowa. Door latch and lock structure. 2,106,954; Feb. 1.
Mack Molding Company. (See Mackesy, Kenneth W., assignor.)
Mackesy, Kenneth W., Montclair, assignor to Mack Molding Company, Wayne, N. J. Molded knob. 2,107,204; Feb. 1.
MacMillan, John H., Jr., Minneapolis, Minn. Cigarette package. 2,107,042; Feb. 1.
Magnaflux Corporation. (See Betz, Carl E., assignor.)
Magner, Phillip G., Wabash, Ind., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Psychrometer. 2,107,077; Feb. 1.
Mahle, Ernst, Stuttgart, Germany. Apparatus for molding strut pistons. 2,107,009; Feb. 1.
Marchok, John M. (See Salzman, T. J., and Marchok.)
Markert, John, New York, N. Y. Adjustable stand. 2,107,124; Feb. 1.
Markwood, Louis N., Washington, D. C., dedicated to the free use of the people of the United States of America. Making an insecticide. 2,107,058; Feb. 1.
Marmon-Herrington Company. (See Herrington, Arthur W., assignor.)
Marshall, Hamilton L. J., assignor to Osteograf Co., Inc., Troy, Ala. Portable self-contained X-ray apparatus. 2,106,873; Feb. 1.
Martel, James P., Evanston, Ill., assignor to Oliver United Filters Incorporated, San Francisco, Calif. Drier. 2,106,916; Feb. 1.
Martin, De Loss K. (See Kleinknuf, J. D., and Martin.)
Martone, Thomas A., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Coloring material. 2,107,159; Feb. 1.
Mason Bex Company, The. (See Rhodes, Russell I., assignor.)
Mason, George W., assignor to Nash-Kelvinator Corporation, Detroit, Mich. Refrigerating apparatus. 2,107,076; Feb. 1.
Masters, Arthur P. (See Townsend, O. A., and Masters.)
Maston, Edward H. (See Brunt, J. P., and Maston.)
McAfoos, Lawrence E., Pittsburgh, assignor to Reliance Steel Products Company, Rankin, Pa. Water cooler for furnaces. 2,107,185; Feb. 1.
McArthur, Joseph, assignor to James Heddon's Sons, Dowagiac, Mich. Fish lure. 2,106,755; Feb. 1.
McClure, Charles B., Denver, Colo., assignor to L. L. McClure. Water temperature control valve. 2,106,929; Feb. 1.
McClure, Lenore L. (See McClure, Charles B., assignor.)
McComb, Parker, Monroe, La. Treating carbonates. 2,107,255; Feb. 1.
McCulloch, Leon, Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Insulating conductors. 2,106,850; Feb. 1.
McCulloch, Norman E., Pawtucket, and W. A. Bourne, Barrington, R. I., assignors to The Rayon Processing Co. of R. I., Inc. Shredded sheet material. 2,106,896; Feb. 1.
McDonald, Edward F., Buffalo, N. Y., assignor to Faries Manufacturing Company, Decatur, Ill. Smoking stand and accessories therefor. 2,107,010; Feb. 1.
McIntosh, Robert D. (See Beehler, V. D., and McIntosh.)
McLendon, Randall L., St. Simons Island, Ga. Bed. 2,107,205; Feb. 1.
Meagher, Edward J. (See Brescka, R. S., and Meagher.)
Melton, Romie L., assignor, by mesne assignments, to The Carborundum Company, Niagara Falls, N. Y. Testing and classifying bonded granular bodies. 2,107,186; Feb. 1.
Mendelsohn, Louis H., Paterson, N. J. Making stockings. 2,107,078; Feb. 1.
Mentele, Hubert A., Canova, S. Dak. Fuel injection pump. 2,107,079; Feb. 1.
Mercer, Richard, Kenton, England, assignor to Associated Electric Laboratories, Inc., Chicago, Ill. Automatic or semiautomatic telephone system. 2,106,897; Feb. 1.
Metal Box Company, The. (See Blakeway, Arthur H., assignor.)
Michell, Anthony G. M., Melbourne, Australia. Nut. 2,106,934; Feb. 1.
Midvale Company, The. (See Sachse, Julius F., assignor.)
Miesner, Benjamin F., Short Hills, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Amplifying and reproducing system. 2,107,125; Feb. 1.
Miller Company, The. (See Doane, Leroy C., assignor.)
Miller, Marvin F. (See Shiffler, W. H., Holm, and Miller.)
Miller, Robert C., Uniontown, Pa. Aeroplane seat structure. 2,106,985; Feb. 1.
Miller, Wayland R., Chicago, Ill., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Unit ventilator control system. 2,106,898; Feb. 1.
Mills Novelty Company. (See Trask, Allen, assignor.)
Miner, W. H., Inc. (See Olander, Roland J., assignor.)
Minkow, Robert, assignor to Hobbs Sales & Service Station, Inc., New York, N. Y. Form separator. 2,107,206; Feb. 1.
Minneapolis-Honeywell Regulator Company. (See Magner, Philip G., assignor.)
Minneapolis-Honeywell Regulator Company. (See Miller, Wayland R., assignor.)
Mitchell, James M., Old Lyme, Conn. Animal trap. 2,107,080; Feb. 1.
Moffitt Automatic Lock Company Limited, The. (See Moffitt, Duncan D. M., assignor.)
Moffitt, Duncan D. M., Arapito, Westport, assignor to The Moffitt Automatic Lock Company Limited, Westport, New Zealand. Lock. 2,106,955; Feb. 1.
Monnahan, J. L. (See Tonkin, Albert, assignor.)
Moorshead, Thomas C., and E. P. Dorman, Strand, London, England, assignors, by mesne assignments, to Ball Brothers Company, Muncie, Ind. Machine for making hollow glassware. 2,107,011; Feb. 1.
Moorshead, Thomas C., London, England, assignor, by mesne assignments, to Ball Brothers Company, Muncie, Ind. Feeding glass to glass shaping machines. 2,107,012; Feb. 1.
Moorshead, Thomas C., Strand, London, assignor to The United Glass Bottle Manufacturers Limited, London, England. Feeding glass to glass forming machines. 2,106,899; Feb. 1.
Morgan, Delevan F., Oak Park, assignor to Nucord company, Chicago, Ill. Belt. 2,107,013; Feb. 1.
Morkisch, Erwin F., Pasadena, Calif. Flush valve control. 2,106,916; Feb. 1.
Moser, Franz R., Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Motor fuel composition. 2,107,059; Feb. 1.
Munsill, Marcus M. (See Hobart, Louis C., assignor.)
Muros, Joseph, Cambridge, assignor to Gillette Safety Razor Company, Boston, Mass. Shaving implement. 2,107,207; Feb. 1.
Murphy, Edward A., Wylde Green, Birmingham, and S. D. Taylor, Sutton Coldfield, assignors to Dunlop Rubber Company Limited, London, England. Producing porous sheets of rubber. 2,106,808; Feb. 1.
N. V. Philips' Gloeilampenfabrieken. (See de Boer, J. H., and Klaassens, assignors.)
N. V. Stikstofbindingsindustrie "Nederland". (See König, Hermann T. J., assignor.)
Nakamura, Uhei, Misoh-mura, Osaka, Japan. Device for supporting steam pipe lines. 2,106,956; Feb. 1.
Nankivell, Frederick W., Chicago, Ill. Vegetable cutter. 2,107,208; Feb. 1.
Nash-Kelvinator Corporation. (See Mason, George W., assignor.)
National Rubber Machinery Company. (See Woodin, Charles K., assignor.)
New Jersey Zinc Company, The. (See Wilhelm, Ernest J., assignor.)
Newman, J. Randolph. (See Auer, Lassle, assignor.)
Niagara Machine & Tool Works. (See Orton, Frederic, assignor.)
Nielsen, John F., Corona, Long Island, assignor to United Research Corporation, Long Island City, N. Y. Changeover for sound picture apparatus. 2,106,957; Feb. 1.

Nigra Duplicator Company. (See Nigra, Ferdinand, assignor.)

Nigra, Ferdinand, assignor to Nigra Duplicator Company, San Francisco, Calif. Variable speed belt drive. 2,106,920; Feb. 1.

Nippon Gaishi Kabushiki Kaisha. (See Ihara, Seytiro, assignor.)

Nordberg, Martin E. (See Hood, H. P., and Nordberg.)

Nordell, Carl H., assignor to Chicago Pump Company, Chicago, Ill. Combined straining and comminuting apparatus. 2,106,861; Feb. 1.

Novick, Abraham, Flushing, assignor to F. L. Smithe Machine Co., Inc., New York, N. Y. Blank aligning mechanism and method. 2,107,043; Feb. 1.

Nuseed Company. (See Morgan, Delevan F., assignor.)

Nutrition Research Laboratories, Inc. (See Whittier, Charles C., assignor.)

Nydegger, Roland R. (See Johnson, F. V., and Nydegger.)

Nyman, Emil. (See Collison, E. E., and Nyman.)

Oakes Products Corporation. (See Sandberg, Ray A., assignor.)

Obermaier, John A., Chicago, Ill. Liquid level change detector. 2,106,756; Feb. 1.

Olander, Roland J., assignor to W. H. Miner, Inc., Chicago, Ill. Floor rack. 2,106,852; Feb. 1.

Olander, Roland J., assignor to W. H. Miner, Inc., Chicago, Ill. Floor rack for refrigerator cars. 2,106,853; Feb. 1.

Oldenbloom, Derk J., Endicott, assignor to International Business Machines Corporation, New York, N. Y. Perforating machine. 2,107,100; Feb. 1.

Olesen, Jens A., assignor to C. E. Johnston, Toronto, Ontario, Canada. Closure for containers. 2,107,256; Feb. 1.

Olin, John F., Grosse Ile, Mich., assignor to The Sharples Solvents Corporation, Philadelphia, Pa. Preparing phenolic compounds. 2,107,090; Feb. 1.

Oliver Farm Equipment Company. (See Altgelt, Herman E. and R. J., assignors.)

Oliver United Filters Incorporated. (See Martel, James F., assignor.)

Oliver, Wallace F., assignor to Hydraulic Brake Company, Detroit, Mich. Hydraulic brake system. 2,106,757; Feb. 1.

Oliver, Wallace F., assignor to Hydraulic Brake Company, Detroit, Mich. Fluid pressure brake system. 2,106,758; Feb. 1.

Olsen, Andrew, Jr. (See Robinson, R. W., and Olsen.)

O'Neal, George R., Washington, D. C., assignor to G. H. Hutaff, Jr., Wilmington, N. C. Eraser for typewriters. 2,107,209; Feb. 1.

Oppan, Erich. (See Bantz, T., Grave, and Oppan.)

Opticolor Aktiengesellschaft. (See Gretener, Edgar, assignor.)

Orton, Frederic, assignor to Niagara Machine & Tool Works, Buffalo, N. Y. Inclining device for inclinable punch presses. 2,106,917; Feb. 1.

Osteograf Co. (See Marshall, Hamilton L. J., assignor.)

Otte, Otho M., Tarentum, Pa., assignor to Allegheny Steel Company. Making grid resistors. 2,107,187; Feb. 1.

Owens, William, Pittsburgh, assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Double window construction. 2,106,900; Feb. 1.

Owens, Charles, Chattanooga, Tenn. Orthopedic instrument. 2,107,081; Feb. 1.

Packard Motor Car Company. (See Griswold, Walter R., assignor.)

Packard Motor Car Company. (See Hammerl, Jacob, assignor.)

Packard Motor Car Company. (See Paton, Clyde R., assignor.)

Packard Motor Car Company. (See Tibbetts, Milton, assignor.)

Packard Motor Car Company. (See Wiegman, Clarence H., assignor.)

Page, Ralph E., Binghamton, assignor to International Business Machines Corporation, New York, N. Y. Punch. 2,107,161; Feb. 1.

Palm, Blake, Washington, D. C. Elevator construction. 2,107,210; Feb. 1.

Pannonia Bárinybörmemesitö és Kereskedelmi r. t. (See Wilhelm, Alexander, assignor.)

Paquin, Frank H., Groveland, Mass. Applicator grid for cementing machines. 2,106,854; Feb. 1.

Parker Rust Proof Company. (See Gordon, Robert H., assignor.)

Parkins, Wright A. (See Ryder, E. A., and Parkins.)

Pasman, Abram N., Milford, Conn. Convertible sink strainer. 2,107,126; Feb. 1.

Paton, Clyde R., Birmingham, assignor to Packard Motor Car Company, Detroit, Mich. Motor vehicle. 2,106,874; Feb. 1.

Paton, Clyde R., Birmingham, assignor to Packard Motor Car Company, Detroit, Mich. Motor vehicle. 2,107,062; Feb. 1.

Patterson, Joseph A., Brave, Pa. Nonrefillable bottle. 2,107,049; Feb. 1.

Paulsen, Thomas E., assignor to Bucyrus-Erie Company, South Milwaukee, Wis. Wheeled scraper. 2,106,759; Feb. 1.

Pavelka, Frank E., San Antonio, Tex. Game apparatus. 2,107,211; Feb. 1.

Peace, Harvey W., Toronto, Ontario, assignor to Canada Cycle & Motor Company, Limited, Weston, Ontario, Canada. Bicycle. 2,107,551; Feb. 1.

Pearce, Edwin S., assignor to Railway Service & Supply Corporation, Indianapolis, Ind. Apparatus for treating fibrous waste for journal box use. 2,106,966; Feb. 1.

Pearcy, Noah C., Park Ridge, Ill., assignor to Westinghouse Electric & Manufacturing Company. Space-current device. 2,106,855; Feb. 1.

Peck, Robert H. (See Davis, C. F., Brush, and Peck.)

Peel, Frederick W. (See Roberts, D., and Peel.)

Peerless Film Processing Corporation. (See Krupa, Victor, assignor.)

People of the United States, Dedicated to the free use of. (See Markwood, Louis N., assignee.)

Perazzoli, Henry L., Philadelphia, Pa. Transmission mechanism. 2,106,918; Feb. 1.

Petroleum Conversion Corporation. (See Colony, Myron W., assignee.)

Pettit, Fred E., Jr., Beverly Hills, Calif. Combined marine gearset and reduction gear. 2,106,958; Feb. 1.

Pfleghar, Alfons, assignor to Elektro-Bohner G. m. b. H., Stuttgart-Bad Cannstatt, Germany. Sheet metal container. 2,107,212; Feb. 1.

Phillips, John, Oakland, Calif. Positive pressure compressor. 2,106,950; Feb. 1.

Pier, Mathias, and A. Eisenhut, Heidelberg, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of highly viscous oils. 2,106,960; Feb. 1.

Pittman, Ralph R., and C. H. Walsh, Pine Bluff, Ark. Conductor protecting tap clamp. 2,107,061; Feb. 1.

Pittsburgh Plate Glass Company. (See Halbach, Clyde J., assignor.)

Pittsburgh Plate Glass Company. (See Halbach, Howard L., assignor.)

Pittsburgh Plate Glass Company. (See Owen, William, assignor.)

Pletcher, Clarence B., St. Joseph, Mich. Blast gun. 2,107,084; Feb. 1.

Poirier, Alphonse, Dutton, Mont. Candy puller. 2,107,213; Feb. 1.

Polk, Henry H., Jr., assignor to W. A. Sheaffer Pen Company, Fort Madison, Iowa. Fountain pen. 2,107,162; Feb. 1.

Polson, Virgil L., East Moline, Ill. Photographic print drier. 2,106,931; Feb. 1.

Potts, Louis M., Evanston, assignor to Teletype Corporation, Chicago, Ill. Two-color ribbon mechanism. 2,107,044; Feb. 1.

Powell, Laurence C., Portsmouth, Va. Distortion check for welding apparatus. 2,106,987; Feb. 1.

Prange, Charles H., Lyndhurst, N. J., and E. H. Zahn, Port Washington, assignors to Austenal Laboratories, Inc., New York, N. Y. Swaged denture and making the same. 2,106,899; Feb. 1.

Preston, Neil D., assignor to General Railway Signal Company, Rochester, N. Y. Centralized traffic controlling system for railroads. 2,107,163; Feb. 1.

Price Brothers, Inc. (See Hammer, Hyman C., assignor.)

Price, Robert B., Oakland, assignor to American Tractor Equipment Corporation. Earth moving device. 2,107,119; Feb. 1.

Radio Corporation of America. (See Barton, Frederick C., assignor.)

Radio Corporation of America. (See Carson, B. R., and Zimmerman, assignors.)

Radio Corporation of America. (See Goldsborough, Thaddeus R., assignor.)

Radio Corporation of America. (See Hoehn, John J., assignor.)

Radio Corporation of America. (See Latimer, C. W., Finch, and Beverage, assignors.)

Radio Corporation of America. (See Miessner, Benjamin F., assignor.)

Radio Corporation of America. (See Scheldorf, Marvel W., assignor.)

Radio Corporation of America. (See Searing, H. R., and Shipstedt, assignors.)

Radio Corporation of America. (See Suomala, John B., assignor.)

Radio Corporation of America. (See Trevor, B., and George, assignors.)

Radio Corporation of America. (See Tunick, Harry, assignor.)

Radio Corporation of America. (See Volk, Joseph A., assignor.)

Railway Service & Supply Corporation. (See Pearce, Edwin S. assignor.)

Raisch, William, assignor to Underpinning & Foundation Co., Inc., New York, N. Y. Incineration. 2,107,127; Feb. 1.

Raizins, George W., and L. W. Clemence, Philadelphia, Pa., assignors to Abbott Laboratories, North Chicago, Ill. B-methyl butyl cresols. 2,106,760; Feb. 1.

Ralston, Andersen W., and S. T. Bauer, assignors to Armour and Company, Chicago, Ill. Hydroxylated fish oil fatty acids and preparing the same. 2,107,062; Feb. 1.

Randa, Conrad, et al., executors. (See Lederer, Anton.)

Randa, General C., et al., executors. (See Lederer Anton.)

Rasmussen, Christian A., Cleveland, Ohio. Electric controller construction. 2,107,045; Feb. 1.

Rassmann, Hugo C., Beaver Dam, Wis. Seeder. 2,106,901; Feb. 1.

Raybestos-Manhattan, Inc. (See Soule, Kenneth J., assignor.)

Rayon Processing Co. of R. I., Inc., The. (See McCulloch, N. H., and Bourne, assignors.)

Rechtin, Clarence R., and R. Jantsch, assignors to The J. H. Day Company, Cincinnati, Ohio. Ink mill. 2,107,214; Feb. 1.

Reingruber, Engelbert, Vienna, Austria, assignor, by mesne assignments, to International Business Machines Corporation, New York, N. Y. Paper feeding mechanism. 2,107,128; Feb. 1.

Reliance Steel Products Company. (See McAfoos, Lawrence R., assignor.)

Rembert, Ernest W., Plainfield, N. J. Making granular material. 2,107,215; Feb. 1.

Remington Rand Inc. (See Dreher, Elmer H., assignor.)

Remington Rand Inc. (See Lester, William W., assignor.)

Rengier, Ralph E., Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Signaling system. 2,106,810; Feb. 1.

Rhodes, Russell L., North Attleboro, assignor to The Mason Box Company, Attleboro Falls, Mass. Making cardboard articles. 2,107,095; Feb. 1.

Rice, Frank E., assignor to American Tap-Bush Company, Detroit, Mich. Tap construction. 2,107,164; Feb. 1.

Rice, Frank E., assignor to American Tap-Bush Company, Detroit, Mich. Tap construction. 2,107,165; Feb. 1.

Richmond Screw Anchor Co. (See Schenk, Tamis C., assignor.)

Richter, George A., assignor to Brown Company, Berlin, N. H. Preparation of acetone-soluble cellulose acetate. 2,106,811; Feb. 1.

Richter, George A., and H. P. Vannah, assignors to Brown Company, Berlin, N. H. Xanthating cellulose. 2,106,812; Feb. 1.

Riebel, Charles W. (See Willett, Benedict E., assignor.)

Robaczynski, Ladislaus, Brooklyn, N. Y. Needle bed construction. 2,106,919; Feb. 1.

Roberts, Dudley, New York, and F. W. Peel, Yonkers, N. Y., assignors to Rubatex Products, Inc., Wilmington, Del. Airplane. 2,106,761; Feb. 1.

Robinson, Charles A. (See Caswell, J. A., and Robinson.)

Robinson, Reed W., and A. Olsen, Jr., San Francisco, Calif. Controlled-grain sugar. 2,106,762; Feb. 1.

Rockwell-Barnes Company. (See Baleman, T. J., and Marchok, assignors.)

Roehm, Erwin G., Norwood, assignor to The Cincinnati Milling Machine Co., Cincinnati, Ohio. Pattern controlled milling machine. 2,107,063; Feb. 1.

Rogers, Harry L., Brooklyn, N. Y. Receptacle and closure therefor. 2,107,216; Feb. 1.

Rohatyn, Isaac W., New York, N. Y. Waist band for garments. 2,107,046; Feb. 1.

Röhm & Haas Company. (See Bruson, Herman A., assignor.)

Rohn, Chester F. and F. A., Milwaukee, Wis. Shoe structure. 2,107,129; Feb. 1.

Rohn, Franklyn A. (See Rohn, Chester F. and F. A.)

Romanow, Frank F., West Hempstead, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Acoustic device. 2,106,813; Feb. 1.

Römer, Elisabeth, New York, N. Y. Automatic multiphoto apparatus. 2,106,814; Feb. 1.

Rorem, Bernard E., Evanston, Ill. Record keeping device. 2,106,856; Feb. 1.

Rosen, Carl G. A., Oakland, assignor to Caterpillar Tractor Co., San Leandro, Calif. Engine. 2,106,920; Feb. 1.

Rosén, Carl G. A., Oakland, assignor to Caterpillar Tractor Co., San Leandro, Calif. Engine. 2,106,932; Feb. 1.

Rowe, William W., Cincinnati, assignor, by mesne assignments, to Bemis Bro. Bag Co., St. Louis, Mo. Seamed bag. 2,106,975; Feb. 1.

Royal, Thomas M., & Co. (See Hepke, William C., assignor.)

Rubatex Products, Inc. (See Roberts, D., and Peel, assignors.)

Ruhrchemie Aktiengesellschaft. (See Tramm, H., Clar, Kühnel, and Schuff, assignors.)

Rumsey, Herbert, Jr., Nutley, N. J. Forming meat products. 2,107,096; Feb. 1.

Rumsey, Herbert, Jr., Nutley, N. J. Packing meat products. 2,107,166; Feb. 1.

Ryder, Earle A., and W. A. Parkins, West Hartford, assignors to United Aircraft Corporation, East Hartford, Conn. Temperature control means for machine lubricating systems. 2,107,188; Feb. 1.

Sachse, Julius F., assignor to The Midvale Company, Philadelphia, Pa. Treating austenitic chrome-nickel steel alloys. 2,107,014; Feb. 1.

Saint Genies, Ann H. J. d. L., Versailles, France. Reproduction of lenticular films. 2,106,933; Feb. 1.

Salzman, Thomas J., and J. M. Marchok, assignors to Rockwell-Barnes Company, Chicago, Ill. Bookbinding. 2,107,217; Feb. 1.

Sandberg, Ray A., Waukegan, assignor to Oakes Products Corporation, North Chicago, Ill. Brake lever construction. 2,107,047; Feb. 1.

Sandberg, Ray A., Waukegan, assignor to Oakes Products Corporation, North Chicago, Ill. Bumper guard. 2,107,048; Feb. 1.

Sands, Roy C., Waukegan, assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill. Substation protector. 2,106,902; Feb. 1.

Sangamo Electric Company. (See Holtz, Frederick C., assignor.)

Saulnier, Raymond, Puteaux, France. Landing gear for aircraft. 2,106,934; Feb. 1.

Scharfenberg, Karl, Berlin-Nikolassee, Germany. Automatic car coupler. 2,107,218; Feb. 1.

Scheldorf, Marvel W., Hadden Heights, N. J., assignor to Radio Corporation of America. Acoustic diaphragm and making same. 2,106,815; Feb. 1.

Schenk, Charles J., Buckeye, Ariz. Windmill. 2,107,219; Feb. 1.

Schenk, Tamis C., New York, assignor to Richmond Screw Anchor Co., Inc., Brooklyn, N. Y. Preventing the formation of continuous voids in concrete masses. 2,107,130; Feb. 1.

Schering-Kahlbaum A. G. (See Schwenk, E., Gehrke, and Hildebrandt, assignors.)

Schiavi, Vincent, Wilmington, Del. Retainer for expansion joint strips. 2,106,935; Feb. 1.

Schlachta, Frank, assignor of one-half to A. K. Syplen, Pittsburgh, Pa. Upholstered furniture. 2,107,087; Feb. 1.

Schmale, Harry W. (See Geerke, H. E., Bystrom, and Schmale.)

Schmid, Hans H., Mars, assignor to United Engineering & Foundry Company, Pittsburgh, Pa. Sheet carrier. 2,107,189; Feb. 1.

Schmidt, Henry F., Lansdowne, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Condenser scoop apparatus. 2,106,961; Feb. 1.

Schneider & Cie. (See Fleux, Jean, assignor.)

Schubert, Friedrich, Leverkusen-I. G. Werk, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Azo dyestuffs. 2,106,876; Feb. 1.

Schuff, Walter. (See Tramm, H., Clar, Kühnel, and Schuff.)

Schuls, Frank J., Rochester, N. Y. Tool for removing paint, varnish, lacquer, shellac, etc. 2,107,220; Feb. 1.

Schwenk, Erwin, New York, N. Y., M. Gehrke, Birkenwerder, near Berlin, and F. Hildebrandt, Hohen Neuendorf, near Berlin, assignors to Schering-Kahlbaum A. G., Berlin, Germany. Purifying crude extracts of the germinal gland hormones and isolating the latter therefrom. 2,106,763; Feb. 1.

Schwinn, Frederick S., Houston, Tex. Railway tie plate and retaining clip. 2,107,131; Feb. 1.

Scott, Leslie E., and E. A. Smith, San Jose, Calif. Refrigerating apparatus. 2,107,088; Feb. 1.

Scovill Manufacturing Company. (See Fenton, Paul E., assignor.)

Searing, Hudson R., New York, and A. F. Shipstedt, North Pelham, N. Y., assignors to Radio Corporation of America. Phonograph. 2,106,764; Feb. 1.

Secretary of Agriculture of the United States of America. (See Gaus, George M., assignor.)

Semrau, Hugo F. (See Stein, J. A., and Semrau.)

Shapiro, Isaac, et al. (See Balton, James, assignor.)

Shapiro, Joseph, et al. (See Balton, James, assignor.)

Shapiro, Nathan, et al. (See Balton, James, assignor.)

Shapiro, Samuel, et al. (See Balton, James, assignor.)

Sharples Solvents Corporation, The. (See Olin, John F., assignor.)

Shaw, Victor S., Cardington, Ohio, assignor to The Hydraulic Press Corporation, Inc., Wilmington, Del. Plastic extrusion molding press. 2,107,190; Feb. 1.

Sheaffer, W. A., Pen Company. (See Helsing, William F., assignor.)

Sheaffer, W. A., Pen Company. (See Polk, Henry H., Jr., assignor.)

Sheet Polariser Company. (See Land, Edwin H., assignor.)

Shell Development Company. (See Evans, Theodore, assignor.)

Shell Development Company. (See Moser, Frans R., assignor.)

Shell Development Company. (See van der Waerden, Hendrikus, assignor.)

Shell Development Company. (See van Peski, Adrianus J., assignor.)

Sherman, Donald W., Shorewood, assignor to A. O. Smith Corporation, Milwaukee, Wis. Automobile frame adjunct. 2,107,191; Feb. 1.

Sherman, John O., Dayton, Ohio. Attachment for writing machines. 2,106,765; Feb. 1.

Sherts, James H., and B. J. Dennison, Tarentum, Pa., assignors to Duplate Corporation. Making safety glass. 2,106,766; Feb. 1.

Shiffer, William H., and M. M. Holm, Berkeley, and M. F. Miller, Albany, assignors to Standad Oil Company of California, San Francisco, Calif. Producing alcohols from alkyl sulphuric acids. 2,106,877; Feb. 1.

Shimizu, Isau. (See Shimizu, Frank K. and E.)

Shimizu, Frank K. and E., San Jose, Calif. Berry basket. 2,106,816; Feb. 1.

Shipstedt, Axel F. (See Searing, H. R., and Shipstedt.)

Short, Bladen M., assignor, by mesne assignments, to Houdaille-Hershey Corporation, Detroit, Mich. Tire cover and lock therefor. 2,107,015; Feb. 1.

Siemens & Halske Aktiengesellschaft. (See Wolf, Fritz, assignor.)

Siemens-Schuckertwerke Aktiengesellschaft. (See Knieppkamp, Heinrich, assignor.)

Sierad, Milton, assignor to George W. Button Corporation, New York, N. Y. Bottle closure. 2,107,167; Feb. 1.

Sinclair, Henry L., Houston, Tex., assignor to Houston Compress Company. Portable elevator. 2,106,878; Feb. 1.
Slepian, Joseph, Pittsburgh, and L. R. Ludwig, Forest Hills, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Vapor electric device. 2,106,857; Feb. 1.
Smith, A. O., Corporation. (See Sherman, Donald W., assignor.)
Smith, Ernest A. (See Scott, L. E., and Smith.)
Smith, Franklin S., New Haven, Conn. Condenser construction. 2,107,132; Feb. 1.
Smith, Howard A., assignor to Knapp-Monarch Company, St. Louis, Mo. Light weight sadiron construction. 2,106,936; Feb. 1.
Smith, Lloyd B., Moorestown, N. J., S. R. Funsten, Rosemont, and H. W. Field, Glen Mills, assignors to The Atlantic Refining Company, Philadelphia, Pa. Producing a hydrocarbon fluorescent product. 2,106,767; Feb. 1.
Smith, Sydney E. (See Hagle, Lydia A., assignor.)
Smithe, F. L., Machine Co. (See Novick, Abraham, assignor.)
Snelling, Walter O., Allentown, Pa. Preparation of soy sauce. 2,107,133; Feb. 1.
Snyder, Eugene L., Canton, assignor to The Hoover Company, North Canton, Ohio. Suction cleaner. 2,107,016; Feb. 1.
Snyder, Frederick D., East Milton, Mass., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Motor control system. 2,106,858; Feb. 1.
Societe Anonyme Adolphe Saurer. (See Fleury, Werner, assignor.)
Société Anonyme: Société des Freins Hydrauliques S. de Lavaud. (See Brisson, Louis C., assignor.)
Somers, Herbert L. (See Coons, Ural E., assignor.)
Soule, Kenneth J., Ridgewood, assignor to Raybestos-Manhattan, Inc., Passaic, N. J. Sealing gasket. 2,106,817; Feb. 1.
Southworth, George C., Ridgewood, N. J., assignor to American Telephone and Telegraph Company. Filter system for high frequency electric waves. 2,106,768; Feb. 1.
Southworth, George C., Red Bank, N. J., assignor to American Telephone and Telegraph Company. Transmission of guided waves. 2,106,769; Feb. 1.
Southworth, George C., Red Bank, N. J., assignor to American Telephone and Telegraph Company. Ultrahigh frequency signaling. 2,106,771; Feb. 1.
Southworth, George C., and A. P. King, Red Bank, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Apparatus and method for receiving electromagnetic wave signals on dielectric guides. 2,106,770; Feb. 1.
Spang, Ferdinand J., Butler, Pa. Hook wall packer. 2,106,859; Feb. 1.
Spilhaus, Athelstan F., Cambridge, Mass. Air condition indicator. 2,107,017; Feb. 1.
Square D Company. (See Jackson, John G., assignor.)
Standard Coin Wrappers, Incorporated. (See Francis, Joseph N., assignor.)
Standard-I. G. Company. (See Ellis, Carleton, assignor.)
Standard Oil Company. (See Adams, C. E., Sullivan, and Anderson, assignors.)
Standard Oil Company of California. (See Shiffler, W. H., Holm, and Miller, assignors.)
Standard Oil Development Company. (See Davis, Garland H. B., assignor.)
Standard Oil Development Company. (See Harris, J. M., Jr., and Black, assignors.)
Standard Oil Development Company. (See Wells, Alfred A., assignor.)
Star-Service Hanger Company. (See Coney, James D., assignor.)
Start, Ernest. (See Start, Harry W. and E.)
Start, Harry W., Carlton, and E. Start, Wilford, assignors to George Blackburn and Sons Limited, Nottingham, England. Straight-bar knitting machine. 2,107,221; Feb. 1.
Steel Heddle Manufacturing Company. (See Kaufmann, Frank H., assignor.)
Stein, Joseph A., Pittsburgh, and H. F. Semrau, Rosedale, Pa., assignors to Bacharach Industrial Instrument Company. Pressure recording apparatus and method. 2,106,772; Feb. 1.
Stowell, Edward R., Fort Wayne, Ind., assignor of one-half to W. Hoyt, Cleveland Heights, Ohio. Ceramic glasing composition. 2,106,879; Feb. 1.
Sullivan, Frederick W., Jr. (See Adams, C. E., Sullivan, and Anderson.)
Sullivan, Joseph M., Jackson Heights, N. Y. Combination metal awning and screen. 2,106,962; Feb. 1.
Summers, William J., Chicago, Ill. Micrometer gauge. 2,107,222; Feb. 1.
Sucmala, John B., Camden, N. J., assignor to Radio Corportion of America. Power transmission device. 2,106,773; Feb. 1.
Swartz, Carl E., Cleveland Heights, assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio. Bearing metal alloy. 2,107,223; Feb. 1.
Sweeney, William J., Belleville, N. J. Display figure. 2,106,818; Feb. 1.
Swennes, Benjamin A., Rockford, assignor to Borg-Warner Corporation, Chicago, Ill. Transmission mechanism. 2,107,089; Feb. 1.
Swennes, Benjamin A., Rockford, assignor to Borg-Warner Corporation, Chicago, Ill. Water pump. 2,107,090; Feb. 1.
Swennes, Benjamin A., Rockford, assignor to Borg-Warner Corporation, Chicago, Ill. Brake. 2,107,091; Feb. 1.
Swennes, Benjamin A., Rockford, assignor to Borg-Warner Corporation, Chicago, Ill. Brake construction. 2,107,092; Feb. 1.
Sykes, George, Los Angeles, Calif. Fruit packing separator. 2,106,921; Feb. 1.
Sypien, Andrew K. (See Schlachta, Frank, assignor.)
Takach, Julius, Flushing Heights, Long Island, N. Y. Double slide window. 2,107,192; Feb. 1.
Taliaferro, William R. (See Harder, E. L., Hibbard, and Taliaferro.)
Tappan Stove Company, The. (See Bauer, William, assignor.)
Tarbox, John P., Philadelphia, Pa. Smoking pipe. 2,106,774; Feb. 1.
Tarvin, Noble R. (See Legg, D. A., and Tarvin.)
Tascher, Joseph, Brooklyn, N. Y. Flickering device. 2,106,922; Feb. 1.
Tatum, John C., Baltimore, Md. Car roof strurture. 2,106,988; Feb. 1.
Tavin, Frank, New York, N. Y., and H. Haas, Freehold, N. J., assignors to I. Eckstein, and M. Landau, doing business as I. D. Manufacturing Co., New York, N. Y. Making transparent puffing. 2,106,819; Feb. 1.
Taylor, Stanley D. (See Murphy, E. A., and Taylor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Buschbeck, W., and Bruckner, assignors.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Kippenberg, H., and Künzer, assignors.)
Teletype Corporation. (See Potts, Louis M., assignor.)
Terrell, Ralph A., assignor to Borg-Warner Corporation, Chicago, Ill. Electric welding apparatus. 2,107,093; Feb. 1.
Texas Company, The. (See Kuhn, W. E., and Kemp, assignors.)
Textile Machine Works. (See Gastrich, Gustav, assignor.)
Thibault, Emile H., Paris, France. Flying machine. 2,106,820; Feb. 1.
Tibbetts, Milton, assignor to Packard Motor Car Company, Detroit, Mich. Bearing. 2,106,860; Feb. 1.
Tidd, Warren H., White Plains, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Carrier communicating system. 2,107,168; Feb. 1.
Toaz, Glenn A., Bedford, Ohio. Fruit jar. 2,106,880; Feb. 1.
Tofte, Harold, Syracuse, assignor to T. N. Benedict Manufacturing Company, East Syracuse, N. Y. Drink mixer. 2,106,861; Feb. 1.
Tonkin, Albert, Cloquet, assignor of two-thirds to J. L. Monnahan, Minneapolis, Minn. Gas mixer. 2,106,903; Feb. 1.
Torbert, John E., Jr., National City, Calif. Drill. 2,106,937; Feb. 1.
Townsend, Oliver A., and A. P. Masters, assignors to Tru Colour Film Limited, Wellington, New Zealand. Colored photography. 2,107,004; Feb. 1.
Tramm, Heinrich, C. Clar, P. Kühsel, and W. Schuff, assignors to Ruhrchemie Aktiengesellschaft, Oberhausen-Holten, Germany. Fireproofing of wood. 2,106,938; Feb. 1.
Trask, Allen, assignor to Mills Novelty Company, Chicago, Ill. Valve. 2,106,775; Feb. 1.
Treadway, Sherman C., and C. Heckendorn, Forrest City, Ark. Garment hanger. 2,107,224; Feb. 1.
Trevor, Bertram, and R. W. George, Riverhead, N. Y., assignors to Radio Corporation of America. Receiving system. 2,106,776; Feb. 1.
Tru Colour Film Limited. (See Townsend, O. A., and Masters, assignors.)
Truesdale, Jesse P., Kershaw, S. C. Automobile map. 2,106,989; Feb. 1.
Tuft, Miles H., Rock Island, assignor to Deere & Company, Moline, Ill. Wheeled vehicle. 2,106,923; Feb. 1.
Tunick, Harry, Rye, N. Y., assignor to Radio Corporation of America. Piezoelectric crystal controlled oscillator circuits. 2,106,821; Feb. 1.
Tuthill Pump Company. (See Huber, Matthew W., assignor.)
Ullman, Morris L., Milton, Mass. Pencil sharpener. 2,106,963; Feb. 1.
Underpinning & Foundation Co. (See Raisch, William, assignor.)
Union Carbide and Carbon Corporation. (See Cox, H. L., and Carruthers, assignors.)
Union Carbide and Carbon Corporation. (See De Motte, Maurice P., assignor.)
Union Carbide and Carbon Corporation. (See De Motte, M. P., and Baker, assignors.)
Union Switch & Signal Company, The. (See Vantassel, Harry C., assignor.)
United Accustigraph Corporation. (See Bender, Max, assignor.)
United Aircraft Corporation. (See Ryder, E. A., and Parkins, assignors.)
United Cork Companies. (See Boss, Edward R., assignor.)
United Engineering & Foundry Company. (See Schmid, Hans H., assignor.)
United Gas Improvement Company, The. (See Hasel, Claude S., assignor.)

United Glass Bottle Manufacturers Limited, The. (See Moorshead, Thomas C., assignor.)
United Research Corporation. (See Fischer, Edwin L., assignor.)
United Research Corporation. (See Nielsen, John F., assignor.)
United Shoe Machinery Corporation. (See Bertrand, Frederic E., assignor.)
United Shoe Machinery Corporation. (See Caswell, J. A., and Robinson, assignors.)
United Shoe Machinery Corporation. (See Hopkins, Raymond E., assignor.)
United States Rubber Company. (See Gammeter, John R., assignor.)
United States Rubber Products, Inc. (See Wendes, John C. H., assignor.)
Van der Waerden, Hendrikus, The Hague, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Solvent dewaxing oils. 2,107,064; Feb. 1.
Vannah, Harold P. (See Richter, G. A., and Vannah.)
Van Peski, Adrianus J., Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Process and products relating to recovery of alcohols from hydrocarbon polymers. 2,107,065; Feb. 1.
Vantassel, Harry C., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Remote control system. 2,106,990; Feb. 1.
Van Veen, Anton. (See Jessen, T., and Van Veen.)
Varilux Holding Corporation. (See Best, John G., assignor.)
Vayda, Louis L., Aspinwall, Pa. Process and apparatus for analyzing gas. 2,106,777; Feb. 1.
Victor Adding Machine Company. (See Garbell, Max, assignor.)
Victor Adding Machine Company. (See Williams, John H., assignor.)
Vinson, Harold S. (See Mace, Charles E., assignor.)
Volk, Joseph A., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Phonograph. 2,106,778; Feb. 1.
Vorech, Stephen. (See Eaton, W. A., and Vorech.)
Wagner, Norbert R., Cleveland, Wis. Leg brace. 2,107,095; Feb. 1.
Walker, Herbert W. (See Riley, H. W., and Walker.)
Walker, William J., and S. F. Gimkey, Johannesburg, Union or South Africa, assignors to Broom and Wade Limited, High Wycombe, Buckinghamshire, England. Lubricator for air lines, rock drills, and other compressed air apparatus. 2,107,225; Feb. 1.
Walsh, Carroll H. (See Pittman, R. R., and Walsh.)
Walworth Patents Inc. (See Henderson, Albert J., assignor.)
Watson, Edward F. (See Lang, W. Y., and Watson.)
Webber, William F., Chicago, Ill. Stapling machine core. 2,107,160; Feb. 1.
Weddle, Loren F., Inglewood, Calif. Latch. 2,107,066; Feb. 1.
Weinlich, Hermann A., Berlin-Charlottenburg, and U. Kölm, Berlin-Lankwitz, Germany, assignors to International Business Machines Corporation, New York, N. Y. Card punch feed mechanism. 2,107,134; Feb. 1.
Weiskotten, William O. (See Facidier, Cora M., assignor.)
Wells, Alfred A., Roselle Park, N. J., assignor to Standard Oil Development Company. Centrifugal dewaxing of oils. 2,106,964; Feb. 1.
Wendes, John C. H., Naugatuck, Conn., assignor to United States Rubber Products, Inc., New York, N. Y. Collapsible form. 2,107,013; Feb. 1.
Wesselman, Albert, Cincinnati, Ohio. Package and manufacture thereof. 2,107,006; Feb. 1.
Western Electric Company. (See Brescka, R. S., and Meagher, assignors.)
Western Electric Company. (See Johnson, F. V., and Nydegger, assignors.)
Westinghouse Electric Elevator Company. (See Eames, William F., assignor.)
Westinghouse Electric & Manufacturing Company. (See Alben, Frank L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Bayne, George M., assignor.)
Westinghouse Electric & Manufacturing Company. (See Bernarde, Henry L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Bosch, Max, assignor.)
Westinghouse Electric & Manufacturing Company. (See Dawson, John W., assignor.)
Westinghouse Electric & Manufacturing Company. (See Dransfeld, Hubert, assignor.)
Westinghouse Electric & Manufacturing Company. (See Gatts, Henry S., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hague, F. T., and Davis, assignors.)
Westinghouse Electric & Manufacturing Company. (See Harder, E. L., Hibbard, and Taliaferro, assignors.)
Westinghouse Electric & Manufacturing Company. (See Lockwood, Edwin H., assignor.)
Westinghouse Electric & Manufacturing Company. (See McCulloch, Leon, assignor.)
Westinghouse Electric & Manufacturing Company. (See Pearcy, Noah C., assignor.)
Westinghouse Electric & Manufacturing Company. (See Schmidt, Henry F., assignor.)
Westinghouse Electric & Manufacturing Company. (See Slepian, J., and Ludwig, assignors.)
Westinghouse Electric & Manufacturing Company. (See Snyder, Frederick D., assignor.)
Weston, Sydney R., Montreal, Quebec, Canada. Squeeze tube cap. 2,107,226; Feb. 1.
Wheeler, Phillip R., Alexandria, Va. Control system for transmissions. 2,106,862; Feb. 1.
White Cap Company. (See Davies, Lynn E., assignor.)
White, Gerald E., Lansing, Mich. Fluid supply system. 2,106,822; Feb. 1.
White, Harry B., Canton, assignor to The Hoover Company, North Canton, Ohio. Odor dispenser. 2,107,019; Feb. 1.
Whitehouse, Duncan, Mill Hill, London, England. Machine for roughening bricks. 2,107,007; Feb. 1.
Whitney, Ralph D., New York, N. Y. Decolorising system for purification of lubricating oil in internal combustion engines. 2,106,863; Feb. 1.
Whittier, Charles C., Chicago, Ill. Method and means for producing vitamin D. 2,106,779; Feb. 1.
Whittier, Charles C., Chicago, Ill. Producing a vitamin D product. 2,106,780; Feb. 1.
Whittier, Charles C., assignor to Nutrition Research Laboratories, Inc., Chicago, Ill. Apparatus for producing antirachitic products. 2,106,781; Feb. 1.
Whittier, Charles C., assignor to Nutrition Research Laboratories, Inc., Chicago, Ill. Apparatus for producing vitamin D. 2,106,782; Feb. 1.
Wiegman, Clarence H., assignor to Packard Motor Car Company, Detroit, Mich. Internal combustion engine. 2,107,096; Feb. 1.
Wilcken, Karl, Dessau-Ziebigk, assignor to Junkers Flugzeug- und Motorenwerke Aktiengesellschaft, Dessau, Germany. Crankcase for internal combustion engines. 2,106,939; Feb. 1.
Wilcox, Harry L. (See Wright, D. C., and Wilcox.)
Wild, Charles H., assignor to Burt Machine Company, Incorporated, Baltimore, Md. Casing machine. 2,107,170; Feb. 1.
Wiley, Samuel E., Nashville, Tenn. Railway mail car. 2,107,000; Feb. 1.
Willford, Edward B., Merion, Pa. Gyroplane. 2,106,783; Feb. 1.
Wilhelm, Alexander, Budapest, assignor to the firm Pannonia Bányabörmemesitö és Kereskedelmi r. t., Ujpest, Hungary. Machine for smoothing and combing skins and the like. 2,106,991; Feb. 1.
Wilhelm, Ernest J., Palmerton, Pa., assignor to The New Jersey Zinc Company, New York, N. Y. Coating malleable non-noble heavy metals. 2,106,904; Feb. 1.
Willett, Benedict E., Dayton, Ohio, assignor of one-half to C. W. Riebel, Louisville, Ky. United folding leg table. 2,107,252; Feb. 1.
Williams, John H., assignor to Victor Adding Machine Company, Chicago, Ill. Adjustable paper roll support. 2,107,020; Feb. 1.
Willing, Joseph E., assignor to General Railway Signal Company, Rochester, N. Y. Signaling system for railroads. 2,107,171; Feb. 1.
Wilson, Fred R. (See Lewis, H. A., and Wilson.)
Wilson, Wesley, Chicago, Ill. Neutralising sound distortion. 2,107,135; Feb. 1.
Winograd, Harold, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Electric valve control system. 2,107,263; Feb. 1.
Wolf, Fritz, Birkenwerder, near Berlin, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Telephone system. 2,106,681; Feb. 1.
Wood, Dennis, Stanmore, England. Waxing machine. 2,106,940; Feb. 1.
Wood, Dennis, Stanmore, England. Conveyer. 2,106,941; Feb. 1.
Woodall Industries Incorporated. (See Johnson, Charles B., assignor.)
Woodhams, Douglas C., London, England. Air-circulating means for motor-driven vehicles. 2,107,193; Feb. 1.
Woodin, Charles K., Bloomington, Ill., assignor to National Rubber Machinery Company, Akron, Ohio. Dry cleaning machine. 2,107,227; Feb. 1.
Wright, David C., and H. L. Wilcox, assignors to The Electric Controller & Manufacturing Company, Cleveland, Ohio. Screw down motor controller. 2,106,965; Feb. 1.
Wroten, John F., Baltimore, Md. Manufacture of yeast. 2,106,784; Feb. 1.
Yacker, Jacob, and W. S. Kirsch, Brooklyn, N. Y. Stamp and label box. 2,107,194; Feb. 1.
Young, Alfred H., West Hartford, Conn. Drawing board and the like. 2,107,049; Feb. 1.
Yount, Willis H., Oakland, Calif., assignor to American Tractor Equipment Corporation. Earth moving device. 2,107,120; Feb. 1.
Zahn, Erich H. (See Prange, C. H., and Zahn.)
Zaiger, Louis, Lynn, Mass. Fan. 2,107,136; Feb. 1.
Zeiss Ikon Aktiengesellschaft. (See Küppenbender, Heinz, assignor.)
Zimmerman, Arthur G. (See Carson, B. R., and Zimmerman.)
Zimmerman, Axel E., West Palm Beach, Fla. Condiment holder. 2,107,228; Feb. 1.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 1ST DAY OF FEBRUARY, 1938

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Closure structure for metallic containers. J. W. Shera. Re. 20,647; Feb. 1.

Cover, Metallic tire. F. Hammond. Re. 20,644; Feb. 1.

Glazing construction. S. K. Huston, Jr. Re. 20,645; Feb. 1.

Heights of aircraft, particularly for use when the aircraft is landing, Means for indicating the. D. F. Lucking. Re. 20,646; Feb. 1.

Safety device. L. M. Goldsmith. Re. 20,643; Feb. 1.

Screen, Well. W. E. Harrington. Re. 20,648; Feb. 1.

Valve, Primer. P. S. Goss. Re. 20,642; Feb. 1.

LIST OF PLANT INVENTIONS

Rose. L. Burbank. 269; Feb. 1.

Rose. G. de Buyter. 270; Feb. 1.

LIST OF DESIGN INVENTIONS

Airplane. A. E. Raymond and E. F. Burton. 108,268; Feb. 1.

Apron. G. T. Bell. 108,275; Feb. 1.

Ball cock. A. C. Arbogast. 108,228; Feb. 1.

Bicycle frame. C. J. Fogarty. 108,201; Feb. 1

Billfold W. St. Thomas 108,251; Feb. 1

Bottle F. Pfeffer. 108,217; Feb. 1

Bottle. G. Spielman. 108,224; Feb. 1.

Bowl or similar article, Mayonnaise. R. A. Kelly. 108,203; Feb. 1.

Brooch or the like. N. Barbieri. 108,229; Feb. 1.

Candlestick or similar article. R. A. Kelly. 108,208; Feb. 1.

Case, Flashlight. A. Gelardin. 108,202; Feb. 1.

Case, Hand luggage. G. H. Wheary. 108,254; Feb. 1.

Case or similar article, Display. A. J. Long, Jr. 108,266; Feb. 1.

Clock face and metronome, Combined. A. H. Wolsfield. 108,274; Feb. 1.

Coat. E. Grossman. 108,284; Feb. 1.

Coat. J. A. Silverman. 108,302–3; Feb. 1.

Comb or similar article. J. Kahn. 108,238; Feb. 1.

Confectionery product. P. Ariolo. 108,256; Feb. 1.

Cover for an electric switch box or the like. R. A. Millermaster and A. A. Writzmann. 108,212; Feb. 1.

Cup or similar article. R. A. Kelly. 108,205; Feb. 1.

Cylinder reboring-plate. E. R. Michener. 108,244; Feb. 1.

Dish or similar article, Covered. R. A. Kelly. 108,210; Feb. 1.

Dispenser for paper tape product. F. H. Meyer. 108,243; Feb. 1.

Door and window grille. R. H. Hutchinson. 108,237; Feb. 1.

Dress. T. Coleman. 108,276–7; Feb. 1.

Dress. M. Ellenbogen. 108,259; Feb. 1.

Dress. R. Feintuck. 108,260; Feb. 1.

Dress. L. George. 108,283; Feb. 1.

Dress. A. Kaplan. 108,264; Feb. 1.

Dress. J. J. Kushner. 108,265; Feb. 1.

Dress. A. E. Levy. 108,292; Feb. 1.

Dress. J. Miracky. 108,267; Feb. 1.

Dress. F. Schiessel. 108,270; Feb. 1.

Dress. H. Snyder. 108,304–5; Feb. 1.

Dress. M. G. Strangard. 108,271; Feb. 1.

Dress. J. Tuman. 108,272; Feb. 1.

Dress, Combination. O. Zaretzky. 108,311; Feb. 1.

Dress, Ensemble. J. Abbate. 108,255; Feb. 1.

Dress ensemble. S. Comolli. 108,278; Feb. 1.

Fabric, Knitted. H. Moses. 108,295–6; Feb. 1.

Fabric, Knitted. D. Siegel. 108,301; Feb. 1.

Fabric or similar article, Textile. A. C. Jaeger. 108,283; Feb. 1.

Fabric or similar article, Textile. A. C. Jaeger. 108,287; Feb. 1.

Fabric, Textile. H. P. Koch. 108,240; Feb. 1.

Fabric, Textile. S. B. McDonald. 108,293; Feb. 1.

Fabric, Textile. H. Mey. 108,242; Feb. 1.

Fabric, Textile. M. Turpan. 108,307–8; Feb. 1.

Fabric, Textile. H. W. Wilde. 108,309; Feb. 1.

Fabric, Woven. J. H. Hoffman. 108,236; Feb. 1.

Glass, Drinking. E. W. Fuerst. 108,200; Feb. 1.

Glass or similar article. M. Shapiro. 108,220; Feb. 1.

Glove. W. E. Meyers. 108,294; Feb. 1.

Goblet or similar article. G. Sakier. 108,219; Feb. 1.

Guard, Combined stirrup and toe. A. F. Hart. 108,285; Feb. 1.

Handbag. H. Feimann. 108,261; Feb. 1.

Handbag. H. Felmann. 108,279–80; Feb. 1.

Hat. A. Raimess. 108,298–300; Feb. 1.

Headdress, Lady's. E. D. Barber. 108,257; Feb. 1.

Heater. L. A. Althoff. 108,227; Feb. 1.

Heater. J. A. Underwood. 108,253; Feb. 1.

Jar. F. Smith. 108,223; Feb. 1.

Jar or similar article, Covered. R. A. Kelly. 108,204; Feb. 1.

Jar or similar article, Covered candy. R. A. Kelly. 108,209; Feb. 1.

Lace. J. Dognin. 108,230; Feb. 1.

Lace. J. H. Worrall. 108,310; Feb. 1.

Marker and urn, Combined grave. J. M. Majewski, Jr. 108,211; Feb. 1.

Mounting, Single gem. J. Granat. 108,233; Feb. 1.

Pitcher or similar article, Cream. R. A. Kelly. 108,206; Feb. 1.

Plastic sheet or similar article. A. F. Harvey. 108,262; Feb. 1.

Radio cabinet or similar article. R. D. Siragusa. 108,222; Feb. 1.

Recorder or the like, Facsimile. W. G. H. Finch. 108,281–2; Feb. 1.

Ring, Finger. N. C. Sternberg. 108,250; Feb. 1.

Rug. L. Biva. 108,258; Feb. 1.

Rug. E. L. Russum. 108,246; Feb. 1.

Sail top. A. W. Steele. 108,306; Feb. 1.

Saw, Band. J. R. Morgan. 108,245; Feb. 1.

Scale, Platform. C. R. Kirk. 108,239; Feb. 1.

Shaker or similar article, Salt. R. A. Kelly. 108,207; Feb. 1.

Slip or similar article. D. Levy. 108,214–15; Feb. 1.

Sole or similar article. D. C. Hubbard. 108,286; Feb. 1.

Spoon or other article of flatware. A. H. Staf. 108,249; Feb. 1.

Stand, Bottle. J. Revson. 108,218; Feb. 1.

Stand, Display. R. A. Hennings. 108,235; Feb. 1.

Stand, Lamp. M. Oalek. 108,216; Feb. 1.

Stand, Smoking. E. Schultz. 108,221; Feb. 1.

Stove. R. E. Kruck. 108,241; Feb. 1.

Stove, Air circulating heating. E. Esson. 108,231; Feb. 1.

Support, Christmas tree. S. A. Pitt. 108,297; Feb. 1.

Sweater. C. Levine. 108,288–91; Feb. 1.

Tire. W. H. Adams. 108,226; Feb. 1.

Tire. K. D. Smith. 108,247; Feb. 1.

Tire. K. D. Smith and W. H. Adams. 108,248; Feb. 1.

Tool unit, Power driven. L. L. Timm. 108,252; Feb. 1.

Tray, File. E. R. Winstrom. 108,273; Feb. 1.

Umbrella. I. Mink. 108,213; Feb. 1.

Vehicle, Gasoline tank. A. de Sahbnoffsky. 108,269; Feb. 1.

Velocipede. W. H. Adams. 108,225; Feb. 1.

Wagon, Coaster. C. E. Garton. 108,232; Feb. 1.

Wiper, Ullage-rod. F. H. Heisley. 108,234; Feb. 1.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 1ST DAY OF FEBRUARY, 1938

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acetone-soluble cellulose acetate, Preparation of. G. A. Richter. 2,106,811; Feb. 1.

Acetylene generator. M. P. De Motte and C. H. Baker. 2,106,970; Feb. 1.

Acetylene generator. M. P. De Motte. 2,106,971–2; Feb. 1.

Acids and preparing the same, Hydroxylated fish oil fatty. A. W. Ralston and S. T. Bauer. 2,107,062; Feb. 1.

Acoustic device. F. F. Romanow. 2,106,813; Feb. 1.

Acoustic diaphragm and making same. M. W. Scheldorf. 2,106,815; Feb. 1.

Adding machine, Listing. L. P. Crosman. 2,107,142; Feb. 1.

Adjustable stand. J. Markert. 2,107,124; Feb. 1.

Air-circulating means for motor-driven vehicles. D. C. Woodhams. 2,107,193; Feb. 1.

Air condition indicator. A. F. Spilhaus. 2,107,017; Feb. 1.

Air conditioning apparatus. N. H. Gay. 2,107,243; Feb. 1.

Air or watercraft propulsion. C. M. Lee. 2,106,928; Feb. 1.

Airplane. D. Roberts and F. W. Peel. 2,106,761; Feb. 1.

Alcohols from alkyl sulphuric acids, Producing. W. H. Shiffler, M. M. Holm, and M. F. Miller. 2,106,877; Feb. 1.

Alcohols from hydrocarbon polymers, Process and products relating to recovery of. A. J. van Peski. 2,107,065; Feb. 1.

Aliphatic acid anhydrides and aldehydes, Making lower. H. Dreyfus. 2,106,798; Feb. 1.

Alkali metal sulphides, Producing anhydrous. H. T. J. König. 2,106,952; Feb. 1.

Alkyl-aryloxy-alkylols, Sulphonated. H. A. Bruson. 2,106,716; Feb. 1.

Alloy: *See*—
Aluminum alloy. Bearing metal alloy.

Alloys, Treating austenitic chrome-nickel steel. J. F. Sachse. 2,107,014; Feb. 1.

Aluminum alloy. R. H. Brown. 2,106,827; Feb. 1.

Amplifying and reproducing system. B. F. Miessner. 2,107,125; Feb. 1.

Amusement apparatus. J. N. Bartlett. 2,107,196; Feb. 1.

Animal trap. J. M. Mitchell. 2,107,060; Feb. 1.

Antirachitic products, Apparatus for producing. C. C. Whittier. 2,106,781; Feb. 1.

Article dividing and packaging machine. A. S. Heineman. 2,107,036; Feb. 1.

Article feeding and packaging mechanism. J. N. Francis. 2,106,975; Feb. 1.

Attachment for writing machines. J. Q. Sherman. 2,106,765; Feb. 1.

Automatic clutch. K. B. Lyman. 2,107,075; Feb. 1.

Automatic rotor valve. V. D. Boehler and R. D. McIntosh. 2,106,942; Feb. 1.

Automobile frame adjunct. D. W. Sherman. 2,107,191; Feb. 1.

Awning and screen, Combination metal. J. M. Sullivan. 2,106,962; Feb. 1.

B-methyl butyl cresols. G. W. Raisins and L. W. Clemence. 2,106,790; Feb. 1.

Bag: *See*—
Seamed bag.

Basket, Berry. F. K. and E. Shimizu. 2,106,816; Feb. 1.

Battery grid casting machine. A. H. Luhrman. 2,107,041; Feb. 1.

Battery installation for motor vehicles. J. O. Black. 2,106,883; Feb. 1.

Bearing. M. Tibbetts. 2,106,860; Feb. 1.

Bearing metal alloy. C. E. Swarts. 2,107,223; Feb. 1.

Bed. R. L. McLendon. 2,107,206; Feb. 1.

Beds, Attachment for. C. J. Ewald. 2,106,834; Feb. 1.

Belt. D. F. Morgan. 2,107,013; Feb. 1.

Belt drive, Variable speed. F. Nigra. 2,106,930; Feb. 1.

Bicycle. H. W. Peace. 2,107,251; Feb. 1.

Bit gauge and wrench, Combination mining. J. L. Knight. 2,106,749; Feb. 1.

Blank aligning mechanism and method. A. Novick. 2,107,043; Feb. 1.

Board and the like, Drawing. A. H. Young. 2,107,049; Feb. 1.

Bookbinding. T. J. Salsman and J. M. Marchok. 2,107,217; Feb. 1.

Bottle labeling machine. J. O. Fenner. 2,106,997; Feb. 1.

Bottle, Nonrefillable. J. A. Patterson. 2,107,083; Feb. 1.

Box: *See*—
Channel-vented box. Paint box.
Fire alarm box. Stamp and label box.

Box. J. P. Brunt and E. E. Maston. 2,106,907; Feb. 1.

Brace, Leg. N. R. Wagner. 2,107,095; Feb. 1.

Brake: *See*—
Hydraulic brake.

Brake. A. B. Cadman. 2,106,717; Feb. 1.

Brake. B. A. Swennes. 2,107,091; Feb. 1.

Brake apparatus, Hydraulic. J. W. Etchison. 2,107,111; Feb. 1.

Brake construction. B. A. Swennes. 2,107,092; Feb. 1.

Brake drum. C. S. Ash. 2,107,229; Feb. 1.

Brake drum cooling device. D. J. Campbell. 2,106,702; Feb. 1.

Brake lever construction. R. A. Sandberg. 2,107,047; Feb. 1.

Brake system, Fluid pressure. W. F. Oliver. 2,106,758; Feb. 1.

Brake system, Hydraulic. W. F. Oliver. 2,106,757; Feb. 1.

Bread slicer feed. W. W. Hartman. 2,106,949; Feb. 1.

Bread slicer, Helical single knife type. T. Jensen and A. Van Veen. 2,107,002; Feb. 1.

Brick, Burning. T. B. Dreher. 2,107,146; Feb. 1.

Brooder. J. A. Aukerman. 2,106,700; Feb. 1.

Bushing locating and rotating means. O. R. Briney. 2,107,051; Feb. 1.

Bushing remover. J. F. Herbert. 2,106,741; Feb. 1.

Camera equipment unit, Copying. E. S. Hineline. 2,107,074; Feb. 1.

Camera, Photographic. H. Küppenbender. 2,106,894; Feb. 1.

Candy puller. A. Poirier. 2,107,213; Feb. 1.

Cap: *See*—
Closure cap. Squeeze tube cap.

Car: *See*—
Railway mail car.

Carbon disulphide, Production of. J. P. Baxter and L. J. Burrage. 2,107,264; Feb. 1.

Carbonates, Treating. P. McComb. 2,107,255; Feb. 1.

Cardboard articles, Making. R. I. Rhodes. 2,107,085; Feb. 1.

Card punch feed mechanism. H. A. Weinlich and U. Kölm. 2,107,134; Feb. 1.

Carrier: *See*—
Sheet carrier.

Carrier communicating system. W. H. Tidd. 2,107,168; Feb. 1.

Cartridge, Converter. C. C. Guthrie. 2,107,034; Feb. 1.

Cash register. M. Garbell. 2,107,033; Feb. 1.

Casing machine. C. H. Wild. 2,107,170; Feb. 1.

Catalytic device. J. Finn, Jr. 2,106,910; Feb. 1.

Catalytic hydrogenation of crude benzene derivatives. M. H. Gwynn. 2,106,735; Feb. 1.

Cellulose ether recovery. W. J. Le Fevre and J. W. Britton. 2,107,005; Feb. 1.

Cellulose from lignocellulosic materials, Production of. H. Dreyfus. 2,106,797; Feb. 1.

Cellulose, Xanthating. G. A. Richter and H. P. Vannah. 2,106,812; Feb. 1.

Centrifugal separator, Closed. S. H. Hall. 2,107,035; Feb. 1.

Centrifuge. H. Dransfeld. 2,106,832; Feb. 1.

Ceramic glazing composition. E. R. Stowell. 2,106,879; Feb. 1.

Chain: *See*—
Potato digger chain.

Change over for sound picture apparatus. J. F. Nielsen. 2,106,957; Feb. 1.

Channel-vented box. J. P. Brunt and E. E. Maston. 2,106,908; Feb. 1.

Cigarette package. J. H. MacMillen, Jr. 2,107,042; Feb. 1.

Circuit breaker. J. G. Jackson. 2,107,246; Feb. 1.

Circuit controller for indicators. L. A. Hagler. 2,106,925; Feb. 1.

Circuits, Piezoelectric crystal controlled oscillator. H. Tunick. 2,106,821; Feb. 1.

Clamp: *See*—
Tap clamp.

Cleaner: *See*—
Suction cleaner.

Cleaner for threshing machines, Grain. J. Hosinski. 2,106,746; Feb. 1.

Cleaning machine, Dry. C. K. Woodin. 2,107,227; Feb. 1.

Clip: *See*—
No screed tile clip.

Closure. T. R. Gilliland. 2,107,244; Feb. 1.

Closure, Bottle. M. Sierad. 2,107,167; Feb. 1.

Closure cap. J. C. Gibbs. 2,107,170; Feb. 1.

Closure for containers. J. A. Olesen. 2,107,256; Feb. 1.

Closure for containers of liquid or semiliquid substances. J. M. Crook. 2,107,100; Feb. 1.

Closure operating mechanism for waste cans. M. Kamenstein. 2,106,892; Feb. 1.
Clutch: *See*—
Automatic clutch.
Coal, Hydrogenation of high oxygen. C. Ellis. 2,106,973; Feb. 1.
Coffee, Brewing. H. Cory. 2,107,236; Feb. 1.
Coloring material. T. A. Martone. 2,107,159; Feb. 1.
Composition material. A. C. Fischer. 2,106,943; Feb. 1.
Composition of matter. C. A. Laise. 2,107,122; Feb. 1.
Compressor, Positive pressure. J. Phillips. 2,106,959; Feb. 1.
Concrete masses, Preventing the formation of continuous voids in. T. C. Schenk. 2,107,130; Feb. 1.
Condenser construction. F. S. Smith. 2,107,132; Feb. 1.
Condenser scoop apparatus. H. F. Schmidt. 2,106,961; Feb. 1.
Condiment holder. A. E. Zimmerman. 2,107,228; Feb. 1.
Conductor, Stranded. H. W. Dudley. 2,107,177; Feb. 1.
Conductors, Insulating. L. McCulloch. 2,106,850; Feb. 1.
Confections, Making frozen. F. T. Krein. 2,106,893; Feb. 1.
Connecter: *See*—
Flexible connecter.
Connecter. B. H. Cope. 2,106,724; Feb. 1.
Construction unit. L. W. Ellertsen. 2,107,240; Feb. 1.
Container: *See*—
Paper and analogous material container.
Sheet metal container.
Container. J. C. Karnes and G. J. Kessenich. 2,106,748; Feb. 1.
Container bottom and top applying and sealing machine. J. K. M. Harrison. 2,106,739; Feb. 1.
Container for styptic powder, Dispensing. F. H. Beyer. 2,107,100; Feb. 1.
Container, Making a tined. E. L. Chappell. 2,106,828; Feb. 1.
Control system for transmissions. P. R. Wheeler. 2,106,962; Feb. 1.
Conveyer. D. Wood. 2,106,941; Feb. 1.
Conveyer mechanism. R. H. Gordon. 2,106,706; Feb. 1.
Cooler for furnaces, Water. L. R. McAfoos. 2,107,185; Feb. 1.
Coupler, Automatic car. K. Scharfenberg. 2,107,218; Feb. 1.
Coupling: *See*—
Shaft coupling.
Coupling device for toy trains. J. L. Bonanno. 2,107,024; Feb. 1.
Cover and lock therefor, Tire. B. M. Short. 2,107,015; Feb. 1.
Crankcase for internal combustion engines. K. Wilcken. 2,106,930; Feb. 1.
Crib and cradle, Combination. M. A. Kinnear. 2,106,927; Feb. 1.
Current-collection apparatus. F. T. Hague and F. R. Davis. 2,106,842; Feb. 1.
Cutter: *See*—
Food cutter.
Vegetable cutter.
Decolorising system for purification of lubricating oil in internal combustion engines. R. D. Whitney. 2,106,863; Feb. 1.
Denture. W. R. A. Guyton. 2,107,181; Feb. 1.
Denture and making the same, Swaged. C. H. Prange and E. H. Zahn. 2,106,809; Feb. 1.
Detector: *See*—
Liquid level change detector.
Diaphragm, Resilient. L. C. Brisson. 2,106,791; Feb. 1.
Dielectric guide system. H. E. Curtis. 2,106,725; Feb. 1.
Differential mechanism. C. E. Frederickson. 2,106,946; Feb. 1.

Fuel injection pump. Water pump.
Reversible fuel pump.
Pump and blower, Corrosion resisting. S. Ihara. 2,107,200; Feb. 1.
Punch. R. E. Page. 2,107,161; Feb. 1.
Quick closing and sealing valve. R. W. Collison. 2,106,723; Feb. 1.
Rack: *See*—
Floor rack.
Rack for refrigerator cars, Floor. R. J. Olander. 2,106,853; Feb. 1.
Radio control, Automatic. E. Brugger. 2,106,715; Feb. 1.
Radio directional indicator. J. B. Kleinkauf and D. K. Martin. 2,107,155; Feb. 1.
Radio frequency coil, Variable inductance. A. Agricola. 2,107,172; Feb. 1.
Radio mounting device. H. Kippenberg and P. Künser. 2,107,037; Feb. 1.
Radio station selector, Automatic. E. Brugger. 2,106,714; Feb. 1.
Rail expansion joint. H. H. Gilbert. 2,106,705; Feb. 1.
Railway control system. E. L. Harder, L. J. Hibbard, and W. R. Taliaferro. 2,106,844; Feb. 1.
Railway mail car. S. E. Wiley. 2,107,099; Feb. 1.
Range and control system therefor, Electric. W. Bauer. 2,107,173; Feb. 1.
Receiving system. B. Trevor and R. W. George. 2,106,776; Feb. 1.
Receptacle and closure therefor. H. L. Rogers. 2,107,216; Feb. 1.
Record controlled machine. R. L. Houston. 2,106,801–2; Feb. 1.
Record keeping device. B. E. Rorem. 2,106,856; Feb. 1.
Refrigerating apparatus. R. E. Gould. 2,106,840; Feb. 1.
Refrigerating apparatus. G. W. Mason. 2,107,076; Feb. 1.
Refrigerating apparatus. L. E. Scott and E. A. Smith. 2,107,088; Feb. 1.
Refrigeration. U. E. Coons. 2,107,053; Feb. 1.
Refrigerator. C. S. Evans. 2,106,909; Feb. 1.
Regulating device for thermocompressors. J. Kirgan. 2,106,804; Feb. 1.
Relay system. C. W. Latimer, J. L. Finch, and H. H. Beverage. 2,106,806; Feb. 1.
Remote control system. H. C. Vantassel. 2,106,990; Feb. 1.
Respirator. H. S. Cover. 2,106,795; Feb. 1.
Retainer for expansion joint strips. V. Schiavi. 2,106,935; Feb. 1.
Reversible fuel pump. M. W. Huber. 2,107,152; Feb. 1.
Ribbon feeding mechanism. J. F. Leventhal and S. Bagno. 2,107,039; Feb. 1.
Ribbon mechanism, Two-color. L. M. Potts. 2,107,044; Feb. 1.
Ring: *See*—
Packing ring.
Rock drill joint. H. H. Des Roches. 2,107,238; Feb. 1.
Roller bearer for printing machines. J. W. Johnson. 2,107,117; Feb. 1.
Roof structure, Car. J. J. Tatum. 2,106,988; Feb. 1.
Rotary tool. J. De Mooy. 2,107,108; Feb. 1.
Rubber, Producing porous sheets of. E. A. Murphy and S. D. Taylor. 2,106,808; Feb. 1.
Sadiron construction, Light weight. H. A. Smith. 2,106,936; Feb. 1.
Safety apparatus for liquid fuel containers. N. E. Koch. 2,106,750; Feb. 1.
Sandblast ornamentation, Method for. R. H. Kavanaugh. 2,106,980; Feb. 1.
Sauce, Preparation of soy. W. O. Snelling. 2,107,133; Feb. 1.
Scraper, Wheeled. T. R. Paulsen. 2,106,759; Feb. 1.
Screen: *See*—.
Projection screen.
Screen for automobiles, Light. J. Frank. 2,106,889; Feb. 1.
Seal for pump structures. S. C. Bliss. 2,106,884; Feb. 1.
Seamed bag. W. W. Rowe. 2,106,875; Feb. 1.
Seat construction. F. O. Church. 2,107,052; Feb. 1.
Seat structure, Aeroplane. R. C. Miller. 2,106,985; Feb. 1.
Seeder. H. C. Rassmann. 2,106,901; Feb. 1.
Sensing device. W. W. Lasker, Jr. 2,107,006; Feb. 1.
Separable fastener. P. E. Fenton. 2,106,728; Feb. 1.
Separator: *See*—
Centrifugal separator. Fruit packing separator.
Form separator.
Shaft coupling. W. Fleury. 2,107,070; Feb. 1.
Sharpener, Pencil. M. L. Ullman. 2,106,963; Feb. 1.
Sharpening device for safety razor blades, Electric. L. C. Hobart. 2,106,977; Feb. 1.
Shaving device. J. O. Jensen. 2,107,055; Feb. 1.
Shaving implement. J. Muros. 2,107,207; Feb. 1.
Sheet carrier. H. H. Schmid. 2,107,189; Feb. 1.
Sheet material, Shredded. N. E. McCulloch and W. A. Bourne. 2,106,896; Feb. 1.
Sheet metal container. A. H. Blakeway. 2,107,232; Feb. 1.
Sheet metal container. A. Pfleghar. 2,107,212; Feb. 1.
Sheet registering device for printing presses. L. R. Johnson. 2,107,248; Feb. 1.
Shoe bottom units, Manufacture of. R. E. Hopkins. 2,106,845; Feb. 1.
Shoe structure. C. F. and F. A. Bohn. 2,107,129; Feb. 1.
Sifting device. R. Hinkle. 2,106,742; Feb. 1.
Sign: *See*—
Illuminated sign.
Signal distortion indicating and measuring device for printing telegraph systems. R. B. Hearn. 2,107,149; Feb. 1.
Signal for vehicles, Direction. F. Courtinande. 2,107,104; Feb. 1.
Signaling system. R. E. Ressler. 2,106,810; Feb. 1.
Signaling system for railroads. J. E. Willing. 2,107,171; Feb. 1.
Signaling, Ultrahigh frequency. G. C. Southworth. 2,106,771; Feb. 1.
Silica for glass batches, Preparation of. H. P. Hood. 2,106,745; Feb. 1.
Ski clamping device. L. Aubert. 2,107,195; Feb. 1.

Slab construction, Doweled. C. F. Davis, J. G. Brush, and R. H. Peck. 2,107,145; Feb. 1.
Slab, Doweled. C. F. Davis, J. G. Brush, and R. H. Peck. 2,107,144; Feb. 1.
Smoking pipe. N. K. Jellinghaus. 2,106,747; Feb. 1.
Smoking pipe. J. P. Tarbox. 2,106,774; Feb. 1.
Sole fitting machine. F. B. Bertrand. 2,106,712; Feb. 1.
Sound distortion, Neutralizing. W. Wilson. 2,107,135; Feb. 1.
Sound recorder and reproducer. M. Bender. 2,107,050; Feb. 1.
Sound reproducing apparatus. B. R. Carson and A. G. Zimmerman. 2,106,718; Feb. 1.
Space-current device. N. C. Pearcy. 2,106,855; Feb. 1.
Speed-change mechanism. K. F. Gallimore. 2,106,731; Feb. 1.
Speed changing device for phonograph turntables. E. E. Collison and E. Nyman. 2,106,722; Feb. 1.
Speed changing mechanism. T. R. Goldsborough. 2,106,733; Feb. 1.
Spool and container, Film. B. H. Draeger. 2,106,726; Feb. 1.
Squash-racket court and the like. G. H. Colt. 2,107,141; Feb. 1.
Squeeze tube cap. S. R. Weston. 2,107,226; Feb. 1.
Stabilizer structure for automobiles. H. L. Chisholm, Jr. 2,106,886; Feb. 1.
Stabilizing means for motor vehicles. C. B. Huntman. 2,107,183; Feb. 1.
Stairway, Moving. W. F. Eames. 2,106,833; Feb. 1.
Stamp and label box. J. Yacker and W. S. Kirsch. 2,107,194; Feb. 1.
Stand: *See*—
Adjustable stand. Merchandising display stand.
Hat stand.
Stand and accessories therefor, Smoking. E. F. McDonald. 2,107,010; Feb. 1.
Stapling machine core. W. F. Weber. 2,107,169; Feb. 1.
Steam generator. J. P. Badenhausen. 2,107,022; Feb. 1.
Steam, Indirect generating of superheated. W. Bredtschneider. 2,107,101; Feb. 1.
Stencil for use in sandblasting. R. H. Kavanaugh. 2,106,981; Feb. 1.
Stockings, Making. L. H. Mendelsohn. 2,107,078; Feb. 1.
Store front construction. C. J. Bristow. 2,106,885; Feb. 1.
Strainer, Convertible sink. A. N. Pasman. 2,107,126; Feb. 1.
Straining and comminuting apparatus, Combined. C. H. Nordell. 2,106,851; Feb. 1.
Strands, Apparatus for handling. F. V. Johnson and R. R. Nydegger. 2,106,903; Feb. 1.
Stretcher, Shoe. P. Cirelli. 2,107,140; Feb. 1.
Substation protector. R. G. Sands. 2,106,902; Feb. 1.
Suction cleaner. E. L. Snyder. 2,107,016; Feb. 1.
Sugar, Controlled-grain. R. W. Robinson and A. Olsen, Jr. 2,106,762; Feb. 1.
Support: *See*—
Paper roll support. Pull rod support.
Surgical apparatus. J. G. H. Liebel and E. S. Flarsheim. 2,107,057; Feb. 1.
Switch: *See*—
Electric switch.
Table: *See*—
United folding leg table.
Tabulating and punching mechanism, Combined. E. H. Dreher. 2,107,030; Feb. 1.
Tabulating machine. G. F. Daly. 2,107,143; Feb. 1.
Tachymetric corrective device, more particularly for use in connection with sighting apparatus for artillery. 2,106,996; Feb. 1.
Tag and affixing the same, Bale identification. G. E. Gaus. 2,107,071; Feb. 1.
Tailor's measuring device. J. J. Fichtol. 2,106,729; Feb. 1.
Tap clamp, Conductor protecting. R. R. Pittman and C. H. Walsh. 2,107,061; Feb. 1.
Tap construction. F. E. Rice. 2,107,164–5; Feb. 1.
Telephone signaling system. E. E. King. 2,107,154; Feb. 1.
Telephone system. H. A. Lewis. 2,107,158; Feb. 1.
Telephone system. F. Wolf. 2,106,881; Feb. 1.
Telephone system, Automatic or semi-automatic. R. Mercer. 2,106,897; Feb. 1.
Teletypewriter. W. Y. Lang and E. F. Watson. 2,106,805; Feb. 1.
Temperature control means for machine lubricating systems. E. A. Ryder and W. A. Parkins. 2,107,188; Feb. 1.
Testing and classifying bonded granular bodies. R. L. Molton. 2,107,136; Feb. 1.
Thread, Rubber. J. E. Gammeter. 2,107,032; Feb. 1.
Tie plate and retaining clip, Railway. F. S. Schwinn. 2,107,131; Feb. 1.
Toaster, Electric. G. M. Bayne. 2,106,824; Feb. 1.
Tool: *See*—
Machine tool. Rotary tool.
Tool for removing paint, varnish lacquer, shellac, etc. F. J. Schulz. 2,107,220; Feb. 1.
Tool head for milling machines. W. J. F. Forward. 2,106,835; Feb. 1.
Toy train, Articulated. J. L. Bonanno. 2,106,698; Feb. 1.
Traffic controlling system for railroads, Centralized. N. D. Preston. 2,107,163; Feb. 1.
Trailer. J. M. Davan. 2,107,107; Feb. 1.
Transmission. T. L. Fawick. 2,107,112; Feb. 1.
Transmission. C. W. Floss. 2,106,870; Feb. 1.
Transmission mechanism. H. J. Perazzoli. 2,106,918; Feb. 1.
Transmission mechanism. B. A. Swennes. 2,107,089; Feb. 1.
Trap: *See*—
Animal trap.
Tube construction, Electric. C. A. Horn. 2,107,254; Feb. 1.
Tube or lamp, Electric discharge. A. Lederer. 2,106,753; Feb. 1.
United folding leg table. B. E. Willett. 2,107,252; Feb. 1.
Valve: *See*—
Automatic rotor valve. Water temperature control valve.
Open hearth valve.
Quick closing and sealing valve.
Valve. A. J. Henderson. 2,107,182; Feb. 1.
Valve. L. H. Kennon. 2,107,200; Feb. 1.
Valve. A. Trask. 2,106,775; Feb. 1.
Valve assembly. W. H. Haas. 2,106,736; Feb. 1.
Valve control, Flush. E. F. Morkisch. 2,106,916; Feb. 1.
Valve control system, Electric. H. Winograd. 2,107,263; Feb. 1.
Vapor electric device. J. Slepian and L. R. Ludwig. 2,106,857; Feb. 1.
Vegetable cutter. F. W. Nankivell. 2,107,208; Feb. 1.
Vehicle: *See*—
Motor vehicle. Wheeled vehicle.
Multiaxle drive vehicle.
Ventilator control system, Unit. W. R. Miller. 2,106,898; Feb. 1.
Vibration-damped structure, Making. D. S. Bruce and R. E. Berg. 2,106,792; Feb. 1.
Visor construction. C. B. Johnson. 2,107,247; Feb. 1.
Vitamin D, Apparatus for producing. C. C. Whittier. 2,106,782; Feb. 1.
Vitamin D, Producing. C. C. Whittier. 2,106,779; Feb. 1.
Vitamin D product, Producing a. C. C. Whittier. 2,106,780; Feb. 1.
Waist band for garments. I. W. Rohatyn. 2,107,046; Feb. 1.
Wall construction, Heat-insulated. E. R. Bose. 2,107,258; Feb. 1.
Warp leasing, Device for. F. H. Kaufmann. 2,107,004; Feb. 1.
Washing machine. G. G. Blandford. 2,107,139; Feb. 1.
Waste for journal box use, Apparatus for treating fibrous. E. S. Pearce. 2,106,986; Feb. 1.
Watchcase. J. Dinhofer. 2,107,176; Feb. 1.
Water bubbler. A. J. Desrosiers. 2,107,109; Feb. 1.
Water feed for rotary offset and lithographic presses. J. G. Goodlike. 2,106,732; Feb. 1.
Water pump. B. A. Swennes. 2,107,090; Feb. 1.
Water temperature control valve. C. B. McClure. 2,106,929; Feb. 1.
Waves, Transmission of guided. G. C. Southworth. 2,106,769; Feb. 1.
Wave-meter. A. E. Bowen. 2,106,713; Feb. 1.
Waxing machine. D. Wood. 2,106,940; Feb. 1.
Welding apparatus, Electric. R. A. Terrell. 2,107,093; Feb. 1.
Wetting, emulsifying, dispersing, or cleansing agents and products obtained by this process, Preparation of. A. Butignot. 2,107,197; Feb. 1.
Wheel axle structure, Motor vehicle drive steering. A. W. Herrington. 2,107,073; Feb. 1.
Wheeled vehicle. M. H. Tuft. 2,106,923; Feb. 1.
Windmill. C. J. Schenk. 2,107,219; Feb. 1.
Window and door lock, Casement. H. H. Kistner. 2,107,056; Feb. 1.
Window construction, Double. W. Owen. 2,106,900; Feb. 1.
Window, Double slide. J. Takach. 2,107,192; Feb. 1.
Wire, Bowden. W. W. Lasker. 2,107,184; Feb. 1.
Wire reminder for telephones, Held. A. C. Hersberg. 2,106,912; Feb. 1.
Wood, Fireproofing of. H. Tramm, C. Clar, P. Kühnel, and W. Schuff. 2,106,938; Feb. 1.
Wood preservative. K. H. Klipstein. 2,106,983; Feb. 1.
Wood preservative composition. S. Kamesam. 2,106,978; Feb. 1.
Wrapping machine, Hand operated. H. E. Goerke, G. A. Bystrom, and H. W. Schmale. 2,106,999; Feb. 1.
Wrench. J. E. Bittner. 2,107,231; Feb. 1.
Wrist pin, Sliding screw adjustable. E. E. Francis. 2,106,945; Feb. 1.
X-ray apparatus, Portable self-contained. H. L. J. Marshall. 2,106,873; Feb. 1.
Yeast, Manufacture of. J. F. Wroten. 2,106,784; Feb. 1.
Zero resetting mechanism for registers. K. Locke and R. Brunhuber. 2,106,807; Feb. 1.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 1, 1938

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

Mullen, Mary, assignor to Rosenan Bros. Inc., Philadelphia, Pa. Dress. 108,399; Feb. 8.
Mullen, Mary, assignor to Rosenan Bros. Inc., Philadelphia, Pa. Dress. 108,400; Feb. 8.
Nen, Irma, New York, N. Y. Medallion or the like. 108,343; Feb. 8.
Newman, Louis. (See Levy, Joseph G., assignor.)
Ontario Manufacturing Company. (See Downs, Marwood A., assignor.)
Peterson, Johann G., West Hartford, Conn. Electric switch. 108,344; Feb. 8.
Pilliod Cabinet Company. (See Pilliod, Thomas J., assignor.)
Pilliod, Thomas J., assignor to The Pilliod Cabinet Company, Swanton, Ohio. Combined article container and display cabinet. 108,345; Feb. 8.
Pono, Marie, New York, N. Y. Dress. 108,401; Feb. 8.
Pool, Noel E., and F. N. Curby, Salt Lake City, Utah. Combined lamp base and radio. 108,402; Feb. 8.
Rabito, Anthony, Elmhurst, N. Y., assignor to The State of Vermont. Tax stamp or similar article. 108,384; Feb. 8.
Rauschenberg, Gerhardt H., Dalton, Ga. Bedspread. 108,403; Feb. 8.
Rosenan Bros. Inc. (See Mullen, Mary, assignor.)
Rubinstein, Helena, Inc. (See Kane, Martine, assignor.)
Ruchman, Albert, New York, N. Y. Embroidered fabric. 108,413; Feb. 8.
Schelawald, Martin H., New York, N. Y. Sweater. 108,404; Feb. 8.
Schelhammer, Herman J., Whitestone, assignor to American Hard Rubber Company, New York, N. Y. Comb. 108,347; Feb. 8.
Schelhammer, Herman J., Whitestone, assignor to American Hard Rubber Company, New York, N. Y. Comb. 108,348; Feb. 8.
Sears, Roebuck and Co. (See Morgan, John R., assignor.)
Seeburg Radio Corporation. (See Miller, Nels A., assignor.)
Sieber, Arthur E., Haledon, N. J. Building. 108,340; Feb. 8.
Silverman, Jacob A., New York, N. Y. Suit ensemble. 108,405; Feb. 8.
Silverman, Jacob A., New York, N. Y. Suit. 108,406; Feb. 8.
Silverman, Jacob A., New York, N. Y. Coat. 108,407; Feb. 8.
State of Vermont, The. (See Rabito, Anthony, assignor.)
Sterman, Florence B., New York, N. Y. Textile fabric. 108,408; Feb. 8.
Sweeney, Joseph L., New York, N. Y., and R. L. Chipman, Jr., Montclair, N. J., assignors to Bates Laboratories, Inc., New York, N. Y. Portable typewriter. 108,350; Feb. 8.
Sweeney, Joseph L., New York, N. Y., and R. L. Chipman, Jr., Montclair, N. J., assignors to Bates Laboratories, Inc., New York, N. Y. Portable typewriter. 108,351; Feb. 8.
Turpan, Mark, West New York, N. J. Textile fabric. 108,414; Feb. 8.
Turpan, Mark, West New York, N. J. Textile fabric. 108,415; Feb. 8.
Turpan, Mark, West New York, N. J. Textile fabric. 108,416; Feb. 8.
Underwood Elliott Fisher Company. (See Anderson, Walter A., assignor.)
United States Glass Company. (See Kelly, Robert A., assignor.)
Weirich, Clarence L., assignor to The C. B. Dolge Company, Westport, Conn. Foot bath tray. 108,352; Feb. 8.
White Motor Company, The. (See de Sakhnoffsky, Alexis, assignor.)
Young Engineering Laboratories, Inc. (See Young, Serenus H. A., assignor.)
Young, Serenus H. A., St. Paul, assignor to Young Engineering Laboratories, Inc., Minneapolis, Minn. Bottle cap. 108,353; Feb. 8.
Zahn, Samuel, New York, N. Y. Dress. 108,410; Feb. 8.
Zahn, Samuel, New York, N. Y. Dress. 108,411; Feb. 8.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 8TH DAY OF FEBRUARY, 1938

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbott, John T., Chicago, Ill. Power developing unit for automotive vehicles. 2,107,844; Feb. 8.
Adams, Joy C., Bridgeport, Conn., assignor to General Electric Company. Coffee maker. 2,107,923; Feb. 8.
Adams, Joy C., Bridgeport, Conn., assignor to General Electric Company. Coffee maker. 2,107,924; Feb. 8.
Adams, Wilbur H. (See Ree, M. E., and Adams.)
Addicks, Christian J. (See Jenkins, R. J., and Addicks.)
Adlake Company, The. (See Verhagen, Christian M., assignor.)
Agfa Ansco Corporation. (See Koslowsky, Robert, assignor.)
Aghito, Marco, Torino, Italy. Safety razor. 2,107,358; Feb. 8.
Ahrens-Fox Fire Engine Company. (See Fox, Charles H., assignor.)
Aktiebolaget Gerh. Arehns Mekaniska Verkstad. (See Johnson, Bror E., assignor.)
Aktieselskapet Per Kure, Norsk Motor & Dynamofabrik. (See Morseth, Leif, assignor.)
Albert, Carl, Wuppertal-Barmen, Germany. Ash receptacle. 2,107,845; Feb. 8.
Allen, Edward B., deceased, by J. W. Allen, administratrix, Newtown, M. D. Knox, Devon, and H. C. Faulkner, Long Hill, Conn., assignors to The Singer Manufacturing Company, Elizabeth, N. J. Buttonhole sewing machine. 2,107,270; Feb. 8.
Allen, Edward B., deceased, by J. W. Allen, administratrix, Newtown, M. D. Knox, Devon, and H. C. Faulkner, Long Hill, Conn., assignors to The Singer Manufacturing Company, Elizabeth, N. J. Zigzag stitch-forming mechanism for sewing machines. 2,107,271; Feb. 8.
Allen, Josephine W., administratrix. (See Allen, E. B., Knox, and Faulkner.)
Altenburger, Ernst, assignor to Manser-Werke A.-G., Oberndorf on the Neckar, Germany. Barrel-holding device for automatic pistols. 2,107,350; Feb. 8.
Altwegg, Hans, and A. Eichler, Freiburg, Germany, assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Obtaining crepe effects on fabrics. 2,107,657; Feb. 8.
Aluminum Company of America. (See Turner, C. O., and Weigel, assignors.)
Aluminum Company of America. (See Work, H. K., and Testerud, assignors.)
Amdur, Leon H., Brooklyn, N. Y. Printing and device therefor. 2,107,272; Feb. 8.
Amdur, Leon H., Brooklyn, N. Y. Printing method and machine. 2,107,273; Feb. 8.
American Brake Shoe and Foundry Company, The. (See Ratkowski, Thomas A., assignor.)
American Can Company. (See Strickler, John C., assignor.)
American Optical Company. (See Tillyer, Edgar D., assignor.)
American Platinum Works. (See Streicher, Johann S., assignor.)
American Rolling Mill Company, The. (See Long, Paul H., assignor.)
American Rolling Mill Company, The. (See Moyer, S. P., and Long, assignors.)
American Stay Company. (See Presby, Leroy Q., assignor.)
American Telephone and Telegraph Company. (See Edwards, Paul G., assignor.)
American Telephone and Telegraph Company. (See Potter, Ralph K., assignor.)
Anchor Post Fence Company. (See Smoot, Theophilus H., assignor.)
Andersen, Carl N., Watertown, Mass., assignor to Lever Brothers Company. Organic mercury compounds. 2,107,321; Feb. 8.
Anderson, Adolph G., and J. I. Kibbe, Muskegon, assignors to Campbell, Wyant & Cannon Foundry Company, Muskegon Heights, Mich. Centrifugal casting machine. 2,107,322; Feb. 8.
Anderson Company, The. (See Boddy, Leonard, assignor.)
Anderson, Howard P., Erie, Pa., assignor to The Standard Stoker Company, Inc. Fuel distributing mechanism. 2,107,622; Feb. 8.
Anderson, Swan F., Rockford, Ill. Filling machine. 2,107,274; Feb. 8.
Anderson, William T., Eggertsville, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Vertical coating equipment. 2,107,276; Feb. 8.
Anderson, William T., Eggertsville, and J. M. Henry, Newburgh, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Drying equipment. 2,107,275; Feb. 8.

Antrim, William D., Gloucester, N. J., and A. W. Schlemmer, assignors to Roberts & Mander Stove Company, Philadelphia, Pa. Cooking stove. 2,107,972; Feb. 8.
Archibald, Francis E., Elizabeth, N. J., assignor to Standard Alcohol Co. Purifying alcohols by removing the oily impurities. 2,107,265; Feb. 8.
Armour and Company. (See Pool, William O., assignor.)
Armour and Company. (See Ralston, A. W., and Christensen, assignors.)
Arndt, Friedrich. (See Klaar, A., Arndt, and Berning.)
Aronson, Louis V., Newark, N. J., assignor to Art Metal Works, Inc. Pyrophoric lighting mechanism. 2,107,658; Feb. 8.
Art Metal Works, Inc. (See Aronson, Louis V., assignor.)
Arthur, James L., Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich. Ignition control apparatus. 2,107,266; Feb. 8.
Ash, Charles S., Milford, assignor to Kelsey-Hayes Wheel Company, Detroit, Mich. Wheel construction. 2,107,925; Feb. 8.
Askania-Werke A. G. vormals Centralwerkstatt-Dessau und Carl Bamberg-Friedenau. (See Blasig, Kurt, assignor.)
Askania-Werke A. G. vormals Central Werkstatt, Dessau und Carl Bamberg-Friedenau. (See Wunsch, G., and Hartung, assignors.)
Asmussen, Heinrich, Berlin-Steglitz, and J. Riess, Berlin, Germany, assignors to General Electric Company. Method of and apparatus for severing into lengths coiled filament wire. 2,107,926; Feb. 8.
Astrom, Carl P., East Orange, N. J. Ladle. 2,107,267; Feb. 8.
Atkinson, Ralph W., Perth Amboy, N. J., assignor to General Cable Corporation, New York, N. Y. Metal extrusion press and operation. 2,107,846; Feb. 8.
Atlantic Refining Company, The. (See Ferris, Seymour W., assignor.)
Aurex Corporation. (See Huth, Walter H., assignor.)
Austin, Miner M., Highland Park, Ill., assignor to Fansteel Metallurgical Corporation. Tantalum recovery. 2,107,277; Feb. 8.
Automatic Drive & Transmission Company. (See Morton, W. D., and Haupt, assignors.)
Automatic Telephone & Electric Company Limited. (See Smith, Sidney R., assignor.)
Automotive Devices Corporation. (See Farrell, Joseph E., assignor.)
Automotive Maintenance Machinery Co. (See Zimmerman, Herman W., assignor.)
Automotive Products Company Limited. (See Trapp, George J., assignor.)
Avery Engineering Company. (See Avery, L. T., and Lenane, assignors.)
Avery, Lester T., Shaker Heights, and H. Lenane, Euclid Village, assignors to Avery Engineering Company, Cleveland, Ohio. Apparatus for conditioning air. 2,107,268; Feb. 8.
Axe, Roy T., assignor to The O. M. Edwards Company Inc., Syracuse, N. Y. Window frame and sash unit. 2,107,773; Feb. 8.
Axe, Roy T., assignor to The O. M. Edwards Company Inc., Syracuse, N. Y. Sash holder mechanism. 2,107,774; Feb. 8.
Axe, Roy T., assignor to The O. M. Edwards Company Inc., Syracuse, N. Y. Window construction. 2,107,775; Feb. 8.
B. B. Chemical Co. (See Macdonald, Alexander D., assignor.)
Babcock & Wilcox Company, The. (See Wilson, Lincoln B., assignor.)
Bahan, William H., Greenville, S. C. Bobbin holder. 2,107,847; Feb. 8.
Bajon, Adolphe, assignor to Societe Anonyme "Transformateurs de Mesure E. Walter", Gentilly, France. Electric transformer for high tension. 2,107,973; Feb. 8.
Baker, Herbert K., Kokomo, Ind. Forming expanded metal. 2,107,278; Feb. 8.
Balke, Clarence W. and C. C., Highland Park, assignors to Fansteel Metallurgical Corporation, Chicago, Ill. Production of refractory metals and alloys. 2,107,279; Feb. 8.
Balke, Claire C. (See Balke, Clarence W. and C. C.)
Ballard, John E., San Francisco, Calif., assignor to G. Von Seebock, Syndicate Manager of Duo-Syndicate, New York, N. Y. Air cooling apparatus. 2,107,280; Feb. 8.
Ball, Joseph A., Los Angeles, assignor to Technicolor Motion Picture Corporation, Hollywood, Calif. Motion picture camera drive. 2,107,623; Feb. 8.
Balloffet Dies & Nozzle Co. (See Davis, John H., assignor.)

Bancroft, Albert F., West Newton, assignor to Bancroft-Walker Company, Waltham, Mass. Shoe heel and making same. 2,107,776; Feb. 8.
Bancroft-Walker Company. (See Bancroft, Albert F., assignor.)
Bangs, Ralph C., Providence, R. I., assignor to Cohn & Rosenberger, Inc., New York, N. Y. Monogram construction. 2,107,684; Feb. 8.
Bany, Herman, Lansdowne, Pa., assignor to General Electric Company. Control system. 2,107,927; Feb. 8.
Barker, Lyle M. (See Fowler, M. G., and Barker.)
Barnes, John B., assignor, by mesne assignments, to Universal Oil Products Company, Chicago, Ill. Hydrocarbon oil conversion. 2,107,269; Feb. 8.
Barrett, Edward L., La Grange, assignor to Utah Radio Products Company, Chicago, Ill. Circuit controlling device. 2,107,848; Feb. 8.
Batie, Joseph E., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich. Apparatus for forming molds. 2,107,928; Feb. 8.
Bassoni, Lewis J., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Splitting machine. 2,107,281; Feb. 8.
Beardsley, Osmer G., South Bend, Ind. Coupling for combined motor cars and trailers. 2,107,881; Feb. 8.
Beaulieu, Oliver. (See Van Buskirk, William H., assignor.)
Bebry, Percy P., Brookline, Mass. Couch. 2,107,882; Feb. 8.
Bécheresu, Louis, and R. Carrouée, Paris, France. Shock absorber. 2,107,974; Feb. 8.
Bechtold, Reuben E., assignor to Tokheim Oil Tank and Pump Company, Fort Wayne, Ind. Interlocking mechanism for gasoline dispensers. 2,108,028; Feb. 8.
Beck, Adolf, Bitterfeld, Germany, assignor, by mesne assignments, to Magnesium Development Corporation. Remelting and refining magnesium and light metal alloys containing magnesium. 2,107,282; Feb. 1.
Beck, Blanche, et al. (See Beck, Clarence E., assignor.)
Beck, Clarence E., assignor of forty-seven per cent to A. T. Hanby, eight per cent to B. Beck, and five per cent to J. H. Taft, Philadelphia, Pa. Carbonated beverage. 2,107,550; Feb. 8.
Beck, Koller & Company. (See Jarl, C. H. B., and Hovey, assignors.)
Beggs, Richard O., Arp, Tex. Shut-off valve. 2,107,975; Feb. 8.
Behrens, Teodoro A., King's Cross, London, England, assignor, by mesne assignments, to The Union Switch & Signal Company, Swissvale, Pa. Alternating current control apparatus. 2,107,360; Feb. 8.
Bell, James H. (See Dinley, Clarence F., assignor.)
Bell Telephone Laboratories, Incorporated. (See Busch, Aloysius J., assignor.)
Bell Telephone Laboratories, Incorporated. (See Goff, Harold W., assignor.)
Bell Telephone Laboratories, Incorporated. (See Harley, John B., assignor.)
Bell Telephone Laboratories, Incorporated. (See Hearn, Richard B., assignor.)
Bell Telephone Laboratories, Incorporated. (See Johnston, Donald F., assignor.)
Bell Telephone Laboratories, Incorporated. (See Kendall, B. W., and Mitchell, assignors.)
Bell Telephone Laboratories, Incorporated. (See Kinsley, Thomas G., assignor.)
Bell Telephone Laboratories, Incorporated. (See Mattke, Charles F., assignor.)
Beloit Iron Works. (See Berry, E. E., Hornbostel, and Goodwillie, assignors.)
Bendix Aviation Corporation. (See Bock, Clarence H., assignor.)
Bendix Products Corporation. (See Whittington, Ralph S., assignor.)
Benedek, Elek K., Bucyrus, Ohio. Hydraulic weighing scale. 2,107,883; Feb. 8.
Bennett Fittings. (See Franck, Robert P., assignor.)
Bennett, Arthur H., Logansport, Ind. Brake. 2,107,685; Feb. 8.
Benson, Edward E., assignor of one-half to E. P. Smith, Providence, R. I. Storm window. 2,107,929; Feb. 8.
Bent, Franklin A., Berkeley, assignor to Shell Development Company, San Francisco, Calif. Production of hydrated olefines. 2,107,515; Feb. 8.
Benton, James T., Spokane, Wash. Antifogging composition. 2,107,361; Feb. 8.
Berger, Mannie, Plainfield, N. J. Partition system. 2,107,624; Feb. 8.
Bergstrom, Carl V., Milwaukee, Wis. Reflector. 2,107,362; Feb. 8.
Berning, Helmut. (See Klaar, A., Arndt, and Berning.)
Berry, Earl E., L. Hornbostel, and J. E. Goodwillie, assignors to Beloit Iron Works, Beloit, Wis. Suction roll. 2,107,812; Feb. 8.
Best, Clarence A., New Albany, Ind. Folding chair. 2,107,813; Feb. 8.
Best, Frank C., assignor to Packard Motor Car Company, Detroit, Mich. Motor vehicle. 2,107,593; Feb. 8.
Bethlehem Steel Company. (See Miller, Louis G., assignor.)
Bettis, William I., Los Angeles, assignor to E. B. Kleaver, Burbank, Calif. Gas separator. 2,107,625; Feb. 8.
Bickness, Frank, Worthington, Minn. Pole bracket and insulator. 2,107,594; Feb. 8.
Biemenfeld, Morris, Brooklyn, N. Y. Girdle. 2,107,849; Feb. 8.
Bilhuber, E., Inc. (See Schenck, Gerhard, assignor.)
Bilhuber, Paul H., Douglaston, assignor to Steinway & Sons, New York, N. Y. Soundboard for pianos. 2,107,650; Feb. 8.
Billand, Carl, Kaiserslautern/Rheinpfalz, Germany. Molding by sand-blowing. 2,107,814; Feb. 8.
Binder, Anna, Buchau, Germany. Climbing device for skis. 2,107,363; Feb. 8.
Binks Manufacturing Company. (See Bramsen, S., and Wahlin, assignors.)
Binks Manufacturing Company. (See Gustafsson, E., and Wahlin, assignors.)
Birmingham, Thomas F., Hammond, Ind., assignor to The Superheater Company, New York, N. Y. Welding fins to tubes. 2,107,435; Feb. 8.
Bishop, John C., Savannah, N. Y. Trouser clip for clasp. 2,107,516; Feb. 8.
Bishop, John C., Savannah, N. Y. Antiskid. 2,107,517; Feb. 8.
Bissell, Carl H., assignor to Crouse-Hinds Company, Syracuse, N. Y. Signal casing. 2,107,777; Feb. 8.
Bitting, Incorporated. (See Keller, Harry H., assignor.)
Blasig, Kurt, Berlin-Steglitz, Germany, assignor to Askania-Werke A. G. vormals Centralwerkstatt-Dessau und Carl Bamberg-Friedenau. Measuring and indicating apparatus. 2,107,976; Feb. 8.
Bloomer Bros. Company. (See Inman, William H., assignor.)
Bludalk, Inc. (See Heinselmann, Alphonse A., assignor.)
Boatner, Howell, Springfield, Mo. Dental articulator. 2,107,283; Feb. 8.
Bock, Clarence H., Detroit, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind. Service apparatus. 2,107,850; Feb. 8.
Boddy, Leonard, Ann Arbor, Mich., assignor to The Anderson Company, Gary, Ind. Electrical indicating system and apparatus. 2,107,560; Feb. 8.
Boehm, Frederick E., Toledo, Ohio. Coloring of butter substitute. 2,107,851; Feb. 8.
Bolton, Elmer K., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Sizing fabric. 2,107,852; Feb. 8.
Bone, Hugh M., and R. C. Williams, Columbus, assignors, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio. Method and product for treating glass wool. 2,107,284; Feb. 8.
Borg, Ernest M. R., Hartford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 2,107,364; Feb. 8.
Borg, George W., Corporation. (See Hobbs, John W., assignor.)
Borg-Warner Corporation. (See Buchanan, John C., assignor.)
Borg-Warner Corporation. (See Ingersoll, Roy C., assignor.)
Borg-Warner Corporation. (See Nutt, H., and Reed, assignors.)
Borg-Warner Corporation. (See Reed, Harold V., assignor.)
Borg-Warner Corporation. (See Swenson, Carl E., assignor.)
Borggard, Clarence S., Somerville, Mass. Hand truck conveyer. 2,107,465; Feb. 8.
Börner, Karl. (See Roesner, E., Börner, Mahn, and Irion.)
Bosshard, John J., Chicago, assignor, to Brasco Manufacturing Company, Harvey, Ill. Store front construction. 2,107,323; Feb. 8.
Boston Wire Stitcher Company. (See Cavanagh, John F., assignor.)
Bourdon, Pierre M., Paris, assignor to Michelin et Cie., Clermont-Ferrand, France. Pressure indicator. 2,107,595; Feb. 8.
Bourdon, Pierre M., Paris, assignor to Michelin et Cie., Clermont-Ferrand, France. Pressure compensating device for multiple gas chambers. 2,107,596; Feb. 8.
Boussel, André. (See Sutter, C., and Boussel.)
Bouwers, Albert and J. H. van der Tuuk, assignors, by mesne assignments, to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. High voltage discharge tube. 2,107,597; Feb. 8.
Bowlby, Walter D., Meriden, N. H. Stable film-forming material and making same. 2,108,001; Feb. 8.
Bown, Samuel, St. Louis County, assignor to International Shoe Company, St. Louis, Mo. Boot or shoe and making the same. 2,107,725; Feb. 8.
Boyle, James C., Cincinnati, Ohio. Dispensing cap. 2,107,324; Feb. 8.
Bradley, Albert F., assignor to Northwestern Barb Wire Company, Sterling, Ill. Apparatus for making wire products. 2,107,745; Feb. 8.
Bradley, Leo C. (See Skinner, C. D., and Bradley.)
Brameen, Svend, and F. Wahlin, assignor to Binks Manufacturing Company, Chicago, Ill. Spray gun for spraying fabrics. 2,107,686; Feb. 8.
Brameen, Svend, and F. Wahlin, assignors to Binks Manufacturing Company, Chicago, Ill. Spray gun. 2,107,726; Feb. 8.
Brandt, John W., and A. J. Linder, assignors to The Troxel Manufacturing Company, Elyria, Ohio. Cycle saddle. 2,107,561; Feb. 8.
Brasco Manufacturing Company. (See Bosshard, John J., assignor.)

Braun, John L., Tonawanda, and K. S. Shickluna, assignors of one-third to F. C. Boatl, Buffalo, N. Y. Traffic signal. 2,107,930; Feb. 8.
Bray, William N., Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J. Heating apparatus suitable for use in shoemaking. 2,107,365; Feb. 8.
Brien, Bailey P., Chattanooga, Tenn. Block floor section. 2,107,854; Feb. 8.
Brodie, Ralph N., Company. (See Granberg, Albert J., assignor.)
Brolly, Archibald H., Palo Alto, Calif., assignor to Farnsworth Television Incorporation. Generating a pulse in a cathode ray tube. 2,107,778; Feb. 8.
Brown, Carl D., assignor to Draper Corporation, Hopedale, Mass. Bobbing changing loom. 2,107,466; Feb. 8.
Brown, Charles W., Middlebore, Mass. Method of and apparatus for electrically cooking frankfurters and other articles. 2,107,931; Feb. 8.
Brown, Henry. (See Soderberg, K. G., and Brown.)
Brown, William, Detroit, Mich. Method and apparatus for producting felted fiber insulation. 2,107,779; Feb. 8.
Brown, William E., Oakland, Calif. Door latch. 2,107,687; Feb. 8.
Browner, Cecil M., Beaumont, Calif. Tunnel mucking apparatus. 2,107,688; Feb. 8.
Bruson, Herman A., assignor to Röhm & Haas Company, Philadelphia, Pa. Organic compounds containing ether and thio ether linkages. 2,107,366; Feb. 8.
Bruson, Herman A., assignor to Röhm & Haas Company, Philadelphia, Pa. Polysulphonates of aromatic polyalkylene ethers. 2,107,367; Feb. 8.
Buchanan, John C., Detroit, Mich., assignor to Borg-Warner Corporation. Refrigerating apparatus. 2,107,562; Feb. 8.
Buffalo Brake Beam Company. (See Busch, Charles R., assignor.)
Buffalo Electro-Chemical Company. (See Kauffmann, Hans O., assignor.)
Bugatti, Ettore, Molsheim, France. Power transmitting mechanism for vehicles and especially railroad vehicles. 2,107,689; Feb. 8.
Buhler, Henry W., Gloucester, Mass. Finishing welt. 2,107,467; Feb. 8.
Bull, Cabot S. (See Shoemberg, L., Bull, and Rodda.)
Bull, Cabot S., Hillingdon, and S. Rodda, Enfield, assignors to Electric and Musical Industries Limited, Middlesex, England. Electron discharge device. 2,107,518; Feb. 8.
Bulldog Electric Products Company. (See Frank, Harrison J. L., assignor.)
Burroughs Adding Machine Company. (See Pasinski, Walter J., assignor.)
Burton, John, Edgbaston, Birmingham, England. Scaffolding coupling. 2,107,407; Feb. 8.
Busch, Aloysius J., Bellerose, assignor to Bell Telephone Laboratories Incorporated, New York, N. Y. Relay circuit. 2,107,746; Feb. 8.
Busch, Charles R., Orange, N. J., assignor to Buffalo Brake Beam Company, New York, N. Y. Brake shoe key. 2,107,521; Feb. 8.
Buschbeck, Werner, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Matching the impedance of a load to a source of power. 2,107,408; Feb. 8.
Buterworth, Samuel D., and S. M. Nampa, Detroit, Mich., assignors of ninety-nine per cent to The Worth Company and one per cent to said Samuel D. Butterworth. Car loading device. 2,107,932; Feb. 8.
Caggiano, Gertrude M., Ozone Park, N. Y. Curtain tieback device. 2,107,585; Feb. 8.
Calco Chemical Company, The. (See Pinco, Orrin W., assignor.)
Callen, Frank J., Clanton, Ala. Paper money counting mechanism. 2,107,977; Feb. 8.
Campbell, Donald J., Spring Lake Township, Ottawa County, assignor to Campbell, Wyant & Cannon Foundry Company, Muskegon Heights, Mich. Camshaft. 2,107,747; Feb. 8.
Campbell, Wyant & Cannon Foundry Company. (See Anderson, A. G., and Kibbe, assignors.)
Campbell, Wyant & Cannon Foundry Company. (See Campbell, Donald J., assignor.)
Canuteson, Irving L., Beaumont, Tex., assignor to Precision Scientific Company, Chicago, Ill. Temperature measuring device. 2,107,468; Feb. 8.
Caracristi, Virginius E., Brookville, assignor to The Superheater Company, New York, N. Y. Locomotive superheater. 2,107,615; Feb. 8.
Carolina Dyeing and Winding, Incorporated. (See James, E. F., and Hemick, assignors.)
Carpenter, Charles E., Chicago, Ill. Doughnut cooking machine. 2,107,325; Feb. 8.
Carrouée, René. (See Béchereau, L., and Carrouée.)
Cartlidge, Frank, assignor to Goodman Manufacturing Company, Chicago, Ill. Loading machine. 2,107,469; Feb. 8.
Catland, Alfred C., Alhambra, assignor to Globe Oil Tools Company, Los Nietos, Calif. Well bit. 2,107,626; Feb. 8.
Catland, Alfred C., Alhambra, Calif. Well bit construction. 2,107,627; Feb. 8.
Cavanagh, John F., Providence, R. I., assignor to Boston Wire Stitcher Company, Portland, Me. Fastener-applying device. 2,107,522; Feb. 8.
Celanese Corporation of America. (See Hale, F. C., and Yeadon, assignors.)
Celanese Corporation of America. (See Jones, J. E., and Johnston, assignors.)
Celanese Corporation of America. (See Platt, Herbert, assignor.)
Celluloid Corporation. (See Salemme, William, assignor.)
Ceskoslovenska Zbrojovka, a. s., Brno. (See Holek, František, assignor.)
Ceskoslovenská Zbrojovka a. s. Brno. (See Rolčík, Miroslav, assignor.)
Chambers, Bering, Quinlan Company. (See Cooper, Earl E.)
Chan, T. Y. (See Yu, Chan Ting.)
Chandlee Corporation, The. (See Jenkins, R. J., and Addicks, assignors.)
Chesler, Isidor, New York, N. Y., assignor to Eagle Pencil Company. Mechanical pencil. 2,107,816. Feb. 8.
Chicago Flexible Shaft Company. (See Nelson, John W., assignor.)
Chicago Pneumatic Tool Company. (See Davenport, Ransom W., assignor.)
Chott, Edward L., assignor of one-half to H. J. Chott, Chicago, Ill. Dispensing cap. 2,107,563; Feb. 8.
Chott, Hugo J. (See Chott, Edward L., assignor.)
Christensen, Carl W. (See Ralston, A. W., and Christensen.)
Christensen, Norman V., Chicago, and H. Hacklander, Tinley Park, assignors to Union Special Machine Company, Chicago, Ill. Sewing machine. 2,107,368; Feb. 8.
Cichocki, Joseph, Woodhaven, N. Y. Adjustable shelving. 2,107,660; Feb. 8.
Cincinnati Advertising Products Company, The. (See Mattman, Gustave F., assignor.)
Clark, Claude J., Young, Ariz. Windmill. 2,107,690; Feb. 8.
Cleveland Brass Manufacturing Company, The. (See Roach, Nathan, assignor.)
Cleveland Tungsten Manufacturing Company. (See Oberdick, Luther E., assignor.)
Clorius, Odin T., Copenhagen, Denmark. Evaporation meter. 2,107,628; Feb. 8.
Coe, Elbert H., Warners, N. Y. Building structure. 2,107,523; Feb. 8.
Coffey, George E., assignor to H. S. Russell, Chicago, Ill. Floor rack. 2,107,853; Feb. 8.
Cohn, Adolph H., assignor, by mesne assignments, to E. Karfiol, Great Neck, and L. A. Voltter, New York, N. Y. Ornamental product. 2,107,748; Feb. 8.
Cohn & Rosenberger, Inc. (See Bangs, Ralph C., assignor.)
Coleman Lamp and Stove Company, The. (See Olds, Ambrose D., assignor.)
Colson Corporation, The. (See Roe, M. E., and Adams, assignors.)
Colvin, William, Jr., Troy, N. Y. Rug or carpet. 2,107,598; Feb. 8.
Comalan, Incorporated. (See Corser, Lawrence E., assignor.)
Conn, C. G., Ltd. (See Platz, Ford D., assignor.)
Conner, James E. (See Smith, C. H., and Conner.)
Connor, Kirke W., Detroit, Mich., assignor to Micromatic Hone Corporation. Honing. 2,108,029; Feb. 8.
Consolidated Iron-Steel Manufacturing Company of 1932. (See Hamlin, Walter E., assignor.)
Constantine, Arthur R., River Forest, assignor, by mesne assignments, to Reconstruction Finance Corporation, Chicago, Ill. Ice tray supporting and releasing means. 2,107,285; Feb. 8.
Conti, Frank C. (See Braun, J. L., and Shickluna, assignors.)
Continental Can Company. (See Kronquest, Alfred L., assignor.)
Cookson, Clarence F., Shelton, Conn. Game board. 2,107,326; Feb. 8.
Cooper, Earl E., assignor to Chambers, Bering, Quinlan Company, Decatur, Ill. Faucet. 2,107,727; Feb. 8.
Cooper, Irving B., Allendale, N. J. Vehicle body construction. 2,107,854; Feb. 8.
Corcoss Conversion Corporation. (See Rowland, H. R., and Smith, assignors.)
Corser, Lawrence E., Cortland, assignor, by mesne assignments, to Comalan, Incorporated, Homer, N. Y. Block keying system. 2,107,691; Feb. 8.
Coyle, John W. (See Noll, Harry R., assignor.)
Crago, Paul H., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway signaling. 2,107,680; Feb. 8.
Crawford, James M., Detroit, and H. A. Schwager, Royal Oak, assignors to General Motors Corporation, Detroit, Mich. Ignition distributor. 2,107,470; Feb. 8.
Creed, Frederick G., Addiscombe, Croydon, England. Floating station. 2,107,856; Feb. 8.
Creighton, Thomas A., Long Beach, assignor of one-half to J. C. Wright, Los Angeles, Calif. Cementing well casings. 2,107,327; Feb. 8.
Crockett, Robert A., and R. H. Crockett, Cincinnati, Ohio. Heating system and method. 2,107,933; Feb. 8.
Crockett, Robert H. (See Crockett, Robert A., and R. H.)

Crombie, George, Sr., assignor to The Stearns-Roger Manufacturing Company, Denver, Colo. Fire wall construction. 2,107,524; Feb. 8.
Crosley Radio Corporation, The. (See Willging, Louis F., assignor.)
Crossley, Arthur, Bolton, England. Solid plaited material. 2,107,661; Feb. 8.
Croucher, Harry J. S., Farnham, England. Jig for use in metaling bearings. 2,107,978; Feb. 8.
Crouse-Hinds Company. (See Bissell, Carl H., assignor.)
Crowley, H. S., Lowell, and R. J. Wilkie, Newton, Mass. Sectional roll. 2,107,471; Feb. 8.
Cunniff, Ivy. (See Singleton, John C., assignor.)
Cunningham, John P., Kingman, Ariz. Rock or earth drill bit. 2,107,286; Feb. 8.
Curran, Alton F., assignor to The Curran Corporation, Malden, Mass. Liquid degreasing composition. 2,107,287; Feb. 8.
Curran, Alton F., assignor to The Curran Corporation, Malden, Mass. Liquid composition for degreasing surfaces and process of preparation. 2,107,288; Feb. 8.
Curran Corporation, The. (See Curran, Alton F., assignor.)
Curtis, Earl W., Canton, Ohio. Apparatus for the manufacture of pretzels. 2,107,749; Feb. 8.
Cutler, Philip, New York, N. Y. Convertible couch. 2,107,728; Feb. 8.
Dallas, Constance H., Chestnut Hill, Pa. Adjustable chair leg extension. 2,107,629; Feb. 8.
Daman, Arthur C. (See Denny, J. J., and Daman.)
Damsiger, Harold I., Westwood, N. J., and A. Di Giacomo, New York, N. Y.; said Di Giacomo assignor to said Damsiger. Electrolytic condenser body and making the same. 2,107,780; Feb. 8.
Darby, J. F. (See Porter, Albert N., assignor.)
Darme, John M. G., Carrol Park, Pa. Gas keeper. 2,107,600; Feb. 8.
Darrah, William A., Chicago, Ill. Oxidation. 2,108,030; Feb. 8.
Dartmouth College, Trustees of the. (See Ogle, Kenneth N., assignor.)
Davenport, Ransom W., Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y. Refrigerating system. 2,107,887; Feb. 8.
Davis, Jack I., assignor to Sidney Ludwig, Chicago, Ill. Inter-office communication system. 2,107,817; Feb. 8.
Davis, John H., Ridgewood, assignor to Balloffet Dies & Nozzle Co., Inc., Guttenberg, N. J. Nozzle. 2,107,601; Feb. 8.
Davis, Kenneth, Edensburg, Pa., assignor, by mesne assignments, to Peale-Davis Company, Wilmington, Del. Process and mechanism for separating intermixed divided materials. 2,107,602; Feb. 8.
Dawson, Aaron G. (See Groeschel, S. C., and Dawson.)
Dayton Malleable Iron Company, The. (See Runyan, W. B., and Langenheim, assignors.)
Dayton Malleable Iron Company, The. (See Smith, Charles J., assignor.)
Dean, Irving, Rockaway Beach, N. Y. Illuminating device for bathroom scales. 2,107,888; Feb. 8.
De Bieux, Earl V., Pittsfield, Mass., assignor to General Electric Company. Parallel multianode transformer connection. 2,107,934; Feb. 8.
De Boer, Jan H. (See Teves, M. C., and de Boer.)
De Botelho, Martin, New York, N. Y. Device for closing a bag. 2,107,692; Feb. 8.
Deere & Company. (See White, Charles H., assignor.)
Deere, John, Tractor Company. (See McCormick, E., Stewart, and Worthington, assignors.)
Del-Mac Shoe Process Corporation. (See Quinn, Edward, assignor.)
Delvinlotti, Paris, France. Clockwork system. 2,108,010; Feb. 8.
Denison, Alvina M., administratrix. (See Denison, James H.)
Denison, James H., deceased, by A. M. Denison, administratrix, Hartford, Conn. Selective control mechanism for radio sets. 2,107,472; Feb. 8.
Denny, John J., Schumacher, and A. C. Daman, Denver, Colo., assignors, by mesne assignments, to Mining Process and Patent Company. Concentration of minerals. 2,107,239; Feb. 8.
Denovan, Robert A., Asbestos, Quebec, Canada. Horizontal vibrating screen. 2,107,729; Feb. 8.
Derby, John H., Scarsdale, N. Y. Fire detecting and alarm mechanism. 2,107,525; Feb. 8.
De Turk, Lewis L. (See Heffner, H. F., and De Turk.)
Dichter, Jakob, Berlin-Schoneberg, Germany. Apparatus for forming screw-threaded necks. 2,107,979; Feb. 8.
Dickey, Edward A., Aliquippa, Pa. Hydraulic brake. 2,107,564; Feb. 8.
Dickey, Joseph B. (See McNally, J. G., and Dickey.)
Dietrich, Werner, assignor to Roberts and Schaefer Company, Chicago, Ill. Coaling gate for locomotives. 2,107,781; Feb. 8.
Dietzler, Andrew J. (See Perkins, R. P., and Dietzler.)
Di Giacomo, Aniello. (See Dansiger, H. L., and Di Giacomo.)
Disley, Clarence F., Detroit, Mich., assignor to James H. Bell, Philadelphia, Pa. Apparatus for treating things with volatile solvents. 2,107,360; Feb. 8.
Dobson, William A., Wethersfield, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 2,107,370; Feb. 8.
Domber, Joseph, Bronx, assignor to Peerless Sample Card Co., Inc., New York, N. Y. Sample card. 2,107,730; Feb. 8.
Donnan, Earl H., assignor of one-half to O. J. Heft, Chestnut, Ill. Stock loading chute. 2,107,371; Feb. 8.
Dorr Company, The. (See Russell, William S., assignor.)
Dougherty, John M., St. Louis, Mo. Vacuum pump. 2,107,880; Feb. 8.
Dow Chemical Company, The. (See Dressel, G. F., and Short, assignors.)
Dow Chemical Company. (See Perkins, R. P., and Dietzler, assignors.)
Dow Chemical Company, The. (See Smith, F. B., and Livak, assignors.)
Draper Corporation. (See Brown, Carl D., assignor.)
Dressel, Grayton F., Wilmington, N. C., and C. E. Short, assignors to The Dow Chemical Company, Midland, Mich. Preparation of ethylene bromide. 2,108,011; Feb. 8.
Drexler, Samuel, assignor to M. S. Harrison and E. Spector, doing business under the firm name and style of Bilt-Rite Baby Carriage Co., Brooklyn, N. Y. Baby carriage bed. 2,107,855; Feb. 8.
Dreyer, John F., Jr., Brooklyn, N. Y., assignor to Radio Corporation of America. Automatic volume control circuits. 2,107,409; Feb. 8.
Dreyer, John F., Jr., Brooklyn, N. Y., assignor to Radio Corporation of America. Automatic gain control circuit. 2,107,410; Feb. 8.
Dreyfus, Henry, London, England. Treatment of textile and other materials. 2,107,526; Feb. 8.
Driver-Harris Company. (See Rogers, Owen A., assignor.)
Dunford, Ernest, assignor to Landis Machine Company, St. Louis, Mo. Sanding wheel. 2,107,411; Feb. 8.
Duo-Syndicate. (See Ballard, John R., assignor.)
Du Pont, E. I., de Nemours & Company. (See Altwegg, H., and Eichler, assignors.)
Du Pont, E. I., de Nemours & Company. (See Anderson, William T., assignor.)
Du Pont, E. I., de Nemours & Company. (See Anderson, W. T., and Henry, assignors.)
Du Pont, E. I., de Nemours & Company. (See Bolton, Elmer K., assignor.)
Du Pont, E. I., de Nemours & Company. (See Hyden, W. L., and Fonda, assignors.)
Du Pont, E. I., de Nemours & Company. (See Wuertz, A. J., and Lulek, assignors.)
Du Pont, E. I., de Nemours & Company. (See Stallmann, Otto, assignors.)
Eagle Pencil Company. (See Chesler, Isidor, assignor.)
Eastman Kodak Company. (See McNally, J. G., and Dickey, assignors.)
Ebert, Joseph, Westmont, N. J., assignor to The Farastan Company, Philadelphia, Pa. Salt of ortho hydroxy quinoline. 2,107,856; Feb. 8.
Edenburg, Josef, Vienna, Austria. Friction wheel pocket lighter. 2,107,372; Feb. 8.
Edlund, Karl R. (See Evans, T., and Edlund.)
Edwards, O. M., Company Inc., The. (See Axe, Roy T., assignor.)
Edwards, Paul G., Verona, N. J., assignor to American Telephone and Telegraph Company. Apparatus for converting continuous motion into interrupted motion. 2,107,373; Feb. 8.
Eichler, Armin. (See Altwegg, H., and Eichler.)
Eisler, Joseph D., assignor to Western Geophysical Company, Los Angeles, Calif. Oscillograph apparatus. 2,108,012; Feb. 8.
Eitzen, August D., Rockville Centre, assignor to News Projection Corporation, New York, N. Y. Projecting apparatus and system. 2,107,290; Feb. 8.
Electric and Musical Industries Limited. (See Bull, C. S., and Rodda, assignors.)
Electric Storage Battery Company, The. (See Hall, Clarence A., assignor.)
Electrical and Musical Industries Limited. (See Shoenberg, I., Bull, and Rodda, assignors.)
Elian, John, Paris, France. Preparing iron and steel. 2,107,980; Feb. 8.
Ellenburg, Sanford J., Berkeley, assignor to Handy-Roll Company, Oakland, Calif. Roll tape container. 2,107,603; Feb. 8.
Elliott, William E., Youngstown, Ohio. Composition and method for the treatment of hydrocarbon emulsions. 2,107,473; Feb. 8.
Elsner, Johann, Mistek, Czechoslovakia. Textile drafting apparatus. 2,107,818; Feb. 8.
Emmett, Paul H., Washington, D. C., assignor to H. A. Wallace, Secretary of Agriculture of the United States of America. Oxidising phosphorus. 2,107,857; Feb. 8.
Enss, Johann, and M. Hüniger, Berlin-Charlottenburg, Germany, assignors to General Electric Company. Ultraviolet transmitting glasses. 2,107,935; Feb. 8.
Erbach, Frederick R., Beloit, assignor, by mesne assignments, to Nash Kelvinator Corporation, Detroit, Mich. Refrigerating apparatus. 2,107,630; Feb. 8.
Erwin, Weldon C., Huntington Park, assignor to J. Grant, Los Angeles, Calif. Well cleaning system. 2,107,631; Feb. 8.
Evans, Theodore, Oakland, and K. R. Edlund, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Concentrating organic acids. 2,107,527; Feb. 8.

Everett, Arthur C., Boston, assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass. Receptacle cleaning and filling machine. 2,107,474; Feb. 8.
Ewald, Heinrich K. F., Chemnitz, assignor to Wanderer-Werke vorm. Winklhofer & Jaenicke Akt.-Ges. Schonau-Chemnitz, Germany. Device for calculating machines, accounting machines, writing and like machines. 2,107,374; Feb. 8.
Faber, Ernst, Stuttgart, Germany. Vacuum cleaner. 2,107,619; Feb. 8.
Fansteel Metallurgical Corporation. (See Austin, Miner M., assignor.)
Fansteel Metallurgical Corporation. (See Balke, Clarence W., and C. C., assignors.)
Farastan Company, The. (See Ebert, Joseph, assignor.)
Farmer, Trester B. (See Biggs, C. A., and Farmer.)
Farnsworth, Philo T., San Francisco, and D. K. Lippincott, Larimpur, assignors to Farnsworth Television Incorporated, San Francisco, Calif. Radiation frequency converter. 2,107,782; Feb. 8.
Farnsworth Television Incorporated. (See Brolly, Archibald H., assignor.)
Farnsworth Television Incorporated. (See Farnsworth, P. T., and Lippincott, assignors.)
Farnsworth Television Incorporated. (See Gardner, Bernard C., assignor.)
Farr, D. E., et al. (See Rose, Lynn E., assignor.)
Farrell, Joseph E., assignor to Automotive Devices Corporation, Washington, D. C. Automatic electric service line protector. 2,107,820; Feb. 8.
Farrell, Joseph E., assignor to Automotive Devices Corporation, Washington, D. C. Automatic switch for electric service lines. 2,107,821; Feb. 8.
Faulkner, Harold C. (See Allen, E. B., Knox, and Faulkner.)
Fehr, Harry W., Whitemarsh, assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa. Temple roller. 2,108,013; Feb. 8.
Feinberg, Benjamin G., New York, N. Y. Renapping process. 2,107,528; Feb. 8.
Fellows Gear Shaper Company, The. (See Miller, Edward W., assignor.)
Felton, Gladys, et al. (See Rose, Lynn E., assignor.)
Ferris, Seymour W., Aldan, assignor to The Atlantic Refining Company, Philadelphia, Pa. Treatment of hydrocarbon oil. 2,107,291; Feb. 8.
Fetzer, Walter R., St. Louis, Mo., assignor to Union Starch and Refining Company, Columbus, Ind. Manufacture and use of malt adjunct from corn. 2,107,529; Feb. 8.
Finch, Evans W., Riverside, Calif. Advertising novelty. 2,107,693; Feb. 8.
Fisette, Charles E., Los Angeles, Calif. Hydraulic master brake cylinder control. 2,107,565; Feb. 8.
Fitch, Benjamin F., Greenwich, Conn., assignor to Motor Terminals Company, New York, N. Y. Freight handling apparatus. 2,107,292; Feb. 8.
Flanagan, George W., Chicago, Ill. Artificial bait or lure. 2,107,436; Feb. 8.
Folke, Bengt E., Mamaroneck, and W. E. Wollheim, assignors to Nathan Manufacturing Company, New York, N. Y. Ratchet mechanism. 2,107,662; Feb. 8.
Fonda, John S. (See Hyden, W. L., and Fonda.)
Ford, Joseph, Trenton, N. J. Audible signaling handle. 2,107,981; Feb. 8.
Ford Meter Box Company, The. See Phillips, James A., assignor.)
Forsyth, Alfred, London, England. Closure means for cans and the like containers. 2,107,437; Feb. 8.
Foster, David T., Khaur, Punjab, India, assignor to Regan Forge & Engineering Company. Rotary well drilling apparatus. 2,107,475; Feb. 8.
Foster, William H., Bayside, assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Lubricating device. 2,107,858; Feb. 8.
Fotsch, William G., assignor to Reliable Electric Co., Chicago, Ill. Electrical connecter. 2,107,859; Feb. 8.
Fowler, Morris G., and L. M. Barker, Clarkdale, Ariz., assignors, by mesne assignments, to Phelps Dodge Corporation, New York, N. Y. Treatment of steel. 2,107,328; Feb. 8.
Fox, Charles H., assignor to The Abrams-Fox Fire Engine Company, Cincinnati, Ohio. Parallel series centrifugal pump. 2,107,694; Feb. 8.
Fox, Martin, assignor to The Seng Company, Chicago, Ill. Sofa bed. 2,107,993; Feb. 8.
Foxboro Company, The. (See Frymoyer, Webster W., assignor.)
Frace, Arleen, and H. Van Bree, Racine, Wis. Clipper. 2,107,750; Feb. 8.
Franck, Robert P., Huntington Park, assignor to Bennett Fittings, Vernon, Calif. Pipe fitting for wall supported water closets. 2,107,663; Feb. 8.
Frank, Harrison J. L., assignor to Bulldog Electric Products Company, Detroit, Mich. Electrical distribution system. 2,107,412; Feb. 8.
Frank, William A., Jersey City, N. J. Conveyer and rotary drum therefor. 2,107,890; Feb. 8.
Frederics, Ernest O., Bronxville, N. Y. Hair waving pad. 2,107,438; Feb. 8.
Frey, Elmer E., assignor to Kittle Manufacturing Co., Los Angeles, Calif. Tire cover. 2,107,783; Feb. 8.
Friday, Ralph W., Pittsburgh, Pa. Staybolt. 2,107,604; Feb. 8.
Friedel, Arthur C., assignor to Lowman Folding Box Corporation, Syracuse, N. Y. Paper carton and making the same. 2,107,999; Feb. 8.
Frusher, Tom, Jr., Groton, Conn., assignors to Rodney Hunt Machine Company, Orange, Mass. Fulling canal. 2,107,476; Feb. 8.
Frymoyer, Webster W., assignor to The Foxboro Company, Foxboro, Mass. Compensated measuring instrument. 2,107,632; Feb. 8.
Gamzon, Robert. (See Roux, B., Gamzon, and Sollima.)
Gardner, Bernard C., Philadelphia, Pa., assignor to Farnsworth Television Incorporated, San Francisco, Calif. Envelope shield and depositing metal areas. 2,107,784; Feb. 8.
Gardner, George F., Scotia, N. Y., assignor to General Electric Company. Light beam instrument. 2,107,936; Feb. 8.
Gardner, Ralph D., assignor to Whitney Metal Tool Company, Rockford, Ill. Cut-off machine. 2,107,566; Feb. 8.
Gáspár, Béla, Brussels, Belgium. Producing colored photographic materials. 2,107,605; Feb. 8.
Gavin, Beauford E., Indianapolis, Ind., assignor to National Malleable and Steel Casting Company, Cleveland, Ohio. Furnace burner. 2,107,439; Feb. 8.
Geare, Randolph E. S., assignor to L. H. Gilmer Co., Philadelphia, Pa. Belt package. 2,107,695; Feb. 8.
Gee, William P., Plainfield, N. J., assignor to The Texas Company, New York, N. Y. Separation of wax from mineral oil by filtration. 2,107,664; Feb. 8.
Geissler, George P., Washington, D. C. Hydraulic engine. 2,107,982; Feb. 8.
Gemmer, George A., Richmond, Ind. Motor vehicle construction. 2,107,606; Feb. 8.

Goodrich, B. F., Company, The. (See Mayne, Robert, assignor.)

Goodwillie, John E. (See Berry, E. E., Hornbostel, and Goodwillie.)

Gookin, Sylvester Leo, Quincy, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Eyelet. 2,107,375; Feb. 8.

Gordon, Charles W., Munster, Ind., assignor to The Superheater Company, New York, N. Y. Compensating reheater and superheater. 2,107,440; Feb. 8.

Grabarse, Manfred, and L. Hoffmann, Berlin-Hermsdorf, assignors to Gustav Schwarz G. m. b. H., Berlin-Waidmannslust, Germany. Variable pitch propeller for aircraft. 2,107,785; Feb. 8.

Granberg, Albert J., Berkeley, assignor to Ralph N. Brodie Company, Oakland, Calif. Automatic shut-off for meters. 2,107,441; Feb. 8.

Grant, John. (See Erwin, Weldon C., assignor.)

Gray, Herbert E., San Jose, Calif. Machine for dicing fruit and the like. 2,107,293; Feb. 8.

Grece, Harry H., Detroit, Mich. Windshield wiper blade. 2,107,567; Feb. 8.

Gremler, Arthur, Lawrence, Mass. Let-off mechanism for looms. 2,107,696; Feb. 8.

Griffith, Carroll L., and L. A. Hall, assignors to The Griffith Laboratories, Inc., Chicago, Ill. Sterilising foodstuffs. 2,107,697; Feb. 8.

Griffith Laboratories, Inc. (See Griffith, C. L., and Hall, assignors.)

Griswold, Wade E., New York, N. Y. Printing member and producing same. 2,107,294; Feb. 8.

Groeschel, Sidney C., and A. G. Dawson, Columbia, S. C. Badge. 2,107,698; Feb. 8.

Groeschel, Sidney C., Columbia, S. C., and A. G. Dawson, Otsan, N. C. Door dumper. 2,107,699; Feb. 8.

Grubb, Herbert H., Baraboo, Wis. Stall. 2,107,477; Feb. 8.

Gruendler, Oscar C., assignor to Nordberg Manufacturing Co., Milwaukee, Wis. Crushing machine. 2,107,786; Feb. 8.

Grumke, Earl W., St. Paul, Minn. Carving machine bit. 2,107,787; Feb. 8.

Gustafsson, Eric, and F. Wahlin, assignors to Binks Manufacturing Company, Chicago, Ill. Spray gun with pneumatic material control. 2,107,732; Feb. 8.

Haas, Henry G., West Orange, N. J. Combination ink bottle and companion fountain pen. 2,107,700; Feb. 8.

Haase, Karl, and H. Werth, Bleicherode, assignor to the firm Preussische Bergwerks-und Hütten-Aktiengesellschaft, Berlin, Germany. Manufacturing granulated potassium fertilisers from potassium sulphate or from sulphate of potassium and magnesium. 2,107,701; Feb. 8.

Haase, Karl, H. Werth, and H. Probst, Bleicherode, assignors to the firm Preussische Bergwerks- und Hütten-Aktiengesellschaft, Berlin, Germany. Manufacturing an agglomerated potassium chloride fertilizer. 2,107,702; Feb. 8.

Hacklander, Hans. (See Christensen, N. V., and Hacklander.)

Hager, Karl. (See Hess, F., Hager, and Pense.)

Hahn, Arthur M., Washington, D. C., assignor to Mathews Conveyer Company, Ellwood City, Pa. Roller conveyer. 2,107,822; Feb. 8.

Haist, Foster A., Buffalo, N. Y. Ratchet wrench. 2,107,568; Feb. 8.

Hale, Frank C., and R. Yeadon, Spondon, near Derby, England, assignors to Celanese Corporation of America. Circular loom. 2,107,531; Feb. 8.

Hall, Archibald J., assignor of one-third to W. N. Hicking and one-third to S. J. Pentecost, New Basford, Nottingham, England. Process for rendering wool material unshrinkable and nonfelting product made thereby. 2,107,703; Feb. 8.

Hall, Clarence A., assignor to The Electric Storage Battery Company, Philadelphia, Pa. Making storage battery plates. 2,107,937; Feb. 8.

Hall, Jesse H., Los Angeles, Calif. Deballing drill bit. 2,107,788; Feb. 8.

Hall, Lloyd A. (See Griffith, C. L., and Hall.)

Hallenbeck, Charles V., Denver, Colo. Dumping grizzly. 2,107,532; Feb. 8.

Hallot, Paul, Paris, France. Braking system. 2,107,823; Feb. 8.

Hamilton, Herbert C. (See Rawlins, A. L., and Hamilton.)

Hamilton, Thomas A., Hale, England. Golf putter. 2,107,983; Feb. 8.

Hamlin, Walter E., assignor, by mesne assignments, to Consolidated Iron-Steel Manufacturing Company of 1932, Cleveland, Ohio. Loading device. 2,107,569; Feb. 8.

Hanby, Albert T., et al. (See Beck, Clarence E., assignor.)

Handy-Roll Company. (See Ellenburg, Sanford J., assignor.)

Happel, Otto, Bochum, Germany. Air-cooled surface condenser. 2,107,478; Feb. 8.

Hardie, Harry W. (See Wainwright, Walter, assignor.)

Hardie Manufacturing Company, The. (See McQueen, Glenn J., assignor.)

Harford, Charles G., Wollaston, assignor to A. D. Little, Incorporated, Cambridge, Mass. Making chlorhydrin. 2,107,789; Feb. 8.

Harley, John B., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrical device. 2,107,752; Feb. 8.

Harper, Walter D., Florence, S. C. Automatic brake operator. 2,107,984; Feb. 8.

Harrington, George G., assignor to Reed Roller Bit Company, Houston, Tex. Drill bit. 2,107,665; Feb. 8.

Harris, Constance, Providence, R. I. Ear ornament. 2,107,938; Feb. 8.

Harrison, Meyer S., et al. (See Drexler, Samuel, assignor.)

Hartnack, John C., assignor to Rubbercraft Corporation of California, Ltd., Los Angeles, Calif. Plug. 2,107,939; Feb. 8.

Hartson, William H. (See Le Blanc, Victor A., assignor.)

Hartung, Walter. (See Wunsch, G., and Hartung.)

Harvey, Leo M., Los Angeles, Calif. Towel dispensing device. 2,107,790; Feb. 8.

Harwood, Geo. S., & Son. (See Walsh, Patrick H., assignor.)

Haseltine, William E., et al. (See Reed, Roy E., assignor.)

Hasler A.-G. Werke für Telephonie & Prasisionsmechanik. (See Ochsenbein, Walter, assignor.)

Haupt, William E. (See Morton, W. D., and Haupt.)

Hawley, Jesse G., Painted Post, assignor to Hawley-Jones Corporation, Riverside, N. Y. Brake lining and making same. 2,107,295; Feb. 8.

Hawley-Jones Corporation. (See Hawley, Jesse G., assignor.)

Haselton, Benjamin F., Jr., Toledo, Ohio, assignor to Owens-Illinois Glass Company. Hollow glass building block. 2,107,994; Feb. 8.

Hearn, Richard B., Hollis, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Distortion indicating and measuring device for printing telegraph systems. 2,107,753; Feb. 8.

Hechman, Helen, New York, N. Y. Foam apparatus. 2,107,666; Feb. 8.

Hedstrom, Carl, Jr., assignor to Hedstrom-Union Company, Gardner, Mass. Baby carriage and hood therefor. 2,107,940; Feb. 8.

Hedstrom-Union Company. (See Hedstrom, Carl., Jr., assignor.)

Heffner, Harry F., and L. L. De Turk, Kearny, N. J. Sled brake. 2,107,893; Feb. 8.

Heft, Orville J. (See Donnan, Earl H., assignor.)

Heinitz, Woldemar, assignor to Schubert & Salzer Maschinenfabrik Aktiengesellschaft, Chemnitz, Germany. Straight knitting machine. 2,107,985; Feb. 8.

Heinselmann, Alphonse A., Rockville Centre, assignor to Bludalk, Inc., New York, N. Y. Gas controlling device. 2,107,863; Feb. 8.

Hennessy, James J., New York, N. Y. Journal wiping means. 2,107,413; Feb. 8.

Hennessy, James J., New York, N. Y. Railway journal lubricator. 2,107,414; Feb. 8.

Henning, William, Peru, Nebr. Dental tool. 2,107,791; Feb. 8.

Henry, Harry H., Chicago, Ill., assignor, by mesne assignments, to U S L Battery Corporation, Niagara Falls, N. Y. Grid pasting machine. 2,107,733; Feb. 8.

Henry, James M. (See Anderson, W. T., and Henry.)

Hercules Powder Company. (See Rummelsburg, Alfred L., assignor.)

Hermson, John H., Brooklyn, assignor to A. G. Spalding & Bros., New York, N. Y. Football shoe. 2,107,667; Feb. 8.

Hess, Frits, K. Hager, and W. Pense, Frankfort-on-the-Main-Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Fast brown leather dyestuffs and preparing them. 2,107,941; Feb. 8.

Hewlett, William F., Upland, Calif. Contractible tent or awning. 2,107,608; Feb. 8.

Hicking, William N., et al. (See Hall, Archibald J., assignor.)

Hill, Harry G., Los Angeles, Calif. Line guide to enable the blind to write script. 2,107,609; Feb. 8.

Hilts, H. C. (See Mellen, George, assignor.)

Hinderer, Louis C. (See Hinderer, Walter F. and L. C.)

Hinderer, Walter F. and L. C., Kankakee, Ill. Window lock. 2,107,479; Feb. 8.

Hobbs, John W., assignor to The George W. Borg Corporation, Chicago, Ill. Automatic switch lamp socket. 2,107,570; Feb. 8.

Hochgesand, Carl P. (See Linde, R., and Hochgesand.)

Hodell Chain Company, The. (See Olmstead, Frederick A., assignor.)

Hoffman Specialty Company. (See Simpson, William K., assignor.)

Hoffmann, Ludwig. (See Grabarse, M., and Hoffmann.)

Hoke, Harry A., Altoona, assignor to The Pennsylvania Railroad Company, Philadelphia, Pa. Pilot and coupler structure. 2,107,376; Feb. 8.

Holcomb, Lester F., Freeport, assignor to Paramount Fireworks Company, Inc., New York, N. Y. Skyrocket. 2,107,734; Feb. 8.

Holek, František, Brunn-Julianov, assignor to Ceskoslovenska Zbrojovka, a. s. Brno, Brno, Czechoslovakia. Gun-carriage. 2,107,824; Feb. 8.

Hollingsworth, William A., Peanta, Calif. Automobile signal. 2,107,533; Feb. 8.

Holloway, Jesse F., Aldan, Pa. Truck. 2,107,296; Feb. 8.

Holmes, Morris P., Claremont, N. H., assignor to Sullivan Machinery Company. Cutter chain. 2,107,942; Feb. 8.

Holt, Thomas W., and J. F. Levan, Elkhart, Ind., assignors, by mesne assignments, to The Syracuse Trust Company, trustee. Window construction. 2,108,000; Feb. 8.

Holton, Abby J. T., Concord, Vt. Steam cooking boiler and baker. 2,107,480; Feb. 8.

Hommel, O., Company, The. (See McQuiston, Frederick B., assignor.)

Honig, Frank, Pawtucket, R. I., assignor to United States Rubber Products, Inc., New York, N. Y. Crinkled sheet rubber and process and apparatus for making the same. 2,107,735; Feb. 8.

Hooven, Frederick J., Dayton, Ohio. Direction finder. 2,107,633; Feb. 8.

Hopkins, Robert K., assignor to The M. W. Kellogg Co., New York, N. Y. Manufacturing composite seamless tubes. 2,107,943; Feb. 8.

Hornbostel, Lloyd. (See Berry, E. E., Hornbostel, and Goodwillie.)

Horsley, James H., assignor to Shanklin Manufacturing Company, Chicago, Ill. Roll top box. 2,107,997; Feb. 8.

Houdaille-Hershey Corporation. (See Jandus, Herbert S., assignor.)

Houdaille-Hershey Corporation. (See Jandus, H. S., and Tyson, assignors.)

Houde Engineering Corporation. (See Peo, Ralph F., assignor.)

Houser, Harry P., Waterloo, Iowa. Face meter. 2,107,534; Feb. 8.

Hovey, Almon G. (See Jarl, C. H. B., and Hovey.)

Hovey, Almon G., Pleasant Ridge, assignor to H. Reichhold, doing business as Reichhold Chemicals, Detroit, Mich. Bleaching alkyd resins. 2,107,610; Feb. 8.

Howard, Willard, Newton, Mass. Golf ball position marker. 2,107,944; Feb. 8.

Howland, Omar O., Eagle, Colo. Apparatus for teaching tumbling. 2,107,377; Feb. 8.

Huber, Henry, Pontiac, Mich. Blade holder. 2,107,736; Feb. 8.

Huesby, Elmer E., Los Angeles, Calif. Internal combustion motor. 2,107,792; Feb. 8.

Huff, Lyman C., assignor to Universal Oil Products Company, Chicago, Ill. Conversion of hydrocarbon oils. 2,107,793; Feb. 8.

Hughes, Cecil, Tuffley Crescent, Gloucester, England, assignor to Sure Feed Limited, Cardiff, South Wales. Feeding bottle and device therefor. 2,107,442; Feb. 8.

Hull, Albert W., and W. A. Ruggles, Schenectady, N. Y., assignors to General Electric Company. Cathode structure. 2,107,945; Feb. 8.

Hull, Horace, et al. (See Reed, Roy E., assignor.)

Humason, Granville A. (See Vogt, C. W., and Humason.)

Humphreys, Edwin S., Aurora, Ill. X-ray apparatus. 2,107,625; Feb. 8.

Hungerford, Daniel C., Chalfont, Pa., assignor, by mesne assignments, to Star Expansion Bolt Company, New York, N. Y. Wedge for concrete form ties. 2,107,415; Feb. 8.

Hüniger, Magdalene. (See Ensz, J., and Hüniger.)

Hunter, John N., Norbury, England, assignor to Pyrene Manufacturing Company, Newark, N. J. Apparatus for trapping dust arising in bore holes. 2,107,864; Feb. 8.

Huth, Walter H., assignor to Aurex Corporation, Chicago, Ill. Electrical sound transmitting and distributing apparatus. 2,107,416; Feb. 8.

Hyden, William L., Kenmore, and J. S. Fonda, Buffalo, N. Y., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Producing artificial silk. 2,107,683; Feb. 8.

Hymans, Frederick, Larchmont, assignor to Otis Elevator Company, New York, N. Y. Brake mechanism. 2,107,894; Feb. 8.

I. G. Farbenindustrie Aktiengesellschaft. (See Neukirch, Eberhard, assignor.)

I. G. Farbenindustrie Aktiengesellschaft. (See Roesner, E., Börner, Mahn, and Irion, assignors.)

Indian Central Cotton Committee. (See Nanjundayya, Chandrashekariya, assignor.)

Ingersoll, Roy C., assignor to Borg-Warner Corporation, Chicago, Ill. Making laminated metal blanks having a lamination of varying thicknesses. 2,107,330; Feb. 8.

Inman, William H., assignor to Bloomer Bros. Company, Newark, N. Y. Carton construction. 2,107,946; Feb. 8.

International Shoe Company. (See Bown, Samuel, assignor.)

Inventor Trust S. A. (See Kardorff, Leon, assignor.)

Ipatieff, Vladimir, and V. Komarewsky, assignors to Universal Oil Products Company, Chicago, Ill. Manufacture of alcohols. 2,107,704; Feb. 8.

Irion, Wilhelm. (See Roesner, E., Börner, Mahn, and Irion.)

Iribeck, Frank J., Dedham, Iowa. Self-steering mechanism for tractors. 2,107,535; Feb. 8.

Irwin, Haskell, Oklahoma City, Okla. Multiple locking means for automobile doors. 2,107,737; Feb. 8.

Jackman, George W. (See Pierson, W. D., and Jackman.)

Jackson, John C., assignor to Square D Company, Detroit, Mich. Electrical distribution system. 2,107,865; Feb. 8.

James, Edwin F., and L. E. Remick, assignors to Carolina Dyeing and Winding, Incorporated, Mount Holly, N. C. Treating yarn. 2,107,536; Feb. 8.

Jandus, Herbert S., assignor, by mesne assignments, to Houdaille-Hershey Corporation, Detroit, Mich. Tire cover and lock construction. 2,107,332; Feb. 8.

Jandus, Herbert S., and T. J. W. Tyson, assignors, by mesne assignments, to Houdaille-Hershey Corporation, Detroit, Mich. Tire cover. 2,107,331; Feb. 8.

Jarl, Carl H. B., Royal Oak, and A. G. Hovey, Pleasant Ridge, assignors to Beck, Koller & Company, Inc., Detroit, Mich. Catalysts and preparing the same. 2,107,611; Feb. 8.

Jeannette Steel Corporation, The. (See Stough, Turney H., assignor.)

Jeffs, William V., Eastcote, England, assignor to General Electric Company. Electric switch gear. 2,107,947; Feb. 8.

Jenkins, Raymond J., and C. J. Addicks, assignors to The Chandlee Corporation, Baltimore, Md. Dispensing apparatus for carbonated beverages. 2,107,866; Feb. 8.

Jiménez, Ramón C., Boston, Mass. Headlight for automobiles. 2,107,443; Feb. 8.

Johnson, Bror E., Alsten, assignor to Aktiebolaget Gerh. Arehns Mekaniska Verkstad, Stockholm, Sweden. Apparatus for delivering portions of relatively mobile material. 2,107,987; Feb. 8.

Johnson, Carl E., Pasadena, assignor to Sterling Electric Motors, Inc., Los Angeles, Calif. Water cooled motor. 2,107,481; Feb. 8.

Johnson, Carl G. (See Wallin, F. E. A. and K. T., and C. G. Johnson.)

Johnson, Kurt T. (See Wallin, F. E. A. and K. T., and C. G. Johnson.)

Johnson Service Company. (See Otto, Arthur J., assignor.)

Johnston, David R. (See Jones, J. E., and Johnston.)

Johnston, Donald F., Pelham, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,107,754; Feb. 8.

Johnston, James W., Manchester, N. H., assignor to North American Holding Corporation, Syracuse, N. Y. Grading machine. 2,107,634; Feb. 8.

Jones, Harrison A. L., assignor of one-fifth to A. M. Girard and one-fifth to A. B. Girard, Oakland, Calif. Tachometer. 2,108,014; Feb. 8.

Jones, John E., and D. R. Johnston, Spondon, near Derby, England, assignors to Celanese Corporation of America. Treatment of solid materials with liquids. 2,107,537; Feb. 8.

Jonker, Johan L. H., assignor to N. V. Philips' Gloeilampenfabriethen, Eindhoven, Netherlands. Electron discharge device. 2,107,333; Feb. 8.

Joy Fastener Company. (See Miller, F. P., assignor.)

Joy Fastener Company. (See Miller, F. P., and Skeel, assignors.)

Junkermann, Fred J., Philadelphia, Pa. Tube holding device. 2,107,635; Feb. 8.

Justheim, Clarence I., Salt Lake City, Utah. Refrigerator. 2,107,538; Feb. 8.

Kallchevsky, Vladimir A. (See Story, B. W., and Kallchevsky.)

Kallsh, Harry L., New York, N. Y. Notebook pad. 2,108,015; Feb. 8.

Kaptulier, Alexander F., Chicago, Ill. Change speed driving mechanism. 2,107,417; Feb. 8.

Kardorff, Léon, Brussels, Belgium, assignor to Inventor Trust S. A., Luxemburg, Luxemburg. Impulse transmitter. 2,107,988; Feb. 8.

Karfiol, Edward, et al. (See Cohn, Adolph H., assignor.)

Karfiol, Edward, New York, N. Y. Shelf edging. 2,107,669; Feb. 8.

Karige, Alfred L., Gotene, Sweden. Stake or stanchion for vehicles. 2,107,612; Feb. 8.

Karlson, Erik O., Elmont, N. Y. Device for gauging the cutting of rafters. 2,107,670; Feb. 8.

Kasdan, Nathan, New York, and R. F. Landwehr, Woodside, Long Island, assignors to Majestic Metal Specialties, Inc., New York, N. Y. Lipstick holder. 2,107,444; Feb. 8.

Kato, Etsuro, Meguro-ku, Tokyo-shi, Japan. Fine spining frame. 2,107,378; Feb. 8.

Kaufman, Gus, Beacon, assignor to The Texas Company, New York, N. Y. Grease manufacture. 2,108,016; Feb. 8.

Kauffman, Walter L., II, assignor to Lovell Manufacturing Company, Erie, Pa. Wringer and wringer support connection. 2,107,539; Feb. 8.

Kaufmann, Hans O., assignor to Buffalo Electro-Chemical Company, Inc., Buffalo, N. Y. Bleaching fiber. 2,107,297; Feb. 8.

Keefer, Walter L., assignor to Pangborn Corporation, Hagerstown, Md. Abrading apparatus. 2,108,005; Feb. 8.

Keefer, Walter L., assignor to Pangborn Corporation, Hagerstown, Md. Abrading apparatus. 2,108,006; Feb. 8.

Keller, Harry H., Ventnor, N. J., assignor to Bitting, Incorporated, New York, N. Y. Attaching wall panel units together. 2,107,418; Feb. 8.
Keller, Joseph, Bronx, N. Y. Cigarette package. 2,107,822; Feb. 8.
Kellogg, M. W., Co., The. (See Hopkins, Robert K., assignor.)
Kelsey-Hayes Wheel Company. (See Ash, Charles S., assignor.)
Kelsey-Hayes Wheel Company. (See Batle, Joseph E., assignor.)
Kelsey-Hayes Wheel Company. (See LeJeune, Frank H., assignor.)
Kemmerer, Ralph R., assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway signaling. 2,107,679; Feb. 8.
Kemp, William E. Detroit, Mich. Roll screen structure. 2,107,755; Feb. 8.
Kemp, William J., Deptford, assignor to Molins Machine Company, Limited, London, England. Wrapping or packing machine. 2,107,482; Feb. 8.
Kendall, Burton W., East Orange, and D. Mitchell, Bound Brook, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Privacy system. 2,107,756; Feb. 8.
Kerr, John W., assignor to E. H. Geyer, Chicago, Ill. Dividing and reinforcing means for concrete roadways. 2,107,827; Feb. 8.
Ketchpel, Paul A., West Englewood, N. J., assignor, by mesne assignments, to The Standard Stoker Company, Inc. Locomotive tender. 2,107,419; Feb. 8.
Kibbe, James I. (See Anderson, A. G., and Kibbe.)
Kiefer, Karl, Machine Company, The. (See Rosendale, Stanley R., assignor.)
Kilgore Development Corporation. (See Kilgore, Lowell B., assignor.)
Kilgore, Lowell B., Washington, D. C., assignor to Kilgore Development Corporation, East Falls Church, Va. Insecticide. 2,107,298; Feb. 8.
Killmer, Miles I., assignor to Mason & Hanger Company, Inc., New York, N. Y. Constructing tunnels. 2,107,671; Feb. 8.
Kilpatrick, Howard M., New York, N. Y. Latch. 2,107,299; Feb. 8.
Kilpatrick, Howard M., New York, N. Y. Jimmyproof lock-latch. 2,107,300; Feb. 8.
King, Clifford G., Barrington, R. I. Tassel. 2,107,948; Feb. 8.
Kingman, Russell B., Orange, assignor to Metal Textile Corporation, West Orange, N. J. Cleanser device. 2,107,636; Feb. 8.
Kinsley, Thomas G., Bloomfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Acoustic device. 2,107,757; Feb. 8.
Kirby, James B., West Richfield, Ohio. Suction cleaner. 2,107,571; Feb. 8.
Kitson Company. (See Lovekin, Luther D., assignor.)
Kittle Manufacturing Co. (See Frey, Elmer E., assignor.)
Klaar, Albert, Bielefeld, F. Arndt, and H. Berning, Essen, Germany, assignors, by mesne assignments, to The National Cash Register Co., Dayton, Ohio. Controlling mechanism for cash registers and bookkeeping machines. 2,107,445; Feb. 8.
Klaus, Sidney D., Jamaica, N. Y. Device for viewing X-ray pictures and the like. 2,107,738; Feb. 8.
Kleaver, Estelle B. (See Bettis, William I., assignor.)
Kleean, Charles E., assignor to P. R. Offedal, Chicago, Ill., doing business under the style and firm name of Protex Weather-Strip Mfg. Co. Door closure. 2,107,940; Feb. 8.
Knechtel, Erich, Sydowsaue, near Stettin, Germany, assignor to North American Rayon Corporation, New York, N. Y. Avoiding the overcharging of drives for rayon centrifuges. 2,107,758; Feb. 8.
Knight, Albert B., Fairmont, W. Va. Variable speed transmission. 2,107,483; Feb. 8.
Knox, Maurice D. (See Allen, E. B., Knox, and Faulkner.)
Koehring Company. (See Lichtenberg, Erich H., assignor.)
Koether, Emil A., Baltimore, Md., assignor, by mesne assignments, to Koppers Company. Piston ring. 2,107,301; Feb. 8.
Kolibe, Thomas, assignor to L. A. Young Spring and Wire Corporation, Detroit, Mich. Spring cushion structure. 2,107,446; Feb. 8.
Komarewsky, Vasili. (See Ipatieff, V., and Komarewsky.)
Koppers Company. (See Koether, Emil A., assignor.)
Koslowsky, Robert, Dessau-Ziebigk in Anhalt, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y. Manufacture of carbocyanine dyes. 2,107,279; Feb. 8.
Kotcher, Irwin and M., Brooklyn, N. Y. Carton. 2,107,613; Feb. 8.
Kotcher, Irwin and M., Brooklyn, N. Y. Carton. 2,107,614; Feb. 8.
Kotcher, Morris. (See Kotcher, Irwin and M.)
Kothny, Gottdank L., Strafford, assignor to Sperry-Sun Well Surveying Company, Philadelphia, Pa. Whip stock removing device. 2,107,420; Feb. 8.
Kovats, John, Fairfield, Conn. Folding table. 2,107,572; Feb. 8.
Krants, Morris, London, England. Portable wardrobe, cupboard, or the like. 2,107,828; Feb. 8.
Kronquest, Alfred L., Syracuse, assignor to Continental Can Company, Inc., New York, N. Y. Safety and relief valve. 2,107,704; Feb. 8.
Kucera, Frank A. (See Thompson, C. S., and Kucera.)
Kuhn, Henry G. M., Spencertown, N. Y. Garden line stake. 2,107,980; Feb. 8.
Küppenbender, Heins, assignor to Zeiss Ikon Aktiengesellschaft Dresden, Dresden, Germany. Photographic camera. 2,107,829; Feb. 8.
Lamb, Charles C., Chicago, Ill. Cleaning materials. 2,107,866; Feb. 8.
Lamb, Lawrence S. (See Parsons, J. H., and Lamb.)
Landis Machine Company. (See Dunford, Ernest, assignor.)
Landwehr, Richard F. (See Kasdan, N., and Landwehr.)
Lang, George H., Boston, Mass. Reversing device. 2,107,705; Feb. 8.
Lang, Harold M., New York, N. Y. Magnetic hooking game. 2,107,672; Feb. 8.
Langdon, Andrew H., Los Angeles, J. A. Langdon, Lancaster, and J. S. Langdon, La Habra, Calif. Poultry fountain. 2,107,573; Feb. 8.
Langdon, John A. (See Langdon, Andrew H., J. A., and J. S.)
Langdon, J. Spencer. (See Langdon, Andrew H., J. A., and J. S.)
Langenheim, Albert H. (See Runyan, W. B., and Langenheim.)
Larsh, Everett P., Vandalia, assignor to The Master Electric Corporation, Dayton, Ohio. Engine piston. 2,107,795; Feb. 8.
Leach, Maude, Wilkes-Barre, Pa. Culinary device. 2,107,380; Feb. 8.
Le Blanc, Victor A., assignor of one-twentieth to W. H. Hartson, New Orleans, La. Ignition apparatus. 2,107,302; Feb. 8.
Lefebvre-Carnot, Pierre, Paris, and L. P. G. Vautier, St. Just des Marais, France, assignors to Société Francaise de la Viscose S. A. Making porous articles. 2,107,637; Feb. 8.
Leibing Automatic Devices, Incorporated. (See Leibing, William E., assignor.)
Leibing, William E., assignor to Leibing Automative Devices, Incorporated, San Francisco, Calif. Method and apparatus for governing fluid flow. 2,107,990; Feb. 8.
Le Jeune, Frank H., assignor, by mesne assignments, to Kelsey-Hayes Wheel Company, Detroit, Mich. Forming a wheel. 2,107,950; Feb. 8.
Lenane, Hugh. (See Avery, L. T., and Lenane.)
Lennox, Florence L., Ann Arbor, Mich. Curtain holder. 2,107,421; Feb. 8.
Leppke, Louis A., Omaha, Nebr. Serving device. 2,107,381; Feb. 8.
Lesher, John B., Chambersburg, Pa. Fowl holder. 2,107,484; Feb. 8.
Levan, John F. (See Holt, T. W., and Levan.)
Levene, Louis L., Merrick, N. Y. Partition. 2,107,334; Feb. 8.
Lever Brothers Company. (See Andersen, Carl N., assignor.)
Lichtenberg, Erich H., assignor to Koehring Company, Milwaukee, Wis. Power take-off. 2,107,540; Feb. 8.
Liebesny, Paul, and H. Wertheim, Vienna, Austria. Influencing enzymes and technically useful micro-organisms and the like. 2,107,830; Feb. 8.
Liebowitz, Benjamin, assignor to Trubenizing Process Corporation, New York, N. Y. Process and apparatus for adhesively uniting plies of fabric material. 2,107,485; Feb. 8.
Linde Air Products Company, The. (See Linde, R., and Hochgesand, assignors.)
Linde, Richard, Munich, and C. P. Hochgesand, Solln, near Munich, Germany, assignors to The Linde Air Products Company. Method of and apparatus for operating cold accumulators. 2,107,335; Feb. 8.
Linder, Andrew J. (See Brandt, J. W., and Linder.)
Lindsay Wire Weaving Company, The. (See Steinhart, Ferdinand, assignor.)
Lippincott, Donald K. (See Farnsworth, P. T., and Lippincott.)
Lipton, Ruby, New York, N. Y. Head covering. 2,107,951; Feb. 8.
Lithgow Corporation. (See Lithgow, James, assignor.)
Lithgow, James, assignor to Lithgow Corporation, Chicago, Ill. Coating containers. 2,108,017; Feb. 8.
Little, Arthur D., Incorporated. (See Harford, Charles G., assignor.)
Livak, John E. (See Smith, F. B., and Livak.)
Ljungström, Fredrik, Lidingo Bravik, Sweden. Rig for sail boats. 2,107,303; Feb. 8.
Long, Paul H. (See Moyer, S. P., and Long.)
Long, Paul H., assignor to The American Rolling Mill Company, Middletown, Ohio. Wiping device for rolling mill rolls. 2,107,541; Feb. 8.
Lothrop, Marcus. (See Price, N. C., and Lothrop.)
Lotz, Rudolph W., assignor to Schneider Iron Works, Chicago, Ill. Collapsible sidewalk sign support. 2,107,574; Feb. 8.
Lovekin, Luther D., Villa Nova, assignor to Kitson Company, Philadelphia, Pa. Temperature limiting device for hot water systems. 2,107,673; Feb. 8.
Lovell Manufacturing Company. (See Kauffman, Walter L., II, assignor.)

Lowman Folding Box Corporation. (See Friedel, Arthur C., assignor.)
Ludwig, Sidney. (See Davis, Jack L., assignor.)
Lulek, Ralph N. (See Weeris, A. J., and Lulek.)
Lundstrom, Hans, assignee of two-thirds to I. Lundstrom, and one-third to J. Magidson and P. B. Magidson, all of St. Louis, Mo. Excavator. 2,107,695; Feb. 8.
Lundstrom, Ida, et al. (See Lundstrom, Hans, assignor.)
Lutey, William J., Seattle, Wash. Resilient pedal pad. 2,107,456; Feb. 8.
Lyon, George A., Allenhurst, assignor to Lyon Incorporated, Asbury Park, N. J. Hinged tire cover for use with fenderwell. 2,107,226; Feb. 8.
Lyon Incorporated. (See Lyon, George A., assignor.)
Lyons, James R., Salem, Oreg. Christmas tree holder. 2,107,435; Feb. 8.
Macdonald, Alexander D., Malden, assignor to B. B. Chemical Co., Boston, Mass. Deodorizing polymerized haloprene. 2,107,796; Feb. 8.
Machate, Fred, and F. Mason, Lansdale, Pa. Tape dispenser. 2,107,457; Feb. 8.
Macintosh, Richard. (See Bader, Thomas D., assignor.)
MacKnight, Edgar W., Bayonne, N. J., assignor to General Cable Corporation, New York, N. Y. Metal extrusion press and operation. 2,107,806; Feb. 8.
Maddock, Robert H., assignor to The Midland Steel Products Company, Cleveland, Ohio. Vehicle frame. 2,107,382; Feb. 8.
Madison, Robert B., Harvey, Ill. Railway ballasting machine. 2,107,639; Feb. 8.
Magidson, Joseph, et al. (See Lundstrom, Hans, assignor.)
Magidson, Phelix B., et al. (See Lundstrom, Hans, assignor.)
Magnesium Development Corporation. (See Beck, Adolf, assignor.)
Magnuson, Raymond A., assignor to Vogel-Peterson Co. Inc., Chicago, Ill. Wardrobe rack. 2,107,640; Feb. 8.
Mahn, Herbert. (See Rossner, R., Börner, Mahn, and Irion.)
Maier, August R., assignor to Oil Well Supply Company, Dallas, Tex. Pump rod hanger. 2,107,485; Feb. 8.
Majestic Metal Specialties, Inc. (See Kasdan, N., and Landwehr, assignors.)
Malcomson, Gilbert C., Collingswood, N. J. Display device. 2,107,641; Feb. 8.
Mandel, Morris, Chicago, Ill. Safety equipment for boats. 2,107,542; Feb. 8.
Marcelli, Nicholas T., Collinsville, Calif. Fishing hook. 2,107,480; Feb. 8.
Marlowe, Harold J., New Rochelle, assignor to Marlowe Products Inc., New York, N. Y. Exercising machine. 2,107,447; Feb. 8.
Marlowe, Harold Jay, New Rochelle, N. Y. Hobbyhorse. 2,107,448; Feb. 8.
Marlowe, Harold J., New Rochelle, assignor to Marlowe Products Inc., New York, N. Y. Exercising machine. 2,107,449; Feb. 8.
Marlowe Products Inc. (See Marlowe, Harold J., assignor.)
Marsden, George, Los Angeles, Calif. Changing display weighing machine. 2,107,674; Feb. 8.
Martin, Fletcher E. (See Nutter, I. E., Martin, and McCullough.)
Marvin, John T. (See Matthews, B. L., and Marvin.)
Mason, Fred. (See Machate, F., and Mason.)
Mason & Hanger Company. (See Killmer, Miles I., assignor.)
Master Electric Corporation, The. (See Larsh, Everett P., assignor.)
Mathews Conveyer Company. (See Hahn, Arthur M., assignor.)
Matthews, Birchard L., Lakewood, and J. T. Marvin, Fairview Village, assignors to The Patrol Valve Company, Cleveland, Ohio. Burner. 2,107,575; Feb. 8.
Matthe, Charles F., Jackson Heights, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrooptical scanning apparatus. 2,107,759; Feb. 8.
Mattman, Gustave F., assignor to The Cincinnati Advertising Products Company, Cincinnati, Ohio. Ornamental mounting. 2,107,383; Feb. 8.
Mauser-Werke A-G. (See Altenburger, Ernst, assignor.)
May Oil Burner Corporation. (See Walsh, John L., assignor.)
Mayer, Alvin L., Cincinnati, Ohio. Printing enlarging machine. 2,107,867; Feb. 8.
Mayne, Robert, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Track for tractors. 2,107,490; Feb. 8.
McAnally, Claude W., Sr., Trinidad, Colo. Supporting and display rack. 2,107,576; Feb. 8.
McClure, Arthur W., assignor to McMillan Book Company, Syracuse, N. Y. Loose leaf binder. 2,107,868; Feb. 8.
McClure, Arthur W., assignor to McMillan Book Company, Syracuse, N. Y. Loose leaf binder. 2,107,869; Feb. 8.
McConnell, Robert J. (See Truslow, J. L., and McConnell.)
McCormick, Elmer, M. D. Stewart, and W. H. Worthington, assignors to John Deere Tractor Company, Waterloo, Iowa. Hydraulic mechanism. 2,107,760; Feb. 8.
McCullough, Gerald W. (See Nutter, I. E., Martin, and McCullough.)
McGee, Joseph R., Los Angeles, Calif. Signaling device. 2,107,952; Feb. 8.
McIntire, Charles V., Short Hills, N. J., assignor to Semet-Solvay Engineering Corporation, New York, N. Y. Coke oven battery. 2,107,642; Feb. 8.
McKelvy, Eugene A., Ardmore, Pa. Checkerwork. 2,107,675; Feb. 8.
McMahan, Kenton D., Schenectady, N. Y., assignor to General Electric Company. Fan. 2,107,897; Feb. 8.
McMillan Book Company. (See McClure, Arthur W., assignor.)
McNally, James G., and J. B. Dickey, Rochester, N. Y., assignors, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J. Azo compounds and process for dyeing therewith. 2,107,898; Feb. 8.
McQueen, Glenn J., Portland, Oreg., assignor to The Hardie Manufacturing Company, Hudson, Mich. Truck. 2,107,384; Feb. 8.
McQuiston, Frederick B., Crafton, Pa., assignor to The O. Hommel Company. Decorating apparatus. 2,107,491; Feb. 8.
Mellen, George, Diamond Head, assignor to H. C. Hilts, Honolulu, Hawaii. Dispensing device. 2,107,615; Feb. 8.
Melton, Guilford B. (See Wood, Z. V., and Melton.)
Mekler, Lev A., assignor, by mesne assignments, to Universal Oil Products Company, Chicago, Ill. Heating fluids. 2,107,492; Feb. 8.
Merritt, Vernon, Montgomery, Ala. Relief valve for preventing the bursting of liquid containers. 2,107,670; Feb. 8.
Messer, Adolf, Frankfort-on-the-Main, Germany. Apparatus for producing and storing oxygen. 2,107,797; Feb. 8.
Metal Textile Corporation. (See Kingman, Russell B., assignor.)
Metropolitan Sewing Machine Corporation. (See Robbins, Willis C., assignor.)
Metropolis Bending Company. (See Puls, Alfred E., assignor.)
Michael, William C. (See Olsvary, Louis, assignor.)
Michelin et Cie. (See Bourdon, Pierre M., assignor.)
Micromatic Hone Corporation. (See Connor, Kirke W., assignor.)
Midland Steel Products Company, The. (See Maddock, Robert H., assignor.)
Millavec, Alvin J., Cleveland, Ohio. Combined receptacle and brush holder. 2,107,643; Feb. 8.
Miller, Chauncey K., Indianapolis, Ind. Combination envelope and return mailing device. 2,107,450; Feb. 8.
Miller, Edward W., assignor to The Fellows Gear Shaper Company, Springfield, Vt. Plural gear shaping machine. 2,107,543; Feb. 8.
Miller, Frank P., Meadville, Pa., assignor, by mesne assignments, to Joy Fastener Company. Process and apparatus for making slide fasteners. 2,108,008; Feb. 8.
Miller, Frank P., and L. Skeel, Meadville, assignors, by mesne assignments, to Joy Fastener Company, Franklin, Pa. Method and apparatus for making slide fasteners. 2,108,007; Feb. 8.
Miller, Frank P., and L. Skeel, Meadville, Pa., assignor, by mesne assignments, to Joy Fastener Company. Slide fastener. 2,108,009; Feb. 8.
Miller, Louis G., Bethlehem, Pa., assignor to Bethlehem Steel Company. Car brake. 2,107,761; Feb. 8.
Mining Process and Patent Company. (See Denny, J. J., and Daman, assignors.)
Mitchell, Doren. (See Kendall, B. W., and Mitchell.)
Molins Machine Company. (See Kemp, William J., assignor.)
Moore, Mathilda G., St. Paul, Minn. Girdle garment. 2,107,337; Feb. 8.
Moore, Weldon B., Corpus Christi, Tex. Mixer and conditioner. 2,107,544; Feb. 8.
Morgan, Maurice J., West Englewood, N. J. Golf tee. 2,107,706; Feb. 8.
Morley, Francis E. (See Morley, Wilfrid T. B., and F. E.)
Morley, Wilfrid T. B., Worsley, and F. E. Morley, Sale, England. Apparatus for removing selvage edges from textile fabrics in the piece. 2,107,953; Feb. 8.
Moross, George B., Woodside, N. Y. Automatic change speed gearing for automotive vehicles. 2,107,422; Feb. 8.
Morris, Thomas C., Akron, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Vulcanization of rubber. 2,108,018; Feb. 8.
Morseth, Leif, Frydenberg, Ostre Aker, near Oslo, assignor to Aktieselskapet Per Kure, Norsk Motor & Dynamofabrik, Oslo, Norway. Machine for the manufacture of ribbed piping. 2,107,831; Feb. 8.
Morton, Wade D., Gloucester City, and W. E. Haupt, Westville, assignors to Automatic Drive & Transmission Company, Gloucester City, N. J. Clutch and transmission mechanism. 2,107,954; Feb. 8.
Moser, Robert E., assignor to Rosedale Knitting Co., Inc., Reading, Pa. Yarn winding machine. 2,107,385; Feb. 8.
Motor Terminals Company. (See Fitch, Benjamin F., assignor.)
Moyer, Samuel P., and P. H. Long, assignors to The American Rolling Mill Company, Middletown, Ohio. Shears. 2,107,577; Feb. 8.
Mueller, Otto, Dearborn, Mich. Manual control for automobile generators. 2,107,899; Feb. 8.

Munro, Charles S., Detroit, Mich. Tape applying device. 2,107,900; Feb. 8.
N. V. Philips' Gloeilampenfabrieken. (See Bouwers, A., and van der Tuuk, assignors.)
N. V. Philips' Gloelampenfabrieken. (See Jonker, Johan L. H., assignor.)
N. V. Philips' Gloeilampenfabrieken. (See Teves, M. C., and de Boer, assignors.)
Nampa, Sulo M. (See Butterworth, S. D., and Nampa.)
Nampa, Sulo M., Detroit, Mich., assignor to The Worth Company. Car loading device. 2,107,338; Feb. 8.
Nanjundayya, Chandrashekariya, Matunga, assignor to The Indian Central Cotton Committee, Bombay, British India. Manner of and apparatus for ascertaining the mean length of cotton or like fibers and/or the mean weight per unit of length of similar fibers. 2,107,616; Feb. 8.
Nash-Kelvinator Corporation. (See Erbach, Frederick R., assignor.)
Nash-Kelvinator Corporation. (See Ohmart, Grayston R., assignor.)
Nashua Manufacturing Company. (See Oliver, Geffrod B., assignor.)
Nathan Manufacturing Company. (See Folke, B. E., and Wollheim, assignors.)
National Cash Register Co., The. (See Klaar, A., Arndt, and Berning, assignors.)
National Malleable and Steel Casting Company. (See Gavin, Beauford E., assignor.)
National Pneumatic Company. (See Parvin, Edward G., assignor.)
Nelson, Frank, New York, N. Y. Fuel saver for engines. 2,107,332; Feb. 8.
Nelson, John W., assignor to Chicago Fexible Shaft Company, Chicago, Ill. Oil burning furnace. 2,107,871; Feb. 8.
Neukirch, Eberhard, Bitterfeld, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Producing colored smoke. 2,108,019; Feb. 8.
Neumann, Friedrich, Berlin, Germany. Awning. 2,107,676; Feb. 8.
Newman, David F., Rockville Centre, N. Y., assignor to Trans-Lux Corporation. Screen structure. 2,107,707; Feb. 8.
Newman, David F., Rockville Centre, N. Y., assignor to Trans-Lux Corporation. Screen structure; 2,107,708; Feb. 8.
News Projection Corporation. (See Eitzen, August D., assignor.)
Nice-Bement-Pond Company. (See Shaw, Robert D., assignor.)
Nisbet, Robert H., Osterley, England, assignor to Sperry Gyroscope Company Inc., Brooklyn, N. Y. Dynamo-electric machine. 2,107,872; Feb. 8.
Noll, Harry R., assignor of one-half to J. W. Coyle, Philadelphia, Pa. Dispenser. 2,108,020; Feb. 8.
Nordberg Manufacturing Co. (See Gruender, Oscar C., assignor.)
North American Holding Corporation. (See Johnston, James W., assignor.)
North American Rayon Corporation. (See Knechtel, Erich, assignor.)
North American Rayon Corporation. (See Schmidt, Kurt, assignor.)
Northwestern Barb Wire Company. (See Bradley, Albert F., assignor.)
Novak, Isador J., assignor to Raybestos-Manhattan, Inc., Bridgeport, Conn. Impregnating fibrous materials. 2,107,304; Feb. 8.
Nowak, Alfred. (See Suida, H., Pöll, and Nowak.)
Nu-line Manufacturing Company. (See Wilsdorf, Frank A., assignor.)
Nutt, Harold, and H. V. Reed, assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Clutch. 2,107,739; Feb. 8.
Nutter, Irvin E., F. E. Martin, Whittenburg, Tex., and G. W. McCullough, assignors to Phillips Petroleum Company, Bartlesville, Okla. Apparatus for liquid level and pressure control. 2,107,955; Feb. 8.
Oberdick, Luther E., Brooklyn, assignor to Cleveland Tungsten Manufacturing Company, Inc., Cleveland, Ohio. Apparatus for removing oxides and preventing pitting of electrical contacts. 2,107,709; Feb. 8.
Obermaier, Carl F., York, Pa., assignor to General Electric Company. Electrical insulation material. 2,107,901; Feb. 8.
Oehsenbein, Walter, assignor to Hasler A.-G. Werke für Telephonie & Pranisions-mechanik, Bern, Switzerland. Machine for postmarking and like purposes. 2,107,618; Feb. 8.
Oetterer, Alvin, Hermann, Mo. Adjustable ice creeper. 2,107,617; Feb. 8.
Ofstedal, Philip R. (See Klecan, Charles E., assignor.)
Ogle, Kenneth N., assignor to Trustees of Dartmouth College, Hanover, N. H. Adjustable lens system. 2,107,905; Feb. 8.
Ohmart, Grayston R., assignor, by mesne assignments, to Nash-Kelvinator Corporation, Detroit, Mich. Refrigerating apparatus. 2,107,644; Feb. 8.
Oil Well Supply Company. (See Maier, August R., assignor.)
Okun, Edward, New York, N. Y. Garment hanger. 2,107,873; Feb. 8.
O'Laverty, James, et al. (See Vanderpoel, Albert G. H., assignor.)
Olds, Ambrose D., assignor to The Coleman Lamp and Stove Company, Wichita, Kans. Sealing means for heater doors. 2,107,762; Feb. 8.
Oliver, Geffrod B., Springfield, assignor to Nashua Manufacturing Company, Boston, Mass. Lap robe for motor vehicles. 2,107,493; Feb. 8.
Oliver, James H., Alden, Pa., assignor to General Electric Company. Supervisory control system. 2,107,902; Feb. 8.
Olmstead, Frederick A., Cleveland Heights, Ohio, assignor to The Hodell Chain Company. Antiskid device. 2,107,545; Feb. 8.
Olsvary, Louis, Spartansburg, assignor of one-half to W. C. Michael, Connellsville, Pa. Safety device for elevators. 2,107,956; Feb. 8.
Olving, Bror G., Hamden, Conn., assignor to Products Protection Corporation. Electric condenser construction. 2,107,423; Feb. 8.
O'Neill, Frank, Jr., assignor to Tamper-Proof Seal Corporation, New York, N. Y. Container cover. 2,107,957; Feb. 8.
Onions, John H., and P. W. Thornhill, Leamington Spa, England; said Thornhill assignor to said Onions. Shock absorbent strut for aircraft. 2,107,494; Feb. 8.
Onsrud Machine Works, Inc. (See Onsrud, Rudolph, assignor.)
Onsrud, Rudolph, assignor to Onsrud Machine Works, Inc., Chicago, Ill. Automatic shaping machine. 2,107,578; Feb. 8.
Oppenlaender, Oskar, Rome, Ga., assignor to Tubise Chatillon Corporation, New York, N. Y. Manufacture of rayon and the like. 2,107,451; Feb. 8.
Osmun, Kenneth L. (See Rockwood, C. D., and Osmun.)
Otis Elevator Company. (See Hymans, Frederick, assignor.)
Otto, Arthur J., assignor to Johnson Service Company, Milwaukee, Wis. Air conditioning. 2,107,386; Feb. 8.
Otto William, and F. E. Scott, Kansas City, Mo. Core drill. 2,107,495; Feb. 8.
Ouellette, Edmond J., Duluth, Minn. Adjustable table. 2,107,579; Feb. 8.
Owens-Illinois Glass Company. (See Bone, H. M., and Williams, assignors.)
Owens-Illinois Glass Company. (See Haselton, Benjamin F., Jr., assignor.)
Pabodie, Robert R., assignor to J. F. Pritchard & Company, Kansas City, Mo. Louver construction for cooling towers. 2,107,496; Feb. 8.
Packard Motor Car Company. (See Best, Frank C., assignor.)
Padgett, Joseph E., Toledo, Ohio. Universal joint. 2,107,497; Feb. 8.
Palmer, Adelbert F. (See Price, F., and Palmer.)
Pangborn Corporation. (See Keefer, Walter L., assignor.)
Pape, Clifford B., and E. N. Thayer, San Jose, and T. A. Schwarz, Menlo Park, Calif. Method and apparatus for treating dried fruits. 2,107,798; Feb. 8.
Papercrete Limited. (See Smith, Ewen R., assignor.)
Paramount Fireworks Company. (See Holcomb, Lester F., assignor.)
Parke, Davis & Company. (See Rawlins, A. L., and Hamilton, assignors.)
Parkhurst, Arthur C., Denver, Colo. Dry fly holder. 2,107,645; Feb. 8.
Parks, Harry H., Huntington Park, L. A. Thomas, Maywood, and H. S. Thomas, Huntington Park, Calif. Shoe finishing apparatus. 2,107,580; Feb. 8.
Parsons, John H., Bloomfield Hills, and L. S. Lamb, Grosse Pointe Park, Mich. Tool retainer. 2,107,581; Feb. 8.
Parvin, Edward G., Roselle, assignor to National Pneumatic Company, Rahway, N. J. Valve control apparatus. 2,107,874; Feb. 8.
Pasinski, Walter J., Howell, assignor to Burroughs Adding Machine Company, Detroit, Mich. Calculating machine. 2,107,582; Feb. 8.
Patrol Valve Company, The. (See Matthews, B. L., and Marvin, assignors.)
Paul, Henri, Montreal, Quebec, Canada. Light diffusing glass. 2,107,833; Feb. 8.
Peale-Davis Company. (See Davis, Kenneth, assignor.)
Pease, John W., Rochester, N. Y. Apple paring and trimming machine. 2,107,339; Feb. 8.
Pedrick, Irene8 P., assignor to William Sellers & Company, Incorporated, Philadelphia, Pa. Washer. 2,107,340; Feb. 8.
Peerless Sample Card Co. Inc. (See Domber, Joseph, assignor.)
Pennsylvania Railroad Company, The. (See Hoke, Harry A., assignor.)
Pennsylvania Railroad Company, The. (See Seider, Leo J., assignor.)
Pense, Walter. (See Hess, F., Hager, and Pense.)
Pentecost, Stephen J., et al. (See Hall Archibald John, assignor.)
Peo, Ralph F., assignor to Houde Engineering Corporation, Buffalo, N. Y. Governor clutch. 2,107,341; Feb. 8.
Perkins, Ralph P., and A. J. Dietzler, assignors to The Dow Chemical Company, Midland, Mich. Vapor phase hydrolysis of halogenated hydrocarbons. 2,107,710; Feb. 8.
Pestarini, Joseph M., Grant City, Staten Island, N. Y. Electric direct current transformer. 2,107,740; Feb. 8.

Peters, Leo R., Garfield Heights, Ohio, assignor to General Electric Company. Manufacturing an electric device. 2,107,903; Feb. 8.
Petroleum Iron Works Company of Ohio, The. (See Shanor, Edgar E., assignor.)
Phelps Dodge Corporation. (See Fowler, M. G., and Barker, assignors.)
Phillips, James A., Hopkinsville, Ky., assignor to The Ford Meter Box Company, Wabash, Ind. Key. 2,107,834; Feb. 8.
Phillips Petroleum Company. (See Nutter, I. E., Martin, and McCullough, assignors.)
Pierce, Milo F., assignor to Western United Gas and Electric Company, Aurora, Ill. Ground rod connecter. 2,107,535; Feb. 8.
Pierson, William D., and G. W. Jackman, assignors to The Waterbury Farrel Foundry & Machine Company, Waterbury, Conn. High speed wiredrawing machine. 2,107,799; Feb. 8.
Pineo, Orrin W., Milo, Maine, assignor to The Calco Chemical Company, Inc., Bridgewater, Township, Somerset County, N. J. Spectrophotometer. 2,107,836; Feb. 8.
Pitney, Earl H., Excelsior, Minn. Crank construction for reels. 2,107,875; Feb. 8.
Platt, Herbert, Cumberland, Md., assignor to Celanese Corporation of America. Marking device. 2,107,424; Feb. 8.
Platz, Ford D., Fort Wayne, assignor to C. G. Conn, Ltd., Elkhart, Ind. Key mechanism for woodwind instruments. 2,107,583; Feb. 8.
Pneumatic Scale Corporation. (See Everett, Arthur C., assignor.)
Pöll, Hans. (See Suida, H., Pöll, and Nowak.)
Pollinger, Morris D., Stamford, Conn. Shoe display easel. 2,107,306; Feb. 8.
Pool, William O., assignor to Armour and Company, Chicago, Ill. Separating nitrile-hydrocarbon mixtures. 2,107,904; Feb. 8.
Porter, Albert N., assignor to J. F. Darby, Tulsa, Okla. Well pumping apparatus. 2,107,498; Feb. 8.
Porter, Albert N., assignor to J. F. Darby, Tulsa, Okla. Stirrup bearing for pitmans. 2,107,499; Feb. 8.
Potter, Ralph K., Madison, N. J., assignor to American Telephone and Telegraph Company. Vacuum tube with tank circuits. 2,107,287; Feb. 8.
Potter, Thomas I., Buffalo, N. Y. Refrigerator. 2,107,763; Feb. 8.
Potts, Thomas E., Los Angeles, Calif. Burner. 2,107,646; Feb. 8.
Powers, Milton A., Detroit, Mich., assignor, by mesne assignments, to The Timken-Detroit Axle Company. Carbureting ring structure for wall flame burners. 2,107,800; Feb. 8.
Pray, Thomas E., assignor to Goodman Manufacturing Company, Chicago, Ill. Kerf-cutting machine. 2,107,584; Feb. 8.
Precision Scientific Company. (See Canuteson, Irving L., assignor.)
Presby, Leroy Q., Melrose, assignor to American Stay Company, East Boston, Mass. Printing press. 2,107,647; Feb. 8.
Preussische Bergwerks- und Hütten-Aktiengesellschaft. (See Haase, K., Kerth, and Probst, assignors.)
Preussische Bergwerks- und Hütten-Aktiengesellschaft. (See Haase, K., and Werth, assignors.)
Pribyl, Elmer L., Wymore, Nebr. Auger. 2,107,958; Feb. 8.
Price, Floyd, and A. F. Palmer, Wellsboro, Pa. Milk can conveyer. 2,107,500; Feb. 8.
Price, Nathan C., and M. Lothrop, Berkeley, Calif. Engine. 2,107,589; Feb. 8.
Prifti, Spiro, Chicago, Ill. Window. 2,107,711; Feb. 8.
Pritchard, J. F., & Company. (See Pabodie, Robert R., assignor.)
Probst, Hermann. (See Haase, K., Werth, and Probst.)
Products Protection Corporation. (See Olving, Bror G., assignor.)
Protex Weather-Strip Mfg. Co. (See Klecan, Charles E., assignor.)
Protze, Curt, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Monitor. 2,107,425; Feb. 8.
Puetzer, Bruno, Albany, assignor to Winthrop Chemical Company, Inc., New York, N. Y. Guanidino and biguanidino derivatives of cyclic ether compounds. 2,107,712; Feb. 8.
Pule, Alfred E., Cleveland, Ohio, assignor to Metropolis Bending Company, Metropolis, Ill. Folding chair. 2,107,764; Feb. 8.
Purdy, Neil B., and H. A. Schneider, Milwaukee, Wis.; said Purdy assignor to said Schneider. Lighter and fuel therefor. 2,107,546; Feb. 8.
Purpura, August C., Chicago, Ill. Toaster. 2,107,388; Feb. 8.
Putterman, Benjamin, Brooklyn, N. Y., assignor to Yankee Metal Products Corp., Norwalk, Conn. Automobile lamp. 2,107,648; Feb. 8.
Pyle, Thomas M., Oklahoma City, Okla. Well reamer. 2,107,547; Feb. 8.
Pyrene Manufacturing Company. (See Hunter, John N., assignor.)
Query, Thurman, Columbus, Ind. Headlight attachment. 2,107,801; Feb. 8.
Quinn, Edward, Brooklyn, assignor to The Del-Mac Shoe Process Corporation, New York, N. Y. Shoemaking method. 2,107,501; Feb. 8.
Quinn, Edward, Brooklyn, assignor to The Del-Mac Shoe Process Corporation, New York, N. Y. Inseam trimming machine. 2,107,502; Feb. 8.
Rader, Thomas D., Glendale, assignor of one-half to R. Macintosh, Los Angeles, Calif. Quick relining brake. 2,107,503; Feb. 8.
Radio Corporation of America. (See Dreyer, John F., Jr., assignor.)
Radio Corporation of America. (See Schade, Otto H., assignor.)
Radio Corporation of America. (See Zworykin, Vladimir K., assignor.)
Ralston, Anderson W., and C. W. Christensen, assignors to Armour and Company, Chicago, Ill. Chlorinated aralkyl ketones. 2,107,905; Feb. 8.
Ramas, Jules F., Chatou, France. Device for making oneself a tie knot. 2,107,619; Feb. 8.
Ratkowski, Thomas A., Chicago Heights, Ill., assignor to The American Brake Shoe and Foundry Company. Dipper door for excavating buckets. 2,107,342; Feb. 8.
Rawlins, Albert L., Detroit, and H. C. Hamilton, Grosse Ile, assignors to Parke, Davis & Company, Detroit, Mich. Polyhydroxy poly secondary alkyl phenol germicides. 2,107,307; Feb. 8.
Raybestos-Manhattan, Inc. (See Novak, Isador J., assignor.)
Raytheon Production Corporation. (See Spencer, Percy L., assignor.)
Rea, Arthur A., La Grande, Oreg. Draft promoter for furnaces. 2,107,504; Feb. 8.
Reconstruction Finance Corporation. (See Constantine, Arthur R., assignor.)
Reconstruction Finance Corporation. (See Wiggers, Henry, assignor.)
Reed, Harold V. (See Nutt, H., and Reed.)
Reed, Harold V., assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Clutch plate. 2,107,741; Feb. 8.
Reed, Louis B., et al. (See Reed, Roy E., assignor.)
Reed Roller Bit Company. (See Harrington, George G., assignor.)
Reed, Roy E., Ripon, Wis., assignor of one-fourth to H. Hull, Denver, one-fourth to L. B. Reed, Greeley, Colo., and one-fourth to W. E. Haseltine, Ripon, Wis. Washing machine. 2,107,426; Feb. 8.
Regan Forge & Engineering Company. (See Foster, David T., assignor.)
Reichhold Chemicals. (See Hovey, Almon G., assignor.)
Reichhold, Helmuth. (See Hovey, Almon G., assignor.)
Reid, James S., Shaker Heights, assignor, by mesne assignments, to The Standard Products Company, Cleveland, Ohio. Strip forming apparatus. 2,107,585; Feb. 8.
Reliable Electric Co. (See Fotsch, William G., assignor.)
Remick, Lawrence E. (See James, E. F., and Remick.)
Reyerson, Lloyd H., St. Paul, Minn. Treating animal fat. 2,107,505; Feb. 8.
Richards, Horace. (See Statham, N., and Richards.)
Richter, Herbert J. (See Richter, Herman G. and H. J.)
Richter, Herman G. and H. J., Sacramento, Calif. Foam wiper. 2,107,876; Feb. 8.
Riess, Joseph. (See Asmussen, H., and Riess.)
Rigandi, Joseph R., Westerleigh, N. Y. Combined sole and arch construction for shoes. 2,107,620; Feb. 8.
Riggs, Clyde A., and T. B. Farmer, Chattanooga, Tenn. Work transferring device for knitting machines. 2,107,548; Feb. 8.
Roach, Nathan, assignor to The Cleveland Brass Manufacturing Company, Cleveland, Ohio. Making threaded connections. 2,107,802; Feb. 8.
Robbins, Willis C., Wakefield, Mass., assignor to Metropolitan Sewing Machine Corporation, Nyack, N. Y. Apparatus for forming tubular articles. 2,107,837; Feb. 8.
Roberts & Mander Stove Company. (See Antrim, W. D., and Schlemmer, assignors.)
Roberts and Schaefer Company. (See Dietrich, Werner, assignor.)
Rockwood, Chester D., and K. L. Osmun, assignors to The Union Selling Company, Cincinnati, Ohio. Treating paper. 2,107,343; Feb. 8.
Rodda, Sidney. (See Bull, C. S., and Rodda.)
Rodda, Sidney. (See Shoenberg, I., Bull, and Rodda.)
Rodeghier, Frederick, Joliet, Ill. Hydraulic clutch. 2,107,344; Feb. 8.
Rodman Chemical Company. (See Rodman, Hugh, assignor.)
Rodman, Hugh, Oakmont, assignor to Rodman Chemical Company, Verona, Pa. Water treatment. 2,107,765; Feb. 8.
Rodney Hunt Machine Company. (See Frusher, Tom, Jr., assignor.)
Roe, Mayo E., Elyria, and W. H. Adams, Cleveland, assignors to The Colson Corporation, Elyria, Ohio. Vehicle of the tricycle or velocipede type. 2,107,506; Feb. 8.
Rogers, Owen A., Newark, assignor to Driver-Harris Company, Harrison, N. J. Electrode material and making the same. 2,108,004; Feb. 8.
Rogers, Stephen C., Lynn, Mass., assignor to General Electric Company. Lamp support for projectors. 2,107,906; Feb. 8.

Röhm & Haas Company. (See Bruson, Herman A., assignor.)

Rolčik, Miroslav, Brunn-Husovice, assignor to Československá Zbrojovka A. S. Brno, Brno, Czechoslovakia. Adjusting mechanism for firearms. 2,107,803; Feb. 8.

Rose, Julius, Brooklyn, N. Y. Monocycle. 2,107,766; Feb. 8.

Rose, Lynn E., assignor of two-fifths to G. Felton, one-fifth to R. Thede, and one-fifth to D. E. Farr, Aledo, Ill. Checkrow planter. 2,107,649; Feb. 8.

Rose, Maurice L., San Francisco, Calif. Incinerator. 2,107,507; Feb. 8.

Rosedale Knitting Co. (See Moser, Robert E., assignor.)

Rosendale, Stanley R., Mount Healthy, assignor to The Karl Kiefer Machine Company, Cincinnati, Ohio. Safety device for container moving machinery. 2,107,345; Feb. 8.

Rosenstein, Ludwig, assignor to Shell Development Company, San Francisco, Calif. Recovery and conversion of the sulphur content of industrial gases. 2,107,907; Feb. 8.

Rosmait, John A., Manistee, Mich. Apparatus for and agitating pulp stock. 2,107,390; Feb. 8.

Ross, Simon G., Marblehead, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Wood heel. 2,107,391; Feb. 8.

Rossner, Ernst, K. Börner, Premnitz/Westhavelland, and H. Mahn and W. Irion, Dessau, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Manufacture of artificial articles from fibroin solutions. 2,107,959; Feb. 8.

Roux, Bernard, R. Gamzon, and M. Sollima, Paris, France. Modifying the acoustics of a room. 2,107,804; Feb. 8.

Rowland, Herbert R., and E. J. Smith, Kansas City, Mo., assignors to Corona Conversion Corporation. Process for refining mineral oils. 2,107,713; Feb. 8.

Rowland, Herbert R., deceased, Kansas City, Mo., by M. U. Rowland, Basking Ridge, N. J., administratrix, and E. J. Smith, Ponca City, Okla.; said H. R. Rowland and E. J. Smith assignors to Corona Conversion Corporation, Kansas City, Mo. Apparatus for refining mineral oils. 2,107,714; Feb. 8.

Rowland, Mary U., administratrix. (See Rowland, H. R., and Smith.)

Royse, Grover C., Vallejo, Calif. Clutch. 2,107,308; Feb. 8.

Rubbercraft Corporation of California, Ltd. (See Hartnack, John C., assignor.)

Ruben, Samuel, New Rochelle, N. Y. Mercury contact interrupter. 2,107,742; Feb. 8.

Rubenstein, Morris J., Northampton, Pa. Garment shaping and turning machine. 2,107,621; Feb. 8.

Ruggles, William A. (See Hull, A. W., and Ruggles.)

Rullison, Earl A., assignor to The Tillotson Manufacturing Company, Toledo, Ohio. Valve for carburetors. 2,107,998; Feb. 8.

Rummelsburg, Alfred L., assignor to Hercules Powder Company, Wilmington, Del. Sulphonated hydrogenated abietyl derivatives and producing. 2,107,508; Feb. 8.

Runyan, William B., and A. H. Langenheim, assignors to The Dayton Malleable Iron Company, Dayton, Ohio. Jack. 2,107,715; Feb. 8.

Rupp, Emil, Berlin-Frohnau, Germany, assignor to General Electric Company. Immersion starter for pool-type discharge devices. 2,107,908; Feb. 8.

Rupp, Max G., Chicago, Ill. Electric sign. 2,107,767; Feb. 8.

Russell, Arthur O., Port Chester, N. Y. Dialyzers. 2,107,805; Feb. 8.

Russell, Harold S. (See Coffey, George E., assignor.)

Russell, William S., Salem, Va., assignor to The Dorr Company, Inc., New York, N. Y. Water treatment. 2,108,021; Feb. 8.

Safety Car Heating & Lighting Company, The. (See Strobell, John D., assignor.)

Salembier, Maurice A., Jr., Plandome, N. Y. Continuous yarn. 2,107,838; Feb. 8.

Salemme, William, West Orange, N. J., assignor to Celluloid Corporation. Tube for thermoplastic derivatives of cellulose. 2,108,022; Feb. 8.

Salemme, William, West Orange, N. J., assignor to Celluloid Corporation. Method and apparatus for making tubes of thermoplastic derivatives. 2,108,023; Feb. 8.

Sanford, Carl J. (See Walker, A. O., and Sanford.)

Sauer, Anthony M., Cincinnati, Ohio. Glare shield structure. 2,107,586; Feb. 8.

Schaaf, John, Buffalo, N. Y. Centrifuge. 2,107,909; Feb. 8.

Schade, Otto H., West Caldwell, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Electron discharge device. 2,107,520; Feb. 8.

Schaefer, Frederic, Pittsburgh, Pa. Brake shoe key. 2,107,768; Feb. 8.

Schenck, Gerhard, Ludwigshafen-on-the-Rhine, Germany, assignor to E. Bilhuber, Inc., Jersey City, N. J. Therapeutic derivative of the genus lactuca and preparing same. 2,107,839; Feb. 8.

Schlesmer, Alfred W. (See Antrim, W. D., and Schlesmer.)

Schlesinger, Kurt, Berlin, Germany. Television arrangement. 2,107,392; Feb. 8.

Schlesinger, Kurt, Berlin, Germany. Radio receiving system. 2,107,393; Feb. 8.

Schlesinger, Kurt, Berlin, Germany. Radio receiving system. 2,107,394; Feb. 8.

Schlesinger, Kurt, Berlin, Germany. Radio receiving system. 2,107,395; Feb. 8.

Schmalfeldt, Hans, Cassel-Brasselsberg, Germany. Reduction of fine iron ores. 2,107,540; Feb. 8.

Schmidt, Hugo E., New Bedford, Mass. Loom reed. 2,107,877; Feb. 8.

Schmidt, Kurt, Wuppertal–Elberfeld-Grenze, Germany, assignor to North American Rayon Corporation. Winding process for filaments of artificial origin. 2,107,996; Feb. 8.

Schmidt, Paul C., Nutley, N. J. Nut lock. 2,107,550; Feb. 8.

Schneider, Herman A. (See Purdy, N. B., and Schneider.)

Schneider Iron Works. (See Lotz, Rudolph W., assignor.)

Scholtz, Otto A., Waterloo, Iowa. Shape cutting machine. 2,107,396; Feb. 8.

Schrader's, A., Son, Incorporated. (See Williams, Selden T., assignor.)

Schubert & Salzer Maschinenfabrik Aktiengesellschaft. (See Heinitz, Woldemar, assignor.)

Schulz, Walter F., assignor to Truscon Steel Company, Youngstown, Ohio. Metal barrel. 2,107,992; Feb. 8.

Schumacher, Willy, Frankfort-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y. 2,6-dimethylnaphthalene-1-sulphonic acid and preparing it. 2,107,910; Feb. 8.

Schuster, Fritz, Chemnitz, Germany. Matting process. 2,107,960; Feb. 8.

Schwager, Henry A. (See Crawford, J. M., and Schwager.)

Schwarz, Gustav, G. m. b. H. (See Grabarse, M., and Hoffmann, assignors.)

Schwarz, Theodor A. (See Pape, C. B., Thayer, and Schwarz.)

Schwarzler, Albert J., New York, N. Y. Mold for concrete walls or the like. 2,107,427; Feb. 8.

Scott, Francis E. (See Otto, W., and Scott.)

Sebek, Albert T., Chicago, Ill. Ornament. 2,107,840; Feb. 8.

Secretary of Agriculture of U. S. A., Henry A. Wallace. (See Emmett, Paul H., assignor.)

Seeburg, Noel M. (See Wallin, F. E. A., Johnson, K. J. and C. G., assignors.)

Seguy, Jean D., assignor to Universal Oil Products Company, Chicago, Ill. Conversion of hydrocarbon oils. 2,107,509; Feb. 8.

Seider, Leo J., assignor to The Pennsylvania Railroad Company, Philadelphia, Pa. Articulation joint for locomotives and cars. 2,107,841; Feb. 8.

Seiler, Dayton A., assignor to J. F. Seiler, Elizabethton, Tenn. Cap cover stretcher. 2,107,961; Feb. 8.

Seiler, Justin F. (See Seiler, Dayton A., assignor.)

Sellers, William, & Company. (See Pedrick, Irenee P., assignor.)

Semet-Solvay Engineering Corporation. (See McIntire, Charles V., assignor.)

Seng Company, The. (See Fox, Martin, assignor.)

Seward, David E., et al. (See Vanderpoel, Albert G. H., assignor.)

Sexton, Isaac E., Winchester, Mass. Bail ear for sheet metal vessels and making the same. 2,107,428; Feb. 8.

Sexton, John R., Meriden, Conn. Flexible decorative strip. 2,107,677; Feb. 8.

Shaffer, Don, Tool Company. (See Van Stone, Clifford E., assignor.)

Shanklin Manufacturing Company. (See Horsley, James H., assignor.)

Shanor, Edgar E., assignor to The Petroleum Iron Works Company of Ohio, Sharon, Pa. Closing sealing rings. 2,108,024; Feb. 8.

Shaw, Robert D., Brooklyn, N. Y., assignor to Niles-Bement-Pond Company, Hartford, Conn. Hydraulic operation and control of machine tools. 2,108,025; Feb. 8.

Sheasby, Hugh C., Kimberley, South Africa. Pillow. 2,107,962; Feb. 8.

Shell Development Company. (See Bent, Franklin A., assignor.)

Shell Development Company. (See Evans, T., and Edlund, assignors.)

Shell Development Company. (See Rosenstein, Ludwig, assignor.)

Shell Development Company. (See van Dijck, Willem, J. D., assignor.)

Shickluna, Kitt S. (See Braun, J. L., and Shickluna.)

Shoenberg, Isaac, London, C. S. Bull, Hillingdon, and S. Rodda, Enfield, assignors to Electric and Musical Industries Limited, Middlesex, England. Electron discharge device. 2,107,519; Feb. 8.

Short, Charles E. (See Dressel, G. F., and Short.)

Shoup, Allen A., assignor to Universal Stamping & Mfg. Co., Chicago, Ill. Sound reproducing and recording mechanism for the films of motion picture projectors. 2,107,743; Feb. 8.

Sieglitz, Adolf, Frankfort-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Preparing 1-methylnaphthalene-7-sulphonic acid and 1-methyl-7-hydroxy-naphthalene. 2,107,911; Feb. 8.

Siemens & Halske Aktien-Gesellschaft. (See Vatter, Hans, assignor.)

Simons, Robert J., Springfield, Mass. Painter's apparatus. 2,107,769; Feb. 8.

Simpson, William K., assignor to Hoffman Specialty Company, Waterbury, Conn. Steam trap and balanced valve. 2,107,551; Feb. 8.

Singer Manufacturing Company, The. (See Allen, E. B., Knox, and Faulkner, assignors.)

Singleton, John C., Vinton, assignor of one-fourth to I. Cunniff, Lake Charles, La. Well casing setting and backing-off coupling. 2,107,716; Feb. 8.

Skell, Lewis. (See Miller, F. P., and Skeel.)

Skinner, Chame D., Springdale, and L. C. Bradley, New Kensington, Pa. Manufacturing extruded articles. 2,107,510; Feb. 8.

Skjerven, Betsy P., Brooklyn, N. Y. Steam table. 2,107,346; Feb. 8.

Sloane, Max. (See Sloane, Nathan and M.)

Sloane, Nathan and M., Brooklyn, N. Y. Reversible handbag cover. 2,107,347; Feb. 8.

Smith, Charles H., St. Petersburg, Fla. Drinking mouthpiece for bottles or the like. 2,107,309; Feb. 8.

Smith, Charles H., and J. E. Conner, Casper, Wyo.; said Conner assignor to said Smith. Display device. 2,108,002; Feb. 8.

Smith, Charles J., assignor to The Dayton Malleable Iron Company, Dayton, Ohio. Jack. 2,107,717; Feb. 8.

Smith, Emerson P. (See Benson, Edward E., assignor.)

Smith, Eugene J. (See Rowland, H. R., and Smith.)

Smith, Ewen R., assignor to Papercrete Limited, London, England. Forming of paperboards. 2,107,587; Feb. 8.

Smith, Frank B., and J. E. Livak, assignors to The Dow Chemical Company, Midland, Mich. Preparation of pentachlorophenol. 2,107,650; Feb. 8.

Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 2,107,397; Feb. 8.

Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 2,107,398; Feb. 8.

Smith, Joseph L., Glen Ellyn, Ill. Muffler repair jacket. 2,107,588; Feb. 8.

Smith, Lester C., West Hartford, assignor to The Spencer Turbine Company, Hartford, Conn. Hood for rock drills. 2,107,552; Feb. 8.

Smith, Sidney R., Liverpool, assignor, by mesne assignments, to Automatic Telephone & Electric Company Limited, London, England. Electric switch. 2,107,651; Feb. 8.

Smoot, Theophilus H., assignor to Anchor Post Fence Company, Baltimore, Md. Oil burner. 2,107,452; Feb. 8.

Société Anonyme Anciens Etablissements Hotchkiss & Cie. (See Sutter, C., and Boussel, assignor.)

Societe Anonyme "Transformateurs de Mesure E. Walter". (See Bajon, Adolphe, assignor.)

Société Francaise de la Viscose S. A. (See Lefebvre-Carnot, P., and Vautier, assignors.)

Socony-Vacuum Oil Company. (See Foster, William H., assignor.)

Socony-Vacuum Oil Company. (See Story, B. W., and Kalichevsky, assignors.)

Soderberg, Karl Gustaf, and H. Brown, assignors to Udylite Company, Detroit, Mich. Ductile cadmium coating. 2,107,806; Feb. 8.

Sollima, Mario. (See Roux, B., Gamson, and Sollima.)

Solomon, Morris B., New York, N. Y. Serving tray. 2,107,744; Feb. 8.

Solomon, Nathan L., Brooklyn, N. Y. Ringlet curler. 2,107,348; Feb. 8.

Solomon, Nathan L., Brooklyn, N. Y. Hair winder. 2,107,349; Feb. 8.

Spalding, A. G., & Bros. (See Hermson, John H., assignor.)

Specter, Elias, et al. (See Drexler, Samuel, assignor.)

Spencer, Percy L., West Newton, Mass., assignor, by mesne assignments, to Raytheon Production Corporation. Glow lamp. 2,107,399; Feb. 8.

Spencer Turbine Company, The. (See Smith, Lester C., assignor.)

Sperry Gyroscope Company Inc. (See Nisbet, Robert H., assignor.)

Sperry-Sun Well Surveying Company. (See Kothny, Gottdank L., assignor.)

Sperti, George, Covington, Ky. Device for promoting uniform and homogeneous freezing. 2,107,718; Feb. 8.

Spieth, Karl A., Kearney, Nebr. Tire deflation indicator. 2,107,912; Feb. 8.

Spooner, Charles E., Arkansas City, Kans. Waterproof coating or paint and making same. 2,107,511; Feb. 8.

Square D Company. (See Jackson, John G., assignor.)

Stabbal, Oscar J., Lakewood, Ohio. Refrigerator. 2,107,400; Feb. 8.

Stader, Florence M., Plymouth, Mich. Fastening device. 2,107,913; Feb. 8.

Stallmann, Otto, South Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of the alkali metal salts of 2-benzoylbenzoic acid compounds. 2,107,652; Feb. 8.

Standard Alcohol Co. (See Archibald, Francis M., assignor.)

Standard Oil Development Company. (See Wiezevich, P. J., and Turner, assignors.)

Standard Products Company, The. (See Reid, James S., assignor.)

Standard Railway Equipment Company. (See Gilpin, Garth G., assignor.)

Standard Railway Equipment Manufacturing Company. (See Gilpin, Garth G., assignor.)

Standard Stoker Company, Te. (See Anderson, Howard P., assignor.)

Standard Stoker Company, The. (See Ketchpel, Paul A., assignor.)

Star Expansion Bolt Company. (See Hungerford, Daniel C., assignor.)

Statham, Noel, Irvington-on-Hudson, N. Y., and H. Richards, Luke, Md., assignors to West Virginia Pulp and Paper Company, New York, N. Y. Dustless bag discharge hopper. 2,107,995; Feb. 8.

Stathem, Vereau L., Riverdale, Calif. Sack sewing apparatus. 2,107,963; Feb. 8.

Stathem, Vereau L., Riverdale, Calif. Filled sack sewing apparatus. 2,107,964; Feb. 8.

Stearns-Roger Manufacturing Company, The. (See Cromble, George, Sr., assignor.)

Steel Heddle Manufacturing Company. (See Fehr, Harry W., assignor.)

Stokes, F. J., Machine Company. (See Westin, Charles J., assignor.)

Story, Bertrand W., and V. A. Kalichevsky, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Refining petroleum. 2,107,429; Feb. 8.

Stough, Turney H., assignor to The Jeannette Steel Corporation, Jeannette, Pa. Carpet sweeper. 2,108,003; Feb. 8.

Strauss, Siegmund, Vienna, Austria. Safety buckle. 2,107,878; Feb. 8.

Streicher, Johann S., assignor to American Platinum Works, Newark, N. J. Alloys. 2,107,310; Feb. 8.

Steinberg, Julius, New York, N. Y. Laying-in elastic strand in the edge of a mesh fabric. 2,107,512; Feb. 8.

Steinhart, Ferdinand, Kearny, N. J., assignor to The Lindsay Wire Weaving Company, Cleveland, Ohio. Woven wire fabrics. 2,107,719; Feb. 8.

Steinway & Sons. (See Bilhuber, Paul H., assignor.)

Sterling Electric Motors, Inc. (See Johnson, Carl E., assignor.)

Stewart, Milford D. (See McCormick, E., Stewart, and Worthington.)

Stricker, Albert H., Cleveland, and M. W. Ulf, Shaker Heights, Ohio, assignors to General Electric Company. Electric lamp attachment fixture. 2,107,914; Feb. 8.

Strickler, John C., San Francisco, Calif., assignor to American Can Company, New York, N. Y. Key attaching machine. 2,107,311; Feb. 8.

Stripling, Luke S., Amarillo, Tex. Tree pruner. 2,107,401; Feb. 8.

Strobell, John D., New Haven, Conn., assignor to The Safety Car Heating & Lighting Company. Air filter for railroad cars. 2,107,653; Feb. 8.

Stromberg-Carlson Telephone Manufacturing Company. (See Veal, Gentry, assignor.)

Stuart, Henry J., New Haven, Conn. Hose supporter button. 2,107,453; Feb. 8.

Stubbins, John T., Youngstown, Ohio. Signal device. 2,107,350; Feb. 8.

Sulda, Herman, H. Pöll, Vienna, and A. Nowak, Modling, Austria. Separating mineral oil products. 2,107,807; Feb. 8.

Sullivan Machinery Company. (See Holmes, Morris P., assignor.)

Superheater Company, The. (See Birmingham, Thomas F., assignor.)

Superheater Company, The. (See Caracristi, Virginius Z., assignor.)

Superheater Company, The. (See Gordon, Charles W., assignor.)

Sure Feed Limited. (See Hughes, Cecil, assignor.)

Sutter, Charles, Suresnes, and A. Boussel, Courbevoie, assignors to Société Anonyme Anciens Etablissements Hotchkiss & Cie, Levallois-Perret, France. Automatic firearm. 2,108,026; Feb. 8.

Swander, Louis A., Osborne, Kans. Dial cover for water meters. 2,107,720; Feb. 8.

Swartwood, Kenneth, assignor to Universal Oil Products Company, Chicago, Ill. Conversion of hydrocarbon oils. 2,107,454; Feb. 8.

Swenson, Carl E., Rockford, assignor to Borg-Warner Corporation, Chicago, Ill. Universal drive mechanism. 2,107,721; Feb. 8.

Swift, George W., Jr., Inc. (See Swift, George W., Jr., assignor.)

Swift, George W., Jr., assignor to George W. Swift, Jr., Inc., Bordentown, N. J. Corrugated paperboard making machine. 2,107,430; Feb. 8.

Switzer, Clarence W., Crawfordsville, Ind. Trailer coupling. 2,107,965; Feb. 8.

Swoger, William, Ferndale, Mich. Centrifugal cast. 2,107,513; Feb. 8.

Syracuse Trust Company, trustee. (See Holt, T. W., and Levan, assignors.)

Taguchi, Junzo, Tokyo-shi, Japan. Attachment for artificial teeth. 2,107,966; Feb. 8.

Tait, James H., et al. (See Beck, Clarence E., assignor.)

Tamis, Jack, New York, N. Y. Pencil. 2,107,879; Feb. 8.

Tamper-Proof Seal Corporation. (See O'Neill, Frank, Jr., assignor.)

Tashjian, Armen H., Cleveland Heights, Ohio. Conduit molding. 2,107,915; Feb. 8.

Taubensee, Henry A., assignor of one-half to E. H. Geyer, Chicago, Ill. Joint for concrete structures. 2,107,351; Feb. 8.

Tauss, Martin, Chicago, Ill. Shaping fur heads of pelts. 2,107,916; Feb. 8.

Taylor, Edward W., assignor to S. G. Taylor Chain Co., Hammond, Ind. Antiskid cross chain. 2,107,431; Feb. 8.

Taylor, Leonard, Port, Okla. Dam forming attachment. 2,107,967; Feb. 8.

Taylor, S. G., Chain Co. (See Taylor, Edward W., assignor.)

Tebo, William A., Anthony, R. I. Shuttle tension. 2,107,917; Feb. 8.

Technicolor Motion Picture Corporation. (See Ball, Joseph A., assignor.)

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Buschbeck, Werner, assignor.)

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Protze, Curt, assignor.)

Tevea, Maarten C., and J. H. de Boer, assignors to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Phototube. 2,107,352; Feb. 8.

Texas Company, The. (See Gee, William P., assignor.)

Texas Company, The. (See Kaufman, Gus, assignor.)

Thayer, Elisha N. (See Pape, C. B., Thayer, and Schwarz.)

Thede, Ralph, et al. (See Rose, Lynn E., assignor.)

Thomas, Howard S. (See Parks, H. H., and Thomas, Lee A. and H. S.)

Thomas, Lee A. (See Parks, H. H., and Thomas, Lee A. and H. S.)

Thomas, William E., Charlotte, N. C. Display box stand. 2,107,991; Feb. 8.

Thompson, Andrew C., Miami, Fla. Window and its associated shade. 2,107,432; Feb. 8.

Thompson, Charles S., Elmhurst, and F. A. Kucera, assignors to Union Special Machine Company, Chicago, Ill. Sewing machine. 2,107,918; Feb. 8.

Thompson, Howard A., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway signaling. 2,107,678; Feb. 8.

Thompson, Joseph W., Portland, Oreg. Attachment for apprehending motor vehicles. 2,107,312; Feb. 8.

Thompson, Tom H., Detroit, Mich. Leaf spring treatment. 2,107,455; Feb. 8.

Thornhill, Peter W. (See Onions, J. H., and Thornhill.)

Tillotson Manufacturing Company, The. (See Rullison, Earl A., assignor.)

Tillyer, Edgar D., assignor to American Optical Company, Southbridge, Mass. Ophthalmic instrument. 2,107,553; Feb. 8.

Timken-Detroit Axle Company, The. (See Powers, Milton A., assignor.)

Tokheim Oil Tank and Pump Company. (See Bechtold, Reuben E., assignor.)

Tosterud, Martin. (See Work, H. K., and Tosterud.)

Tour, Sam, New York, N. Y., assignor to U. S. Ring Traveler Company, Providence, R. I. Ring traveler. 2,108,027; Feb. 8.

Touton, Rush D. (See Wurman, H. P., and Touton.)

Trail, John O., Forest City, Iowa. Fence post brace. 2,107,589; Feb. 8.

Trans-Lax Corporation. (See Newman, David F., assignor.)

Trapp, George J., Merton Park, London, assignor to Automotive Products Company Limited, London, England. Cam and follower mechanism. 2,107,456; Feb. 8.

Troxel Manufacturing Company, The. (See Brandt, J. W., and Linder, assignors.)

Trubenising Process Corporation. (See Liebowitz, Benjamin, assignor.)

Truscon Steel Company. (See Schulz, Walter F., assignor.)

Truslow, James L., and R. J. McConnell, assignors to Whitin Machine Works, Whitinsville, Mass. Long draft spinning cradle. 2,107,433; Feb. 8.

Tubise Chatillon Corporation. (See Oppenlaender, Oskar, assignor.)

Turner, Carroll O., East St. Louis, and M. P. Weigel, St. Louis, Mo., assignors to Aluminum Company of America, Pittsburgh, Pa. Continuous digestion process. 2,107,919; Feb. 8.

Turner, Luther B. (See Wiesevich, P. J., and Turner.)

Tyson, Theodore J. W. (See Jandus, H. S., and Tyson.)

U S L Battery Corporation. (See Henry, Harry H., assignor.)

Udylite Company. (See Soderberg, K. G., and Brown, assignors.)

Ulf, Marshall W. (See Stricker, A. H., and Ulf.)

Ulline, Migiel J., Washington, D. C. Machine for cutting ice. 2,107,968; Feb. 8.

Underwood Elliott Fisher Company. (See Borg, Ernest M. R., assignor.)

Underwood Elliott Fisher Company. (See Dobson, William A., assignor.)

Underwood Elliott Fisher Company. (See Smith, Jesse A. B., assignor.)

Union Oil Company of California. (See Wade, Maner L., assignor.)

Union Selling Company, The. (See Rockwood, C. D., and Osmun, assignors.)

Union Special Machine Company. (See Christensen, N. V., and Hacklander, assignors.)

Union Special Machine Company. (See Thompson, C. S., and Kucera, assignors.)

Union Starch and Refining Company. (See Fetzer, Walter R., assignor.)

Union Switch & Signal Company, The. (See Behrens, Teodoro A., assignor.)

Union Switch & Signal Company, The. (See Crago, Paul H., assignor.)

Union Switch & Signal Company, The. (See Kemmerer, Ralph R., assignor.)

Union Switch & Signal Company, The. (See Thompson, Howard A., assignor.)

United Shoe Machinery Corporation. (See Bazzoni, Lewis J., assignor.)

United Shoe Machinery Corporation. (See Bray, William N., assignor.)

United Shoe Machinery Corporation. (See Gookin, Sylvester L., assignor.)

United Shoe Machinery Corporation. (See Ross, Simon G., assignor.)

U. S. Ring Traveler Company. (See Tour, Sam, assignor.)

United States Rubber Products, Inc. (See Honig, Frank, assignor.)

Universal Oil Products Company. (See Barnes, John B., assignor.)

Universal Oil Products Company. (See Huff, Lyman C., assignor.)

Universal Oil Products Company. (See Ipatieff, V., and Komarewsky, assignors.)

Universal Oil Products Company. (See Mekler, Lev A., assignor.)

Universal Oil Products Company. (See Seguy, Jean D., assignor.)

Universal Oil Products Company. (See Swartwood, Kenneth, assignor.)

Universal Stamping & Mfg. Co. (See Shoup, Allen A., assignor.)

Urquhart, Radcliffe M., Philadelphia, Pa. Hand operated fire extinguisher. 2,107,313; Feb. 8.

Utah Radio Products Company. (See Barrett, Edward L., assignor.)

Vagnelatos, James, Toledo, Ohio. Hair treatment. 2,107,554; Feb. 8.

Vail, Edwin H., Los Angeles, Calif. Container opening device and pouring device. 2,107,654; Feb. 8.

Valtat, Raymond L. A., St. Mande, France. Making record cards for statistical machines. 2,107,969; Feb. 8.

Van Bree, Hubert. (See Frace, A., and Van Breen.)

Van Buskirk, William H., assignor of one-half to O. Beaulieu, Vancouver, British Columbia, Canada. Insulated milk bottle container. 2,107,590; Feb. 8.

Vanderpool, Albert G. H., Wilmar, assignor of one-third to J. O'Laverty and one-third to D. E. Seward, Los Angeles, Calif. Automatically controlling flow of fuel mixture to internal combustion engines. 2,107,314; Feb. 8.

Van der Tuuk, Jacob H. (See Bouwers, A., and van der Tuuk.)

Van Dijck, Willem J. D., The Hague, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Extraction process. 2,107,681; Feb. 8.

Van Ittersum, Willem H. A. G., Bilthoven, Netherlands. Kite. 2,107,808; Feb. 8.

Van Stone, Clifford E., Taft, Calif., assignor to Don Shaffer Tool Corporation. Apparatus for making casing and formation tests in wells. 2,107,457; Feb. 8.

Vatter, Hans, Berlin-Charlottenburg, assignor to Siemens & Halske Aktien-Gesellschaft, Berlin-Siemensstadt, Germany. Lead-in for electron discharge devices. 2,107,353; Feb. 8.

Vautier, Leon P. G. (See Lefebvre-Carnot, P., and Vautier.)

Veal, Gentry, assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y. Apparatus for reproducing sound. 2,107,920; Feb. 8.

Verhagen, Christian M., Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill. Sash construction. 2,107,842; Feb. 8.

Vimeux, Léon, St.-Ouen, France. Mechanical propulsion toy-vehicle. 2,107,722; Feb. 8.

Vogel-Peterson Co. Inc. (See Magnuson, Raymond A., assignor.)

Vogt, Carl W., and G. A. Humason, Houston, Tex. Tester. 2,107,655; Feb. 8.

Voitter, Louis A., et al. (See Cohn, Adolph H., assignor.)

Von Seebeck, George, Syndicate Manager, of Duo Syndicate. (See Ballard, John R., assignor.)

Wade, Maner L., Long Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Dewaxing oil. 2,107,770; Feb. 8.

Wade, Maner L., Long Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Dewaxing oil. 2,107,771; Feb. 8.

Wade, Maner L., Long Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Dewaxing oil. 2,107,772; Feb. 8.

Wadsworth, James M., Tulsa, Okla. Apparatus for decolorizing or desulphurizing hydrocarbons. 2,107,354; Feb. 8.

Wahlin, Fritz. (See Bramsen, S., and Wahlin.)

Wahlin, Fritz. (See Gustafsson, E., and Wahlin.)

Wainwright, Walter, Brooklyn, assignor to H. W. Hardie, New York, N. Y. Plug for tubes. 2,107,315; Feb. 8.

Walker, Albert O., and C. J. Sanford, Independence, Mo. Device for mentholizing cigarettes. 2,107,591; Feb. 8.

Wall, Reuben E., Winston-Salem, N. C. Unloading truck. 2,107,682; Feb. 8.

Wallin, Fred E. A., Chicago, K. T. Johnson, Palatine, and C. G. Johnson, assignors to N. M. Seeburg, Chicago, Ill. Apparatus for separating genuine and spurious coins. 2,107,402; Feb. 8.

Walsh, John L., Baltimore, Md., assignor to May Oil Burner Corporation. Stapling machine attachment. 2,107,555; Feb. 8.

Walsh, Patrick H., East Orange, N. J., assignor to Geo. S. Harwood & Son, Boston, Mass. Textile manufacture. 2,107,458; Feb. 8.

Wanderer-Werke vorm. Winklhofer & Jaenicke Akt.-Ges. (See Ewald, Heinrich K. F., assignor.)

Warner, John L., Fremont, Nebr. Automatic air regulator for incubators. 2,107,909; Feb. 8.

Waterbury Farrel Foundry & Machine Company. (See Pierson, W. D., and Jackman, assignors.)

Watson, Leston, Ardmore, Okla. Drilling mechanism. 2,107,556; Feb. 8.

Weatherhead, Albert J., Jr., assignor to The Weatherhead Company, Cleveland, Ohio. Brake cylinder assembly and making same. 2,107,403; Feb. 8.

Weatherhead Company, The. (See Weatherhead, Albert J., Jr., assignor.)

Weed, Walter A., Lakeland, Fla. Grinding device. 2,107,921; Feb. 8.

Weigel, Melvin P. (See Turner, C. O., and Weigel.)

Weller, Ernest E., Providence, R. I. Tassel. 2,107,459; Feb. 8.

Wells, Emil C., Kauneonga Lake, N. Y. Hydraulic vise. 2,107,970; Feb. 8.

Werth, Helmut. (See Haase, K., Werth, and Probst.)

Wertheim, Hugo. (See Liebesny, P., and Wertheim.)

West Virginia Pulp and Paper Company. (See Statham, N., and Richards, assignors.)

Western Geophysical Company. (See Eisler, Joseph D., assignor.)

Western United Gas and Electric Company. (See Pierce, Milo F., assignor.)

Westlin, Charles J., assignor to F. J. Stokes Machine Company, Philadelphia, Pa. Collapsible tube testing apparatus. 2,107,922; Feb. 8.

Wherry, Earle E., Oklahoma City, Okla. Wire line ends and forming same. 2,107,810; Feb. 8.

White, Charles H., assignor to Deere & Company, Moline, Ill. Planter. 2,107,723; Feb. 8.

Whitin Machine Works. (See Truslow, J. L., and McConnell, assignors.)

Whitney Metal Tool Company. (See Gardner, Ralph D., assignor.)

Whittington, Ralph S., Oak Park, Ill., assignor to Bendix Products Corporation, South Bend, Ind. Automatic clutch control device. 2,107,724; Feb. 8.

Wiesevich, Peter J., now by change of name P. J. Gaylor, and L. B. Turner, Elisabeth, N. J., assignors to Standard Oil Development Company. Ester-containing lubricants and making the same. 2,107,316; Feb. 8.

Wiggers, Henry, Chandler, Ind., assignor, by mesne assignments, to Reconstruction Finance Corporation, Chicago, Ill. Refrigerating apparatus. 2,107,317; Feb. 8.

Wildhaber, Ernest, Irondequoit, assignor to Gleason Works, Rochester, N. Y. Method of and mechanism for producing gears. 2,107,460; Feb. 8.

Wilkie, Robert J. (See Crysler, H. S., and Wilkie.)

Wilkin, Arthur J., San Pedro, Calif. Combination desk and chair. 2,107,404; Feb. 8.

Willging, Louis F., assignor to The Crosley Radio Corporation, Cincinnati, Ohio. Automatic volume control system. 2,107,514; Feb. 8.

Williams, Robert C. (See Bone, Hugh M., and Williams.)

Williams, Selden T., Bellerose, assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y. Rotating joint for running inflation. 2,107,405; Feb. 8.

Williams, Wilbur D., Washington Court House, Ohio. Animal trap. 2,107,683; Feb. 8.

Wilsdorf, Frank A., assignor to Nu-line Manufacturing Company, Incorporated, St. Louis, Mo. Portable seat. 2,107,860; Feb. 8.

Wilson, Lincoln B., Barberton, Ohio, assignor to The Babcock & Wilcox Company, Newark, N. J. Weldrod. 2,107,434; Feb. 8.

Wingfoot Corporation. (See Morris, Thomas C., assignor.)

Winkler, Friedrich, Toronto, Ontario, Canada. Closure for collapsible tubes. 2,107,355; Feb. 8.

Winthrop Chemical Company. (See Puetzer, Bruno, assignor.)

Wittenberg, Mervyn F., Rochester, N. Y. Display device for wearing apparel. 2,107,356; Feb. 8.

Wolfensberger, Jakob, Bauma, Switzerland. Loom for weaving. 2,107,592; Feb. 8.

Wollheim, Walter E. (See Folke, B. E., and Wollheim.)

Woltersdorf, Elmer J., Van Horne, Iowa. Gearing. 2,107,463; Feb. 8.

Wood, Edward L., Detroit, Mich. Filter. 2,107,406; Feb. 8.

Wood, Garfield A., Detroit, Mich. Vacuum actuated automobile control. 2,107,357; Feb. 8.

Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Web supply arrangement of printing presses. 2,107,461; Feb. 8.

Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Connecting sheets of a newspaper. 2,107,462; Feb. 8.

Wood, Zebulon V., and G. B. Melton, Gaffney, S. C., assignors of three-fourths to said Z. V. Wood and one-fourth to said G. B. Melton. Scalp cooling apparatus. 2,107,557; Feb. 8.

Wood Newspaper Machinery Corporation. (See Wood, Henry A. W., assignor.)

Work, Harold K., Oakmont, and M. Tosterud, Arnold, assignors to Aluminum Company of America, Pittsburgh, Pa. White coating on aluminum. 2,107,318; Feb. 8.

Worth Company, The. (See Butterworth, S. D., and Nampa, assignors.)

Worth Company, The. (See Nampa, Sulo M., assignor.)

Worthington, Wayne H. (See McCormick, E., Stewart, and Worthington.)

Wright, Jesse C. (See Creighton, Thomas A., assignor.)

Wuerts, Alexander J., Carrollville, and R. N. Lulek, Waukesha, Wis., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Dyestuffs of the dibenzanthrone series. 2,107,656; Feb. 8.

Wunsch, Guido, and W. Hartung, Berlin-Steglitz, Germany, assignors to Askania-Werke A. G. vormals Central Werkstatt Dessau und Carl Bamberg Friedenau. Jet pipe relay. 2,107,971; Feb. 8.

Wurman, Harry P., Brooklyn, N. Y., and R. D. Touton, assignors to Wurton Machine Company, Philadelphia, Pa. Treating tobacco. 2,107,843; Feb. 8.

Wurton Machine Company. (See Wurman, H. P., and Touton, assignors.)

Yankee Metal Products Corp. (See Putterman, Benjamin, assignor.)

Yeadon, Robert. (See Hale, F. C., and Yeadon.)

Yonkers, Edward H., Jr., Chicago, Ill. Amplifier tube. 2,107,811; Feb. 8.

Young, L. A., Spring and Wire Corporation. (See Koliba, Thomas, assignor.)

Yu, Chan Ting, also known as T. Y. Chan, North Point, China. Electric battery lamp. 2,107,599; Feb. 8.

Zeiss Ikon Aktiengesellschaft Dresden. (See Küppenbender, Heinz, assignor.)

Zellhoefer, Glenn F., Bloomington, Ill. Absorption refrigerating apparatus. 2,107,319; Feb. 8.

Zellhoefer, Glenn F., Bloomington, Ill. Refrigeration. 2,107,320; Feb. 8.

Zimmerman, Herman W., Chicago, assignor to Automotive Maintenance Machinery Co., North Chicago, Ill. Gauging fixture. 2,107,558; Feb. 8.

Zworykin, Vladimir K., Philadelphia, Pa., assignor to Radio Corporation of America. Television system. 2,107,464; Feb. 8.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 8TH DAY OF FEBRUARY, 1938

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Air conditioning. T. Chester. Re. 20,650; Feb. 8.
Deceleration control device, Automatic. A. G. H. Vanderpool. Re. 20,651; Feb. 8.
Thermostatic overload switch. H. J. Hammerly. Re. 20,649; Feb. 8.

LIST OF DESIGN INVENTIONS

Automobile. D. F. H. Fitzmaurice. 108,322–3; Feb. 8.
Base, Washing machine. A. H. Labisky. 108,395; Feb. 8.
Bedspread. C. H. Rauschenberg. 108,403; Feb. 8.
Belt for pedestrians, Safety. T. E. Miller. 108,337; Feb. 8.
Blouse. I. Absug. 108,385; Feb. 8.
Bowl or similar article, Sugar. Y. Buma. 108,357; Feb. 8.
Bowl or similar article. Y. Buma. 108,360; Feb. 8.
Building. A. E. Sieber. 108,349; Feb. 8.
Cabinet for radios and the like. N. A. Miller. 108,338; Feb. 8.
Cap, Bottle. S. H. A. Young. 108,353; Feb. 8.
Casing, Air valve. E. J. Lux. 108,335; Feb. 8.
Clock. J. R. Morgan. 108,341; Feb. 8.
Coat. M. Bagedonow. 108,386–8; Feb. 8.
Coat. J. A. Silverman. 108,407; Feb. 8.
Comb. H. J. Scheihammer. 108,347–8; Feb. 8.
Container and display cabinet, Combined article. T. J. Pilliod. 108,345; Feb. 8.
Cover for canned products, Wrap. M. Buchalter. 108,317; Feb. 8.
Creamer or similar article. Y. Buma. 108,358; Feb. 8.
Cutter element for food choppers. E. E. Grow. 108,326; Feb. 8.
Doll or similar article. C. K. Kempner. 108,332; Feb. 8.
Dress. T. Coleman. 108,391; Feb. 8.
Dress. R. Hochberg. 108,394; Feb. 8.
Dress. H. Lowenbraun. 108,396; Feb. 8.
Dress. M. Mullen. 108,398–400; Feb. 8.
Dress. M. Pono. 108,401; Feb. 8.
Dress. S. Zahn. 108,410–11; Feb. 8.
Dress ensemble. C. H. Colcord. 108,389; Feb. 8.
Dress ensemble. T. Coleman. 108,390; Feb. 8.
Drier or the like, Hair. D. Chapman. 108,681; Feb. 8.
Fabric, Embroidered. A. Ruchman. 108,413; Feb. 8.
Fabric or similar article, Textile. L. N. Gross. 108,382; Feb. 8.
Fabric, Textile. A. S. Hatcher. 108,393; Feb. 8.
Fabric, Textile. F. B. Sterman. 108,406; Feb. 8.
Fabric, Textile. M. Turpan. 108,414–16; Feb. 8.
Fabric, Woven textile. J. G. Levy. 108,412; Feb. 8.
Frame, Picture. M. Mitchell. 108,339; Feb. 8.
Holder, Cigarette. J. Lykos and O. H. Beaumont. 108,336; Feb. 8.
Holder, Lipstick. M. Kane. 108,330; Feb. 8.
Jar. E. W. Fuerst. 108,324; Feb. 8.
Jar or similar article. Y. Buma. 108,361; Feb. 8.
Jug or similar article. Y. Buma. 108,359; Feb. 8.
Lamp base and radio, Combined. N. E. Pool and F. N. Curby. 108,402; Feb. 8.
Lantern and bottle, Combined. A. J. Hortenau. 108,327; Feb. 8.
Medallion or the like. I. Neu. 108,343; Feb. 8.
Plate or similar article. Y. Buma. 108,356; Feb. 8.
Plate or similar article. Y. Buma. 108,367–80; Feb. 8.
Rack for bread or similar articles. E. R. Erickson. 108,321; Feb. 8.
Receptacle, Flexible pocket. W. R. Buxton. 108,316; Feb. 8.
Scale. O. D. Jennings. 108,329; Feb. 8.
Shaker, Salt or pepper. Y. Buma. 108,364–6; Feb. 8.
Shoe. B. Benjamin. 108,315; Feb. 8.
Shoe. H. Geller. 108,325; Feb. 8.
Shoe. A. D. Levine. 108,333; Feb. 8.
Shoe. A. W. Luts. 108,334; Feb. 8.
Shoe. F. Molea. 108,340; Feb. 8.
Shoe, Tennis. J. F. Eldon. 108,320; Feb. 8.
Sock or similar article, Top. A. Morrison. 108,342; Feb. 8.
Spoon or other article of flatware. E. J. Conroy. 108,318; Feb. 8.
Spoon or other article of flatware. M. A. Downs. 108,319; Feb. 8.
Stamp or similar article, Tax. A. Rabito. 108,384; Feb. 8.
Stand for business machines. W. A. Anderson. 108,313; Feb. 8.
Stopper and liquid pourer, Combined bottle. C. A. McBride and P. J. Callowhill. 108,397; Feb. 8.
Store front. M. Levitt. 108,383; Feb. 8.
Stove, Cooking. W. H. Adams. 108,312; Feb. 8.
Suit. J. A. Silverman. 108,408; Feb. 8.
Suit ensemble. J. A. Silverman. 108,405; Feb. 8.
Sweater. M. H. Scheinwald. 108,404; Feb. 8.
Switch, Electric. J. G. Peterson. 108,344; Feb. 8.
Teacup or similar article. Y. Buma. 108,354; Feb. 8.
Teapot or similar article. Y. Buma. 108,355; Feb. 8.
Teapot or similar article. Y. Buma. 108,362–3; Feb. 8.
Tower, Advertising. W. G. Baryl. 108,314; Feb. 8.
Toy sign. C. W. Jackson. 108,328; Feb. 8.
Tray, Foot bath. C. L. Weirich. 108,352; Feb. 8.
Tray or similar article. R. A. Kelly. 108,331; Feb. 8.
Truck, Fuel tank. A. de Sakhnoffsky. 108,346; Feb. 8.
Typewriter, Portable. J. L. Sweeney and R. L. Chipman, Jr. 108,350–1; Feb. 8.
Wrap. L. Halpern. 108,392; Feb. 8.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 8TH DAY OF FEBRUARY, 1938

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abietyl derivatives and producing, Sulphonated hydrogenated. A. L. Rummelsburg. 2,107,506; Feb. 8.
Abrading apparatus. W. L. Keefer. 2,106,005–6; Feb. 8.
Acids, Concentrating organic. T. Evans and K. R. Edlund. 2,107,527; Feb. 8.
Acoustic device. T. G. Kinsley. 2,107,757; Feb. 8.
Acoustics of a room, Modifying the. B. Roux, R. Gamzon, and M. Sollima. 2,107,604; Feb. 8.
Adjustable table. E. J. Ouellette. 2,107,579; Feb. 8.
Adjusting mechanism for firearms. M. Rolcik. 2,107,803; Feb. 8.
Advertising novelty. E. W. Finch. 2,107,693; Feb. 8.
Advertising novelty. M. Gold. 2,107,892; Feb. 8.
Air, Apparatus for conditioning. L. T. Avery and H. Lemann. 2,107,268; Feb. 8.
Air conditioning. A. J. Otte. 2,107,386; Feb. 8.
Air-cooled surface condenser. O. Happel. 2,107,478; Feb. 8.
Air cooling apparatus. J. R. Ballard. 2,107,280; Feb. 8.
Air filter for railroad cars. J. D. Strobell. 2,107,653; Feb. 8.
Air regulator for incubators, Automatic. J. L. Warner. 2,107,809; Feb. 8.
Alcohols by removing the oily impurities, Purifying. F. M. Archibald. 2,107,265; Feb. 8.
Alcohols, Manufacture of. V. Ipatieff and V. Komarewsky. 2,107,794; Feb. 8.
Alkali metal salts of 2-benzoylbenzoic acid compounds, Preparation of. O. Stallmann. 2,107,652; Feb. 8.
Alloys. J. S. Streicher. 2,107,310; Feb. 8.
Amplifier tube. E. H. Yonkers, Jr. 2,107,611; Feb. 8.
Animal trap. W. D. Williams. 2,107,683; Feb. 8.
Antifogging composition. J. T. Benton. 2,107,361; Feb. 8.
Antiskid chain. J. C. Bishop. 2,107,517; Feb. 8.
Antiskid cross chain. E. W. Taylor. 2,107,431; Feb. 8.
Antiskid device. F. A. Olmstead. 2,107,545; Feb. 8.
Apparatus for making casing and formation tests in wells. C. E. Van Stone. 2,107,457; Feb. 8.
Apparatus for trapping dust arising in bore holes. J. N. Hunter. 2,107,554; Feb. 8.
Apparatus for treating things with volatile solvents. C. F. Dinley. 2,107,360; Feb. 8.
Apple paring and trimming machine. J. W. Pease. 2,107,339; Feb. 8.
Articles from fibroin solutions, Manufacture of artificial. E. Rossmer, K. Borner, H. Mahn, and W. Irion. 2,107,959; Feb. 8.
Ash receptacle. C. Albert. 2,107,845; Feb. 8.
Attachment for apprehending motor vehicles. J. W. Thompson. 2,107,312; Feb. 8.
Audible signaling handle. J. Ford. 2,107,981; Feb. 8.
Auger. E. L. Pribyl. 2,107,968; Feb. 8.
Automobile control, Vacuum actuated. G. A. Wood. 2,107,357; Feb. 8.
Automobile lamp. B. Putterman. 2,107,648; Feb. 8.
Automobile signal. W. A. Hollingsworth. 2,107,533; Feb. 8.
Awning. F. Neumann. 2,107,676; Feb. 8.
Azo compounds and dyeing therewith. J. G. McNally and J. B. Dickey. 2,107,598; Feb. 8.
Badge. S. C. Groeschel and A. G. Dawson. 2,107,698; Feb. 8.
Bail ear for sheet metal vessels and making the same. I. E. Sexton. 2,107,428; Feb. 8.
Bait or lure, Artificial. G. W. Flanagan. 2,107,436; Feb. 8.
Barrel-holding device for automatic pistols. E. Altenburger. 2,107,359; Feb. 8.
Barrel, Metal. W. F. Schulz. 2,107,992; Feb. 8.
Battery plates, Making storage. C. A. Hall. 2,107,937; Feb. 8.
Bearing for pitmans, Stirrup. A. N. Porter. 2,107,499; Feb. 8.
Belt package. R. E. S. Goare. 2,107,695; Feb. 8.
Beverage, Carbonated. C. E. Beck. 2,107,559; Feb. 8.
Binder, Loose leaf. A. W. McClure. 2,107,663–9; Feb. 8.
Bit: *See*—
Carving machine bit.
Deballing drill bit.
Drill bit.
Rock or earth drill bit.
Well bit.
Bit construction, Well. A. C. Catland. 2,107,627; Feb. 8.
Blade holder. H. Huber. 2,107,736; Feb. 8.
Blanks having a lamination of varying thicknesses, Making laminated metal. R. C. Ingersoll. 2,107,330; Feb. 8.
Block: *See*—
Glass building block.
Block floor section. B. P. Brien. 2,107,884; Feb. 8.
Board: *See*—
Game board.
Bobbin changing loom. C. D. Brown. 2,107,466; Feb. 8.
Bobbin holder. W. H Bahan. 2,107,847; Feb. 8.
Boiler and baker, Steam cooking. A. J. T. Holton. 2,107,480; Feb. 8.
Boot or shoe and making the same. S. Bown. 2,107,725; Feb. 8.
Bottle and companion fountain pen, Combination ink. H. G. Haas. 2,107,700; Feb. 8.
Bottle and device therefor, Feeding. C. Hughes. 2,107,442; Feb. 8.
Box: *See*—
Roll top box.
Brace, Fence post. J. O. Trail. 2,107,589; Feb. 8.
Bracket and insulator, Pole. F. Bicknese. 2,107,594; Feb. 8.
Brake: *See*—
Car brake.
Hydraulic brake.
Quick relining brake.
Sled brake.
Brake. A. H. Bennett. 2,107,685; Feb. 8.
Brake cylinder assembly and making same. A. J. Weatherhead, Jr. 2,107,403; Feb. 8.
Brake cylinder control, Hydraulic master. C. E. Fisette. 2,107,565; Feb. 8.
Brake lining and making same. J. G. Hawley. 2,107,295; Feb. 8.
Brake mechanism. F. Hymans. 2,107,894; Feb. 8.
Brake operator, Automatic. W. D. Harper. 2,107,984; Feb. 8.
Brake shoe key. C. R. Busch. 2,107,521; Feb. 8.
Braking system. P. Hallot. 2,107,523; Feb. 8.
Buckle, Safety. S. Strauss. 2,107,878; Feb. 8.
Building structure. E. H. Coe. 2,107,523; Feb. 8.
Bunker for railway refrigerator cars. G. G. Gilpin. 2,107,862; Feb. 8.
Burner: *See*—
Furnace burner.
Oil burner.
Burner. B. L. Matthews and J. T. Marvin. 2,107,575; Feb. 8.
Burner. T. E. Potts. 2,107,646; Feb. 8.
Butter substitutes, Coloring of. F. E. Boehm. 2,107,851; Feb. 8.
Button, Hose supporter. H. J. Stuart. 2,107,453; Feb. 8.
Calculating machine. W. J. Pasinski. 2,107,582; Feb. 8.
Cam and follower mechanism. G. J. Trapp. 2,107,456; Feb. 8.
Camera drive, Motion picture. J. A. Ball. 2,107,623; Feb. 8.
Camera, Photographic. H. Küppenbender. 2,107,829; Feb. 8.
Camshaft. D. J. Campbell. 2,107,747; Feb. 8.
Cap: *See*—
Dispensing cap.
Can conveyer, Milk. F. Price and A. F. Palmer. 2,107,500; Feb. 8.
Canal, Pulling. T. Frusher, Jr. 2,107,476; Feb. 8.
Car brake. L. G. Miller. 2,107,761; Feb. 8.
Car loading device. S. D. Butterworth and S. M. Nampa. 2,107,932; Feb. 8.
Car loading device. S. M. Nampa. 2,107,338; Feb. 8.
Carbureting ring structure for wall flame burners. M. A. Powers. 2,107,800; Feb. 8.
Card, Sample. J. Domber. 2,107,730; Feb. 8.
Cards for statistical machines, Making record. R. L. A. Valtat. 2,107,969; Feb. 8.
Carriage and hood therefor, Baby. C. Hedstrom, Jr. 2,107,940; Feb. 8.
Carriage bed, Baby. S. Drexler. 2,107,855; Feb. 8.
Carton. I. Kotcher and M. Kotcher. 2,107,613–14; Feb. 8.
Carton and making the same, Paper. A. C. Friedel. 2,107,999; Feb. 8.
Carton construction. W. H. Inman. 2,107,946; Feb. 8.
Carving machine bit. E. W. Grumke. 2,107,787; Feb. 8.
Casings, Cementing well. T. A. Creighton. 2,107,327; Feb. 8.
Cast, Centrifugal. W. Swoger. 2,107,513; Feb. 8.
Casting machine, Centrifugal. A. G. Anderson and J. I. Kibbe. 2,107,322; Feb. 8.
Catalysts and preparing the same. C. H. B. Jarl and A. G. Hovey. 2,107,611; Feb. 8.
Cathode structure. A. W. Hull and W. A. Ruggles. 2,107,945; Feb. 8.
Centrifugal pump, Parallel series. C. H. Fox. 2,107,694; Feb. 8.
Centrifuge. J. Schaaf. 2,107,909; Feb. 8.
Chain: *See*—
Antiskid chain.
Antiskid cross chain.
Cutter chain.
Chair: *See*—
Folding chair.
Chair leg extension, Adjustable. C. H. Dallas. 2,107,620; Feb. 8.

Checkerwork. E. A. McKelvy. 2,107,675; Feb. 8.
Chlorhydrin, Making. C. G. Harford. 2,107,789; Feb. 8.
Chromatic blender. R. Gilbert. 2,107,860; Feb. 8.
Chute, Stock loading. E. H. Donnan. 2,107,371; Feb. 8.
Cigarette package. J. Keller. 2,107,826; Feb. 8.
Circuit: *See*—
Gain control circuit. Relay circuit.
Circuit controlling device. E. L. Barrett. 2,107,848; Feb. 8.
Circuits, Automatic volume control. J. F. Dreyer, Jr. 2,107,409; Feb. 8.
Circular loom. F. C. Hale and R. Yeadon. 2,107,531; Feb. 8.
Cleaner: *See*—
Suction cleaner. Vacuum cleaner.
Cleanser device. R. B. Kingman. 2,107,636; Feb. 8.
Climbing device for skis. A. Binder. 2,107,363; Feb. 8.
Clip or clasp, Trouser. J. C. Bishop. 2,107,516; Feb. 8.
Clipper. A. Frace and H. Van Bree. 2,107,750; Feb. 8.
Clockwork system. J. Delviniotti. 2,108,010; Feb. 8.
Closure for collapsible tubes. F. Winkler. 2,107,355; Feb. 8.
Closure means for cans and the like containers. A. Forsyth. 2,107,437; Feb. 8.
Clutch: *See*—
Governor clutch. Hydraulic clutch.
Clutch. H. Nutt and H. V. Reed. 2,107,730; Feb. 8.
Clutch. G. C. Royse. 2,107,308; Feb. 8.
Clutch and transmission mechanism. W. D. Morton and W. E. Haupt. 2,107,954; Feb. 8.
Clutch control device, Automatic. R. S. Whittington. 2,107,724; Feb. 8.
Clutch plate. H. V. Reed. 2,107,741; Feb. 8.
Coating, Ductile cadmium. K. G. Soderberg and H. Brown. 2,107,806; Feb. 8.
Coating equipment, Vertical. W. T. Anderson. 2,107,276; Feb. 8.
Coating on aluminum, White. H. K. Work and M. Tosterud. 2,107,318; Feb. 8.
Coating or paint and making same, Waterproof. C. E. Spooner. 2,107,511; Feb. 8.
Coffee maker. J. C. Adams. 2,107,923–4; Feb. 8.
Coins, Apparatus for separating genuine and spurious. F. E. A. Wallin, K. T. Johnson, and C. G. Johnson. 2,107,402; Feb. 8.
Coke oven battery. C. V. McIntire. 2,107,642; Feb. 8.
Cold accumulators, Method of and apparatus for operating. R. Linde and C. P. Hochgesand. 2,107,335; Feb. 8.
Communication system, Inter-office. J. I. Davis. 2,107,817; Feb. 8.
Composition and method for the treatment of hydrocarbon emulsions. W. E. Elliott. 2,107,473; Feb. 8.
Compounds containing ether and thio ether linkages, Oragnic. H. A. Bruson. 2,107,366; Feb. 8.
Condenser: *See*—
Air-cooled surface condenser.
Condenser body and making the same, Electrolytic. H. I. Dannziger and A. Di Giacomo. 2,107,780; Feb. 8.
Condenser construction, Electric. B. G. Olving. 2,107,423; Feb. 8.
Connecter: *See*—
Electrical connecter. Rod connecter.
Connection, Parallel multianode transformer. E. V. De Bilieux. 2,107,934; Feb. 8.
Connections, Making threaded. N. Roach. 2,107,802; Feb. 8.
Container: *See*—
Milk bottle container. Roll tape container.
Container cover. F. O'Neill, Jr. 2,107,957; Feb. 8.
Container opening device and pouring device. E. H. Vail. 2,107,654; Feb. 8.
Containers, Coating. J. Lithgow. 2,108,017; Feb. 8.
Control, Apparatus for liquid level and pressure. I. E. Nutter, F. E. Martin, and G. W. McCullough. 2,107,955; Feb. 8.
Control for automobile generators, Manual. O. Mueller. 2,107,899; Feb. 8.
Control mechanism for radio sets, Selective. J. H. Denison. 2,107,472; Feb. 8.
Control system. H. Bany. 2,107,927; Feb. 8.
Control system, Supervisory. J. H. Oliver. 2,107,902; Feb. 8.
Controlling mechanism for cash registers and bookkeeping machines. A. Klaar, F. Arndt, and H. Berning. 2,107,445; Feb. 8.
Conveyer and rotary drum therefor. W. A. Frank. 2,107,890; Feb. 8.
Core drill. W. Otto and F. E. Scott. 2,107,495; Feb. 8.
Couch. P. P. Bebry. 2,107,882; Feb. 8.
Couch, Convertible. P. Cutler. 2,107,728; Feb. 8.
Coupling: *See*—
Scaffolding coupling. Well casing setting and
Trailer coupling. backing-off coupling.
Coupling for combined motor cars and trailers. O. G. Beardsley. 2,107,881; Feb. 8.
Cover: *See*—
Container cover. Tire cover.
Handbag cover.
Cover and lock construction, Tire. H. S. Jandus. 2,107,332; Feb. 8.
Cover for use with fenderwell, Hinged tire. G. A. Lyon. 2,107,336; Feb. 8.
Cover for water meters, Dial. L. A. Swander. 2,107,720; Feb. 8.
Covering, Head. R. Lipton. 2,107,951; Feb. 8.
Crank construction for reels. E. H. Pitney. 2,107,875; Feb. 8.
Crushing machine. O. C. Gruender. 2,107,786; Feb. 8.
Culinary device. M. Leach. 2,107,380; Feb. 8.
Curler, Ringlet. N. L. Solomon. 2,107,348; Feb. 8.
Current control apparatus, Alternating. T. A. Behrens. 2,107,360; Feb. 8.
Current transformer, Electric direct. J. M. Pestarini. 2,107,740; Feb. 8.
Curtain holder. F. L. Lennox. 2,107,421; Feb. 8.
Curtain tie-back device. G. M. Caggiano. 2,107,885; Feb. 8.
Cushion structure, Spring. T. Koliba. 2,107,446; Feb. 8.
Cut-off machine. R. D. Gardner. 2,107,566; Feb. 8.
Cutter chain. M. P. Holmes. 2,107,942; Feb. 8.
Dam forming attachment. L. Taylor. 2,107,967; Feb. 8.
Deballing drill bit. J. E. Hall. 2,107,788; Feb. 8.
Decorating apparatus. F. B. McQuiston. 2,107,491; Feb. 8.
Decorative strip, Flexible. J. R. Sexton. 2,107,677; Feb. 8.
Dental articulator. H. Boatner. 2,107,283; Feb. 8.
Dental tool. W. Henning. 2,107,791; Feb. 8.
Desk and chair, Combination. A. J. Wilkin. 2,107,404; Feb. 8.
Device for calculating machines, accounting machines, writing and like machines. H. K. F. Ewald. 2,107,374; Feb. 8.
Device for closing a bag. M. de Botelho. 2,107,602; Feb. 8.
Device for gauging the cutting of rafters. E. O. Karlson. 2,107,670; Feb. 8.
Device for making oneself a tie knot. J. F. Ramas. 2,107,619; Feb. 8.
Device for mentholising cigarettes. A. O. Walker and C. J. Sanford. 2,107,501; Feb. 8.
Dialysers. A. O. Russell. 2,107,805; Feb. 8.
Digestion process, Continuous. C. O. Turner and M. P. Weigel. 2,107,919; Feb. 8.
Direction finder. F. J. Hooven. 2,107,633; Feb. 8.
Discharge tube, High voltage. A. Bouwers and J. H. van der Tuuk. 2,107,597; Feb. 8.
Dispenser: *See*—
Tape dispenser.
Dispenser. H. R. Noll. 2,108,020; Feb. 8.
Dispensing apparatus for carbonated beverages. R. J. Jenkins and C. J. Addicks. 2,107,986; Feb. 8.
Dispensing cap. J. C. Boyle. 2,107,324; Feb. 8.
Dispensing cap. E. L. Chott. 2,107,563; Feb. 8.
Dispensing device. G. Mellen. 2,107,615; Feb. 8.
Display box stand. W. E. Thomas. 2,107,991; Feb. 8.
Display device. G. C. Malcomson. 2,107,641; Feb. 8.
Display device. C. H. Smith and J. E. Conner. 2,108,002; Feb. 8.
Display device for wearing apparel. M. F. Wittenberg. 2,107,356; Feb. 8.
Distortion indicating and measuring device for printing telegraph systems. R. B. Hearn. 2,107,753; Feb. 8.
Dividing and reinforcing means for concrete roadways. J. W. Kerr. 2,107,827; Feb. 8.
Door closure. C. E. Klecan. 2,107,949; Feb. 8.
Door for excavating buckets, Dipper. T. A. Ratkowski. 2,107,342; Feb. 8.
Door latch. W. E. Brown. 2,107,687; Feb. 8.
Doughnut cooking machine. C. E. Carpenter. 2,107,325; Feb. 8.
Draft promoter for furnaces. A. A. Rea. 2,107,504; Feb. 8.
Drill: *See*—
Core drill.
Drill bit. G. G. Harrington. 2,107,665; Feb. 8.
Drilling mechanism. L. Watson. 2,107,556; Feb. 8.
Drive mechanism, Universal. C. E. Swenson. 2,107,721; Feb. 8.
Drives for rayon centrifuges, Avoiding the overcharging of. E. Knechtel. 2,107,758; Feb. 8.
Drying equipment. W. T. Anderson and J. M. Henry. 2,107,275; Feb. 8.
Dumper, Door. S. C. Groeschel and A. G. Dawson. 2,107,699; Feb. 8.
Dyes, Manufacture of carbocyanine. R. Koslowsky. 2,107,379; Feb. 8.
Dyestuffs and preparing them, Fast brown leather. F. Hess, K. Hager, and W. Pense. 2,107,941; Feb. 8.
Dyestuffs of the dibenzanthrone series. A. J. Wuerts and R. N. Lulek. 2,107,656; Feb. 8.
Easel, Shoe display. M. D. Pollinger. 2,107,306; Feb. 8.
Edging, Shelf. E. Kardol. 2,107,669; Feb. 8.
Elastic strand in the edge of a mesh fabric, Means for laying-in. J. Steinberg. 2,107,512; Feb. 8.
Electric battery lamp. C. T. Yu. 2,107,599; Feb. 8.
Electric device, Manufacturing an. L. R. Peters. 2,107,903; Feb. 8.
Electric machine, Dynamo. R. H. Nisbet. 2,107,872; Feb. 8.
Electric sign. M. G. Rupp. 2,107,767; Feb. 8.
Electric switch. S. R. Smith. 2,107,651; Feb. 8.
Electrical connecter. W. G. Fotsch. 2,107,859; Feb. 8.
Electrical device. J. B. Harley. 2,107,752; Feb. 8.

Electrical distribution system. H. J. L. Frank. 2,107,412; Feb. 8.
Electrical distribution system. J. G. Jackson. 2,107,865; Feb. 8.
Electrical indicating system and apparatus. L. Boddy. 2,107,560; Feb. 8.
Electrode material and making the same. O. A. Rogers. 2,106,004; Feb. 8.
Electron discharge device. C. S. Bull and S. Rodda. 2,107,518; Feb. 8.
Electron discharge device. J. L. H. Jonker. 2,107,333; Feb. 8.
Electron discharge device. O. H. Schade. 2,107,520; Feb. 8.
Electron discharge device. I. Shoenberg, C. S. Bull and S. Rodda. 2,107,519; Feb. 8.
Electrooptical scanning apparatus. C. F. Mattke. 2,107,759; Feb. 8.
Engine: *See*—
Hydraulic engine.
Engine. N. C. Price and M. Lothrop. 2,107,389; Feb. 8.
Envelope and return mailing device, Combination. C. K. Miller. 2,107,450; Feb. 8.
Enzymes and technically useful microorganisms and the like, Influencing. P. Liebeany and H. Wertheim. 2,107,830; Feb. 8.
Ethylene bromide, Preparation of. G. F. Dressel and C. E. Short. 2,108,011; Feb. 8.
Evaporation meter. O. T. Clorius. 2,107,628; Feb. 8.
Excavator. H. Lundstrom. 2,107,895; Feb. 8.
Exercising machine. H. J. Marlowe. 2,107,447; Feb. 8.
Exercising machine. H. J. Marlowe. 2,107,449; Feb. 8.
Extraction process. W. J. D. van Dijck. 2,107,681; Feb. 8.
Extruded articles, Manufacturing. C. D. Skinner and L. C. Bradley. 2,107,510; Feb. 8.
Eyelet. S. L. Gookin. 2,107,375; Feb. 8.
Fabric: *See*—
Sizing fabric.
Fabrics, Obtaining crepe effects on. H. Altwegg and A. Eichler. 2,107,657; Feb. 8.
Fabrics, Woven wire. F. Steinhart. 2,107,719; Feb. 8.
Face meter. H. P. Houser. 2,107,534; Feb. 8.
Fan. K. D. McMahan. 2,107,897; Feb. 8.
Fastener: *See*—
Slide fastener.
Fastener-applying device. J. F. Cavanagh. 2,107,522; Feb. 8.
Fasteners, Method and apparatus for making slide. F. P. Miller and L. Skeel. 2,108,007; Feb. 8.
Fasteners, Process and apparatus for making slide. F. P. Miller. 2,108,008; Feb. 8.
Fastening device. F. M. Stader. 2,107,913; Feb. 8.
Fat, Treating animal. L. H. Bayerson. 2,107,505; Feb. 8.
Faucet. E. B. Cooper. 2,107,727; Feb. 8.
Fertiliser, Manufacturing an agglomerated potassium chloride. K. Haase, H. Werth and H. Probst. 2,107,702; Feb. 8.
Fertilisers from potassium sulphate or from sulphate or potassium and magnesium, Manufacturing granulated potassium. K. Haase and H. Werth. 2,107,701; Feb. 8.
Fiber, Bleaching. H. O. Kauffmann. 2,107,297; Feb. 8.
Fiber insulation, Method and apparatus for producing felted. W. Brown. 2,107,779; Feb. 8.
Fibers and/or the mean weight per unit of length of similar fibers, Manner of and apparatus for ascertaining the mean length of cotton or like. C. Nanjundayya. 2,107,616; Feb. 8.
Fibrous materials, Impregnating. I. J. Novak. 2,107,304; Feb. 8.
Filling machine. S. F. Anderson. 2,107,274; Feb. 8.
Film-forming material and making the same, Stable. W. D. Bowlby. 2,108,001; Feb. 8.

Renapping process. B. G. Feinberg. 2,107,528; Feb. 8.
Resilient pedal pad. W. J. Lutey. 2,107,486; Feb. 8.
Resins, Bleaching alkyd. A. G. Hovey. 2,107,610; Feb. 8.
Reversing device. G. H. Lang. 2,107,705; Feb. 8.
Rig for sail boats. F. Ljungström. 2,107,303; Feb. 8.
Ring: *See*—
Piston ring.
Ring traveler. S. Tour. 2,108,027; Feb. 8.
Robe for motor vehicles, Lap. G. B. Oliver. 2,107,493; Feb. 8.
Rock or earth drill bit. J. P. Cunningham. 2,107,286; Feb. 8.
Rod connecter, Ground. M. F. Pierce. 2,107,835; Feb. 8.
Roll, Sectional. H. S. Cryster and R. J. Wilkie. 2,107,471; Feb. 8.
Roll, Suction. E. E. Berry, L. Hornbostel, and J. E. Goodwillie. 2,107,812; Feb. 8.
Roll tape container. S. J. Ellenburg. 2,107,603; Feb. 8.
Roll top box. J. H. Horsley. 2,107,997; Feb. 8.
Roller conveyer. A. M. Hahn. 2,107,822; Feb. 8.
Rubber and process and apparatus for making the same, Crinkled sheet. F. Honig. 2,107,735; Feb. 8.
Rubber vulcanization. T. C. Morris. 2,108,018; Feb. 8.
Rug or carpet. W. Colvin, Jr. 2,107,598; Feb. 8.
Sack sewing apparatus. V. L. Stathem. 2,107,963; Feb. 8.
Sack sewing apparatus, Filled. V. L. Stathem. 2,107,964; Feb. 8.
Saddle, Cycle. J. W. Brandt and A. J. Linder. 2,107,561; Feb. 8.
Safety and relief valve. A. L. Kronquest. 2,107,704; Feb. 8.
Safety device for container moving machinery. S. R. Rosendale. 2,107,345; Feb. 8.
Safety device for elevators. L. Olsvary. 2,107,956; Feb. 8.
Safety equipment for boats. M. Mandel. 2,107,542; Feb. 8.
Salt of ortho hydroxy quinoline. J. Ebert. 2,107,856; Feb. 8.
Sanding wheel. E. Dunford. 2,107,411; Feb. 8.
Sash construction. C. M. Verhagen. 2,107,842; Feb. 8.
Sash holder mechanism. R. T. Axe. 2,107,774; Feb. 8.
Scaffolding coupling. J. Burton. 2,107,407; Feb. 8.
Scale, Hydraulic weighing. E. K. Benedek. 2,107,883; Feb. 8.

Scalp cooling apparatus. Z. V. Wood and G. B. Melton. 2,107,557; Feb. 8.
Screen: *See*—
Horisontal vibrating screen.
Screen structure. D. F. Newman. 2,107,707–8; Feb. 8.
Screen structure, Roll. W. E. Kemp. 2,107,755; Feb. 8.
Screw-threaded necks, Apparatus for forming. J. Dichter. 2,107,979; Feb. 8.
Sealing means for heater doors. A. D. Olds. 2,107,762; Feb. 8.
Sealing rings, Closing. E. E. Shanor. 2,108,024; Feb. 8.
Seat: *See*—
Portable seat.
Self-steering mechanism for tractors. F. J. Iribeck. 2,107,535; Feb. 8.
Selvage edges from textile fabrics in the piece, Apparatus for removing. W. T. B. and F. E. Morley. 2,107,953; Feb. 8.
Separator: *See*—
Gas separator.
Service apparatus. C. H. Bock. 2,107,850; Feb. 8.
Serving device. L. A. Leppke. 2,107,381; Feb. 8.
Sewing machine. N. V. Christensen and H. Hacklander. 2,107,366; Feb. 8.
Sewing machine. C. S. Thompson and F. A. Kucera. 2,107,916; Feb. 8.
Sewing machine, Buttonhole. E. B. Allen, M. D. Knox, and H. C. Faulkner. 2,107,270; Feb. 8.
Sewing machines, Zigzag stitch-forming mechanism for. E. B. Allen, M. D. Knox, and H. C. Faulkner. 2,107,271; Feb. 8.
Shape cutting machine. O. A. Scholtz. 2,107,396; Feb. 8.
Shaping machine, Automatic. R. Onsrud. 2,107,578; Feb. 8.
Shears. S. P. Moyer and P. H. Long. 2,107,577; Feb. 8.
Sheets of a newspaper, Connecting. H. A. W. Wood. 2,107,462; Feb. 8.
Shelving, Adjustable. J. Cichocki. 2,107,660; Feb. 8.
Shield and depositing metal areas, Envelope. B. C. Gardner. 2,107,784; Feb. 8.
Shield structure, Glare. A. M. Sauer. 2,107,586; Feb. 8.
Shock absorber. L. Béchereau and R. Carrouée. 2,107,974; Feb. 8.
Shoe finishing apparatus. H. H. Parks, L. A. Thomas, and H. S. Thomas. 2,107,580; Feb. 8.
Shoe, Football. J. H. Hermson. 2,107,667; Feb. 8.
Shoe heel and making same. A. F. Bancroft. 2,107,776; Feb. 8.
Shoemaking method. E. Quinn. 2,107,501; Feb. 8.
Shut-off for meters, Automatic. A. J. Granberg. 2,107,441; Feb. 8.
Shut-off valve. R. O. Beggs. 2,107,975; Feb. 8.
Shuttle tension. W. A. Tebo. 2,107,917; Feb. 8.
Sign: *See*—
Electric sign.
Sign support, Collapsible sidewalk. R. W. Lotz. 2,107,574; Feb. 8.
Signal: *See*—
Automobile signal.
Traffic signal.
Signal casing. C. H. Bissell. 2,107,777; Feb. 8.
Signal device. J. T. Stubblins. 2,107,350; Feb. 8.
Signaling device. J. R. McGee. 2,107,952; Feb. 8.
Signaling, Railway. P. H. Crago. 2,107,680; Feb. 8.
Signaling, Railway. R. R. Kemmerer. 2,107,679; Feb. 8.
Signaling, Railway. H. A. Thompson. 2,107,678; Feb. 8.
Silk, Producing artificial. W. L. Hyden and J. S. Fonda. 2,107,668; Feb. 8.
Sising fabric. E. K. Bolton. 2,107,852; Feb. 8.
Skyrocket. L. F. Holcomb. 2,107,734; Feb. 8.
Sled brake. H. F. Heffner and L. L. De Turk. 2,107,893; Feb. 8.
Slide fastener. F. P. Miller and L. Skeel. 2,108,009; Feb. 8.
Smoke, Producing colored. E. Neukirch. 2,108,019; Feb. 8.
Socket, Automatic switch lamp. J. W. Hobbs. 2,107,570; Feb. 8.
Sofa bed. M. Fox. 2,107,993; Feb. 8.
Sole and arch construction for shoes, Combined. J. R. Rigandi. 2,107,620; Feb. 8.
Sound, Apparatus for reproducing. G. Veal. 2,107,920; Feb. 8.
Soundboard for pianos. P. H. Bilhuber. 2,107,659; Feb. 8.
Sound reproducing and recording mechanism for the films of motion picture projectors. A. A. Shoup. 2,107,743; Feb. 8.
Sound transmitting and distributing apparatus, Electrical. W. H. Huth. 2,107,410; Feb. 8.
Spectrophotometer. O. W. Pineo. 2,107,836; Feb. 8.
Speed driving mechanism, Change. A. F. Kaptuller. 2,107,417; Feb. 8.
Spinning cradle, Long draft. J. L. Truslow and R. J. McConnell. 2,107,433; Feb. 8.
Splitting machine. L. J. Bazzoni. 2,107,281; Feb. 8.
Spring treatment, Leaf. T. H. Thompson. 2,107,455; Feb. 8.
Stake, Garden line. H. G. M. Kuhn. 2,107,989; Feb. 8.
Stake or stanchion for vehicles. A. L. Karige. 2,107,612; Feb. 8.
Stall. H. H. Grubb. 2,107,477; Feb. 8.
Stand: *See*—
Display box stand.
Stapling machine attachment. J. L. Walsh. 2,107,555; Feb. 8.
Starter for pool-type discharge devices, Immersion. E. Rupp. 2,107,908; Feb. 8.
Station, Floating. P. G. Creed. 2,107,886; Feb. 8.
Staybolt. R. W. Friday. 2,107,604; Feb 8
Steam table. B. P. Skjerven. 2,107,346; Feb. 8.
Steel, Treatment of. M. G. Fowler and L. M. Barker. 2,107,328; Feb. 8.
Store front construction. J. J. Bosshard. 2,107,323; Feb. 8.
Stove, Cooking. W. D. Antrim and A. W. Schlemmer. 2,107,972; Feb. 8.
Stretcher, Cap cover. D. A. Seiler. 2,107,961; Feb. 8.
Strip forming apparatus. J. S. Reid. 2,107,585; Feb. 8.
Strip, Terminal. H. W. Goff. 2,107,751; Feb. 8.
Strut for aircraft, Shock absorbent. J. H. Onions and P. W. Thornhill. 2,107,494; Feb. 8.
Suction cleaner. J. B. Kirby. 2,107,571; Feb. 8.
Sulphur content of industrial gases, Recovery and conversion of the. L. Rosenstein. 2,107,907; Feb. 8.
Support: *See*—
Garment support.
Sign support.
Support for projectors, Lamp. S. C. Rogers. 2,107,906; Feb. 8.
Supporting and display rack. C. W. McAnally, Sr. 2,107,576; Feb. 8.
Sweeper, Carpet. T. H. Stough. 2,108,003; Feb. 8.
Switch: *See*—
Electric switch.
Switch for electric service lines, Automatic. J. E. Farrell. 2,107,821; Feb. 8.
Switchgear, Electric. W. V. Jeffs. 2,107,947; Feb. 8.
Table: *See*—
Adjustable table.
Steam table.
Folding table.
Tachometer. H. A. L. Jones. 2,108,014; Feb. 8.
Tantalum recovery. M. M. Austin. 2,107,277; Feb. 8.
Tape applying device. C. S. Munro. 2,107,900; Feb. 8.
Tape dispenser. F. Machate and F. Mason. 2,107,487; Feb. 8.
Tassel. C. G. King. 2,107,948; Feb. 8.
Tassel. E. E. Weller. 2,107,450; Feb. 8.
Teeth, Attachment for artificial. J. Taguchi. 2,107,966; Feb. 8.
Telephone system. D. F. Johnston. 2,107,754; Feb. 8.
Television arrangement. K. Schlesinger. 2,107,392; Feb. 8.
Television system. V. K. Zworykin. 2,107,464; Feb. 8.
Temperature limiting device for hot water systems. L. D. Lovekin. 2,107,673; Feb. 8.
Temperature measuring device. I. L. Canuteson. 2,107,468; Feb. 8.
Temple roller. H. W. Fehr. 2,108,013; Feb. 8.
Tent or awning, Contractible. W. F. Hewlett. 2,107,608; Feb. 8.
Tester. C. W. Vogt and G. A. Humason. 2,107,655; Feb. 8.
Textile and other materials, Treatment of. H. Dreyfus. 2,107,526; Feb. 8.
Textile drafting apparatus. J. Elser. 2,107,818; Feb. 8.
Textile manufacture. P. H. Walsh. 2,107,458; Feb. 8.
Therapeutic derivative of the genus lactuca and preparing same. G. Schenck. 2,107,839; Feb. 8.
Tire cover. E. E. Frey. 2,107,783; Feb. 8.
Tire cover. H. S. Jandus and T. J. W. Tyson. 2,107,331; Feb. 8.
Tire deflation indicator. K. A. Spieth. 2,107,912; Feb. 8.
Toaster. A. C. Purpura. 2,107,388; Feb. 8.
Tobacco, Treating. H. P. Wurman and R. D. Touton. 2,107,843; Feb. 8.
Tool: *See*—
Dental tool.
Tool retainer. J. H. Parsons and L. S. Lamb. 2,107,581; Feb. 8.
Towel dispensing device. L. M. Harvey. 2,107,790; Feb. 8.
Toy-vehicle, Mechanical propulsion. L. Vimeux. 2,107,722; Feb. 8.
Track for tractors. R. Mayne. 2,107,490; Feb. 8.
Traffic signal. J. L. Braun and K. S. Shickluna. 2,107,930; Feb. 8.
Trailer coupling. C. W. Switzer. 2,107,965; Feb. 8.
Transformer for high tension, Electric. A. Bajon. 2,107,973; Feb. 8.
Transmission, Variable speed. A. B. Knight. 2,107,483; Feb. 8.
Trap: *See*—
Animal trap.
Trap and balanced valve, Steam. W. K. Simpson. 2,107,551; Feb. 8.
Tray, Serving. M. B. Solomon. 2,107,744; Feb. 8.
Tree holder, Christmas. J. E. Lyons. 2,107,638; Feb. 8.
Tree pruner. L. S. Stripling. 2,107,401; Feb. 8.
Truck. J. F. Holloway. 2,107,296; Feb. 8.
Truck. G. J. McQueen. 2,107,384; Feb. 8.
Truck conveyer, Hand. C. S. Borggaard. 2,107,465; Feb. 8.
Truck, Unloading. R. E. Wall. 2,107,682; Feb. 8.
Tube: *See*—
Amplifier tube.
Discharge tube.
Tube holding device. F. J. Junkermann. 2,107,635; Feb. 8.
Tube of thermoplastic derivatives of cellulose. W. Salemme. 2,108,022; Feb. 8.
Tube testing apparatus, Collapsible. C. J. Westin. 2,107,922; Feb. 8.

Tube with tank circuits, Vacuum. R. K. Potter. 2,107,387; Feb. 8.
Tubes, Manufacturing composite seamless. R. K. Hopkins. 2,107,943; Feb. 8.
Tubes of thermoplastic derivatives, Method and apparatus for making. W. Salemme. 2,108,023; Feb. 8.
Tubular articles, Apparatus for forming. W. C. Robbins. 2,107,837; Feb. 8.
Tumbling, Apparatus for teaching. O. O. Howland. 2,107,377; Feb. 8.
Tunnel mucking apparatus. C. M. Browner. 2,107,688; Feb. 8.
Tunnels, Constructing. M. I. Killmer. 2,107,671; Feb. 8.
2,6-dimethylnaphthalene-1-sulphonic acid and preparing it. W. Schumacher. 2,107,910; Feb. 8.
Typewriting machine. E. M. R. Borg. 2,107,364; Feb. 8.
Typewriting machine. W. A. Dobson. 2,107,370; Feb. 8.
Typewriting machine. J. A. B. Smith. 2,107,397–8; Feb. 8.
Universal joint. J. E. Padgett. 2,107,497; Feb. 8.
Vacuum cleaner. E. Faber. 2,107,819; Feb. 8.
Vacuum pump. J. M. Dougherty. 2,107,889; Feb. 8.
Valve: *See*—
Safety and relief valve.
Shut-off valve.
Valve control apparatus. E. G. Parvin. 2,107,874; Feb. 8.
Valve for carburetors. E. A. Rullison. 2,107,998; Feb. 8.
Valve for preventing the bursting of liquid containers, Relief. V. Merritt. 2,107,870; Feb. 8.
Vapor phase hydrolysis of halogenated hydrocarbons. R. C. Perkins and A. J. Dietsler. 2,107,710; Feb. 8.
Vehicle: *See*—
Motor vehicle.
Toy-vehicle.
Vehicle body construction. I. B. Cooper. 2,107,854; Feb. 8.
Vehicle construction, Motor. G. A. Gemmer. 2,107,606; Feb. 8.
Vehicle frame. R. H. Maddock. 2,107,382; Feb. 8.
Vehicle of the tricycle or velocipede type. M. E. Roe. 2,107,506; Feb. 8.
Vise, Hydraulic. E. C. Wells. 2,107,970; Feb. 8.
Volume control system, Automatic. L. F. Willging. 2,107,514; Feb. 8.
Wall construction, Fire. G. Crombie, Sr. 2,107,524; Feb. 8.
Wall for railway cars, Corrugated. G. G. Gilpin. 2,107,861; Feb. 8.
Wardrobe, cupboard, or the like, Portable. M. Krantz. 2,107,828; Feb. 8.
Wardrobe rack. R. A. Magnuson. 2,107,640; Feb. 8.
Washer. I. P. Pedrick. 2,107,340; Feb. 8.
Washing machine. R. E. Reed. 2,107,426; Feb. 8.
Water cooled motor. C. E. Johnson. 2,107,481; Feb. 8.
Water treatment. H. Redman. 2,107,765; Feb. 8.
Water treatment. W. S. Russell. 2,108,021; Feb. 8.
Wax from mineral oil by filtration, Separation of. W. P. Gee. 2,107,664; Feb. 8.
Web supply arrangement of printing presses. H. A. W. Wood. 2,107,461; Feb. 8.
Wedge for concrete form ties. D. C. Hungerford. 2,107,415; Feb. 8.
Weighing machine, Changing display. G. Marsden. 2,107,674; Feb. 8.
Weldrod. L. B. Wilson. 2,107,434; Feb. 8.
Well bit. A. C. Catland. 2,107,626; Feb. 8.
Well casing setting and backing-off coupling. J. C. Singleton. 2,107,716; Feb. 8.
Well cleaning system. W. C. Erwin. 2,107,631; Feb. 8.
Well drilling apparatus, Rotary. D. T. Foster. 2,107,475; Feb. 8.
Well pumping apparatus. A. N. Porter. 2,107,498; Feb. 8.
Well reamer. T. M. Pyle. 2,107,547; Feb. 8.
Welt, Finishing. H. W. Buhler. 2,107,467; Feb. 8.
Wheel: *See*—
Sanding wheel.
Wheel construction. C. S. Ash. 2,107,925; Feb. 8.
Wheel, Forming a. F. H. Le Jeune. 2,107,950; Feb. 8.
Whip stock removing device. G. L. Kothny. 2,107,420; Feb. 8.
Winding process for filaments of artificial origin. K. Schmidt. 2,107,996; Feb. 8.
Windmill. C. J. Clark. 2,107,690; Feb. 8.
Window. S. Prifti. 2,107,711; Feb. 8.
Window and its associated shade. A. C. Thompson. 2,107,432; Feb. 8.
Window construction. R. T. Axe. 2,107,775; Feb. 8.
Window construction. T. W. Holt and J. F. Levan. 2,108,000; Feb. 8.
Window frame and sash unit. R. T. Axe. 2,107,773; Feb. 8.
Window lock. W. F. and L. C. Hinderer. 2,107,479; Feb. 8.
Window, Storm. E. E. Benson. 2,107,929; Feb. 8.
Wiper blade, Windshield. H. H. Grece. 2,107,567; Feb. 8.
Wiper, Foam. H. G. and H. J. Richter. 2,107,876; Feb. 8.
Wiping device for rolling mill rolls. P. H. Long. 2,107,541; Feb. 8.
Wiredrawing machine, High speed. W. D. Pierson and G. W. Jackman. 2,107,799; Feb. 8.
Wire line ends and forming same. E. E. Wherry. 2,107,810; Feb. 8.
Wire, Method of and apparatus for severing into lengths coiled filaments. H. Asmussen and J. Riess. 2,107,926; Feb. 8.
Wire products, Apparatus for making. A. F. Bradley. 2,107,745; Feb. 8.
Wool material unshrinkable and non-felting product made thereby, Rendering. A. J. Hall. 2,107,703; Feb. 8.
Work transferring device for knitting machines. C. A. Riggs and T. B. Farmer. 2,107,548; Feb. 8.
Wrapping or packing machine. W. J. Kemp. 2,107,482; Feb. 8.
Wrench: *See*—
Ratchet wrench.
Wringer and wringer support connection. W. L. Kauffman. 2,107,539; Feb. 8.
X-ray apparatus. E. S. Humphreys. 2,107,825; Feb. 8.
Yarn, Continuous. M. A. Salembier, Jr. 2,107,838; Feb. 8.
Yarn, Treating. E. F. James and L. E. Remick. 2,107,536; Feb. 8.
Yarn winding machine. R. E. Moser. 2,107,385; Feb. 8.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 8, 1938

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

Porcelain Products, Inc. (See Dalton, Rolland B., assignor.)
Ramsey, Warren A., Jersey City, N. J. Windshield defrosting device. 108,456; Feb. 15.
Redfield Brick & Tile Company. (See Poortinga, Fred E., assignor.)
Rockola, David C., assignor to Rock-Ola Manufacturing Corporation, Chicago, Ill. Phonograph. 108,499; Feb. 15.
Rock-Ola Manufacturing Corporation. (See Rockola, David C., assignor.)
Rohde, Carlos J., assignor to Interstate Button Company, New York, N. Y. Display easel. 108,457; Feb. 15.
Shanser, Max, New York, N. Y. Shoe. 108,500; Feb. 15.
Shapiro, Samuel, New York, N. Y. Glove. 108,515; Feb. 15.
Silverman, Jacob A., New York, N. Y. Coat. 108,516; Feb. 15.
Sinko, John, Oak Park, Ill. Cigar lighter. 108,458; Feb. 15.
Smith, Marie E., New York, N. Y. Dress ensemble. 108,517; Feb. 15.
Spar, Jacob M., New York, N. Y. Dress. 108,518; Feb. 15.
Spar, Jacob M., New York, N. Y. Dress. 108,519; Feb. 15.
Standard Oil Company. (See Munson, Ralph O., assignor.)
Starr, Lillie B., New York, N. Y. Dress or similar article. 108,459; Feb. 15.
Stephens, George H., Glencoe, assignor to Hammond Instrument Company, Chicago, Ill. Clock. 108,482; Feb. 15.
Stevens, Clifford B., assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Casing for a calorimetric device. 108,460; Feb. 15.
Stevens, William W., Dallas, Tex. Lunch counter unit or similar article. 108,501; Feb. 15.
Taylor Instrument Companies. (See Brown, H. Brainard, assignor.)
Teller, Max, New York, N. Y. Cape. 108,520; Feb. 15.
Teller, Max, New York, N. Y. Cape. 108,521; Feb. 15.
Trautner, Wagn, Springdale, Ohio, assignor to E. H. Kueffer, Oakland, Calif. Steering column switch casing. 108,502; Feb. 15.
Tuman, John, Mount Vernon, N. Y. Ensemble dress. 108,522; Feb. 15.
Tuman, John, Mount Vernon, N. Y. Dress ensemble. 108,523; Feb. 15.
Turpan, Mark, West New York, N. J. Textile fabric. 108,524; Feb. 15.
Turpan, Mark, West New York, N. J. Textile fabric. 108,525; Feb. 15.
Turpan, Mark, West New York, N. J.. Textile fabric. 108,526; Feb. 15.
Underwood, John A., assignor to Montgomery Ward & Co., Incorporated, Chicago, Ill. Laundry stove. 108,483; Feb. 15.
Underwood, John A., assignor to Montgomery Ward & Co., Incorporated, Chicago, Ill. Laundry stove. 108,484; Feb. 15.
United States Glass Company. (See Kelly, Robert A., assignor.)
United States Glass Company. (See Kelly, Robert A., assignor.)
Verrecchio, Gene, Providence, R. I., assignor to Coro-Gram, Inc., New York, N. Y. Brooch pin or similar article. 108,461; Feb. 15.
Verrecchio, Gene, Providence, R. I., assignor to Coro-Gram, Inc., New York, N. Y. Brooch pin or similar article. 108,462; Feb. 15.
Verrecchio, Gene, Providence, R. I., assignor to Coro-Gram, Inc., New York, N. Y. Brooch pin or similar article. 108,463; Feb. 15.
Verrecchio, Gene, Providence, R. I., assignor to Coro-Gram, Inc., New York, N. Y. Brooch pin or similar article. 108,464; Feb. 15.
Verrecchio, Gene, Providence, R. I., assignor to Coro-Gram, Inc., New York, N. Y. Brooch pin or similar article. 108,465; Feb. 15.
Verrecchio, Gene, Providence, R. I., assignor to Coro-Gram, Inc., New York, N. Y. Brooch pin or similar article. 108,466; Feb. 15.
Verrecchio, Gene, Providence, R. I., assignor to Coro-Gram, Inc., New York, N. Y. Brooch pin or similar article. 108,467; Feb. 15.
Verrecchio, Gene, Providence, R. I., assignor to Coro-Gram, Inc., New York, N. Y. Brooch pin or similar article. 108,468; Feb. 15.
Verrecchio, Gene, Providence, R. I., assignor to Coro-Gram, Inc., New York, N. Y. Brooch pin or similar article. 108,469; Feb. 15.
Verrecchio, Gene, Providence, R. I., assignor to Coro-Gram, Inc., New York, N. Y. Brooch pin or similar article. 108,470; Feb. 15.
Verrecchio, Gene, Providence, R. I., assignor to Coro-Gram, Inc., New York, N. Y. Brooch pin or similar article. 108,471; Feb. 15.
Virgile, Gabriel, Long Beach, N. Y. Textile fabric or similar article. 108,527; Feb. 15.
Wagner, Mildred, New York, N. Y. Dress ensemble. 108,528; Feb. 15.
Wallace, Sadye E., New York, N. Y. Combination mirror, lipstick, and powder holder. 108,485; Feb. 15.
Ward, Robert V., Richmond Hill, N. Y. Scooter. 108,503; Feb. 15.
Weinstein, Philip, Brooklyn, N. Y. Shoe. 108,486; Feb. 15.
White, Murray, Brookline, Mass. Dress. 108,529; Feb. 15.
White, Murray, Brookline, Mass. Dress. 108,530; Feb. 15.
Wishbow, Nathan, New York, N. Y. Textile fabric. 108,531; Feb. 15.
Wood, John, Manufacturing Company. (See Bradley, Eric H., assignor.)
Wood, Orville T., assignor to Blake Manufacturing Corporation, Clinton, Mass. Flashlight. 108,472; Feb. 15.
Wright, Frank L., Spring Green, Wis. Chair. 108,473; Feb. 15.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 15TH DAY OF FEBRUARY, 1938

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abeles, Jerome, assignor to The Formfit Company, Chicago, Ill. Garment. 2,108,024; Feb. 15.
Abraham, Leonard G., Madison, N. J., assignor to the American Telephone and Telegraph Company. Two-way signaling system. 2,108,156; Feb. 15.
Accardi, Ferruccio, assignor to Fiat Società Anonima, Turin, Italy. Lock for automobile doors. 2,108,359; Feb. 15.
Acme Propeller Corporation. (See Farrell, Stephen A., assignor.)
Acuff, Henry C., Knoxville, Tenn. Electrical connecting device. 2,108,031; Feb. 15.
Adams, Elmer W. (See Brunstrum, L. C., and Adams.)
Adams, George R., Los Angeles, Calif. Door latch. 2,108,326; Feb. 15.
Abey, Ralph H., London, England. Apparatus for the electrodeposition of metals. 2,108,700; Feb. 15.
Agfa Ansco Corporation. (See Wendt, Bruno, assignor.)
Aiken, Charles B., New York, N. Y., and T. Durfee, East Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Shield for ignition plugs. 2,108,635; Feb. 15.
Aiken, Thomas M. G., Pittsburgh, Pa. Photographic apparatus. 2,108,246; Feb. 15.
Ainslie Knitting Machine Co. (See Broadwin, Sampson, assignor.)
Aktiebolaget Formator. (See Dahlström, E. R., and Granstedt, assignors.)
Alba Pharmaceutical Company. (See Domagk, Gerhard, assignor.)
Alden, L. Russel, executor. (See Washburn, Edward W.)
Alfter, Josef, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. X-ray tube. 2,108,573; Feb. 15.
Allan, William, Jr. (See Phillips, A. H., and Allan.)
Allen-Bradley Company. (See Wilms, Gustav O., assignor.)
Allen, Roy O., Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Locking device. 2,108,032; Feb. 15.
Allen, William R., III, assignor to United American Bosch Corporation, Springfield, Mass. Mounting for tubular articles. 2,108,398; Feb. 15.
Allen, William R., III, assignor to United American Bosch Corporation, Springfield, Mass. Mounting device for tubular articles. 2,108,399; Feb. 15.
Allen, William W., Jacksonville, Fla. Twin-fan structure. 2,108,738; Feb. 15.
Allgemeine Elektricitats Gesellschaft. (See Meyer, Wilfred, assignor.)
Allgemeine Elektricitats Gesellschaft. (See Weigt, Paul, assignor.)
Allin, George S., Seattle, Wash., and T. P. Flynn, Portland, Oreg. Bulldozer. 2,108,466; Feb. 15.
Allyne, Edmund E., and W. J. Guzik, Cleveland, Ohio. Condenser unit. 2,108,360; Feb. 15.
Aluminum Company of America. (See Mason, Ralph B., assignor.)
Aluminum Company of America. (See Stroup, Philip T., assignor.)
Amberg, Walter E., assignor to F. M. Friedlob, Chicago, Ill. Mechanical seal. 2,108,701; Feb. 15.
American Can Company. (See Dirker, William S., assignor.)
American Can Company. (See Hothersall, John M., assignor.)
American Car and Foundry Company. (See Udstad, Sigvald F., assignor.)
American Car and Foundry Company. (See Walp, Charles F., assignor.)
American Concrete & Steel Pipe Company. (See French, Jay C., assignor.)
American Foundry Equipment Company, The. (See Minich, Verne E., assignor.)
American Hyalsol Corporation. (See Helft, Ernst, assignor.)
American Largi Corporation. (See Miedel, Hermann, assignor.)
American Machine & Metals, Inc. (See Thomsen, W. A. V., Gross, and Luci, assignors.)
American Metal Company, The. (See Eppensteiner, William F., assignor.)
American Safety Razor Corporation. (See O'Neill, Bernard, assignor.)
American Sales Book Company. (See Bovier, Archie M., assignor.)
American Sales Book Company. (See Phillips, S. H., and Allan, assignors.)
American Sales Book Company. (See Pringle, William A., assignor.)
American Sales Book Company. (See Wiswall, William J., assignor.)
American Sales Book Company Inc. (See Motsinger, John B., assignor.)
American Security and Trust Company. (See Washburn, Edward W., assignor.)
American Sheet and Tin Plate Company. (See McElhaney, J. R., and Stoker, assignors.)
American Sheet and Tin Plate Company. (See Paul, Irvin J., assignor.)
American Slicing Machine Company. (See Cooper, Frank H., assignor.)
American Steel and Wire Company of New Jersey, The. (See Parrish, Cecil C., assignor.)
American Steel and Wire Company of New Jersey, The. (See Swift, Joseph H., assignor.)
American Telephone and Telegraph Company. (See Abraham, Leonard G., assignor.)
American Telephone and Telegraph Company. (See Swart, Leland K., assignor.)
American Teletector Corporation. (See Kelly, Frederick G., Jr., assignor.)
American Zinc, Lead & Smelting Company. (See Monk, R. H., and Ross, assignors.)
Anderson, Arnold G. O., Coscob, Conn. Thumb tack. 2,108,739; Feb. 15.
Anheuser-Busch, Inc. (See Barsi, James E., assignor.)
Antonsen, Anker K., Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill. Engine governor. 2,108,464; Feb. 15.
Apple, Bessie D. (See Cotterman, Frederick W., assignor.)
Archer, Samuel W. (See Ellis, R. C., and Archer.)
Armstrong Cork Company. (See Clark, Ralph R., assignor.)
Armstrong, Walter R., Sr., New Orleans, La. Signal device. 2,108,187; Feb. 15.
Asakawa, Yukichi, Tokyo, Japan. Apparatus for manufacturing luster-free rayon. 2,108,361; Feb. 15.
Ash, Thomas, Jr., Los Angeles, Calif. Gyratory airplane wing. 2,108,245; Feb. 15.
Ashley, Frank M., Great Kills, Staten Island, N. Y., assignor to L. Gompers, trustee. Pipe and pipe filter. 2,108,423; Feb. 15.
Associated Electric Laboratories, Inc. (See Saunders, Norman H., assignor.)
Atwell, Corbin S., St. Petersburg, Fla. Boat. 2,108,574; Feb. 15.
Atwell, Harold V., White Plains, N. Y., assignor to Standard Oil Company, Chicago, Ill. Propane treating in cracking systems. 2,108,636; Feb. 15.
Au, Carl H., Washington, D. C. Recorder. 2,108,037; Feb. 15.
Austin, Arthur O., near Barberton, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio. Surge arrester. 2,108,465; Feb. 15.
Autogiro Company of America. (See Stanley, Paul H., assignor.)
Automatic Telephone & Electric Company Limited. (See Simpson, Lancelot M., assignor.)
Automatic Temperature Control Company. (See Macgeorge, William D., assignor.)
Babcock & Wilcox Company, The. (See Lucke, Charles E., assignor.)
Backhouse, Headley T., St. Johns Wood, London, England, Automatic sheet feeding machinery. 2,108,702; Feb. 15.
Backstrom, Adolph, Hempstead, N. Y. Brake mechanism. 2,108,467; Feb. 15.
Bahan, George F., Charlotte, N. C. Heddle bar locking system for heddle frames and the like. 2,108,095; Feb. 15.
Bair, Alfred J. (See Miller, Thomas T., assignor.)
Bakely, William T., Beverly, N. J. Textile frame. 2,108,424; Feb. 15.
Ball Brothers Company. (See Wadsworth, Frank L. O., assignor.)
Ball, Frederick O. and T. M., Detroit, Mich. Carburetor. 2,108,281; Feb. 15.
Ball, Thomas M. (See Ball, Frederick O. and T. M.)
Balmford, Joseph A., East Orange, N. J. Synchronizing alternating current motor. 2,108,038; Feb. 15.
Baltimore Paint and Color Works, Inc. (See Shuger, Leroy W., assignor.)
Bancroft Holdings Limited. (See Johns, Henry S., assignor.)
Bangs, Ralph C., Providence, R. I., assignor to L. K. Stupell. Ornament construction. 2,108,153; Feb. 15.
Barker-Bland, Harry, London, England. Cash register. 2,108,400; Feb. 15.

Barman, Waldemar J., Los Angeles, Calif. Air conduit. 2,108,159; Feb. 15.
Barnes Drill Co. (See Swanson, Floyd A., assignor.)
Barrett, Edward, Des Moines, Iowa. Package delivering apparatus. 2,108,302; Feb. 15.
Barrows, Donald S., assignor to The Symington-Gould Corporation, Rochester, N. Y. Railway truck. 2,108,362; Feb. 15.
Baril, James E., Newark, N. J., assignor to Anheuser-Busch, Inc., St. Louis, Mo. Merchandise display apparatus. 2,108,096; Feb. 15.
Bartgis, Charles P., Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Testing apparatus. 2,108,637; Feb. 15.
Barwood, Leon J., Cambridge, Mass. Lobster claw lock. 2,108,327; Feb. 15.
Bassett, Robert S., Buffalo, N. Y. Water meter. 2,108,425; Feb. 15.
Batchelder, Nelson A., Welland, Ontario, Canada. Yarn dyeing, dressing, and loom beaming. 2,108,188; Feb. 15.
Batchelder, Nelson A., Welland, Ontario, Canada. Sizing vat. 2,108,189; Feb. 15.
Batchelder, Nelson A., Welland, Ontario, Canada. Dyeing machine. 2,108,190; Feb. 15.
Baxter Laboratories, Inc. (See Falk, Harry N., assignor.)
Beall Improvements Company, The. (See Dempsey, Henry C., assignor.)
Beaudry, William A., Wallace, Idaho. Crushing mill. 2,108,160; Feb. 15.
Becher, Hubert L., Trenton, N. J., assignor to Homasote Company. Fire resistant pulp board. 2,108,761; Feb. 15.
Becker, Wilhelm, Cologne-Mulheim, and L. Orthner, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Preparation of high molecular sulphur containing plastics. 2,108,468; Feb. 15.
Beddow, Raymond, Toledo, Ohio. Safety device for automobiles. 2,108,303; Feb. 15.
Bedford, Alda V., Collingswood, and R. D. Kell, Haddonfield, N. J., assignors, by mesne assignments, to Radio Corporation of America, New York, N. Y. Television transmitter. 2,108,097; Feb. 15.
Begg, Russell S., assignor to General Motors Corporation, Detroit, Mich. Underbody. 2,108,191; Feb. 15.
Begun, Semi, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhoff, Germany. Clutch mechanism for electromagnetic sound recording and reproducing devices. 2,108,426; Feb. 15.
Beiseman, John B. (See Schafer, R. A., Muhl, Opel, and Beiseman.)
Belford, Uriah, Golconda, Ill., assignor of one-half to C. Lightner. Engine. 2,108,740; Feb. 15.
Bell, Arthur R., assignor to Wm. H. Horn & Brother, Inc., Philadelphia, Pa. Truss. 2,108,521; Feb. 15.
Bell Telephone Laboratories, Incorporated. (See Aiken, C. B., and Durfee, assignors.)
Bell Telephone Laboratories, Incorporated. (See Bartgis, Charles P., assignor.)
Bell Telephone Laboratories, Incorporated. (See Bieling, Carl A., assignor.)
Bell Telephone Laboratories, Incorporated. (See Boardman, Edward M., assignor.)
Bellavance, Paul J., Attleboro, Mass. Bracelet and making the same. 2,108,247; Feb. 15.
Bendix Aviation Corporation. (See Nowosielski, Edward B., assignor.)
Benedict, Erwin E., assignor to The Brearley Company, Rockford, Ill. Bathroom scale. 2,108,575; Feb. 15.
Benedict, Reuben, East Orange, N. J. Wire screening applicator. 2,108,638; Feb. 15.
Bentley, Oliver D. H., Norfolk, assignor to B. F. Sturtevant Company, Inc., Boston, Mass. Blower drive and support. 2,108,703; Feb. 15.
Berg, William A., Yakima, Wash. Control handle for car windows. 2,108,554; Feb. 15.
Berg, Willie. (See Humes, Guy B., assignor.)
Bergmann, Christian N., Pittsburgh, assignor of two-sixths to C. M. Clarke, Sewickley, Pa. Container conveyer and distributor. 2,108,522; Feb. 15.
Bergner, Nore E., Stockholm, Sweden, assignor to The De Laval Separator Company, New York, N. Y. Feed for centrifugal separators. 2,108,098; Feb. 15.
Besson, Earl A., Meadville, Pa., assignor to United Shoe Machinery Corporation, Paterson, N. J. Heel-seat fitting machine. 2,108,161; Feb. 15.
Bethlehem Foundry & Machine Company. (See Van Sciver, Josiah, H., assignor.)
Betner, Benjamin C., Ithan, Pa. Bag closure. 2,108,741; Feb. 15.
Betts, Gilbert A., assignor to The Universal Engraving & Colorplate Company, Incorporated, Buffalo, N. Y. Printing plate unit. 2,108,089; Feb. 15.
Bichowsky, Francis R., Ann Arbor, Mich. Conditioning air or gas. 2,108,248; Feb. 15.
Bickel, Frederic J., assignor to The Osborn Manufacturing Company, Cleveland, Ohio. Brush. 2,108,742; Feb. 15.
Bicknell, George M., assignor to Carter Carburetor Corporation, St. Louis, Mo. Automatic heat control valve for internal combustion engines. 2,108,639; Feb. 15.
Bieling, Carl A., Westfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electron discharge apparatus. 2,108,640; Feb. 15.
Black, Sivalls & Bryson, Inc. (See Raymond, Gwynne, assignor.)
Bleuel, William H., Dormont, Pa., and S. Stock, Warren, Ohio. Hair clamp. 2,108,249; Feb. 15.
Blodgett, Katharine B., Schenectady, N. Y., assignor to General Electric Company. Surface treatment of materials. 2,108,641; Feb. 15.
Bluebdorn, Hartford, Conn., and F. K. Howard, East Falls Church, Va. Latch. 2,108,040; Feb. 15.
Boardman, Edward M., Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Magnetic device. 2,108,642; Feb. 15.
Bockmuhl, Max, G. Ehrhart, and H. Ruschig, Frankfort-on-the-Main-Hochst, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y. Sterine derivatives and preparing them. 2,108,646; Feb. 15.
Boeger, Henry F. (See Dreyer, Charles B., assignor.)
Boese, Albert B., Jr., Pittsburgh, Pa., assignor to Carbide and Carbon Chemicals Corporation. Preparation of alpha, beta unsaturated ketones. 2,108,427; Feb. 15.
Bohme Fettchemie-Gesellschaft. (See Wolf, B., Kling, and Rau, assignors.)
Bokemüller, Alfred, Gaggenau, assignor to Daimler-Benz Aktiengesellschaft, Stuttgart-Unterturkheim, Germany. Scavenging two-stroke engine. 2,108,576; Feb. 15.
Bonat, Harry, New York, N. Y. Protector pad for permanent hair waving. 2,108,460; Feb. 15.
Borgen, Sigward L., Dallas, Wis. Putty retainer. 2,108,192; Feb. 15.
Boulton, Harold S., Chicago, Ill. Floor troweling machine. 2,108,470; Feb. 15.
Bovier, Archie M., Elmira, assignor to American Sales Book Company, Inc., Niagara Falls, N. Y. Composite traveler record fastener. 2,108,471; Feb. 15.
Bowman-Manifold, Michael, Worplesdon Station, assignor to Electric & Musical Industries Limited, Middlesex, England. Cathode ray tube. 2,108,523; Feb. 15.
Brackett, Tracy F., assignor to General Motors Corporation, Detroit, Mich. Sanding machine. 2,108,193; Feb. 15.
Bradley Washfountain Company. (See Mullett, Howard A., assignor.)
Brady, Myrl W., Tarentum, Pa. Axle housing and wheel alignment gauge. 2,108,743; Feb. 15.
Brandt, David G., Westfield, assignor to Power Patents Company, Hillside, N. J. Cracking gasoline. 2,108,762; Feb. 15.
Braner, Arthur J. (See Wagner, Frederick P., assignor.)
Brazell, John J., Baldwinsville, and C. A. Broman, Worcester, assignors to E. L. Thompson Chair Corporation, Baldwinsville, Mass. Tray fastening device. 2,108,472; Feb. 15.
Brearley Company, The. (See Benedict, Erwin E., assignor.)
Breslow, Albert I. (See Margrave, Charles B., assignor.)
Broadwin, Sampson, assignor to Ainslie Knitting Machine Co., Inc., Brooklyn, N. Y. Circular hand-knitting machine. 2,108,706; Feb. 15.
Brock, Willie W., assignor of one-half to P. W. Lusader, Winnfield, La. Clip. 2,108,473; Feb. 15.
Brodersen, Karl. (See Rieche, A., Brodersen, Quaedvlieg, and Maier-Bode.)
Brodsky, Frank, New York, N. Y. Loose-leaf sheet. 2,108,363; Feb. 15.
Broese, Johannes Jan., Delft, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Cooled atomiser for solid injection engines. 2,108,647; Feb. 15.
Brooks, Josiah A., Port Washington, N. Y. Device for indicating direction of movement. 2,108,099; Feb. 15.
Brosnan, Cornelius A. (See Brasell, J. J., and Broseman.)
Brough, Frank W., Chiswick, London, assignor to Electric & Musical Industries Limited, Hayes, England. Treatment of mica for electrical purposes. 2,108,577; Feb. 15.
Brown, Andrew, R. H. Dunn, and D. G. McKie, London, England, assignors to International Standard Electric Corporation, New York, N. Y. Electric switch, particularly for use in control of railway signals. 2,108,428; Feb. 15.
Brown & Bigelow. (See Winford, Orion P., assignor.)
Brown, William T., assignor to Fibre Processing Limited, Wellington, New Zealand. Apparatus for the treatment of fibers. 2,108,578; Feb. 15.
Browning, J. M. & M. S. Company. (See Browning, Val A., assignor.)
Browning, Val A., assignor to J. M. & M. S. Browning Company, Ogden, Utah. Repeating firearm. 2,108,648; Feb. 15.
Brun, Arne, and J. A. Honne, assignors to I. A. Honne, Oslo, Norway. Device for threading the needle in sewing machines. 2,108,474; Feb. 15.
Brunstrum, Lawrence C., assignor to Standard Oil Company, Chicago, Ill. Grease. 2,108,644; Feb. 15.
Brunstrum, Lawrence C., Chicago, Ill., and E. W. Adams, Hammond, Ind., assignors to Standard Oil Company, Chicago, Ill. Grease. 2,108,643; Feb. 15.
Bryant, Robert C., assignor, by mesne assignments, to The Carborundum Company, Niagara Falls, N. Y. Manufacture of flexible abrasive articles. 2,108,645; Feb. 15.
Buccicone, Dario, Gary, Ind. Sheet guide. 2,108,364; Feb. 15.

Büchi, Alfred, Winterthur, Switzerland. Slide valve controlled four-stroke cycle internal combustion engine. 2,108,365; Feb. 15.
Buckeye Steel Castings Company, The. (See Larsen, Lacob C., assignor.)
Bucyrus-Erie Company. (See Mork, George W., assignor.)
Buono, Mario, Brooklyn, assignor to U. S. Blind Stitch Machine Corporation, New York, N. Y. Sewing machine. 2,108,100; Feb. 15.
Buono, Mario, Brooklyn, assignor to U. S. Blind Stitch Machine Corporation, New York, N. Y. Sewing. 2,108,101; Feb. 15.
Burr, Lynton, Hampton, Va. Fishing line. 2,108,598; Feb. 15.
Burt, F. N., Company, Inc. (See Royal, Joseph N., assignor.)
Burton, Robert B., assignor to General Motors Corporation, Detroit, Mich. Combined shock absorber and antiroll device. 2,108,594; Feb. 15.
Busch, Ira C., Lebanon, N. J. Poultry feeder. 2,108,102; Feb. 15.
Bustamante, Cesar, New York, N. Y. Cigar-wrapping machine. 2,108,429; Feb. 15.
Butcher, William L., Decorah, Iowa. Rope making machine. 2,108,704; Feb. 15.
Cage, John M., Los Angeles, Calif., assignor, by mesne assignments, to Petroleum Rectifying Company of California. Dehydration system. 2,108,220; Feb. 15.
Calderwood, Allan H., Martinez, Calif., assignor to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbon oils. 2,108,649; Feb. 15.
Cambridge Rubber Co. (See Dunbar, Ernest W., assignor.)
Campbell, Donald J., and L. P. Loudon, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Bleaching beeswax. 2,108,282; Feb. 15.
Carbide and Carbon Chemicals Corporation. (See Boese, Albert B., Jr., assignor.)
Carborundum Company, The. (See Bryant, Robert C., assignor.)
Carborundum Company, The. (See Walker, Avery W., assignor.)
Carington, Charles M., and A. H. Postlethwaite, assignors to K. L. G. Sparking Plugs Limited, London, England. Sparking plug. 2,108,535; Feb. 15.
Carmody, William H., Pittsburgh, Pa., assignor to The Neville Company. Hydrogenated heavy oil. 2,108,250; Feb. 15.
Carnahan, Ralph W., near Dayton, assignor to The S. H. Thomson Manufacturing Company, Dayton, Ohio. Automatic operator for casement windows and the like. 2,108,328; Feb. 15.
Carswell, Thomas S., Kirkwood, Mo., assignor, by mesne assignments, to Monsanto Chemical Company. Cleaning fruits and vegetables. 2,108,763; Feb. 15.
Carter, Burton D., Aberdeen, S. Dak. Tire casing and rim. 2,108,329; Feb. 15.
Carter Carburetor Corporation. (See Bicknell, George M., assignor.)
Carter, Willard K. (See McKinley, J. M., and Carter.)
Casey, Edward F., assignor to Converse Rubber Company, Malden, Mass. Overshoe. 2,108,650; Feb. 15.
Cassagne, Georges R., Cassaux, France. Device for transmitting motion. 2,108,366; Feb. 15.
Catherwood, Herbert C., Hagersville, Ontario, Canada. Tally keeper. 2,108,103; Feb. 15.
Celanese Corporation of America. (See Dickie, W. A., and Hale, assignors.)
Celanese Corporation of America. (See Hale, Frank C., assignor.)
Celanese Corporation of America. (See Hale, F. C., and Yorke, assignors.)
Ceramic Machinery Distributors Limited. (See Shurley, Frederick, assignor.)
Chamberlain Co. (See Kennedy, John J., assignor.)
Chase Companies, The. (See Reichenbach, Howard F., assignor.)
Chase-Shawmut Company, The. (See Taylor, Elmer H., assignor.)
Cherry, George L., Western Springs, and V. H. Dupre, Oak Park, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y. Coin chute. 2,108,651; Feb. 15.
Chicago Carton Company. (See Hayes, Charles C., assignor.)
Chicago Flexible Shaft Company. (See Lynch, John W., assignor.)
Chisholm-Ryder Company. (See Ryder, Frank P., assignor.)
Choate, Roy E., W. E. Roller and W. I. Leach, assignors to La Plant-Choate Manufacturing Co. Inc., Cedar Rapids, Iowa. Earth moving device. 2,108,304; Feb. 15.
Christian, Joseph D., San Francisco, Calif. Speed change device. 2,108,367; Feb. 15.
Christian, Joseph D., San Francisco, Calif. Speed change device. 2,108,368; Feb. 15.
Chrysler Corporation. (See Rosalot, Andre J. E., assignor.)
Chrysler Corporation. (See Wheat, Thomas E. M., assignor.)
Church, Harold D., Cleveland, Ohio, assignor to General Motors Corporation, Detroit, Mich. Piston. 2,108,194; Feb. 15.
Cincinnati Bickford Tool Company, The. (See Schauer, L. L., and McKewen, assignors.)
Clark, Cuyler L., Baltimore, Md. Curvilinear measuring instrument. 2,108,251; Feb. 15.
Clark, Frank C., Minneapolis, Minn. Butter churn. 2,108,162; Feb. 15.
Clark, Ralph B., assignor to Armstrong Cork Company, Lancaster, Pa. Centrifugal feeding device. 2,108,165; Feb. 15.
Clarke, Charles M. (See Bergmann, Christian N., assignor.)
Cleveland Welding Company, The. (See Mueller, Homer L., assignor.)
Clifford, Charles C., Maplewood, N. J. Memorandum holder. 2,108,526; Feb. 15.
Coanda, Henri, Clichy, France, assignor to Société Anonyme d'Etudes des Brevets et Procédés Coanda-Société Coanda. Propelling device. 2,108,652; Feb. 15.
Coe, Mayne R., Washington, D. C., assignor to the Government and the People of the United States of America. Curing and preserving plant products. 2,108,305; Feb. 15.
Collins & Aikman Corporation. (See Drobile, Albert W., assignor.)
Collins & Aikman Corporation. (See Kubicky, Joseph, assignor.)
Collins, Douglas, Salisbury, N. C. Engine starting device. 2,108,579; Feb. 15.
Coloray Corporation, The. (See MacDonald, Archibald H., assignor.)
Colvin, Ella F., et al., executrices. (See Colvin, William, Jr.)
Colvin, William, Jr., deceased, Troy, E. F. Colvin and R. E. Sharpe, executrices, assignors to P. Gayne, New York, N. Y. Aeroplane. 2,108,041; Feb. 15.
Combustion Engineering Company. (See O'Mara, Richard F., assignor.)
Compo Shoe Machinery Corporation. (See Small, Edward F., assignor.)
Compton, W. H., Shear Company, The. (See Dalley, Charles J., assignor.)
Comrie, Andrew W., Miami, Fla. Navigational instrument. 2,108,042; Feb. 15.
Condon, Edward T. (See Rogers, Clarence T., assignor.)
Consolidated Aircraft Corporation. (See Laddon, Isaac M., assignor.)
Converse Rubber Company. (See Casey Edward F., assignor.)
Cookson, Clarence F., Lyndhurst, N. J. Amusement device. 2,108,490; Feb. 15.
Cooper, Barclay B. W., Oklahoma City, Okla. Hot air furnace. 2,108,083; Feb. 15.
Cooper, Frank H., assignor to American Slicing Machine Company, Chicago, Ill. Slicing machine. 2,108,306; Feb. 15.
Cooper, George W., assignor of one-fourth to F. H. Hill and one-fourth to W. Miller, Muncie, Ind. Clutch sleeve spring tool. 2,108,252; Feb. 15.
Cooper, Leonard W., assignor to The Cooper Spot-Sight Co. Inc., La Grande, Ore. Combined firearm and spotlight. 2,108,475; Feb. 15.
Cooper Spot-Sight Co. Inc., The. (See Cooper, Leonard W., assignor.)
Copeland, Francis C., Beverly Hills, Calif. Cigarette lighting and dispensing device. 2,108,376; Feb. 15.
Cordrey, Almon J., assignor to Liquid Carbonic Corporation, Chicago, Ill. Milk truck. 2,108,104; Feb. 15.
Cornell Securities Corporation. (See Lockhart, William, assignor.)
Cornwall, Edward F., Union Township, Union County, N. J. Opener for containers. 2,108,431; Feb. 15.
Cornwell, Leroy, assignor of one-half to P. H. Hull, C. H. Rodell, and R. F. Stewart, Spokane, Wash. Hydraulic braking system. 2,108,164; Feb. 15.
Cottenman, Frederick W., assignor of one-half to B. D. Apple, Dayton, Ohio. Automatic automotive transmission mechanism. 2,108,105; Feb. 15.
Couch, Glenn F., assignor to The Symington-Gould Corporation, Rochester, N. Y. Railway truck. 2,108,653; Feb. 15.
Crawford, John W. C., and J. McGrath, Ardrossan, Scotland, assignors to Imperial Chemical Industries Limited. Plastic materials and production thereof. 2,108,044; Feb. 15.
Crichton, James V., assignor of one-half to K. Selberg, Philadelphia, Pa. Wheel brake mechanism. 2,108,401; Feb. 15.
Criley, William W., Cleveland, Ohio. Combination safety slip and drive mechanism. 2,108,165; Feb. 15.
Crillon, Marcel V., Marseille, France. Cylinder head for internal combustion engines, for the prevaporisation of light fuel and for cracking of heavy oils. 2,108,706; Feb. 15.
Crist, Donald M., San Francisco, Calif., assignor to Titanium Steel Alloy Company. Making steel and iron alloys. 2,108,043; Feb. 15.
Crosley, Lewis M., and R. H. Money, assignors to The Crosley Radio Corporation, Cincinnati, Ohio. Diaphragm type evaporator. 2,108,744; Feb. 15.
Crosley Radio Corporation, The. (See Crosley, L. M., and Money, assignors.)

Crosley Radio Corporation, The. (See Kierulff, William E., assignor.)
Crow, Raymond L., Lawrence, Kans. Drill hole cleaning device. 2,108,195; Feb. 15.
Crown Cork & Seal Company. (See Earling, Roy, assignor.)
Cudmore, Arthur H., Salem, Mass. Folding cribbage board. 2,108,527; Feb. 15.
Cutler-Hammer, Inc. (See Horter, Bayard M., assignor.)
Cyclone Fence Company. (See Harter, Noah S., assignor.)
Cykajlo, Peter, assignor of one-half to H. L. Goemann, Mansfield, Ohio. Uniting metals. 2,108,528; Feb. 15.
Czarnecki, Walter, assignor, by mesne assignments, to Eddington Metal Specialty Co., Eddington, Pa. Strainer, pump, and pressure regulating unit. 2,108,432; Feb. 15.
Dahlberg, Tord O. R., Stockholm, Sweden. Calculating machine differential mechanism. 2,108,476; Feb. 15.
Dahlström, Ernst R., Alsten, and K. E. Granstedt, Stockholm, assignors to Aktiebolaget Formator, Sweden. Method and device for distributing tobacco mass. 2,108,269; Feb. 15.
Daimler-Benz Aktiengesellschaft. (See Bokemüller, Alfred, assignor.)
Dain Manufacturing Company of Iowa. (See Jones, Frank D., assignor.)
Dalcher, John T., Lawrence Harbor, N. J. Fuse plug. 2,108,106; Feb. 15.
Dalley, Charles J., Maplewood, assignor to The W. H. Compton Shear Company, Newark, N. J. Nut lock for shears and the like. 2,108,654; Feb. 15.
Dâna, Bernard D. (See von Hofe, G. W., and Dâna.)
Danner, Catherine, et al., executors. (See Lederer, Anton.)
Da Valle, Conrad, Oakland, Calif. Trailer coupler. 2,108,307; Feb. 15.
Davies, Harrison, The Plains, Ohio. Bracket. 2,108,196; Feb. 15.
Deere & Company. (See Silver, Walter H., assignor.)
Deere, John, Tractor Company. (See Paul, Talbert W., assignor.)
De Gheselle, Frank, East Moline, Ill. Refrigerator handling and moving device. 2,108,477; Feb. 15.
De Lanty, Loren J. (See Drake, H. C., and De Lanty.)
De Laval Separator Company, The. (See Bergner, Nore E., assignor.)
Delta Manufacturing Company. (See Tauts, Herbert E., assignor.)
Dempsey, Henry C., assignor to The Beall Improvements Company, Inc., Decatur, Ill. Degerminator. 2,108,655; Feb. 15.
Dennin, William W., Albany, N. Y. Coin controlled garment checking apparatus. 2,108,402; Feb. 15.
De Noronha, Joaquin, Rio de Janeiro, Brazil. Overshoe or galosh. 2,108,656; Feb. 15.
Dense, John C., Rochester, N. Y. Die shoe. 2,108,253; Feb. 15.
Deringer, Hans, Winterthur, Switzerland, assignor, by mesne assignments, to Koppers Company, Pittsburgh, Pa. Gas producer. 2,108,764; Feb. 15.
Devaney, Michael J., Chicago, Ill. Producing steel. 2,108,254; Feb. 15.
Devendor, John A., and W. A. Devendor, Jackson Heights, N. Y. Button. 2,108,255; Feb. 15.
Devendor, William A. (See Devendor, John A. and W. A.)
De Wees, Russell J., Dallas, Tex. Anchoring structural elements to concrete supporting bodies. 2,108,107; Feb. 15.
De Witt, William J., assignor to Shoe Form Co., Inc., Auburn, N. Y. Shoe form. 2,108,657; Feb. 15.
Diamond Match Company, The. (See Nolan, John R., assignor.)
Diamond Match Company, The. (See Wright, Charles F., assignor.)
Diamond Match Company, The. (See Zomnir, Joseph E., assignor.)
Dick, A. B., Company. (See Pollard, Walter, assignor.)
Dickey, Margaret, Portland, Oreg. Adjustable garment sizer and stretcher. 2,108,308; Feb. 15.
Dickie, William A., and F. C. Hale, Spondon, near Derby, England, assignors to Celanese Corporation of America. Circular loom. 2,108,108; Feb. 15.
Dirker, William S., Portland, Oreg., assignor to American Can Company, New York, N. Y. Container. 2,108,045; Feb. 15.
Ditchfield, Frank, assignor to The Youngstown Steel Door Company, Cleveland, Ohio. House car construction. 2,108,309; Feb. 15.
Dixon, Reginald G. (See Patterson, W. G., and Dixon.)
Dodd, Victor J., Kalannie, West Australia, Australia. Adjustable control lever. 2,108,745; Dec. 15.
Domagk, Gerhard, Wuppertal-Elberfeld, Germany, assignor, by mesne assignments, to Alba Pharmaceutical Company, Inc., New York, N. Y. Preserving and disinfecting media. 2,108,765; Feb. 15.
Doyle, Edgar D., and G. A. Perley, assignors to Leeds & Northrup Company, Philadelphia, Pa. Method and apparatus for measuring ion-concentration. 2,108,294; Feb. 15.
Drake, Harcourt C. (See Jones, G. L., Drake, and Schumacher.)
Drake, Harcourt C., Hempstead, and L. J. De Lanty, assignors to Sperry Products, Inc., Brooklyn, N. Y. Lubricant testing device. 2,108,580; Feb. 15.
Dravo Corporation. (See Edwards, Vere B., assignor.)
Drew, Ralph L., North Plymouth, and S. A. Reed, Duxbury, assignors to Plymouth Cordage Company, North Plymouth, Mass. Air conditioning device. 2,108,283; Feb. 15.
Dreyer, Charles B., assignor of one-half to H. F. Boeger, Los Angeles, Calif. Producing photographic effects and films therefor. 2,108,284; Feb. 15.
Dreyfus, Henry, London, England. Manufacture of organic compounds. 2,108,109; Feb. 15.
Drobile, Albert W., Wayne, assignor to Collins & Aikman Corporation, Philadelphia, Pa. Pile fabric and making the same. 2,108,046; Feb. 15.
Duffy, Walter J., North Bergen, N. J. Electrical outlet. 2,108,581; Feb. 15.
Dunbar, Ernest W., Hudson, assignor to Cambridge Rubber Co., Cambridge, Mass. Rubber overshoe. 2,108,658; Feb. 15.
Dunham, George S., Augusta, Kans., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Method and apparatus for distillation. 2,108,659; Feb. 15.
Dunham, Henry V., Bainbridge, N. Y. Casein product and process of making. 2,108,582; Feb. 15.
Dunn, Roland H. (See Brown, A., Dunn, and McKie.)
Dunsheath, Percy, Kent, assignor to W. T. Henley's Telegraph Works Company Limited, London, England. Metal extrusion device. 2,108,529; Feb. 15.
Dupelesis, René B., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Lasting machine. 2,108,106; Feb. 15.
Du Pont, E. I., de Nemours & Company. (See Campbell, D. J., and London, assignors.)
Du Pont, E. I., de Nemours & Company. (See McCall, Francis J., assignor.)
Du Pont, E. I., de Nemours & Company. (See McVay, Willard S., assignor.)
Du Pont, E. I., de Nemours & Company. (See Scott, N. D., and Walker, assignors.)
Du Pont, E. I., de Nemours & Company. (See Walker, Joseph F., assignor.)
Du Pont, E. I., de Nemours & Company. (See Wortz, Charles G., assignor.)
Dupre, Valentine H. (See Cherry, G. L., and Dupre.)
Durfee, Thomas. (See Aiken, C. B., and Durfee.)
Du Sang, Virgil L., Kokomo, Ind. Hub cap and dust cap puller. 2,108,197; Feb. 15.
Dym, Joseph B., assignor to Mine Safety Appliances Company, Pittsburgh, Pa. Breathing apparatus. 2,108,256; Feb. 15.
Eagle-Picher Lead Company, The. (See Harner, H. R., Schultz, and Ritchie, assignors.)
Eaker, Sidney C., and E. E. Grover, Springfield, Mass., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Refrigeration apparatus. 2,108,478; Feb. 15.
Earling, Roy, assignor to Crown Cork & Seal Company, Inc., Baltimore, Md. Detector mechanism for crown cap assembling machines. 2,108,257; Feb. 15.
Eastman Kodak Company. (See Hamer, Frances M., assignor.)
Eastman Kodak Company. (See Hamer, F. M., and Fisher, assignors.)
Eastman Kodak Company. (See Mannes, L. D., and Godowsky, assignors.)
Eastman Kodak Company. (See Murray, Alexander, assignor.)
Eastman Kodak Company. (See Smith, Henry B., assignor.)
Eastman Kodak Company. (See Stone, H. G., and Malm, assignors.)
Eastern Illinois Clay Company. (See Van Antwerp, Arthur C., assignor.)
Eastwood, Robert A. (See Johnson, E. W., and Eastwood.)
Eddington Metal Specialty Co. (See Czarnecki, Walter, assignor.)
Edwards, Henry J., Dartford, assignor to Siemens Brothers & Company Limited, London, England. Automatic switch for use in telephone or like systems. 2,108,110; Feb. 15.
Edwards, Russell T., assignor to Union Special Machine Company, Chicago, Ill. Fabric manipulating mechanism for sewing machines. 2,108,403; Feb. 15.
Edwards, Vere B., Corapolis, Pa., assignor to Dravo Corporation. Fleet testing dynamometer. 2,108,433; Feb. 15.
Egeberg, Birger, Meriden, Conn., and R. W. Tindula, Buffalo, N. Y., assignors to International Silver Company, Meriden, Conn. Nontarnish alloy. 2,108,047; Feb. 15.
Egeberg, Birger, Meriden, Conn., and R. W. Tindula, Buffalo, N. Y., assignors to International Silver Company, Meriden, Conn. Alloy. 2,108,048; Feb. 15.
Egeberg, Birger, Meriden, Conn., and R. W. Tindula, Buffalo, N. Y., assignors to International Silver Company, Meriden, Conn. Nontarnish alloys. 2,108,049; Feb. 15.
Egeberg, Birger, Meriden, Conn., and R. W. Tindula, Buffalo, N. Y., assignors to International Silver Company, Meriden, Conn. Alloys. 2,108,050; Feb. 15.
Egeberg, Birger, and R. W. Tindula, assignors to International Silver Company, Meriden, Conn. Nontarnish alloy. 2,108,051; Feb. 15.

Egger, Walter, Pekin, Ill. Window curtain tie-back. 2,108,198; Feb. 15.
Egry Register Company, The. (See Pfeiffer, William C. and F. E., assignors.)
Ehrhart, Gustav. (See Bockmühl, M., Ehrhart, and Ruschig.)
Ehrlich, Emile E., Tampa, Fla. Retriever for electric cords. 2,108,111; Feb. 15.
Elane, Halvor O., Washington Island, Wis. Grasshopper trap. 2,108,599; Feb. 15.
Elbert, Fritz, Munich, Germany, assignor to R. Wolff, Basel, Switzerland. Escapement. 2,108,112; Feb. 15.
Eichholz, William. (See Leutwiler, R. W., and Eichholz.)
Eickemeyer, Rudolf. (See Scholler, H., and Eickemeyer.)
Eisenmann, Karl, Ludwigshafen-on-the-Rhine, and H. Scheuermann, Oggersheim, Germany, assignors, by mesne assignments, to Plaskon Company, Incorporated, Toledo, Ohio. Producing condensation products of methylol compounds of urea. 2,108,113; Feb. 15.
Eitzen, August D., Rockville Centre, assignor to News Projection Corporation, New York, N. Y. Ink drying means for stock quotation projecting machines. 2,108,052; Feb. 15.
Eitzen, August D., Rockville Centre, assignor to News Projection Corporation, New York, N. Y. Broad tape projector. 2,108,053; Feb. 15.
Eitzen, August D., Rockville Centre, assignors to News Projection Corporation, New York, N. Y. Stock quotation projecting machine. 2,108,054; Feb. 15.
Eitzen, August D., Rockville Centre, assignor to News Projection Corporation, New York, N. Y. Optical system. 2,108,055; Feb. 15.
Eitzen, August D., Rockville Centre, assignor to News Projection Corporation, New York, N. Y. News projecting machine. 2,108,056; Feb. 15.
Electric Household Utilities Corporation. (See Molinare, Anthony W., assignor.)
Electric & Musical Industries Limited. (See Bowman-Manifold, Michael, assignor.)
Electric & Musical Industries Limited. (See Brough, Frank W., assignor.)
Electronics Supply Corp. (See Stringer, Louis C., assignor.)
Ellis, James T., Lake Charles, La. Pipe cutter. 2,108,230; Feb. 15.
Ellis, Ray C., and S. W. Archer, assignors to General Motors Corporation, Detroit, Mich. Radio static eliminator. 2,108,530; Feb. 15.
Elmendorf, Armin, Chicago, Ill. Nonshrinkable wood panel. 2,108,479; Feb. 15.
Elmes, John A., assignor to Keystone Driller Company, Beaver Falls, Pa. Tool guide for drilling machines. 2,108,057; Feb. 15.
Emerson Apparatus Company. (See Thompson, R. E., Emerson, and Jansson.)
Emerson, Charles J. (See Thompson, R. E., Emerson, and Jansson.)
Eppensteiner, William F., Rahway, N. J., assignor to The American Metal Company, Limited, New York, N. Y. Apparatus for sweating out fusible metals. 2,108,034; Feb. 15.
Erichsen, Abraham M., Teltow, near Berlin, Germany. Safety device for machine parts subject to high pressures. 2,108,746; Feb. 15.
Ernst, Otto, Larchmont, N. Y. Highway marker. 2,108,370; Feb. 15.
Evans Case Company. (See Gibson, Thomas M., assignor.)
Evans Case Company. (See Reilly, Alfred F., assignor.)
Evans, Ronald K. (See Stief, K., and Evans.)
Fairbanks, Morse & Co. (See Antonsen, Anker K., assignor.)
Fairway Real Estate Company, The. (See Phillips, Charles H., assignor.)
Falk, Harry N., Chicago, assignor to Baxter Laboratories, Inc., Glenview, Ill. Container. 2,108,583; Feb. 15.
Fantle, Willard E. (See Rentz, Frank B., assignor.)
Farrell, Stephen A., Brooklyn, assignor to Acme Propeller Corporation, New York, N. Y. Variable pitch and reversing propeller mechanism. 2,108,660 Feb. 15.
Farrier, Louis H., and R. H. Harlis, Poughkeepsie, N. Y. Apparatus for purifying and aging liquor. 2,108,661; Feb. 15.
Fer-O-Con Corporation. (See Kotrbaty, Guy F., assignor.)
Fiat Società Anonima. (See Accardi, Ferruccio, assignor.)
Fibre Processing Limited. (See Brown, William T., assignor.)
Fischer, Fritz, Berlin-Charlottenburg, and L. Reilstab, Berlin-Nikolassee, assignors to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Distance measuring means and method. 2,108,766; Feb. 15.
Fisher, Alec, Lynn, Mass., assignor to General Electric Company. Inductor dynamo-electric machine. 2,108,662; Feb. 15.
Fisher, Harmon F., Long Beach, assignor to Petroleum Rectifying Company of California, Los Angeles, Calif. Electric dehydrator. 2,108,358; Feb. 15.
Fisher, Nellie L. (See Hamer, F. M., and Fisher.)
Fitz Gerald, Alan S., Wynnewood, assignor of one-half to F. H. Fleer Corporation, Philadelphia, Pa. Paper registering system. 2,108,767; Feb. 15.
Fitzner, Alexander. (See White, J. H., and Fitzner.)
Flanders, William E., Detroit, Mich. Portable seat. 2,108,531; Feb. 15.
Fleer, Frank H., Corporation. (See Fitz Gerald, Alan S., assignors.)
Fleischhack, Friedrich K., Leipsig, Germany. Mechanical process for making ready impressions. 2,108,707; Feb. 15.
Flynn, Theodore P. (See Allin, G. S., and Flynn.)
Foard, William G., Jr., Kalamazoo, Mich. Hooding, filling, and capping milk bottles. 2,108,114; Feb. 15.
Folkers, Herman, Omaha, Nebr. Electrode for windmill generators. 2,108,663; Feb. 15.
Food Machinery Corporation. (See Morse, James W., assignor.)
Food Machinery Corporation. (See Paxton, Hale, assignor.)
Food Machinery Corporation. (See Twomley, Herbert E., assignor.)
Formfit Company, The. (See Abeles, Jerome, assignor.)
Forrest, Henry C., Merchantville, N. J. Method and apparatus for making and treating artificial fiber. 2,108,285; Feb. 15.
Forsberg, Carl D., Winnetka, Ill. Trouser hanger. 2,108,555; Feb. 15.
Foss, Levi, Wilmot, S. Dak. Hand duplicator. 2,108,115; Feb. 15.
Foster, Herbert K., Riverside, N. J. Electrical connecter. 2,108,706; Feb. 15.
Foster, Wade H., Bad Axe, Mich. Hive handling apparatus. 2,108,430; Feb. 15.
Foster, Wheeler, Corporation. (See Nelis, Joseph J., assignor.)
Fowler, John, & Company (Leeds) Limited. (See Sanders, Arthur F., assignor.)
Franz, Erwin E., Cranford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for winding material. 2,108,664; Feb. 15.
Frayer, Lee A., Kent, assignor to The Lamson & Sessions Company, Cleveland, Ohio. Apparatus for making bolts or the like. 2,108,709; Feb. 15.
Frelin, Fritjof, Phillipsburg, assignor to Ingersoll-Rand Company, Jersey City, N. J. Cooling device for pistons. 2,108,532; Feb. 15.
French, Jay C., San Gabciel, Calif., assignor to American Concrete & Steel Pipe Company. Water ring for concrete pipe forms. 2,108,571; Feb. 15.
Friedlich, Fred M. (See Amberg, Walter R., assignor.)
Friedmann, Alex. (See Nemetz, Gustav, assignor.)
Fuehrer, George H., Phillipsburg, and G. W. Hollmer, Stewartsville, assignors to Ingersoll-Rand Company, Jersey City, N. J. Centraliser for drill steels. 2,108,035; Feb. 15.
Fujii, Masakichi, Nippori Machi, Arakawa Ku, Tokyo, Japan. Operating mechanism of vehicular toys. 2,108,434; Feb. 15.
Fulpa, Robert L., Waco, Tex. Seam opener and turner for pants. 2,108,372; Feb. 15.
Fulton Company, The. (See Thorp, Joel R., assignor.)
Furminger, Henry S., Appleton, Wis. Paper making machine. 2,108,116; Feb. 15.
Galvin Manufacturing Corporation. (See Mitchell, Donald H., assignor.)
Gardere, Henri, and A. P. Pagès, Paris, France, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Signaling system. 2,108,117; Feb. 15.
Gartin, Elmer G., Claremont, N. H., assignor to Sullivan Machinery Company. Rock drilling mechanism. 2,108,058; Feb. 15.
Gates Rubber Company, The. (See Turman, Gardner W., assignor.)
Gayna, Paul. (See Colvin, William, Jr., assignor.)
General Aniline Works, Inc. (See Honold, R., and Taube, assignors.)
General Aniline Works, Inc. (See Müller, F., Scherer, and Schumacher, assignors.)
General Aniline Works, Inc. (See Ritter, Heinrich, assignor.)
General Aniline Works, Inc. (See Scheyer, H., and Schwamberger, assignors.)
General Chemical Company. (See Hoddeson, S. L., and Meiklejohn, assignors.)
General Chemical Company. (See Mullen, Edwin J., assignor.)
General Electric Company. (See Blodgett, Katharine B., assignor.)
General Electric Company. (See Fisher, Alec, assignor.)
General Electric Company. (See Kjolseth, Ole K., assignor.)
General Electric Company. (See Roech, A., and Neumann, assignors.)
General Electric Company. (See Schaefer, Vincent J., assignor.)
General Electric Company. (See Stöber, Wolfgang, assignor.)
General Electric Company. (See Sykes, C., and Needham, assignors.)
General Electric Company. (See Thearle, Ernest L., assignor.)

Kiss, Joseph, River Forest, Ill. Traffic signal light. 2,108,675; Feb. 15.
Kjolseth, Ole K., Erie, Pa., assignor to General Electric Company. Oscillation restraint mechanism for locomotives or cars. 2,108,676; Feb. 15.
Kline, Seth Q., assignor to General Show Card Machine Company, Inc., Washington, D. C., Printing press clamp. 2,108,490; Feb. 15.
Kling, Walter. (See Wolf, B., Kling, and Rau.)
Klotz, H. O., Bethel, Conn. Precast floor construction. 2,108,677; Feb. 15.
Knight, Alfred W. (See Montgomery, Henry S., assignee.)
Kobayashi, Yoshito. (See Kondo, H., Ikawa, and Kobayashi.)
Koch, Albert, Cologne-Deutz, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Coating worked solid materials. 2,108,715; Feb. 15.
Kondo, Heisaburo, Shibuya-ku, Tokyo, S. Ikawa, Hongo-ku, Tokyo, and Y. Kobayashi, Asabu-ku, Toyko, Japan. Desoxy-l-pseudo hyfotalin haloid and preparing same. 2,108,340; Feb. 15.
Koppers Company. (See Deringer, Hans, assignor.)
Kotrbaty, Guy F., assignor to Fer-O-Con Corporation, New York, N. Y. Building construction and structural element therefor. 2,108,065; Feb. 15.
Kraft, Herman T., assignor to The General Tire & Rubber Company, Akron, Ohio. Tire. 2,108,406; Feb. 15.
Kriechbaum, John P., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Preignition oil burner system. 2,108,770; Feb. 15.
Kriegel, Abraham, et al, executors. (See Kasanof, Maurice M.)
Kristensen, Norman Y., assignor to Oakes Products Corporation, Detroit, Mich. Bumper guard structure. 2,108,129; Feb. 15.
Kubicky, Joseph, Brandywine Summit, assignor to Collins & Aikman Corporation, Philadelphia, Pa. Manufacture of pile fabrics. 2,108,288; Feb. 15.
Kuhlemann, Stig O. C., assignor to C. H. Lundholm, Aktiebolag, Stockholm, Sweden. Parachute harness. 2,108,609; Feb. 15.
Kuhlemann, Stig O. C., assignor to C. H. Lundholm, Aktiebolag, Stockholm, Sweden. Device of support for parachutes. 2,108,716; Feb. 15.
Kuhlemann, Stig O. C., and C. H. Lundholm, assignors to C. H. Lundholm, Aktiebolag, Stockholm, Sweden. Parachute supporting device. 2,108,491; Feb. 15.
Kulhawy, Ferdinand, West New York, N. J. Hat hanger. 2,108,678; Feb. 15.
Küppenbender, Heinz, assignor to Zeiss Ikon Aktiengesellschaft, Dresden, Germany. Photographic device. 2,108,751; Feb. 15.
Kurti, Aladar, Highland Park, N. J., assignor to Mack Manufacturing Corporation. Thrust collar. 2,108,679; Feb. 15.
L'Abée Lund Aktieselskab. (See L'Abée-Lund, Johan H., assignor.)
L'Abée-Lund, Johan H., Slemdal, near Oslo, assignor to L'Abée Lund Aktieselskab, Oslo, Norway. Compass. 2,108,383; Feb. 15.
Ladden, Isaac M., Buffalo, N. Y., assignor to Consolidated Aircraft Corporation. Aircraft windshield and hatch. 2,108,230; Feb. 15.
Ladewig, Archie E., and G. F. Soelch, Waukesha, Wis. Bottle washing machine. 2,108,227; Feb. 15.
Lagier, Frederick P., Ripon, Calif. Pocket medical or first aid kit. 2,108,492; Feb. 15.
Laird, Joseph P., assignor to The Wicaco Machine Corporation, Philadelphia, Pa. Fluid pump. 2,108,771; Feb. 15.
Lakey, Ray, Denton, Tex. Cooling tower. 2,108,680; Feb. 15.
Lamson & Sessions Company, The. (See Frayer, Lee A., assignor.)
Lamson & Sessions Company, The. (See Smith, A. M., and Strayer, assignors.)
Landsdell, Harry, Wilton, assignor, by mesne assignments, to General Shaver Corporation, Bridgeport, Conn. Dry shaving device. 2,108,493; Feb. 15.
Lansing, Mortimer N., New York, N. Y. Bookmark. 2,108,494; Feb. 15.
Lantzberg, David and L. D., assignors to N. D. Q. Specialty Corporation, Brooklyn, N. Y. Machine for molding chocolate articles and the like. 2,108,067; Feb. 15.
Lantzberg, Leon D. (See Lantzberg, David and L. D.)
La Pratt-Choate Manufacturing Co. Inc. (See Choate, R. B., Rodler, and Leech, assignors.)
Larry, Timothy A., Los Angeles, Calif. Pressure control device. 2,108,048; Feb. 15.
Larsen, Jacob C., Bexley, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Car truck construction. 2,108,378; Feb. 15.
Lasker, William W., Brooklyn, assignor to Remington Rand Inc., Buffalo, N. Y. Converting and translating punch. 2,108,661; Feb. 15.
Lassiat, Raymond C. (See Shobaker, H. A., and Lassiat.)
Lassiat, Raymond C., Woodbury, N. J., assignor to Hendry Process Corporation, Dover, Del. Structure and assembly of converters. 2,108,060; Feb. 15.
Lauter, Felix, Evanston, assignor to Sealbeto Corporation, Chicago, Ill. Synthetic resin. 2,108,241; Feb. 15.
Lawrence, Victor H., Norristown, Pa., assignor to Alan Wood Steel Company. Producing sheets from corrosion-resistant ferrous-base alloys combining improved strength properties with corrosion resistance. 2,108,588; Feb. 15.
Lawson, Robert H., Pawtucket, assignor to Hemphill Company, Central Falls, R. I. Take-up rod. 2,108,773; Feb. 15.
Lawson, Robert H., and W. L. Smith, Jr., Pawtucket, assignors to Hemphill Company, Central Falls, R. I. Needle bed for knitting machines. 2,108,772; Feb. 15.
Lawson, William L., Brooklyn, N. Y. Camera bellows. 2,108,717; Feb. 15.
Lederer, Anton, deceased, Vienna, Austria; C. Danser and C. Banda, executors of said A. Lederer, assignors to E. A. Lederer, Glen Ridge, N. J. Direct electric current rare gas lamp. 2,108,537; Feb. 15.
Lederer, Ernest A. (See Lederer, Anton, assignor.)
Lee, John W., Wilkes-Barre, Pa. Station indicator. 2,108,718; Feb. 15.
Leech, William I. (See Choate, R. B., Rodler, and Leech.)
Leeds & Northrup Company. (See Doyle, E. D., and Perley, assignors.)
Leeds & Northrup Company. (See Perley, George A., assignor.)
Lees-Bradner Company, The. (See Schurr, Charles H., assignor.)
Le Fevre, Arden W., assignor to Stewart-Warner Corporation, Chicago, Ill. Dial for indicating instruments. 2,108,342; Feb. 15.
Leifer, Rees L., McKeesport, Pa. Hot strip rolling. 2,108,379; Feb. 15.
Leishman, Le Roy J., Los Angeles, Calif. Turning rotatable objects to predetermined positions. 2,108,538; Feb. 15.
Lems, Hendrik, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Oxide cathode more particularly for a gas-filled discharge tube. 2,108,589; Feb. 15.
Lentschewsky, Boris, Berlin, Germany. Peripheral sealing means for tanks. 2,108,280; Feb. 15.
Lentz, William L., Tuckahoe, N. Y., and C. F. Kantola, Ashtabula, Ohio, assignors to The New York Central Railroad Company. Streamlined locomotive and tender and vestibule curtain structure therefor. 2,108,203; Feb. 15.
Lentz, William L., Tuckahoe, N. Y., and C. F. Kantola, Ashtabula, Ohio, assignors to The New York Central Railroad Company. Locomotive tender. 2,108,204; Feb. 15.
Leslie, Frank R., St. Paul, Minn. Insulating material. 2,108,682; Feb. 15.
Leutwiler, Richard W., Chicago, and W. Eichhols, Cicero, assignors to Illinois Engineering Company, Chicago, Ill. Steam heating. 2,108,601; Feb. 15.
Leverenz, Humboldt W., Collingswood, N. J., assignor to Radio Corporation of America. Making fluorescent screens. 2,108,683; Feb. 15.
Levin, Nils D., Columbus, Ohio, assignor to The Jeffrey Manufacturing Company. Method of and apparatus for cleaning coal. 2,108,495; Feb. 15.
Levin, Nils D., and S. H. Yost, Columbus, Ohio, assignors to The Jeffrey Manufacturing Company. Cleaning coal and fluid separating medium therefor. 2,108,290; Feb. 15.
Lewis, George S., assignor to Winchester Repeating Arms Company, New Haven, Conn. Extractor mechanism for breakdown firearms. 2,108,130; Feb. 15.
Lewis, Myron H., New York, N. Y. Drilling machine and device. 2,108,131; Feb. 15.
Lewis, Wilbur S., assignor to The Murle Co., Cleveland, Ohio. Hair waving device. 2,108,719; Feb. 15.
Lewit, Carl J., assignor to Industrial Development and Research Laboratories, Incorporated, Atlanta, Ga. Permanent waving pad. 2,108,590; Feb. 15.
L'Hollier, Leslie H., Waltham, assignor to Hood Rubber Company, Inc., Watertown, Mass. Spiked shoe. 2,108,439; Feb. 15.
Light, Ralph A., Cynwyd, and J. W. Price, Jr., assignors to The United States Metallic Packing Company, Philadelphia, Pa. Cylinder cock. 2,108,228; Feb. 15.
Lightner, Cody. (See Belford, Uriah, assignor.)
Liguori, Vincent, Bayonne, N. J. Rotating shaft controlling apparatus. 2,108,315; Feb. 15.
Lindenblad, Nils E., Port Jefferson, N. Y., assignor, by mesne assignments, to Radio Corporation of America. Electron discharge device. 2,108,539; Feb. 15.
Link, Louis, New York, N. Y. Gummed tape dispensing machine. 2,108,496; Feb. 15.
Lipert, Sidney, Edmonton, England. Hinge. 2,108,774; Feb. 15.
Liquid Carbonic Corporation. (See Cordrey, Almon J., assignor.)
Livingston, John W., Forest Hills, assignor to The Union Switch & Signal Company, Swissvale, Pa. Track rail contactor. 2,108,497; Feb. 15.

Lochhead, Elmer C., assignor of one-half to C. R. Henderson, Moberly, Mo. Stocking and making the same. 2,108,549; Feb. 15.
Lockhart, William, assignor to Cornell Securities Corporation, Cleveland, Ohio. Receptacle and closure. 2,108,407; Feb. 15.
London, Le Roy P. (See Campbell, D. J., and London.)
Lora, Luis A., Brooklyn, assignor to Radio Patents Corporation, New York, N. Y. Television device. 2,108,132; Feb. 15.
Lorenz, C., Aktiengesellschaft. (See Begun, Seml, assignee.)
Love, Frank R., Oklahoma City, Okla. Belt loss prevention means. 2,108,316; Feb. 15.
Low, Marshall, Washington, D. C. Method of and apparatus for shaping plastic materials. 2,108,070; Feb. 15.
Low, Marshall, Washington, D. C. Method of and apparatus for shaping plastic materials. 2,108,071; Feb. 15.
Low, Marshall, Washington, D. C. Method of and apparatus for shaping metal delivered in a molten condition. 2,108,752; Feb. 15.
Low, Marshall, Washington, D. C. Method of and apparatus for shaping metal delivered in a molten condition. 2,108,753; Feb. 15.
Lowe, Joe, Corporation. (See Thomas, Norman M., assignor.)
Luci, Warner S. (See Thomsen, W. A. V., Gross, and Luci.)
Luche, Charles E., New York, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J. Steam generator. 2,108,072; Feb. 15.
Ludtke, Ray, Copley, Pa. Foundation fastener and decapping tool. 2,108,754; Feb. 15.
Luke, Leo C., assignor to International Door Company, Evansville, Ind. Slot chaser. 2,108,720; Feb. 15.
Lull, Le Grand H., Minneapolis, Minn. Leveliser for road maintaining apparatus. 2,108,541; Feb. 15.
Lundberg, Hans T. F. (See Zaschlag, Theodor, assignor.)
Lundholm, Carl H. (See Kuhlemann, S. O. C., and Lundholm.)
Lundholm, Carl H., Aktiebolag. (See Kuhlemann, Stig O. C., assignor.)
Lundholm, Carl H., Aktiebolag. (See Kuhlemann, S. O. C., and Lundholm, assignors.)
Lusader, Pearl W. (See Brock, Willis W., assignor.)
Lynch, John W., assignor to Chicago Flexible Shaft Company, Chicago, Ill. Cedar maker. 2,108,684; Feb. 15.
Lyons, Joseph, Detroit, Mich. Cuff folding device. 2,108,542; Feb. 15.
Mabry, Forrest S., Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Radio system of fog landing for airplanes. 2,108,562; Feb. 15.
MacDonald, Archibald H., assignor to The Coloray Corporation, Detroit, Mich. Color film pack. 2,108,073; Feb. 15.
Macgeorge, William D., Woodbury, N. J., assignor to Automatic Temperature Control Company, Inc., Philadelphia, Pa. Relay. 2,108,775; Feb. 15.
Mack Manufacturing Corporation. (See Kurti, Aladar, assignor.)
Magill-Weinsheimer Company. (See Rasmussen, Frank H., assignor.)
Maier-Bode, Hans. (See Bloche, A., Brodersen, Quaedvlieg, and Maier-Bode.)
Malm, Carl J. (See Stone, H. G., and Malm.)
Mannes, Leopold D., and L. Godowsky, Jr., assignors to Eastman Kodak Company, Rochester, N. Y. Photographic color-forming compounds. 2,108,602; Feb. 15.
Margrave, Charles B., assignor of one-half to A. I. Breslow, Los Angeles, Calif. Casing perforater. 2,108,172; Feb. 15.
Marks, Albert A., West Allis, Wis. License plate holder. 2,108,591; Feb. 15.
Martin, Armor B., Butte, Mont., and H. N. Wade, Los Angeles, Calif. Apparatus for determining dew point of gases. 2,108,175; Feb. 15.
Martin, Elsie L., Drexel Hill, Pa. Breast pad and the like. 2,108,205; Feb. 15.
Martin, Stoddard B., Lakewood, Ohio, and C. B. Waechter, Bradford, Pa. Pipe or rod coupling. 2,108,265; Feb. 15.
Mason, Ralph B., New Kensington, assignor to Aluminum Company of America, Pittsburgh, Pa. Production of aluminum reflecting surfaces. 2,108,603; Feb. 15.
Mason, Ralph B., New Kensington, assignor to Aluminum Company of America, Pittsburgh, Pa. Aluminum reflector. 2,108,604; Feb. 15.
Mancher, Hans, New York, N. Y. Pencil. 2,108,441; Feb. 15.
Mauntel, Anthony J. (See Townley, J. R., and Mauntel.)
Maxam, Harvey K., Francisco, Ind. Air vent guard. 2,108,721; Feb. 15.
Mays, Orland C., Wink, Tex. Apparatus for shooting wells. 2,108,174; Feb. 15.
McAllister, Johanna C., Los Angeles, Calif. Folded container or envelope. 2,108,243; Feb. 15.
McAllister, Walter H., Wyoming, assignor to The Procter & Gamble Company, Cincinnati, Ohio. Detergents for use in laundering processes. 2,108,756; Feb. 15.
McAllister, Walter H., Wyoming, assignor of one-half to The Procter & Gamble Company, Cincinnati, Ohio, and of one-half to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Purification of sulphonation products. 2,108,755; Feb. 15.
McBee Company, The. (See Gerety, Edward J., assignee.)
McCall, Francis J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Producing high molecular alcohols from the corresponding ketones. 2,108,133; Feb. 15.
McConnell, Elliott B. (See Musselman, J. M., and McConnell.)
McDaniel, James A., Memphis, Tenn. Gear shifting mechanism. 2,108,264; Feb. 15.
McDonough, John, Jersey City, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Structural unit. 2,108,685; Feb. 15.
McElhaney, James E., and R. Stoker, Vandergrift, Pa., assignors to American Sheet and Tin Plate Company. Coating sheet metal. 2,108,381; Feb. 15.
McGrath, James. (See Crawford, J. W. C., and McGrath.)
McGraw Electric Company. (See Scharf, Frank W., assignor.)
McKewen, John H. (See Schauer, L. L., and McKewen.)
McKie, David G. (See Brown, A. Dunn, and McKie.)
McKinley, John M., East Cleveland, and W. K. Carter, Columbus, Ohio; said Carter assignor to National Aluminate Corporation, Chicago, Ill., and said McKinley assignor to North American Refractories Company, Cleveland, Ohio. Ferruginous siliceous refractories. 2,108,543; Feb. 15.
McLeod, Thomas, Elizabeth, N. J. Marine steering gear motor. 2,108,498; Feb. 15.
McMahon, Edward F., Clinton, Md. Spectacles. 2,108,074; Feb. 15.
McNally, Malcolm R., assignor of one-half to W. H. Ramsay, Lumsden, Saskatchewan, Canada. Tractor wheel scraper. 2,108,291; Feb. 15.
McNicoll, Andrew G., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Starting mechanism. 2,108,776; Feb. 15.
McNulty, William A., Chicago, Ill. Snow plow. 2,108,134; Feb. 15.
McVay, Willard S., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Furnace and firing. 2,108,292; Feb. 15.
Meeker, Lillian P., executrix. (See Meeker, Sidney.)
Meeker, Sidney, deceased, by L. P. Meeker, executrix, Memphis, Tenn. Tenaculum. 2,108,206; Feb. 15.
Melklejohn, Roy M. (See Hoddeson, S. L., and Melklejohn.)
Mekler, Lev A., assignor to Universal Oil Products Company, Chicago, Ill. Heating of fluids. 2,108,686; Feb. 15.
Mekler, Lev A., assignor to Universal Oil Products Company, Chicago, Ill. Heating of fluids. 2,108,687; Feb. 15.
Mekler, Lev A., assignor to Universal Oil Products Company, Chicago, Ill. Furnace. 2,108,688; Feb. 15.
Metz, Martha M., Talmage, Kans. Anatomical skeleton. 2,108,229; Feb. 15.
Meyer, Wilfred, Birkenwerder, near Berlin, assignor to Allgemeine Elektricitats Gesellschaft, Berlin, Germany. Cathode heater for electron discharge devices. 2,108,544; Feb. 15.
Meyfarth, Gottlieb, assignor of one-half to Societe Anonyme des Ateliers de Secheron, Geneva, Switzerland. Individual axle drive for vehicles. 2,108,382; Feb. 15.
Miedel, Hermann, Frankfort-on-the-Main, Germany, assignor to American Lurgi Corporation, New York, N. Y. Laminated corrosion resistant structure. 2,108,722; Feb. 15.
Miller, Harry E., East Cleveland, Ohio. Waist band adjustment for garments. 2,108,175; Feb. 15.
Miller, Thomas, Brooklyn, N. Y. Screw driver and socket wrench attachment. 2,108,344; Feb. 15.
Miller, Thomas T., assignor of five-twelfths to A. J. Bair, Peoria, Ill. Aging whisky. 2,108,317; Feb. 15.
Miller, William, et al. (See Cooper, George W., assignor.)
Milwaukee Gas Specialty Company. (See Steffen, Elmer G., assignor.)
Mine Safety Appliances Company. (See Dym, Joseph B., assignor.)
Miner, W. H., Inc. (See Haseltine, Stacy B., assignor.)
Minich, Verne E., Mishawaka, assignor to The American Foundry Equipment Company, St. Joseph, Ind. Low pressure abrasive blast system. 2,108,545; Feb. 15.
Minneapolis-Honeywell Regulator Company. (See Kriechbaum, John P., assignor.)
Minneapolis-Honeywell Regulator Company. (See McNicoll, Andrew G., assignor.)
Mitchell Camera Corporation. (See Hoffmann, Louis B., assignor.)
Mitchell, Donald H., assignor to Galvin Manufacturing Corporation, Chicago, Ill. Control device. 2,108,408; Feb. 15.
Mix & Genest Aktiengesellschaft. (See Heyduck, Alfred, assignor.)
Mixer, Harold P., Frankfort, assignor to Remington Rand Inc., Buffalo, N. Y. Rotary switch. 2,108,777; Feb. 15.
Mnookin, Nathan M. (See Spess, V. B., and Mnookin.)
Mnookin, Nathan M., and V. B. Spess, Kansas City, Mo. Effecting solution of lead arsenate. 2,108,563; Feb. 15.
Mock, Hugo, New York, N. Y. Collapsible tube. 2,108,689; Feb. 15.
Moisy, Alexandrest. Prix, France. Transmission gear for electric starters. 2,108,384; Feb. 15.
Molinare, Anthony W., Oak Park, assignor to Electric Household Utilities Corporation, Chicago, Ill. Guard for shoe of ironing machines. 2,108,230; Feb. 15.
Money, Roland H. (See Crosley, L. M., and Money.)

Monk, Reginald H., and A. S. Ross, Montreal, Quebec, Canada, assignors to American Zinc, Lead & Smelting Company, St. Louis, Mo. Preparing TiO_2. 2,108,723; Feb. 15.

Monsanto Chemical Company. (See Carswell, Thomas S., assignor.)

Monsanto Chemical Company. (Sibley, Robert L., assignor.)

Montgomery, Henry S., South Pasadena, assignor of one-half to A. W. Knight, San Marino, Calif. Vapor phase treatment of petroleum distillates. 2,108,690; Feb. 15.

Morgan, John D., South Orange, assignor to Power Patents Company, Hillside, N. J. Electric toaster. 2,108,778; Feb. 15.

Mork, George W., assignor to Bucyrus-Erie Company, South Milwaukee, Wis. Dipper tooth. 2,108,075; Feb. 15.

Morris Packaging Equipment Company. (See Ness, Edward F., assignor.)

Morse, James W., Lansing, Mich., assignor to Food Machinery Corporation, San Jose, Calif. Method for determining the alignment of dirigible vehicle wheels. 2,108,383; Feb. 15.

Moseley, Charles F., Bartlesville, Okla. Fishing tool. 2,108,499; Feb. 15.

Moseley, Charles F., Bartlesville, Okla. Tubing stop. 2,108,605; Feb. 15.

Motsinger, John B., Lakewood, Ohio, assignor to American Sales Book Company Inc., Niagara Falls, N. Y. Continuous interleaved record. 2,108,500; Feb. 15.

Motto, Charles E., et al. (See Tufts, Carl R., assignor.)

Mueller, Homer L., assignor to The Cleveland Welding Company, Cleveland, Ohio. Coaster brake. 2,108,501; Feb. 15.

Muench, Frank J., Newark, N. J. Blending machine. 2,108,502; Feb. 15.

Muhl, Charles H. (See Schafer, R. A., Muhl, Opel, and Beissman.)

Mullen, Edwin J., New Rochelle, assignor to General Chemical Company, New York, N. Y. Roasting ores. 2,108,592; Feb. 15.

Mullen, Edwin J., New Rochelle, assignor to General Chemical Company, New York, N. Y. Process and apparatus for roasting ores. 2,108,593; Feb. 15.

Müller, Fritz, O. Scherer, and W. Schumacher, Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Trifluoromethylphenylsulphides, oxidation products thereof, and preparing the same. 2,108,606; Feb. 15.

Mullett, Howard A., assignor to Bradley Washfountain Company, Milwaukee, Wis. Wash fountain spray head. 2,108,266; Feb. 15.

Murakami, Masasuke, Tokyo, Japan. Rotary engine. 2,108,385; Feb. 15.

Murie Co., The. (See Lewis, Wilbur S., assignor.)

Murphy, Thomas F., New York, N. Y. Locking device for mail receptacles. 2,108,440; Feb. 15.

Murray, Alexander, Rochester, N. Y., assignor, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J. Coloring materials. 2,108,503; Feb. 15.

Musselman, John M., Cleveland, and E. B. McConnell, Shaker Heights, assignors to Standard Oil Company, Cleveland, Ohio. Lubricant preparation. 2,108,380; Feb. 15.

Mustee, Joseph F., University Heights, Ohio. Water heater. 2,108,601; Feb. 15.

N. D. Q. Specialty Corporation. (See Lantinberg, David, and L. D., assignors.)

N. V. Philips' Gloeilampenfabrieken. (See Alfter, Josef, assignor.)

N. V. Philips' Gloeilampenfabrieken. (See Lems, Hendrik, assignor.)

N. V. Philips' Gloeilampenfabrieken. (See van Loon, Carel J. assignor.)

N. V. Philips' Gloeilampenfabrieken. (See Vermeulen R., and Van Urk, assignors.)

Nardelli, Nelio, Florence, Italy. Viscous, Waterproof and insulating composition with a basis of rubber, to be used hot or cold. 2,108,387; Feb. 15.

Nash, Marie D., et al. (See Nash, William C., assignor.)

Nash, Roy A., et al. (See Nash, William C., assignor.)

Nash, William C., Neenah, Wis. Making paper. 2,108,231; Feb. 15.

Nash, William C., assignor of one-fifth to M. Jones, one-fifth to M. D. Nash, Neenah, Wis., one-fifth to W. M. Nash, Chicago, Ill., and one-fifth to R. A. Nash, New Rochelle, N. Y. Web guiding device. 2,108,232; Feb. 15.

Nash, William M., et al. (See Nash, William C., assignor.)

National Airoil Burner Company. (See Straitz, John F., assignor.)

National Aluminate Corporation. (See McKinley, J. M., and Carter, assignors.)

National Automatic Tool Company, The. (See Schafer, Robert A., assignor.)

National Automatic Tool Company, The. (See Schafer, R. A., Muhl, Opel, and Beissman, assignors.)

National Malleable and Steel Castings Company. (See Hobson, Roy C., assignor.)

National Tube Company. (See Heimbach, Charles H., assignor.)

Needham, William. (See Sykes, C., and Needham.)

Nelis, Joseph J., Brooklyn, assignor to Foster Wheeler Corporation, New York, N. Y. Steam generator. 2,108,135; Feb. 15.

Nelson, Charles, Miami, Fla. Constructing holders. 2,108,594; Feb. 15.

Nelson, Christian B., and I. Spinner, assignors, by mesne assignments, to Plastic Binding Corporation, Chicago, Ill. Binding machine. 2,108,138; Feb. 15.

Nelson, Nels, Upper Darby, Pa. Radio turning device. 2,108,607; Feb. 15.

Nemets, Gustav, assignor to the firm Alex. Friedmann, Vienna, Austria. Labyrinth packing for bearings. 2,108,724; Feb. 15.

Ness, Edward F., assignor to Morris Packaging Equipment Company, Toledo, Ohio. Machine for wrapping bars of butter or the like. 2,108,546; Feb. 15.

Neumann, Herbert. (See Rosch, A., and Neumann.)

Neville Company, The. (See Carmody, William H., assignor.)

Newby, Howard L., Los Angeles, Calif. Apparatus for testing plate seams. 2,108,176; Feb. 15.

New Jersey Machine Corporation. (See von Hofe, G. W., and Dâse, assignors.)

News Projection Corporation. (See Eitsen, August D., assignor.)

New York Central Railroad Company, The. (See Lentz, W. L., and Kantola, assignors.)

Niles Metalcraft Company. (See Rogers, Kenneth S., assignor.)

Nolan, John R., Larchmont, N. Y., assignor to The Diamond Match Company, Wilmington, Del. Cover feeding and folding mechanism for booking machines. 2,108,318; Feb. 15.

Noller, Friedrich C., Collingswood, assignor to Radio Condenser Company, Camden, N. J. Speed reducing drive. 2,108,608; Feb. 15.

North American Refractories Company. (See McKinley, J. M., assignor, and Carter.)

Northern Machine Co. (See Kamborian, Jacob S., assignor.)

Norton Company. (See Griffing, Herbert J., assignor.)

Nowosielski, Edward B., Sidney, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind. Electrical cable connecter. 2,108,504; Feb. 15.

Nutt, William H., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Method of and machine for trimming. 2,108,177; Feb. 15.

Nyland, Edward R., assignor to General Motors Corporation, Detroit, Mich. Gear lapping machine. 2,108,547; Feb. 15.

Oakes Products Corporation. (See Gould, Jay H., assignor.)

Oakes Products Corporation. (See Kristensen, Norman Y., assignor.)

Oftedal, Philip R., and D. G. Kingsley, Chicago, Ill. Threshold. 2,108,137; Feb. 15.

Ogden, John, Indianapolis, Ind. Preparing bituminous emulsions. 2,108,505; Feb. 15.

Ohio Brass Company, The. (See Austin, Arthur O., assignor.)

O'Mara, Richard F., Chicago, Ill., assignor, by mesne assignments, to Combustion Engineering Company, Inc. Whizzer separator and mill. 2,108,609; Feb. 15.

O'Neill, Bernard, Sheffield, England, assignor, by mesne assignments, to American Safety Razor Corporation, Brooklyn, N. Y. Blade for safety razors. 2,108,267; Feb. 15.

Opel, Earl E. (See Schafer, R. A., Muhl, Opel, and Beissman.)

Orloff, Arthur, Green Bay, Wis. Walking toy. 2,108,345; Feb. 15.

Orthner, Ludwig. (See Becker, W., and Orthner.)

Osborn Manufacturing Company, The. (See Bickel, Frederic J., assignor.)

Otto, Carl, Essen, Germany. Operation of regenerative ovens. 2,108,610; Feb. 15.

Owens, Jesse C., Los Angeles, Calif. Carpet stretcher. 2,108,506; Feb. 15.

Pacific Coast Engineering Company. (See Sjoberg, John G., assignor.)

Pacific Machinery Company. (See Jepson, Percy, assignor.)

Packers Tar Soap, Inc. (See Webber, Calvin R., assignor.)

Pagan, John W. (See Thompson, N. A. D., and Pagan.)

Pages, André P. (See Gardere H., and Pages.)

Painter, Roy S., Hannibal, Mo., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Sewing and trimming machine. 2,108,138; Feb. 15.

Painter, Roy S., Hannibal, Mo., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Trimming machine. 2,108,139; Feb. 15.

Pangborn Corporation. (See Rosenberger, William A., assignor.)

Pangborn Corporation. (See Rosenberger, W. A., and Keefer, assignors.)

Park, Ward & Company Limited. (See Thompson, N. A. D., and Pagan, assignors.)

Parker, Hugh B., Jacksonville, Fla. Lawn sprinkler. 2,108,207; Feb. 15.

Parker-Wolverine Company. (See Woolens, Roy E., assignor.)

Parks, Paul B., Oak Park, and W. M. Smith, assignors to Vapor Car Heating Company, Inc., Chicago, Ill. Correlative temperature control system. 2,108,507; Feb. 15.

Parrish, Cecil C., Donora, Pa., assignor to The American Steel and Wire Company of New Jersey. Motor powering system. 2,108,388; Feb. 15.

Patterson, William G., and R. G. Dixon, assignors to Siemens Brothers & Company Limited, London, England. Telephone system. 2,108,140; Feb. 15.

Paul, Irvin J., Gary, Ind., assignor to American Sheet and Tin Plate Company. Apparatus for coating. 2,108,389; Feb. 15.

Paul, Talbert W., Moline, Ill., assignor to John Deere Tractor Company, Waterloo, Iowa. Tractor wheel. 2,108,246; Feb. 15.

Paxton, Hale, Santa Ana, Calif., assignor, by mesne assignments, to Food Machinery Corporation. Lidding machine. 2,108,548; Feb. 15.

Perkins, Albert G., Warsaw, N. Y. Feed apparatus for pipe coating machines and the like. 2,108,319; Feb. 15.

Perley, George A. (See Doyle, E. D., and Perley.)

Perley, George A., assignor to Leeds & Northrup Company, Philadelphia, Pa. Apparatus for measuring ion-concentration. 2,108,293; Feb. 15.

Peron, Anthony, New York, N. Y. Manufacture of cooking utensils. 2,108,400; Feb. 15.

Perrault, Josephat. (See Guillon, R., and Perrault.)

Perry, William R., assignor to Reeves Pulley Company, Columbus, Ind. Speed control mechanism. 2,108,410; Feb. 15.

Petersime Incubator Company, The. (See Petersime, Ira M., assignor.)

Petersime, Ira M., assignor to The Petersime Incubator Company, Gettysburg, Ohio. Electrothermo bath. 2,108,268; Feb. 15.

Petroleum Rectifying Company of California. (See Cage, John M., assignor.)

Petroleum Rectifying Company of California. (See Fisher, Harmon F., assignor.)

Pfandler Co., The. (See Greene, Otto W., assignor.)

Pfeiffer, Frank E. (See Pfeiffer, William C. and F. E.)

Pfeiffer, William C., and F. E. Pfeiffer, assignors to The Egry Register Company, Dayton, Ohio. Autographic register. 2,108,564; Feb. 15.

Phillips, Arthur H., Hempstead, N. Y., and W. Allan, Jr., Ridgefield Park, N. J., assignors, by mesne assignments, to American Sales Book Company, Inc. Multiform stationery. 2,108,595; Feb. 15.

Phillips, Charles H., assignor to The Fairway Real Estate Company, Incorporated, Richmond, Va. Writing instrument. 2,108,442; Feb. 15.

Picard, Leo, San Antonio, Tex. Temporary binder. 2,108,508; Feb. 15.

Pieck, Carl E., Covington, Ky. Container closure. 2,108,692; Feb. 15.

Pirelli-General Cable Works Limited. (See Tobia, Vincent, assignor.)

Plaskon, Incorporated. (See Eisenmann, K., and Scheuermann, assignors.)

Plastic Binding Corporation. (See Nelson, C. B., and Spinner, assignors.)

Plow-Wake Corporation, The. (See Russell, Thomas K., assignor.)

Plymouth Cordage Company. (See Drew, E. L., and Reed, assignors.)

Polcha, Jacob W., Scranton, Pa. Textile machine attachment. 2,108,509; Feb. 15.

Pollard, Walter, Romford, England, assignor to A. B. Dick Company, Chicago, Ill. Separating and feeding sheets. 2,108,549; Feb. 15.

Pollock Paper & Box Company. (See Sullivan, Dan, assignor.)

Pontius, George W., Jr., South Bend, Ind., assignor to International Engineering Corporation, Chicago, Ill. Liquid fuel burner. 2,108,141; Feb. 15.

Postlethwaite, Archibald E. (See Carington, C. M., and Postlethwaite.)

Powell, Edwin L., et al. (See Tufts, Carl R., assignor.)

Power Patents Company. (See Brandt, David G., assignor.)

Power Patents Company. (See Morgan, John D., assignor.)

Price, Joseph W., Jr. (See Light, R. A., and Price.)

Price, Whitfield, Charleston, W. Va., assignor, by mesne assignments, to Westvaco Chlorine Products Corporation, New York, N. Y. Stabilising chlorinated hydrocarbons. 2,108,390; Feb. 15.

Prickett, Thomas B., Woodbury, N. J., assignor to Houdry Process Corporation, Dover, Del. Apparatus for treating fluids. 2,108,076; Feb. 15.

Pringle, William A., Niagara Falls, N. Y., assignor, by mesne assignments, to American Sales Book Company, Inc. Record assembly. 2,108,510; Feb. 15.

Procter & Gamble Company, The, et al. (See McAllister, Walter H., assignor.)

Prucha, Otto J., Denver, Colo. Universal easel table. 2,108,295; Feb. 15.

Prussing, Walter, New York, assignor to Victor Metal Products Corporation, Brooklyn, N. Y. Collapsible tube enameling machine. 2,108,443; Feb. 15.

Pudlich, Carl W., San Diego, Calif. Croquette molder. 2,108,233; Feb. 15.

Pugsley, William H., Minneapolis, Minn. Door check. 2,108,511; Feb. 15.

Quaedvlieg, Matthias. (See Rieche, A., Brodersen, Quaedvlieg, and Maier-Bode.)

Quarnstrom, Bert L., Grosse Pointe Farms, Mich. Tubing clip. 2,108,347; Feb. 15.

Radio Condenser Company. (See Noller, Friedrich C., assignor.)

Radio Corporation of America. (See Bedford, A. V., and Kell, assignors.)

Radio Corporation of America. (See Henry, Thomas J., assignor.)

Radio Corporation of America. (See Leverens, Humboldt W., assignor.)

Radio Corporation of America. (See Lindenblad, Nils E., assignor.)

Radio Corporation of America. (See Shardlow, Lawrence R., assignor.)

Radio Corporation of America. (See Tolson, William A., assignor.)

Radio Corporation of America. (See Unk, Jacob M., assignor.)

Radio Corporation of America. (See von Ardenne, Manfred, assignor.)

Radio Patents Corporation. (See Lora, Luis A., assignor.)

Ramsay, W. Beattie. (See McNally, Malcolm R., assignor.)

Ramsey, Allan, Evanston, assignor to Schweitzer & Conrad, Inc., Chicago, Ill. Cross arm mounting hanger. 2,108,348; Feb. 15.

Randa, General Conrad, et al., executors. (See Lederer, Anton.)

Randolph Cary H., St. Louis, Mo. Music chart. 2,108,208; Feb. 15.

Rasmussen, Frank H., assignor to Magill-Weinsheimer Company, Chicago, Ill. Advertising device and mailing tube. 2,108,349; Feb. 15.

Rau, Martin. (See Wolf, B., Kling, and Rau.)

Rawlins, Herbert L., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Circuit interrupter. 2,108,550; Feb. 15.

Raymond, Gwynne, assignor to Black, Sivalls & Bryson, Inc., Oklahoma City, Okla. Valve. 2,108,234; Feb. 15.

Reece Folding Machine Company. (See Gilbert, Alfred G., assignor.)

Reed, Stephen A. (See Drew, R. L., and Reed.)

Reeves Pulley Company. (See Perry, William R., assignor.)

Reichenbach, Howard F., assignor to The Chase Companies, Incorporated, Waterbury, Conn. Producing parts for lipsticks and the like. 2,108,512; Feb. 15.

Reilly, Alfred F., assignor to Evans Case Company, North Attleboro, Mass. Assembling portions of hollow articles. 2,108,209; Feb. 15.

Reilly, Alfred F., North Attleboro, Mass., assignor to Evans Case Company. Enameled plaque and making same. 2,108,444; Feb. 15.

Reilly, Alfred F., assignor to Evans Case Company, North Attleboro, Mass. Receptacle. 2,108,445; Feb. 15.

Rellstab, Ludwig. (See Fischer, F., and Rellstab.)

Remington Rand Inc. (See Lasker, William W., assignor.)

Remington Rand Inc. (See Mixer, Harold P., assignor.)

Rents, Frank B., Wells, Minn., assignor of one-half to W. E. Fantle, La Crosse, Wis. Portable self-contained cooling apparatus. 2,108,320; Feb. 15.

Rice, Paul E., Lincoln, Nebr. Air conditioner for motor vehicles. 2,108,391; Feb. 15.

Richardson, Harlow T., North Plainfield, N. J., assignor to the Ruberoid Co., New York, N. Y. Fastener for attaching corrugated covering sheets. 2,108,611; Feb. 15.

Richardson, Harlow T., North Plainfield, N. J., assignor to The Ruberoid Co., New York, N. Y. Clip for securing corrugated roof or siding sheets. 2,108,612; Feb. 15.

Rickenbacher, Robert J., Columbus, assignor to The Kilgore Mfg. Company, Westerville, Ohio. Toy pistol. 2,108,269; Feb. 15.

Riddle, Herbert S., Springfield, Mass. Golf ball and the like. 2,108,321; Feb. 15.

Rider, Ernest G., assignor to Stokes and Smith Company, Summerdale, Philadelphia, Pa. Adhesive applying mechanism. 2,108,613; Feb. 15.

Rieche, Alfred, Wolfen, Kreis Bitterfeld, and K. Brodersen, M. Quaedvlieg, and H. Maier-Bode, Dessau in Anhalt, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Assistant for the treatment of textiles. 2,108,725; Feb. 15.

Ritchie, Everett J. (See Harner, H. R., Schnitz, and Ritchie.)

Ritter, Heinrich, Frankfort-on-the-Main-Fechenheim, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Acid wool dyestuffs. 2,108,142; Feb. 15.

Ritz-Woller, Oliver C., Chicago, Ill. Reflector device. 2,108,446; Feb. 15.

Robinson, Van K., Bremerton, Wash. Pipe joint welding clamp. 2,108,077; Feb. 15.

Rockwell, Hugh M., Freeport, N. Y. Aircraft and engines therefor. 2,108,411; Feb. 15.

Rocuskie, Edward, New York, N. Y. Mechanical toy. 2,108,726; Feb. 15.

Rodell, C. Herman, et al. (See Cornwell, Leroy, assignor.)

Rodier, Waldo E. (See Choate, R. E., Rodier, and Leech.)

Rogers, Clarence T., assignor to E. T. Condon, New York, N. Y. Fluid-operated change-speed gear. 2,108,270; Feb. 15.

Rogers, Kenneth S., Niles Township, Berrien County, assignor to Niles Metalcraft Company, Niles, Mich. Mop. 2,108,727; Feb. 15.

Röhm & Haas Company. (See Schummer, A., and Trommsdorff, assignors.)

Rosch, Arthur, Brieselang, near Nauen, and H. Neumann, Berlin-Wilmersdorf, Germany, assignors to General Electric Company. Extraction turbine arrangement. 2,108,614; Feb. 15.

Rosenberg, Stig E., Brockton, Mass. Apparatus for trimming or pinking leather or the like. 2,108,178; Feb. 15.

Rosenberg, Stig E., Brockton, Mass. Perforating machine and operating the same. 2,108,447; Feb. 15.

Rosenberger, William A., assignor to Pangborn Corporation, Hagerstown, Md. Abrading apparatus. 2,108,210; Feb. 15.

Rosenberger, William A., and W. L. Keefer, Hagerstown, Md., assignors to Pangborn Corporation. Abrading machine. 2,108,211; Feb. 15.

Rosenstein Bros. (See Rosenstein, Charles, assignor.)

Rosenstein, Charles, assignor to Rosenstein Bros., Paterson, N. J. Making textile fabrics. 2,108,565; Feb. 15.

Ross, Archibald S. (See Monk, R. H., and Ross.)

Roth, Karl, Terre Haute, Ind. Metal roofing. 2,108,350; Feb. 15.

Roualet, Andre J. E., assignor to Chrysler Corporation, Detroit, Mich. Automatic choke. 2,108,296; Feb. 15.

Royal, Joseph N., assignor, by mesne assignments, to F. N. Burt Company Inc., Buffalo, N. Y. Powder box. 2,108,551; Feb. 15.

Ruberoid Co., The. (See Richardson, Harlow T., assignor.)

Ruckel, Erwin, Richmond Hill, assignor to Louis Hirsch Textile Machines, Inc., New York, N. Y. Flat knitted stocking welt. 2,108,615; Feb. 15.

Rudin, Karl V., Stockholm, Sweden. Calculating machine. 2,108,596; Feb. 15.

Ruffino, Peter, Brooklyn, N. Y. Brake. 2,108,235; Feb. 15.

Runkel, William H. (See Smith, A. E., and Runkel.)

Ruppricht, Siegfried, et al. (See Seyfarth, Alfred, assignor.)

Ruschig, Heinrich. (See Bockmühl, M., Ehrhart, and Ruschig.)

Russell, Thomas K., New York, N. Y., assignor to The Plow-Wake Corporation. Rotary attachment for tractor plows. 2,108,078; Feb. 15.

Rutherford, John T., Berkeley, assignor to Standard Oil Company of California, San Francisco, Calif. Purification of naphthenic acids. 2,108,448; Feb. 15.

Ryder, Frank P., deceased, by S. M. Ryder, executor, assignor to Chisholm-Ryder Company, Inc., Niagara Falls, N. Y. Bean snipping machine. 2,108,179; Feb. 15.

Ryder, Stephen M., executor. (See Ryder, Frank P., assignor.)

Salberg, Karl. (See Crichton, James V., assignor.)

Samuel, Howard H., Hackettstown, N. J. Channel-iron bending apparatus. 2,108,271; Feb. 15.

Sanders, Arthur F., assignor of one-half to John Fowler & Company (Leeds) Limited, Leeds, England. Cylinder liner for internal-combustion engines. 2,108,392; Feb. 15.

Sanders, Cary B., Washington, D. C. Staff-controlled baby walker. 2,108,566; Feb. 15.

Sapunar, Joseph M., San Mateo, Calif. Holder for string. 2,108,449; Feb. 15.

Sauer, George, Berwyn, assignor to Union Special Machine Company, Chicago, Ill. Rotary hook for sewing machines. 2,108,412; Feb. 15.

Saunders, Norman H., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill. Motor starting system. 2,108,143; Feb. 15.

Schaefer, Vincent J., Schenectady, N. Y., assignor to General Electric Company. Treatment of materials. 2,108,616; Feb. 15.

Schafer, Robert A., assignor to The National Automatic Tool Company, Richmond, Ind. Machine tool. 2,108,297; Feb. 15.

Schafer, Robert A., C. H. Muhl, E. E. Opel, and J. B. Beissman, assignors to The National Automatic Tool Company, Richmond, Ind. Multiple machine tool. 2,108,779; Feb. 15.

Schart, Frank W., Western Springs, assignor to McGraw Electric Company, Chicago, Ill. Electric cooking appliance. 2,108,298; Feb. 15.

Schauer, Lawrence L., Wyoming, and J. H. McKewen, assignors to The Cincinnati Bickford Tool Company, Cincinnati, Ohio. Submerged motor. 2,108,780; Feb. 15.

Schauer, Lawrence L., Wyoming, and J. H. McKewen, assignors to The Cincinnati Bickford Tool Company, Cincinnati, Ohio. Cylinder mounting for hydraulic motors. 2,108,781; Feb. 15.

Schellens, Eugene L., Ridgewood, assignor to The Shellwood-Johnson Company, Paterson, N. J. Metal-walled vacuum chamber or container. 2,108,212; Feb. 15.

Scherer, Otto. (See Müller, F., Scherer, and Schumacher.)

Scheuermann, Hans. (See Eisenmann, K., and Scheuermann.)

Schey, Oscar W., Hampton, Va., and G. T. Hemmeter, Washington, D. C. Fuel pump for internal combustion engines. 2,108,079; Feb. 15.

Scheyer, Heinz, Frankfort-on-the-Main, and E. Schwamberger, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Vat dyestuffs containing nitrogen and making same. 2,108,144; Feb. 15.

Scheyer, Heinz, Frankfort-on-the-Main, and E. Schwamberger, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Condensation products of the anthraquinone series. 2,108,412; Feb. 15.

Schilling, Willard G., Lima, assignor to The Wessel Bait Company, Cincinnati, Ohio. Artificial fishing bait. 2,108,728; Feb. 15.

Schlegel, Charles P., assignor to The Schlegel Manufacturing Company, Rochester, N. Y. Closure and weather stripping therefor. 2,108,450; Feb. 15.

Schlegel Manufacturing Company, The. (See Schlegel, Charles P., assignor.)

Scholler, Heinrich, Munich-Solln, and R. Eickemeyer, Munich, Germany. Method of and apparatus for the saccharification of substances containing cellulose. 2,108,567; Feb. 15.

Schoneberger, Arthur W., Cincinnati, Ohio. Fountain pen. 2,108,552; Feb. 15.

Schramm, Albert A. and A. A. Schramm, Chicago, Ill. Brake. 2,108,180; Feb. 15.

Schramm, Arthur A. (See Schramm, Albert A. and A. A.)

Schröter, Fritz, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Electron tube. 2,108,617; Feb. 15.

Schultz, Frederick H. (See Harner, H. R., Schultz, and Ritchie.)

Schultz, John A., Jr., deceased, and J. A. Zapf; M. T. Schultz, executrix of the estate of said Schultz, assignors to Schultz Machine Company, Toledo, Ohio. Casting metals. 2,108,060; Feb. 15.

Schultz Machine Company. (See Schultz, J. A., Jr., and Zapf, assignors.)

Schultz, Mary T., executrix. (See Schultz, John A., Jr., and Zapf.)

Schuls, Walter F., assignor to Truscon Steel Company, Youngstown, Ohio. Dowel means for roadway expansion joints. 2,108,393; Feb. 15.

Schumacher, Henry. (See Jones, G. L., Drake, and Schumacher.)

Schumacher, Willy. (See Müller, F., Scherer, and Schumacher.)

Schummer, August, Giessen, and E. Trommsdorff, Darmstadt, Germany, assignors to Röhm & Haas Company, Philadelphia, Pa. Preparing anatomical casts of human and animal organs. 2,108,181; Feb. 15.

Schurr, Charles H., assignor to The Lees-Bradner Company, Cleveland, Ohio. Measuring apparatus. 2,108,414; Feb. 15.

Schwamberger, Emil. (See Scheyer, H., and Schwamberger.)

Schweitzer & Conrad, Inc. (See Ramsey, Allan, assignor.)

Schweizerische Lokomotiv- & Maschinenfabrik. (See Weber, Fritz J., assignor.)

Scott, Henry, New York, N. Y. Finger exercising device. 2,108,236; Feb. 15.

Scott, Norman D., and J. F. Walker, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Hydrogenated products. 2,108,213; Feb. 15.

Sealkote Corporation. (See Lauter, Felix, assignor.)

Searle, Dudley F., Oakland, Calif. Power brake system. 2,108,182; Feb. 15.

Sears, Roebuck and Co. (See Snow, Adolph J., assignor.)

Selesneff, Leonid L., New York, N. Y. Envelope. 2,108,451; Feb. 15.

Seljesaeter, Kaare S., Bergen, Norway, assignor to Western Electric Company, Incorporated, New York, N. Y. Hard alloy. 2,108,618; Feb. 15.

Sewell, Jesse M., Villegreen, assignor of one-half to O. E. Sewell, Leadville, Colo. Trap drum, cymbal, and triangle beater. 2,108,693; Feb. 15.

Sewell, Ole E. (See Sewell, Jesse M., assignor.)

Seyfarth, Alfred, Altenburg, Germany, assignor to C. L. Gulick and S. Ruppricht, New York, N. Y. Combined valve and pressure gauge. 2,108,272; Feb. 15.

Shabaker, Hubert A., Media, Pa., and E. C. Lasslat, Woodbury, N. J., assignors to Houdry Process Corporation, Dover, Del. Temperature control of contact masses and apparatus therefor. 2,108,081; Feb. 15.

Shardlow, Lawrence R., Kearny, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Ceramic insulator and making the same. 2,108,513; Feb. 15.

Sharpe, John S., Haverford, Pa. Transmission mechanism. 2,108,082; Feb. 15.

Sharpe, John S., Haverford, Pa. Transmission mechanism. 2,108,083; Feb. 15.

Sharpe, Ruth E., et al., executrices. (See Colvin, William, Jr.)

Shell Development Company. (See Broese, Johannes J., assignor.)

Shell Development Company. (See van Wijk, Willem R., assignor.)

Shellwood-Johnson Company, The. (See Schellens, Eugene L., assignor.)

Shoe Form Co. (See De Witt, William J., assignor.)

Short, Bladen M., assignor, by mesne assignments, to Houdaille-Hershey Corporation, Detroit, Mich. Wheel assembly. 2,108,145; Feb. 15.

Shuger, Leroy W., assignor to Baltimore Paint and Color Works, Inc., Baltimore, Md. Polishing composition. 2,108,214; Feb. 15.

Shurley, Frederick, Salt Lake City, Utah, assignor to Ceramic Machinery Distributors Limited, Windsor, Ontario, Canada. Machine for printing directly on metal or glass and the like. 2,108,597; Feb. 15.

Sibley, Robert L., Nitro, W. Va., assignor, by mesne assignments, to Monsanto Chemical Company, St. Louis, Mo. Vulcanization of rubber. 2,108,742; Feb. 15.

Siemens Brothers & Company Limited. (See Edwards, Henry J., assignor.)

Siemens Brothers & Company Limited. (See Patterson, W. G., and Dixon, assignors.)

Siemens & Halske Aktiengesellschaft. (See Fischer, F., and Bellstab, assignors.)

Silver, Walter H., assignor to Deere & Company, Moline, Ill. Plow. 2,108,251; Feb. 15.

Simister, Louis W., Astoria, N. Y. Moccasin. 2,108,415; Feb. 15.

Simmons Hardware Company. (See Thompson, Thomas C., assignor.)

Simpson, Lancelot M., Thorner, near Leeds, assignor, by mesne assignments, to Automatic Telephone & Electric Company Limited, London, England. Ratio computer. 2,108,148; Feb. 15.

Sims, Lena D. (See Hardin, M. S., and Sims.)

Singer Manufacturing Company, The. (See Painter, Roy S., assignor.)

Sjoberg, John G., assignor to Pacific Coast Engineering Company, Inc., Oakland, Calif. Dredge pipe Y valve. 2,108,183; Feb. 15.

Small, Edward F., Newtonville, assignor to Compo Shoe Machinery Corporation, Boston, Mass. Machine for treating heel seats of shoes. 2,108,373; Feb. 15.

Smith, Abram E., and W. H. Runkel, assignors to Union Tank Car Company, Chicago, Ill. Car. 2,108,416; Feb. 15.

Smith, Alexander M., and L. H. Strayer, Kent, assignors to The Lamson & Sessions Company, Cleveland, Ohio. Article feeding device. 2,108,694; Feb. 15.

Smith, George W., assignor to Hall Laboratories, Inc., Pittsburgh, Pa. Separating inorganic salts from solutions. 2,108,783; Feb. 15.

Smith, Harold C., assignor of one-half to R. C. Johnson, West Orange, N. J. Metal cutting tool. 2,108,237; Feb. 15.

Smith, Henry B., Rochester, N. Y., assignor, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J. Cellulose mixed ester compositions containing higher fatty acid esters. 2,108,453; Feb. 15.

Smith, Jacob A., River Forest, Ill. Piercing die. 2,108,619; Feb. 15.

Smith, William L., Jr. (See Lawson, R. H., and Smith.)

Smith, William M. (See Parks, P. B., and Smith.)

Snow, Adolph J., Evanston, assignor to Sears, Roebuck and Co., Chicago, Ill. Radio receiver. 2,108,729; Feb. 15.

Société Anonyme des Ateliers de Sécheron. (See Meyfarth, Gottlieb, assignor.)

Société Anonyme d'Etudes des Brevets et Procédés Coanda-Société Coanda. (See Coanda, Henri, assignor.)

Socony-Vacuum Oil Company. (See Dunham, George S., assignor.)

Soelch, George F. (See Ladewig, A. E., and Soelch.)

Speas Mfg. Co. (See Speas, V. E., and Mnookin, assignors.)

Speas, Victor E. (See Mnookin, N. M., and Speas.)

Speas, Victor E., and N. M. Mnookin, Kansas City, Mo., assignors to Speas Mfg. Co. Making lead arsenate in finely divided form. 2,108,553; Feb. 15.

Speer, Walter, Ludwigshafen-on-the-Rhine, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of amines. 2,108,147; Feb. 15.

Spencer, Guy, Heyworth, Ill. Mail carrier. 2,108,453; Feb. 15.

Sperry Products, Inc. (See Drake, H. C., and De Lanty, assignors.)

Sperry Products, Inc. (See Jones, G. L., Drake, and Schumacher, assignors.)

Spies, Brothers, Inc. (See White, J. H., and Fitzner, assignors.)

Spinner, Isidore. (See Nelson, C. B., and Spinner.)

Standard Car Truck Company. (See Webb, Edwin W., assignor.)

Standard Oil Company. (See Atwell, Harold V., assignor.)

Standard Oil Company. (See Brunstrum, Lawrence C., assignor.)

Standard Oil Company. (See Brunstrum, L. C., and Adams, assignors.)

Standard Oil Company. (See Musselman, J. M., and McConnell, assignors.)

Standard Oil Company. (See Stockdale, Thomas E., assignor.)

Standard Oil Company. (See Sullivan, Frederick W., Jr., assignor.)

Standard Oil Company. (See Watts, George W., assignor.)

Standard Oil Company of California. (See Rutherford, John T., assignor.)

Stanley, Paul H., Glenside, assignor to Autogiro Company of America, Willow Grove, Pa. Air rotor particularly for aircraft. 2,108,417; Feb. 15.

Steak, Samuel. (See Bleuel, W. H., and Steak.)

Steen, Harford K., Newburgh, N. Y. Making handled shopping bags. 2,108,148; Feb. 15.

Steffen, Elmer G., Cleveland Heights, Ohio, assignor to Milwaukee Gas Specialty Company, Milwaukee, Wis. Gas cock. 2,108,299; Feb. 15.

Steinman, Louis E., Cincinnati, Ohio. Signaling device for vehicles. 2,108,454; Feb. 15.

Steinmüller, Lebrecht, Gummersbach, Germany. Furnace grate. 2,108,394; Feb. 15.

Stewart, Rollen F., et al. (See Cornwell, Leroy, assignor.)

Stewart-Warner Corporation. (See Le Fevre, Arden W., assignor.)

Stief, Karl, and R. K. Evans, Russelsheim-on-the-Main, Germany, assignors to General Motors Corporation, Detroit, Mich. Automobile body. 2,108,215; Feb. 15.

Stöber, Wolfgang, Berlin-Pankow, Germany, assignor to General Electric Company. Control of alternating-current commutator motors. 2,108,620; Feb. 15.

Stockdale, Thomas E., Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill. Storage tank. 2,108,784; Feb. 15.

Stoker, Robert. (See McElhaney, J. E., and Stoker.)

Stokes and Smith Company. (See Rider, Ernest G., assignor.)

Stone, Herbert G., Kingsport, Tenn., and C. J. Malm, Rochester, N. Y., assignors, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J. Rendering a textile material resistant to moisture. 2,108,455; Feb. 15.

Straits, John F., assignor to National Airoil Burner Company, Incorporated. Oil burning. 2,108,621; Feb. 15.

Strayer, Lawrence H. (See Smith, A. M., and Strayer.)

Strelow, Henry A., assignor to The Heil Co., Milwaukee, Wis. Closure. 2,108,238; Feb. 15.

Stresoff, Bogois, Minneapolis, Minn. Collapsible coat hanger. 2,108,622; Feb. 15.

Strickland, Royce M., assignor to The Geometric Tool Company, New Haven, Conn. Chaser holder for die heads. 2,108,149; Feb. 15.

Stringer, Louis C., Chicago, Ill., assignor to Electronics Supply Corp. Rare gas salvaging device. 2,108,216; Feb. 15.

Stringer, Louis C., Chicago, Ill., assignor to Electronics Supply Corp. Tube cutting device. 2,108,217; Feb. 15.

Strobridge, William, Syracuse, assignor to United States Hoffman Machinery Corporation, New York, N. Y. Drying apparatus. 2,108,084; Feb. 15.

Stroup, Philip T., New Kensington, assignor to Aluminum Company of America, Pittsburgh, Pa. Making aluminum base alloys. 2,108,085; Feb. 15.

Stulz, Harvey C., Washington, D. C. Smoking device. 2,108,218; Feb. 15.

Stupell, Leo K. (See Bangs, Ralph C., assignor.)

Sturtevant, B. F., Company. (See Bentley, Oliver D. H., assignor.)

Sturtevant, B. F., Company. (See Hagen, Harold F., assignor.)

Submarine Signal Company. (See Turner, Edwin E., Jr., assignor.)

Sullivan, Dan, Fort Worth, assignor to Pollock Paper & Box Company, Dallas, Tex. Box. 2,108,300; Feb. 15.

Sullivan, Frederick W., Jr., Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill. Hydrocarbon conversion process. 2,108,395; Feb. 15.

Sullivan Machinery Company. (See Gartin, Elmer G., assignor.)

Sullivan Machinery Company. (See Joy, Joseph F., assignor.)

Summers, Caleb E., Pontiac, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Motor mounting. 2,108,515; Feb. 15.

Summers, Caleb E., Pontiac, assignor to General Motors Corporation, Detroit, Mich. Valve mechanism. 2,108,514; Feb. 15.

Sund, Alfred D., Santa Rosa, Calif. Mop renovator. 2,108,352; Feb. 15.

Sundstrand Machine Tool Co. (See Svenson, Ernest J., assignor.)

Sutcliffe, Edgar R., Lowton, Newton-le-Willows, England. Adsorption apparatus. 2,108,730; Feb. 15.

Svenson, Ernest J., assignor to Sundstrand Machine Tool Co., Rockford, Ill. Feeding mechanism. 2,108,353; Feb. 15.

Swanson, Floyd A., assignor to Barnes Drill Co., Rockford, Ill. Blind end cylinder honing machine. 2,108,354; Feb. 15.

Swart, Leland K., Mountain Lakes, N. J., assignor to American Telephone and Telegraph Company. Gas tube circuits. 2,108,219; Feb. 15.

Swebilius, Carl G., New Haven, Conn. Sight for firearms. 2,108,150; Feb. 15.

Swift, Joseph H., Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey. Push-out apparatus for billets. 2,108,355; Feb. 15.

Sykes, Charles, Timperley, and W. Needham, Sale, England, assignors to General Electric Company. Electric heater. 2,108,623; Feb. 15.

Sykes, William E., Buffalo, N. Y. Cutter sharpening machine. 2,108,239; Feb. 15.

Symington-Gould Corporation, The. (See Barrows, Donald, S., assignor.)

Symington-Gould Corporation, The. (See Couch, Glenn F., assignor.)

Takata, Akira, Toyotsu-Mura, Kyoto-Gun, Fukuoka-Ken, Japan. Hemp dressing machine. 2,108,568; Feb. 15.

Talon, Inc. (See Wintritz, George, assignor.)

Tapley, William, Totton, Southampton, England. Pendulum control instrument. 2,108,696; Feb. 15.

Taube, Carl. (See Honold, E., and Taube.)

Tautz, Herbert E., assignor to Delta Manufacturing Company, Milwaukee, Wis. Extension control means for tool guides. 2,108,066; Feb. 15.

Tautz, Herbert E., and M. Heinrich, Milwaukee, Wis., assignors to said H. E. Tautz. Stock feeding apparatus for screw-machines. 2,108,274; Feb. 15.

Taylor, Elmer H., assignor to The Chase-Shawmut Company, Newburyport, Mass. Filling mechanism for electric fuses. 2,108,301; Feb. 15.

Teeter, Ralph J., Cadillac, Mich. Clamp. 2,108,151; Feb. 15.

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Schröter, Fritz, assignor.)

Texas Company, The. (See Kaufman, Gus, assignor.)

Textile Machine Works. (See Janssen, Henry, assignor.)

Thayer, Clarence H., Wallingford, Pa., assignor, by mesne assignments, to Houdry Process Corporation, Wilmington Del. Apparatus for contact treatment of materials. 2,108,067; Feb. 15.

Thearle, Ernest L., Schenectady, N. Y., assignor to General Electric Company. Dynamically balancing rotatable body. 2,108,624; Feb. 15.

Thomas, Norman M., Brooklyn, N. Y., assignor to Joe Lowe Corporation. Wrapped frozen confection. 2,108,418; Feb. 15.

Thompson, B. L., Chair Corporation. (See Brasell, J. J., and Brosman, assignors.)

Thompson, Harlan E., Alpine, Calif. Automatic grading scale. 2,108,731; Feb. 15.

Thompson, Norman A. D., and J. W. Pagen, assignors to Park, Ward & Company Limited, London, England. Automobile body. 2,108,456; Feb. 15.

Thompson, Ralph E., Brookline, and C. J. Emerson, Winchester, Mass., and B. G. Jansson, Kittery Point, Maine, assignors to Emerson Apparatus Company, Melrose, Mass. Safety razor. 2,108,758; Feb. 15.

Thompson, Thomas C., University City, assignor to Simons Hardware Company, St. Louis, Mo. Merchandise display unit. 2,108,516; Feb. 15.

Thomsen, William A. V., Plainfield, N. J., C. G. Gross, Mount Vernon, N. Y., and W. S. Luel, Linden, N. J., assignors, by mesne assignments, to American Machine & Metals, Inc., New York, N. Y. Spiral curl heater. 2,108,240; Feb. 15.

Thomson, Judson L., Mfg. Co. (See Townley, J. R., and Mauntel, assignors.)

Thomson, S. H., Manufacturing Company, The. (See Carnahan, Ralph W., assignor.)

Thorp, Joel R., assignor to The Fulton Company, West Allis, Wis. Weather guard. 2,108,322; Feb. 15.

Tilden, Bert O., Trenton, N. J. Water closet combination. 2,108,625; Feb. 15.

Tile-Tex Company, The. (See Johnston, Walter S., assignor.)

Tindula, Roy W. (See Egeberg, B., and Tindula.)

Titanium Steel Alloy Company. (See Crist, Donald M., assignor.)

Tobia, Vincent, Chandlers Ford, assignor to Pirelli-General Cable Works Limited, London, England. Apparatus for automatically feeding metal pigs. 2,108,457; Feb. 15.

Togami, Nobufumi, Saga-shi, Japan. Electric hair clipper. 2,108,569; Feb. 15.

Tolson, William A., Westmont, N. J., assignor to Radio Corporation of America. Electrical control apparatus. 2,108,152; Feb. 15.

Townley, James R., Chamois, and A. J. Mauntel, Washington, Mo., assignors to Judson L. Thomson Mfg. Co., Inc., Waltham, Mass. Work feeding device. 2,108,626; Feb. 15.

Tricolor, Inc. (See Jones, Charles F., assignor.)

Trilling, Jacques G. (See Jofeh, E. J., and Trilling.)

Trommsdorff, Ernst. (See Schummer, A., and Trommsdorff.)

Trotter, Odie B., Houma, La. Whipstock. 2,108,419; Feb. 15.

Troutner, Franklin M., San Jose, Calif. Mixing and molding device. 2,108,696; Feb. 15.

Truscon Steel Company. (See Schulz, Walter F., assignor.)

Tschunkur, Eduard. (See Herdieckerhoff, E., and Tschunkur.)

Tufts, Carl R., Detroit, Mich., assignor of one-third to E. L. Powell, Washington, D. C., and one-third to C. E. Motto, Detroit, Mich. Automatic intercept two-channel radio receiver. 2,108,088; Feb. 15.

Turman, Gardner W., assignor to The Gates Rubber Company, Denver, Colo. Antistatic gasoline dispensing nozzle. 2,108,759; Feb. 15.

Turner, Edwin E., Jr., West Roxbury, assignor to Submarine Signal Company, Boston, Mass. Recording device. 2,108,089; Feb. 15.

Turner, Edwin E., Jr., West Roxbury, assignor to Submarine Signal Company, Boston, Mass. Apparatus for distance and depth measurement. 2,108,090; Feb. 15.

Twomley, Herbert E., Riverside, assignor to Food Machinery Corporation, San Jose, Calif. Variable speed mechanism. 2,108,256; Feb. 15.

Twomley, Herbert E., Riverside, Calif., assignor, by mesne assignments, to Food Machinery Corporation. Drive for box lidding machines. 2,108,732; Feb. 15.

Tyler, Herbert B., Evanston, Ill. Automatic corn-popping machine. 2,108,627; Feb. 15.

Udstad, Sigvald P., Berwick, Pa., assignor to American Car and Foundry Company, New York, N. Y. Side bearing for articulated cars. 2,108,733; Feb. 15.

Unger, Paul O., Elmhurst, assignor to Wilson-Jones Company, Chicago, Ill. Loose leaf binder. 2,108,153; Feb. 15.

Union Special Machine Company. (See Edwards, Russell T., assignor.)

Union Special Machine Company. (See Sauer, George, assignor.)

Union Switch & Signal Company, The. (See Grondahl, Lars O., assignor.)

Union Switch & Signal Company, The. (See Livingston, John W., assignor.)

Union Tank Car Company. (See Smith, A. E., and Runkel, assignors.)

United American Bosch Corporation. (See Allen, William R., III, assignor.)

United Lens Corporation. (See Godley, Charles E., assignor.)

United Shoe Machinery Corporation. (See Besson, Earl A., assignor.)

United Shoe Machinery Corporation. (See Duplessis, René E., assignor.)

United Shoe Machinery Corporation. (See Jorgensen, Jacob C., assignor.)

United Shoe Machinery Corporation. (See Nutt, William H., assignor.)

U. S. Blind Stitch Machine Corporation. (See Buono, Mario, assignor.)

United States Hoffman Machinery Corporation. (See Strobridge, William, assignor.)

United States Metallic Packing Company, The. (See Light, E. A., and Price, assignors.)

Universal Engraving & Colorplate Company, The. (See Betts, Gilbert A., assignor.)

Universal Oil Products Company. (See Calderwood, Allan H., assignor.)

Universal Oil Products Company. (See Mekler, Lev A., assignor.)

Unk, Jacob M., Eindhoven, Netherlands, assignor to Radio Corporation of America. Receiver. 2,108,458; Feb. 15.

Van Antwerp, Arthur C., Chicago, assignor to Eastern Illinois Clay Company, St. Anne, Ill. Building tile. 2,108,396; Feb. 15.

Van Atta, Arthur A., Marion, Ohio. Door structure. 2,108,697; Feb. 15.

Van Loon, Carel J., assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Receiver tuning circuits. 2,108,154; Feb. 15.

Van Loon, Carel J., assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Automatic tuning control. 2,108,420; Feb. 15.

Van Sciver, Josiah H., Elkins Park, assignor to Bethlehem Foundry & Machine Company, Bethlehem, Pa. Oil burner. 2,108,734; Feb. 15.

Van Urk, Arend T. (See Vermeulen, R., and Van Urk.)

Van Wijk, Willem R., Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Fractionating hydrocarbon oils. 2,108,629; Feb. 15.

Vapor Car Heating Company. (See Parks, P. B., and Smith, assignors.)

Vaughan Motor Company. (See Weiss, Samuel, assignor.)

Vermeulen, Roelof, and A. T. Van Urk, assignors to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Electromagnetic device and making same. 2,108,275; Feb. 15.

Victor Metal Products Corporation. (See Prussing, Walter, assignor.)

Von Ardenne, Manfred, Berlin, Germany, assignor, by mesne assignments, to Radio Corporation of America. Cathode ray device. 2,108,091; Feb. 15.

Von Hofe, George W., Bound Brook, N. J., and B. D. Dana, Brooklyn, N. Y., assignors to New Jersey Machine Corporation, Hoboken, N. J. Elevating mechanism. 2,108,628; Feb. 15.

Von Thyssen-Bornemisza, Stephan B., The Hague, Netherlands. Gravitational instrument. 2,108,421; Feb. 15.

Voorhees, Laurence E., Washington, D. C. Weather and carpet strip. 2,108,459; Feb. 15.

Wade, Henry N. (See Martin, A. B., and Wade.)

Wadsworth, Frank L. O., Pittsburgh, Pa., assignor to Ball Brothers Company, Muncie, Ind. Dual orifice feeder. 2,108,517; Feb. 15.

Wadsworth, Frank L. O., Pittsburgh, Pa., assignor to Ball Brothers Company, Muncie, Ind. Method and apparatus for severing molten glass. 2,108,518; Feb. 15.

Wadsworth, Lewis L., Winchester, Mass. Joint compound. 2,108,276; Feb. 15.

Waechter, Charles B. (See Martin, A. B., and Waechter.)

Wagner, Frederick P., assignor of one-half to A. J. Brauer, St. Louis, Mo. Shoe. 2,108,631; Feb. 15.

Walker, Avery W., assignor, by mesne assignments, to The Carborundum Company, Niagara Falls, N. Y. Grinding device. 2,108,650; Feb. 15.

Walker, Joseph F. (See Scott, N. D., and Walker.)

Walker, Joseph W., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Reacting hydrocarbons with alkali metals. 2,108,277; Feb. 15.

Wallace, Leta, Kansas City, Mo. Footstool. 2,108,241; Feb. 15.

Wallace, Leta, Kansas City, Mo. Adjustable cushion. 2,108,242; Feb. 15.

Wallenius, Arthur W., Glendale, Calif. Fountain comb. 2,108,184; Feb. 15.

Walp, Charles F., Berwick, Pa., assignor to American Car and Foundry Company, New York, N. Y., Shaker chute construction. 2,108,698; Feb. 15.

Walther, Fritz, Plauen i. V., Germany. Boring bar. 2,108,699; Feb. 15.

Washburn, Edward W., deceased, Washington, D. C.; L. R. Alden, executor of said E. W. Washburn, assignor to American Security and Trust Company, trustee, Washington, D. C. Kinds of water and producing them. 2,108,570; Feb. 15.

Watts, George W., Whiting, Ind., assignor to Standard Oil Company, Chicago, Ill. Heating hydrocarbon fluids. 2,108,397; Feb. 15.

Webb, Edwin W., assignor to Standard Car Truck Company, Chicago, Ill. Side bearing for car trucks. 2,108,220; Feb. 15.

Webber, Calvin R., Brooklyn, N. Y., assignor to Packers Tar Soap, Inc. Package. 2,108,278; Feb. 15.

Weber, Fritz J., assignor to firm Schweizerische Lomotiv- & Maschinenfabrik, Winterthur, Switzerland. Device for printing hand-composed odd type. 2,108,857; Feb. 15.

Weezel Bait Company, The. (See Schilling, Willard G., assignor.)

Weigt, Paul, Berlin-Reinickendorf, assignor to Allgemeine Elektricitäts Gesellschaft, Berlin, Germany. Stem assembly for electron discharge devices. 2,108,519; Feb. 15.

Weiher, George F., assignor to General Motors Corporation, Dayton, Ohio. Seal for refrigerating apparatus. 2,108,760; Feb. 15.

Weiss, Samuel, assignor to Vaughan Motor Company, Inc., Portland, Oreg. Logging trailer. 2,108,323; Feb. 15.

Wendt, Bruno, Dessau, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y. Photographic developer. 2,108,243; Feb. 15.

Western Electric Company. (See Cherry, G. L., and Dupre, assignors.)

Western Electric Company. (See Franz, Erwin E., assignor.)

Western Electric Company. (See McDonough, John, assignor.)

Western Electric Company. (See Seljesaeter, Kaare S., assignor.)

Westinghouse Electric & Manufacturing Company. (See Baker, S. C., and Grover, assignors.)

Westinghouse Electric & Manufacturing Company. (See Kesselring, Fritz, assignor.)

Westinghouse Electric & Manufacturing Company. (See Mabry, Forrest S., assignor.)

Westinghouse Electric & Manufacturing Company. (See Rawlins, Herbert L., assignor.)

Weston, Frederick H., Bridgeport, Conn., assignor to General Electric Company. Double ended socket. 2,108,632; Feb. 15.

Westvaco Chlorine Products Corporation. (See Price, Whitfield, assignor.

Wheat, Thomas E. M., Highland Park, assignor to Chrysler Corporation, Detroit, Mich. Motor vehicle frame. 2,108,279; Feb. 15.

Wheatley, John E., Norwood, Ohio. Bar soap dispenser. 2,108,092; Feb. 15.

White, Frank P., Minneapolis, Minn. Weatherproof masonry joint. 2,108,358; Feb. 15.

White, Joseph H., and A. Fitzner, assignors to Spies Brothers, Inc., Chicago, Ill. Finger ring or the like. 2,108,324; Feb. 15.

Wicaco Machine Corporation, The. (See Laird, Joseph P., assignor.)

Wiedeman, Stanhope, Lexington, Ky. Piano music-reproduction attachment. 2,108,571; Feb. 15.

Wiegand, Kurt, Berlin-Hohen-Neuendorf, and F. Göritz, Berlin, Germany, assignors to General Electric Company. Fitting for tubular incandescent lamps. 2,108,633; Feb. 15.

Wildhaber, Ernest, Irondequoit, assignor to Gleason Works, Rochester, N. Y. Cutting gears. 2,108,244; Feb. 15.

Wilkinson, George H., Windsor, Ontario, Canada. Wearplate for rubber overshoes and the like. 2,108,572; Feb. 15.

Willard, George T., Chicago, Ill. Tie plate and rail cushion retainer. 2,108,460; Feb. 15.

Williams, Diana P., Boston, Mass. Hose supporter. 2,108,461; Feb. 15.

Wilms, Gustav O., assignor to Allen-Bradley Company, Milwaukee, Wis. Mechanical interlock. 2,108,634; Feb. 15.

Wilson-Jones Company. (See Unger, Paul O., assignor.)

Winchester Repeating Arms Company. (See Lewis, George S., assignor.)

Winford, Orion P., assignor to Brown & Bigelow, St. Paul, Minn. Calendar. 2,108,221; Feb. 15.

Winthrop Chemical Company. (See Bockmühl, M., Ehrhart, and Ruschig, assignors.)

Wintrits, George, Springdale, Conn., assignor to Talon, Inc. Slider for fasteners. 2,108,185; Feb. 15.

Wirth, Emil H., assignor to the firma Emil Wirth Wirkmaschinenfabrik, Hartmannsdorf, near Chemnits, Germany. Fabric take-up device for flat warp knitting machines. 2,108,737; Feb. 15.

Wirth, Emil, Kirkmaschinenfabrik. (See Wirth, Emil H., assignor.)

Wirth, Emil, Kirkmaschinenfabrik. (See Wirth, Herbert, assignor.)

Wirth, Herbert, assignor to the firma Emil Wirth Wirkmaschinenfabrik, Hartmannsdorf, near Chemnits, Germany. Manufacturing Milanese warp fabric. 2,108,735; Feb. 15.

Wirth, Herbert, assignor to the firma Emil Wirth Wirkmaschinenfabrik, Hartmannsdorf, near Chemnits, Germany. Presser arrangement for warp knitting machines. 2,108,736; Feb. 15.

Wiswall, William J., Portland, Oreg., assignor, by mesne assignments, to American Sales Book Company, Inc. Continuous manifolding strip supplies. 2,108,462; Feb. 15.

Wolf, Bruno, and W. Kling, Chemnits, and M. Rau, Rabenstein N/Chemnits, assignors to Bohme Fettchemie-Gesellschaft, Chemnits, Germany. Textile and method of finishing. 2,108,520; Feb. 15.

Wolff, Robert. (See Eibert, Fritz, assignor.)

Wood, Alan, Steel Company. (See Lawrence, Victor H., assignor.)

Woodman, Charles K., Beverly, Mass. Synchronising internal combustion engine. 2,108,422; Feb. 15.

Woolens, Roy E., assignor to Parker-Wolverine Company, Detroit, Mich. Wood graining apparatus. 2,108,155; Feb. 15.

Worts, Charles G., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of ketones. 2,108,156; Feb. 15.

Wray, Charles S., Atlantic Highlands, N. J. Seat suspension for vehicles. 2,108,222; Feb. 15.

Wright, Charles F., Akron, Ohio, assignor to The Diamond Match Company, New York, N. Y. Machine for packing book matches. 2,108,280; Feb. 15.

Yorke, James R. (See Hale, F. C., and Yorke.)

Yost, Samuel H. (See Levin, N. D., and Yost.)

Young, Fred M., Racine, Wis. Air cooling device for compressors. 2,108,223; Feb. 15.

Youngstown Steel Door Company, The. (See Ditchfield, Frank, assignor.)

Zapf, John A. (See Schultz, J. A., Jr., and Zapf.)

Zeiss Ikon Aktiengesellschaft. (See Küppenbender, Heins, assignor.)

Ziegler, Charles E., Pittsburgh, Pa. Funis clamp. 2,108,325; Feb. 15.

Zimmerman, Charles H., Hampton, Va. Aircraft. 2,108,093; Feb. 15.

Zomnir, Joseph E., Springfield, Mass., assignor to The Diamond Match Company, Wilmington, Del. Assembling book matches. 2,108,157; Feb. 15.

Zuschlag, Theodor, West Englewood, N. J., assignor to H. T. F. Lundberg, Montreal, Quebec, Canada. Apparatus for electrical prospecting. 2,108,463; Feb. 15.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 15TH DAY OF FEBRUARY, 1938

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Scaffold. C. K. Lamb. 20,653; Feb. 15.
Toy, Block. C. J. Hecht. 20,652; Feb. 15.
Tractor, Gasoline. W. Schroeder. 20,654; Feb. 15.
Wheel construction, Vehicle. C. W. Sinclair. 20,655; Feb. 15.

LIST OF PLANT INVENTIONS

Tree, Peach. M. Harpole. 271; Feb. 15.

LIST OF DESIGN INVENTIONS

Badge or similar article. R. W. Hill. 108,442; Feb. 15.
Bank, Savings. J. B. Aronson. 108,487; Feb. 15.
Block or similar article, Building. F. E. Poortinga. 108,455; Feb. 15.
Boot or similar article, Animal. F. P. Ford, A. C. Cope, and A. G. H. Gough. 108,491; Feb. 15.
Bottle. J. C. Fuller. 108,493; Feb. 15.
Bottle. W. R. Kohl. 108,449; Feb. 15.
Bottle. P. G. Lloyd. 108,451; Feb. 15.
Bowl or similar article, Mixing. A. E. Hull. 108,445; Feb. 15.
Brooch pin or similar article. G. Verrecchio. 108,461–71; Feb. 15.
Buckle. J. B. Freysinger. 108,476; Feb. 15.
Burner, Oil. F. E. Herr. 108,577–8; Feb. 15.
Cape. M. Teller. 108,520–1; Feb. 15.
Case for watches, Display. A. S. Braude. 108,420; Feb. 15.
Case, Instrument. H. B. Brown. 108,422; Feb. 15.
Case or the like, Service station display. R. O. Munson. 108,454; Feb. 15.
Casing for a calorimetric device. C. B. Stevens. 108,460; Feb. 15.
Casing for unit heater or similar article. C. R. T. Hess. 108,512; Feb. 15.
Casing, Steering column switch. W. Trautner. 108,502; Feb. 15.
Chair. F. L. Wright. 108,473; Feb. 15.
Clock. F. S. Carpenter. 108,488; Feb. 15.
Clock. G. H. Stephens. 108,482; Feb. 15.
Coat. J. A. Sliverman. 108,516; Feb. 15.
Corset and brassière, Combination. M. Lagussi. 108,514; Feb. 15.
Counter unit or similar article, Lunch. W. W. Stevens. 108,501; Feb. 15.
Cover, Metal box. M. H. Connor. 108,427–30; Feb. 15.
Defrosting device, Windshield. W. A. Ramsay. 108,456; Feb. 15.
Dress. J. Abbate. 108,504–5; Feb. 15.
Dress. T. Coleman. 108,507; Feb. 15.
Dress. J. M. Spar. 108,518–19; Feb. 15.
Dress. M. White. 108,529–30; Feb. 15.
Dress ensemble. H. Berry. 108,506; Feb. 15.
Dress ensemble. P. Fracchia. 108,492; Feb. 15.
Dress ensemble. M. E. Smith. 108,517; Feb. 15.
Dress, Ensemble. J. Tuman. 108,522; Feb. 15.
Dress ensemble. J. Tuman. 108,523; Feb. 15.
Dress ensemble. M. Wagner. 108,528; Feb. 15.
Dress or similar article. L. B. Starr. 108,459; Feb. 15.
Easel, Display. C. J. Rohde. 108,457; Feb. 15.
Fabric, Fringed textile. S. H. Gertner. 108,432; Feb. 15.
Fabric or similar article, Printed textile. M. R. Hamre. 108,427–9; Feb. 15.
Fabric or similar article, Textile. G. Virgile. 108,527; Feb. 15.
Fabric, Textile. J. Granowitz. 108,509–10; Feb. 15.
Fabric, Textile. W. Harm. 108,511; Feb. 15.
Fabric, Textile. J. H. Huelat. 108,513; Feb. 15.
Fabric, Textile. M. Turpan. 108,524–6; Feb. 15.
Fabric, Textile. N. Wiabbow. 108,531; Feb. 15.
Face plate for a see-gauge for liquid-dispensing apparatus. E. H. Bradley. 108,419; Feb. 15.
Flashlight. O. T. Wood. 108,472; Feb. 15.
Fork blade. C. R. T. Hess. 108,495; Feb. 15.
Game board. L. W. Clary. 108,424; Feb. 15.
Glove. S. Shapiro. 108,515; Feb. 15.
Grill. G. A. Hamilton. 108,439; Feb. 15.
Grille, Radiator. J. Oswald. 108,498; Feb. 15.
Handbag. H. Feimann. 108,490; Feb. 15.
Insulator, Electric. R. R. Dalton. 108,489; Feb. 15.
Jug. J. L. Ambrose. 108,417; Feb. 15.
Knob, Steering wheel. R. L. Morton. 108,453; Feb. 15.
Lighter, Cigar. J. Sinko. 108,458; Feb. 15.
Marker, Traffic. J. M. Huff. 108,444; Feb. 15.
Mausoleum. S. O. Colbe. 108,425–6; Feb. 15.
Mirror, lipstick, and powder holder, Combination. S. E. Wallace. 108,485; Feb. 15.
Net, Embroidered. A. Grossman and B. Axelrod. 108,434–5; Feb. 15.
Net, Embroidered. A. Grossman and B. Axelrod. 108,494; Feb. 15.
Panel coupling and supporting clip for use in counter display. P. H. Mayer. 108,497; Feb. 15.
Phonograph. D. C. Rockola. 108,499; Feb. 15.
Scarf, Embroidered lace. J. Goldstein. 108,433; Feb. 15.
Scooter. R. V. Ward. 108,503; Feb. 15.
Shaving device, Electric. J. A. Hanley. 108,440–1; Feb. 15.
Shoe. A. Hurseler. 108,479; Feb. 15.
Shoe. A. A. Kotzin. 108,496; Feb. 15.
Shoe. R. A. Parker. 108,481; Feb. 15.
Shoe. M. Shanser. 108,500; Feb. 15.
Shoe. P. Weinstein. 108,486; Feb. 15.
Shoe or similar article. N. Elkin. 108,474; Feb. 15.
Shoe or similar article. D. E. Levin. 108,480; Feb. 15.
Sign, Interchangeable price. L. Manchan. 108,452; Feb. 15.
Spoon or other article of flatware. M. A. Downs. 108,431; Feb. 15.
Stand, Display. S. Bloomfield. 108,418; Feb. 15.
Stand, Display. H. S. Johnston, Jr. 108,446; Feb. 15.
Sterilising unit or similar article. H. M. Finn. 108,475; Feb. 15.
Sterilising unit or similar article. H. M. Finn and M. Laven. 108,508; Feb. 15.
Stove, Laundry. J. A. Underwood. 108,483–4; Feb. 15.
Table leg. W. Hoffmann. 108,443; Feb. 15.
Tray or similar article. R. A. Kelly. 108,448; Feb. 15.
Tray or similar article, Relish. R. A. Kelly. 108,447; Feb. 15.
Trough, Feeding. N. Gwilt. 108,436; Feb. 15.
Tumbler, Beverage. A. Brill. 108,421; Feb. 15.
Valve or similar control structure, Gas. E. V. Lavallee. 108,450; Feb. 15.
Waffle iron and tray or similar article, Combined. D. Chapman. 108,423; Feb. 15.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 15TH DAY OF FEBRUARY, 1938

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrading apparatus. W. A. Rosenberger. 2,108,210; Feb. 15.
Abrading machine. W. A. Rosenberger and W. L. Keefer. 2,108,211; Feb. 15.
Abrasive articles, Manufacture of flexible. R. C. Bryant. 2,108,645; Feb. 15.
Abrasive blast system, Low pressure. V. E. Minich. 2,108,545; Feb. 15.
Acids, Purification of naphthenic. J. T. Rutherford. 2,108,448; Feb. 15.
Advertising device and mailing tube. F. H. Rasmussen. 2,108,249; Feb. 15.
Adhesive applying mechanism. H. G. Rider. 2,108,613; Feb. 15.
Adsorption apparatus. H. R. Sutcliffe. 2,108,730; Feb. 15.
Aeroplane. W. Colvin, Jr. 2,108,041; Feb. 15.
Air conditioner for motor vehicles. P. E. Rice. 2,108,291; Feb. 15.
Air conditioning device. R. L. Drew and S. A. Reed. 2,108,253; Feb. 15.
Air cooling device for compressors. F. M. Young. 2,108,323; Feb. 15.
Air humidifier for a combustion engine. W. G. Hardt. 2,108,556; Feb. 15.
Air or gas, Conditioning. F. R. Bichowsky. 2,108,248; Feb. 15.
Air with liquids, Apparatus to laden the. W. F. Jones. 2,108,587; Feb. 15.
Aircraft. C. H. Zimmerman. 2,108,093; Feb. 15.
Aircraft and engine therefor. H. M. Rockwell. 2,108,411; Feb. 15.
Aircraft, Launching and beaching of. W. G. Glover. 2,108,747; Feb. 15.
Airplane wing, Gyratory. T. Ash, Jr. 2,108,245; Feb. 15.
Alcohols from the corresponding ketones, Producing high molecular. F. J. McCall. 2,108,123; Feb. 15.
Alignment of dirigible vehicle wheels, Determining the. J. W. Morse. 2,108,288; Feb. 15.
Alloy: *See*—
Hard alloy. Nontarnish alloy.
Alloy. B. Egeberg and R. W. Tindula. 2,108,048; Feb. 15.
Alloys. B. Egeberg and R. W. Tindula. 2,108,050; Feb. 15.
Alloys, Making aluminum base. P. T. Stroup. 2,107,065; Feb. 15.
Alloys, Making steel and iron. D. M. Crist. 2,108,043; Feb. 15.
Alloys, Nontarnish. B. Egeberg and R. W. Tindula. 2,108,049; Feb. 15.
Alternating current motor, Synchronizing. J. A. Balmford. 2,108,038; Feb. 15.
Aluminum reflecting surfaces, Production of. R. B. Mason. 2,108,603; Feb. 15.
Amines, Production of. W. Spear. 2,108,147; Feb. 15.
Ammonium chloride crystals, Production of. C. H. Heimbach. 2,108,377; Feb. 15.
Amusement device. C. F. Cockson. 2,108,430; Feb. 15.
Armor, Body protective. N. D. Holland. 2,108,236; Feb. 15.
Article feeding device. A. M. Smith and L. H. Strayer. 2,108,694; Feb. 15.
Ash receiver. C. Hardy. 2,108,426; Feb. 15.
Assembly rack. G. L. Hall. 2,108,122; Feb. 15.
Assistant for the treatment of textiles. A. Rieche, K. Brodersen, M. Quaedvlieg, and H. Maier-Bode. 2,108,725; Feb. 15.
Atomizer for solid injection engines, Cooled. J. J. Broese. 2,108,647; Feb. 15.
Attachment for tractor plows, Rotary. T. K. Russell. 2,108,078; Feb. 15.
Automobile body. K. Stief and R. K. Evans. 2,108,215; Feb. 15.
Automobile body. N. A. D. Thompton and J. W. Pagan. 2,108,456; Feb. 15.
Axle housing and wheel alignment gauge. M. W. Brady. 2,108,743; Feb. 15.
Azo-dyestuffs of the anthraquinone series. E. Honold and C. Taube. 2,108,126; Feb. 15.
Baby walker, Staff-controlled. G. B. Sanders. 2,108,566; Feb. 15.
Bags, Making handled shopping. H. K. Steen. 2,108,148; Feb. 15.
Bait, Artificial fishing. W. G. Schilling. 2,108,728; Feb. 15.
Ball and the like, Golf. H. S. Riddle. 2,108,231; Feb. 15.
Bar: *See*—
Boring bar.
Bar soap dispenser. J. R. Wheatley. 2,108,062; Feb. 15.
Bath, Electrothermo. I. M. Petersime. 2,108,268; Feb. 15.
Bean snipping machine. F. P. Ryder. 2,108,179; Feb. 15.
Bearing for articulated cars, Side. S. F. Udstad. 2,108,733; Feb. 15.
Bearing for car trucks, Side. E. W. Webb. 2,108,220; Feb. 15.
Bearings, new composition of matter and producing the same. M. P. Kirk and I. H. Grancell. 2,108,339; Feb. 15.
Beater, Trap drum, cymbal and triangle. J. M. Sewell. 2,108,693; Feb. 15.
Beeswax, Bleaching. D. J. Campbell and L. R. P. London. 2,108,282; Feb. 15.
Bellows, Camera. W. L. Lawson. 2,108,717; Feb. 15.
Belt conveyer, Tubular. H. S. Johns. 2,108,488; Feb. 15.
Binder, Loose leaf. P. O. Unger. 2,108,153; Feb. 15.
Binder, Temporary. L. Picard. 2,108,508; Feb. 15.
Binding machine. C. B. Nelson and I. Spinner. 2,108,136; Feb. 15.
Binding, Rbl. E. Gerber. 2,108,167; Feb. 15.
Bituminous emulsions, Preparing. J. Ogden. 2,108,505; Feb. 15.
Blade for safety razors. B. O'Neill. 2,108,267; Feb. 15.
Blending machine. F. J. Muench. 2,108,592; Feb. 15.
Blind and cylinder honing machine. F. A. Swanson. 2,108,354; Feb. 15.
Block: *See*—
Cleaning and polishing block.
Blower drive and support. O. D. H. Bentley. 2,108,703; Feb. 15.
Board: *See*—
Cribbage board. Writing board.
Pulp board.
Boat. C. S. Atwell. 2,108,574; Feb. 15.
Body for cars. R. S. Humburch. 2,108,557; Feb. 15.
Bolt loss prevention means. F. M. Love. 2,108,316; Feb. 15.
Bolts or the like, Apparatus for making. L. A. Frayer. 2,108,709; Feb. 15.
Book. Coupon. B. Harris. 2,108,749; Feb. 15.
Book, Multiple payment coupon. E. A. Kelly. 2,108,314; Feb. 15.
Bookmark. M. N. Lansing. 2,108,494; Feb. 15.
Boring bar. F. Walther. 2,108,099; Feb. 15.
Bottle washing machine. A. R. Ladewig and G. F. Soalch. 2,108,227; Feb. 15.
Bottles, Hooding, filling, and capping milk. W. G. Foard, Jr. 2,108,114; Feb. 15.
Box. D. Sullivan. 2,108,300; Feb. 15.
Box making apparatus. C. G. Hayes. 2,108,384; Feb. 15.
Bracelet and making the same. F. J. Bellavance. 2,108,247; Feb. 15.
Bracket. H. Davies. 2,108,196; Feb. 15.
Brake: *See*—
Coaster brake.
Brake. P. Ruffino. 2,108,235; Feb. 15.
Brake. A. A. and A. A. Schramm. 2,108,180; Feb. 15.
Brake mechanism. A. Backstrom. 2,108,467; Feb. 15.
Brake mechanism, Wheel. J. V. Crichton. 2,108,401; Feb. 15.
Brake system, Power. D. F. Searle. 2,108,182; Feb. 15.
Braking system, Hydraulic. L. Cornwell. 2,108,164; Feb. 15.
Breathing apparatus. J. B. Dym. 2,108,256; Feb. 15.
Brush. F. J. Bickel. 2,108,742; Feb. 15.
Building construction and structural element therefor. G. F. Kotrbaty. 2,108,065; Feb. 15.
Bulldozer. G. B. Allin and T. P. Flynn. 2,108,466; Feb. 15.
Burner: *See*—
Liquid fuel burner. Oil burner.
Burner system, Preignition oil. J. P. Kriechbaum. 2,108,770; Feb. 15.
Button. J. A. and W. A. Devendor. 2,108,255; Feb. 15.
Cabinet: *See*—
Sewing cabinet.
Calendar. G. P. Winford. 2,108,221; Feb. 15.
Calculating machine. K. V. Rudin. 2,108,596; Feb. 15.
Calculating machine differential mechanism. T. O. R. Dahlberg. 2,108,476; Feb. 15.
Camera, Cinematographic. C. F. Jones. 2,108,201; Feb. 15.
Cap and dust cap puller, Hub. V. L. Du Sang. 2,108,197; Feb. 15.
Car. A. E. Smith and W. H. Runkel. 2,108,416; Feb. 15.
Car construction, House. F. Ditchfield. 2,108,309; Feb. 15.
Car truck construction. J. C. Larsen. 2,108,378; Feb. 15.

Carburetor. F. O. and T. M. Ball. 2,108,281; Feb. 15.
Carrier: *See*—
Mail carrier.
Casein product and process of making. H. V. Dunham. 2,108,582; Feb. 15.
Casts of human and animal organs, Preparing anatomical. A. Schaumer and E. Trosmsdorff. 2,108,181; Feb. 15.
Cathode more particularly for a gas-filled discharge tube, Oxide. H. Lems. 2,108,580; Feb. 15.
Cathode ray device. M. von Ardenne. 2,108,091; Feb. 15.
Cathode ray tube. M. Bowman-Manifold. 2,108,523; Feb. 15.
Cellulose products and method of making. S. I. Hoddesen and R. M. Mathijsen. 2,108,125; Feb. 15.
Cementing machine. I. L. Keith. 2,108,674; Feb. 15.
Centralizer for drill steels. G. H. Fuehrer and G. W. Bainbiner. 2,108,035; Feb. 15.
Chamber or container, Metal-walled vacuum. E. L. Scheliens. 2,108,212; Feb. 15.
Change-speed gear, Fluid-operated. C. T. Rogers. 2,108,270; Feb. 15.
Channel-iron bending apparatus. H. H. Samuel. 2,108,271; Feb. 15.
Chart, Music. C. H. Randolph. 2,108,208; Feb. 15.
Choke, Automatic. A. J. E. Roualet. 2,108,290; Feb. 15.
Churn, Butter. F. G. Clark. 2,108,162; Feb. 15.
Chute, Coin. G. L. Cherry and V. H. Dupre. 2,108,651; Feb. 15.
Cigarette lighting and dispensing device. F. C. Copeland. 2,108,370; Feb. 15.
Cigar-wrapping machine. C. Bustamante. 2,108,429; Feb. 15.
Circuit breaker. F. Kesselring. 2,108,560; Feb. 15.
Circuit interrupter. H. L. Rawlins. 2,108,550; Feb. 15.
Circuits: *See*—
Gas tube circuits. Receiving tuning circuits.
Circuits, Gas tube. L. K. Swart. 2,108,219; Feb. 15.
Circuits, Receiver tuning. C. J. van Loon. 2,108,154; Feb. 15.
Circular loom. W. A. Dickie and F. C. Hale. 2,108,108; Feb. 15.
Circular loom. F. C. Hale. 2,108,120; Feb. 15.
Circular loom. F. C. Hale and J. R. Yorke. 2,108,121; Feb. 15.
Clamp: *See*—
Fusis clamp. Printing press clamp.
Hair clamp. Welding clamp.
Clamp. R. J. Teetor. 2,108,151; Feb. 15.
Cleaning and polishing block. J. J. Kennedy. 2,108,405; Feb. 15.
Clip: *See*—
Tubing clip.
Clip. W. W. Brock. 2,108,473; Feb. 15.
Clip for securing corrugated roof or siding sheets. H. T. Richardson. 2,108,612; Feb. 15.
Closure. H. A Strelow 2,108,238; Feb 15
Closure and weather stripping therefor. C. P. Schlegel. 2,108,450; Feb. 15.
Closure, Bag. B. C. Betner. 2,108,741; Feb. 15.
Clutch mechanism for electromagnetic sound recording and reproducing devices. S. Begun. 2,108,426; Feb. 15.
Clutch sleeve spring tool. G. W. Cooper. 2,108,252; Feb. 15.
Coal and fluid separating medium therefor, Cleaning. N. D. Levin and S. H. Yost. 2,108,290; Feb. 15.
Coal, Method of and apparatus for cleaning. N. D. Levin. 2,108,495; Feb. 15.
Coat hanger, Collapsible. B. Stresoff. 2,108,622; Feb. 15.
Coating compositions. E. Helft. 2,108,768; Feb. 15.
Coaster brake. H. L. Mueller. 2,108,501; Feb. 15.
Coating Apparatus for. I. J. Paul 2,108,389; Feb 15
Cock, Cylinder. R. A. Light and J. W. Price, Jr. 2,108,228; Feb. 15.
Cock, Gas. E. G. Steffen. 2,108,299; Feb. 15.
Coffee maker. J. W. Lynch. 2,108,634; Feb. 15.
Collapsible tube. H. Mock. 2,108,689; Feb. 15.
Color-forming compounds, Photographic. L. D. Mannes and L. Godowsky, Jr. 2,108,602; Feb. 15.
Coloring material. A. Murray. 2,108,503; Feb. 15.
Comb, Fountain. A. W. Wallenius. 2,108,184; Feb. 15.
Compass. J. H. L'A. Lund. 2,108,263; Feb. 15.
Composition with a basis of rubber, to be used hot or cold, Viscous, waterproof and insulating. N. Nardelli. 2,108,387; Feb. 15.
Computer, Ratio. L. M. Simpson. 2,108,146; Feb. 15.
Condensation products of the anthraquinone series. H. Scheyer and E. Schwamberger. 2,108,413; Feb. 15.
Condensation products of methylol compounds of urea, Producing. K. Eisenmann and H. Scheuermann. 2,108,113; Feb. 15.
Condenser unit. E. E. Allyne and W. J. Gusik. 2,108,360; Feb. 15.
Conduit, Air. W. J. Barman. 2,108,159; Feb. 15.
Confection, Wrapped frozen. N. M. Thomas. 2,108,418; Feb. 15.
Connector: *See*—
Electrical cable connecter. Electrical connecter.
Container. W. S. Dirker. 2,108,045; Feb. 15.
Container. H. N. Falk. 2,108,583; Feb. 15.
Container. J. M. Hothersall. 2,108,083; Feb. 15.
Container. C. Van H. King, Jr. 2,108,600; Feb. 15.
Container closure. C. E. Pieck. 2,108,692; Feb. 15.
Container closures, Making. J. M. Hothersall. 2,108,064; Feb. 15.
Container conveyer and distributor. C. N. Bergmann. 2,108,522; Feb. 15.
Container or envelope, Folded. J. C. McAllister. 2,108,243; Feb. 15.
Control device. D. E. Mitchell. 2,108,408; Feb. 15.
Control means for pool guides, Extension. H. E. Tautz. 2,108,099; Feb. 15.
Control system for motor vehicles. E. S. Hall. 2,108,666; Feb. 15.
Cooking appliance, Electric. F. W. Scharf. 2,108,298; Feb. 15.
Cooling apparatus, Portable self-contained. F. B. Rents. 2,108,320; Feb. 15.
Cooling device for pistons. F. Frelin. 2,108,532; Feb. 15.
Cord extension device, Electrical. J. W. Johnson. 2,108,170; Feb. 15.
Corn-popping machine, Automatic. H. B. Tyler. 2,108,627; Feb. 15.
Corrosion resistant structure, Laminated. H. Miedel. 2,108,722; Feb. 15.
Coupler, Trailer. C. Da Valle. 2,108,307; Feb. 15.
Coupling: *See*—
Pipe coupling. Pipe or rod coupling.
Cover feeding and folding mechanism for booking machines. J. R. Nolan. 2,108,318; Feb. 15.
Cribbage board, Folding. A. H. Cudmore. 2,108,527; Feb. 15.
Croquette molder. C. W. Pudlich. 2,108,233; Feb. 15.
Cross arm mounting hanger. A. Ramsey. 2,108,248; Feb. 15.
Crushing mill. W. A. Beaudry. 2,108,160; Feb. 15.
Cuff folding device. J. Lyska. 2,108,542; Feb. 15.
Curler, Permanent wave. S. A. Hamilton. 2,108,374; Feb. 15.
Cushion, Adjustable. L. Wallace. 2,108,242; Feb. 15.
Cushioning device. R. C. Hobson. 2,108,124; Feb. 15.
Cutter: *See*—
Pipe cutter.
Cutter sharpening machine. W. E. Sykes. 2,108,230; Feb. 15.
Cylinder head for internal combustion engines, for the prevaporisation of light fuel and for cracking of heavy oils. M. V. Crillon. 2,108,706; Feb. 15.
Cylinder liner for internal-combustion engines. A. F. Sanders. 2,108,302; Feb. 15.
Degerminator. H. C. Dempsey. 2,108,655; Feb. 15.
Dehydration system. J. M. Cage. 2,108,250; Feb. 15.
Dehydrator, Electric. H. F. Fisher. 2,108,258; Feb. 15.
Dental instrument. W. B. Jackman. 2,108,558; Feb. 15.
Desacetyl-pseudo bufotalin haloid and preparing same. H. Kondo, S. Ikawa, and Y. Kobayashi. 2,108,340; Feb. 15.
Detector mechanism for crown cap assembling machines. R. Barling. 2,108,287; Feb. 15.
Detector system. F. G. Kelly, Jr. 2,108,202; Feb. 15.
Detergents for use in laundering processes. W. H. McAllister. 2,108,756; Feb. 15.
Device for indicating direction of movement. J. A. Brooks. 2,108,099; Feb. 15.
Device of support for parachutes. S. O. C. Kuhlemann. 2,108,716; Feb. 15.
Dial for indicating instruments. A. W. Le Fevre. 2,108,342; Feb. 15.
Die: *See*—
Piercing die.
Die shoe. J. C. Dense. 2,108,253; Feb. 15.
Dipper and mold, Ice cream. A. M. Healy. 2,108,585; Feb. 15.
Dipper tooth. G. W. Mork. 2,108,075; Feb. 15.
Dispenser: *See*—
Bar soap dispenser.
Display unit, Merchandise. T. C. Thompson. 2,108,516; Feb. 15.
Distance and depth measurement, Apparatus for. H. H. Turner, Jr. 2,108,060; Feb. 15.
Distance measuring means and method. F. Fischer and L. Rellstab. 2,108,766; Feb. 15.
Distillation, Method and apparatus for. G. S. Dunham. 2,108,650; Feb. 15.
Door: *See*—
Refrigerator car door.
Door check. W. H. Pugsley. 2,108,511; Feb. 15.
Door latch. G. R. Adams. 2,108,326; Feb. 15.
Door structure. A. A. Van Atta. 2,108,697; Feb. 15.
Dowel means for roadway expansion joints. W. F. Schulz. 2,108,593; Feb. 15.
Dredge pipe Y valve. J. G. Sjoberg. 2,108,183; Feb. 15.
Drill hole cleaning device. E. L. Crow. 2,108,195; Feb. 15.
Drilling machine and device. M. H. Lewis. 2,108,131; Feb. 15.
Drive for box lidding machines. H. E. Twomley. 2,108,732; Feb. 15.
Drive for vehicles, Individual axle. G. Meyfarth. 2,108,382; Feb. 15.
Drive, Speed reducing. F. C. Noller. 2,108,606; Feb. 15.
Drying apparatus. W. Strobridge. 2,108,064; Feb. 15.
Duplicator, Hand. L. Foss. 2,108,115; Feb. 15.
Dyeing machine. N. A. Batcheldor. 2,108,190; Feb. 15.
Dyes and the preparation thereof, 1'-cyanine. F. M. Hamer and N. I. Fisher. 2,108,484; Feb. 15.
Dyestuffs, Acid wool. H. Ritter. 2,108,142; Feb. 15.
Dyestuffs containing nitrogen and making same, Vat. H. Scheyer and E. Schwamberger. 2,108,144; Feb. 15.

Dynamometer, Fleet testing. V. B. Edwards. 2,108,423; Feb. 15.
Earth moving device. R. B. Cheate, W. B. Roller, and W. I. Leech. 2,108,204; Feb. 15.
Egg production of hens, Checking and recording. O. E. Kellum. 2,108,287; Feb. 15.
Electric current sare gas lamp, Direct. A. Lederer. 2,108,537; Feb. 15.
Electric heater. C. Sykes and W. Needham. 2,108,623; Feb. 15.
Electrical cable connecter. E. B. Newquidell. 2,108,504; Feb. 15.
Electrical connecter. H. K. Foster. 2,108,708; Feb. 15.
Electrical connecting device. H. C. Acuff. 2,108,031; Feb. 15.
Electrical control apparatus. W. A. Tolson. 2,108,152; Feb. 15.
Electrical outlet. W. J. Duffy. 2,108,581; Feb. 15.
Electrical prospecting, Apparatus for. T. Zuschlag. 2,108,463; Feb. 15.
Electrode and making the same, Storage battery positive. H. R. Harner, F. H. Schultz, and E. J. Ritchie. 2,108,746; Feb. 15.
Electrode assembly. T. J. Henry. 2,108,583; Feb. 15.
Electrode for windmill generators. H. Folkers. 2,108,663; Feb. 15.
Electromagnetic device and making same. R. Vermeulen and A. T. Van Urk. 2,108,275; Feb. 15.
Electron discharge apparatus. C. A. Bieling. 2,108,640; Feb. 15.
Electron discharge device. N. E. Lindenblad. 2,108,539; Feb. 15.

Pencil, Mechanical. P. S. Hauton. 2,108,668; Feb. 15.
Pendulum control instrument. W. Tapley. 2,108,695; Feb. 15.
Perforating machine and operating the same. S. E. Rosenberg. 2,108,447; Feb. 15.
Perforator, Casing. C. B. Margrave. 2,108,172; Feb. 15.
Photographic apparatus. T. M. Aiken. 2,108,246; Feb. 15.
Photographic developer. B. Wendt. 2,108,243; Feb. 15.
Photographic device. H. Küppenbender. 2,108,751; Feb. 15.
Photographic effects and films therefor, Producing. C. B. Dreyer. 2,108,284; Feb. 15.
Piano music-reproduction attachment. S. Wiedeman. 2,108,571; Feb. 15.
Pictorial control and material for use therein. P. H. Jamieson. 2,108,261; Feb. 15.
Piercing die. J. A. Smith. 2,108,619; Feb. 15.
Pipe and pipe filter. F. M. Ashley. 2,108,423; Feb. 15.
Pipe coupling. P. Hirsch and R. Kaiser. 2,108,714; Feb. 15.
Pipe cutter. J. T. Ellis. 2,108,230; Feb. 15.
Pipe or rod coupling. S. B. Martin and C. B. Waechter. 2,108,265; Feb. 15.
Pipes, Apparatus for cleaning metal. E. W. Johnson and R. A. Eastwood. 2,108,489; Feb. 15.
Piston. H. D. Church. 2,108,194; Feb. 15.
Plant products, Curing and preserving. M. R. Coe. 2,108,305; Feb. 15.
Plaque and making same, Enameled. A. F. Reilly. 2,108,444; Feb. 15.
Plastics, Preparation of high molecular sulphur containing. W. Becker and L. Orthner. 2,108,468; Feb. 15.
Plow. W. H. Silver. 2,108,351; Feb. 15.
Plow, Snow. W. A. McNulty. 2,108,134; Feb. 15.
Plug: *See*—
Fuse plug. Sparking plug.
Spark plug.
Polishing composition. L. W. Shuger. 2,108,214; Feb. 15.
Portable seat. W. E. Flanders. 2,108,531; Feb. 15.
Portions of hollow articles, Assembling. A. F. Reilly. 2,108,209; Feb. 15.
Poultry feeder. I. C. Busch. 2,108,102; Feb. 15.
Powder box. J. N. Royal. 2,108,551; Feb. 15.
Power transmission mechanism. R. Hutchings. 2,108,586; Feb. 15.
Preserving and disinfecting media. G. Domagk. 2,108,765; Feb. 15.
Presser arrangement for warp knitting machines. H. Wirth. 2,108,736; Feb. 15.
Pressure control fitting. T. A. Larry. 2,108,068; Feb. 15.
Printing plate unit. G. A. Betts. 2,108,039; Feb. 15.
Printing press clamp. S. Q. Kline. 2,108,460; Feb. 15.
Projecting machine, News. A. D. Eitzen. 2,108,056; Feb. 15.
Projecting machine, Stock quotation. A. D. Eitzen. 2,108,054; Feb. 15.
Propane treating in cracking systems. H. V. Atwell. 2,108,036; Feb. 15.
Propelling device. H. Coanda. 2,108,652; Feb. 15.
Puller: *See*—
Cap and dust cap puller.
Pulp board, Fire resistant. H. L. Becher. 2,108,761; Feb. 15.
Pump: *See*—
Fluid pump.
Pump for internal combustion engines, Fuel. O. W. Schey and G. T. Hemmeter. 2,108,079; Feb. 15.
Punch, Converting and translating. W. W. Lasker. 2,108,681; Feb. 15.
Push-out apparatus for billets. J. H. Swift. 2,108,355; Feb. 15.
Putty retainer. S. L. Borgen. 2,108,192; Feb. 15.
Rack: *See*—
Assembly rack.
Rack for storing linens. M. S. Hardin and L. D. Sims. 2,108,333; Feb. 15.
Radio receiver. A. J. Snow. 2,108,729; Feb. 15.
Radio receiver, Automatic intercept two-channel. C. R. Tufts. 2,108,083; Feb. 15.
Radio static eliminator. R. C. Ellis and S. W. Archer. 2,108,530; Feb. 15.
Radio system of for landing for airplanes. F. S. Mabry. 2,108,562; Feb. 15.
Radio tuning control. A. E. Hedger. 2,108,335; Feb. 15.
Radio tuning device. N. Nelson. 2,108,607; Feb. 15.
Rail contactor, Track. J. W. Livingston. 2,108,497; Feb. 15.
Rail flaw detector mechanism. G. L. Jones, H. C. Drake, and H. Schumacher. 2,108,559; Feb. 15.
Rayon, Apparatus for manufacturing luster-free. Y. Asakawa. 2,108,361; Feb. 15.
Razor, Safety. R. E. Thompson, C. J. Emerson, and B. G. Jansson. 2,108,756; Feb. 15.
Receiver. J. M. Unk. 2,108,458; Feb. 15.
Receptacle. A. F. Reilly. 2,108,445; Feb. 15.
Receptacle and closure. W. Lockhart. 2,108,407; Feb. 15.
Record assembly. W. A. Pringle. 2,108,510; Feb. 15.
Record, Continuous interleaved. J. B. Motsinger. 2,108,500; Feb. 15.
Recorder. C. H. Au. 2,108,037; Feb. 15.
Recording device. E. E. Turner, Jr. 2,108,089; Feb. 15.
Reflector, Aluminum. R. B. Mason. 2,108,604; Feb. 15.
Reflector device. O. C. Ritz-Weller. 2,108,446; Feb. 15.
Refractories, Ferruginous siliceous. J. M. McKinley and W. K. Carter. 2,108,543; Feb. 15.
Refrigeration apparatus. S. C. Baker and E. E. Grover. 2,108,478; Feb. 15.
Refrigerator car door. S. B. Haseltine. 2,108,224; Feb. 15.
Refrigerator handling and moving device. F. De Gheselle. 2,108,477; Feb. 15.
Register, Cash. H. Barker-Bland. 2,108,400; Feb. 15.
Regulator: *See*—
Heat regulator.
Relay. W. D. Macgeorge. 2,108,775; Feb. 15.
Resin, Synthetic. F. Lauter. 2,108,341; Feb. 15.
Register, Autographic. W. C. and F. R. Pfeiffer. 2,108,564; Feb. 15.
Retriever for electric cords. E. E. Ehrlich. 2,108,111; Feb. 15.
Ring or the like, Finger. J. H. White and A. Fitzner. 2,108,324; Feb. 15.
Rock drilling mechanism. E. G. Gartin. 2,108,058; Feb. 15.
Rod: *See*—
Take-up rod.
Roll grinding machine. H. J. Griffing. 2,108,310; Feb. 15.
Roofing, Metal. K. Roth. 2,108,350; Feb. 15.
Rope making machine. W. L. Butcher. 2,108,704; Feb. 15.
Rotary engine. M. Murakami. 2,108,385; Feb. 15.
Rotary switch. H. P. Mixer. 2,108,777; Feb. 15.
Rotatable body, Dynamically balancing. E. L. Thearle. 2,108,624; Feb. 15.

Rotor particularly for aircraft, Air. P. H. Stanley. 2,108,417; Feb. 15.
Rubber and rubber-like articles, Manufacture of. W. Kay. 2,108,673; Feb. 15.
Rubber vulcanization. R. L. Sibley. 2,108,782; Feb. 15.
Saccharification of substances, Method of and apparatus for the. H. Scholler and R. Eickemeyer. 2,108,567; Feb. 15.
Safety device for automobiles. R. Beddow. 2,108,303; Feb. 15.
Safety device for machine parts subject to high pressures. A. M. Erichsen. 2,108,746; Feb. 15.
Salts from solutions, Separating inorganic. G. W. Smith. 2,108,783; Feb. 15.
Sanding machine. T. F. Brackett. 2,108,193; Feb. 15.
Scale, Automatic grading. H. E. Thompson. 2,108,731; Feb. 15.
Scale, Bathroom. E. E. Benedict. 2,108,575; Feb. 15.
Scraper, Tractor wheel. M. R. McNally. 2,108,291; Feb. 15.
Screens, Making fluorescent. H. W. Leverens. 2,108,683; Feb. 15.
Screw driver and socket wrench attachment. T. Miller. 2,108,244; Feb. 15.
Seal for refrigerating apparatus. G. F. Welber. 2,108,760; Feb. 15.
Seal, Mechanical. W. E. Amberg. 2,108,701; Feb. 15.
Sealing means for tanks, Peripheral. B. Lentschewsky. 2,108,390; Feb. 15.
Seam opener and turner for pants. R. L. Fulps. 2,108,372; Feb. 15.
Seams, Apparatus for testing plate. H. L. Newby. 2,108,178; Feb. 15.
Seat: *See*—
Portable seat.
Seat suspension for vehicles. C. S. Wray. 2,108,222; Feb. 15.
Selector mechanism, Rapid. W. E. Kieruiff. 2,108,561; Feb. 15.
Self-closing valve. P. Herrmann. 2,108,534; Feb. 15.
Sewing and trimming machine. R. S. Painter. 2,108,138; Feb. 15.
Sewing cabinet. P. H. Harmon. 2,108,711; Feb. 15.
Sewing machine. M. Buono. 2,108,100; Feb. 15.
Sewing machines, Device for threading the needle in. A. Brun and J. A. Honne. 2,108,474; Feb. 15.
Sewing machines, Fabric manipulating mechanism for. R. T. Edwards. 2,108,403; Feb. 15.
Sewing machines, Rotary hook for. G. Sauer. 2,108,412; Feb. 15.
Sewing, Method of. M. Buono. 2,108,101; Feb. 15.
Shaft controlling apparatus, Rotating. V. Liguori. 2,108,315; Feb. 15.
Shaker chute construction. C. F. Walp. 2,108,698; Feb. 15.
Shaving device, Dry. H. Landsiedel. 2,108,493; Feb. 15.
Sheet feeding machinery, Automatic. H. T. Backhouse. 2,108,702; Feb. 15.
Sheet, Loose-leaf. F. Brodsky. 2,108,363; Feb. 15.
Sheets from corrosion-resistant ferrous-base alloys combining improved strength properties with corrosion resistance, Producing. V. H. Lawrence. 2,108,588; Feb. 15.
Sheets, Separating and feeding. W. Pollard. 2,108,549; Feb. 15.
Shield for ignition plugs. C. B. Aiken and T. Durfee. 2,108,635; Feb. 15.
Shock absorber and antiroll device, Combined. R. B. Burton. 2,108,524; Feb. 15.
Shoe. F. P. Wagner. 2,108,631; Feb. 15.
Shoe, Spiked. L. H. L'Hollier. 2,108,439; Feb. 15.
Shoes, Apparatus for lasting. J. S. Kamborian. 2,108,670; Feb. 15.
Shuttle bar actuating mechanism. N. S. Harter. 2,108,375; Feb. 15.
Sight for firearms. C. G. Swebilius. 2,108,150; Feb. 15.
Signal device. W. R. Armstrong, Sr. 2,108,187; Feb. 15.
Signaling apparatus, Railway. L. O. Grondahl. 2,108,483; Feb. 15.
Signaling device for vehicles. L. E. Steinman. 2,108,454; Feb. 15.
Signaling system. H. Garders and A. P. Pages. 2,108,117; Feb. 15.
Signaling system, Two-way. L. G. Abraham. 2,108,186; Feb. 15.
Sizer and stretcher, Adjustable garment. M. Dickey. 2,108,308; Feb. 15.
Skate, Ice. F. W. Kinney. 2,108,128; Feb. 15.
Skeleton, Anatomical. M. M. Metz. 2,108,229; Feb. 15.
Slicing machine. F. H. Cooper. 2,108,306; Feb. 15.
Slider for fasteners. G. Wintrits. 2,108,185; Feb. 15.
Slip and drive mechanism, Combination safety. W. W. Criley. 2,108,165; Feb. 15.
Slot closer. L. C. Luke. 2,108,720; Feb. 15.
Smoking device. H. C. Stults. 2,108,218; Feb. 15.
Socket, Double ended. F. H. Weston. 2,108,632; Feb. 15.
Spark plug. E. Guilion and J. Perrault. 2,108,332; Feb. 15.
Sparking plug. C. M. Carington and A. E. Postlethwaite. 2,108,525; Feb. 15.
Spectacle frame. M. H. Harris. 2,108,667; Feb. 15.
Spectacles. E. F. McMahon. 2,108,074; Feb. 15.
Speed change device. J. D. Christian. 2,108,367–8; Feb. 15.
Speed control mechanism. W. R. Perry. 2,108,410; Feb. 15.
Speed mechanism, Variable. H. E. Twomley. 2,108,356; Feb. 15.
Spiral curl heater. W. A. V. Thomsen, C. G. Gross, and W. S. Luci. 2,108,240; Feb. 15.
Sprinkler, Lawn. H. B. Parker. 2,108,207; Feb. 15.
Starting mechanism. A. G. McNicoll. 2,108,776; Feb. 15.
Station indicator. J. W. Lee. 2,108,718; Feb. 15.
Stationery, Multiform. A. H. Phillips and W. Allan, Jr. 2,108,595; Feb. 15.
Steam generator. C. E. Lucke. 2,108,072; Feb. 15.
Steam generator. J. J. Nelis. 2,108,135; Feb. 15.
Steam heating. R. W. Leutwiler and W. Eichholz. 2,108,601; Feb. 15.
Steel, Producing. M. J. Devaney. 2,108,254; Feb. 15.
Stem assembly for electron discharge devices. P. Weigt. 2,108,519; Feb. 15.
Stocking and making the same. E. C. Lochhead. 2,108,540; Feb. 15.
Stocking welt, Flat knitted. E. Ruckel. 2,108,615; Feb. 15.
Stool, Foot. L. Wallace. 2,108,241; Feb. 15.
Stop, Tubing. C. F. Moseley. 2,108,605; Feb. 15.
Storage tank. T. E. Stockdale. 2,108,784; Feb. 15.
Strainer, pump, and pressure regulating unit. W. Czarnecki. 2,108,432; Feb. 15.
Sterine derivatives and preparing them. M. Bockmühl, G. Ehrhart, and H. Ruschig. 2,108,646; Feb. 15.
Stock feeding apparatus for screw-machines. H. E. Tautz and M. Heinrich. 2,108,274; Feb. 15.
Stretcher, Carpet. J. C. Owens. 2,108,506; Feb. 15.
Strip for harvesters, Endless conveying. S. V. Hansson. 2,108,486; Feb. 15.
Strip rolling, Hot. R. L. Leffler. 2,108,379; Feb. 15.
Strip, Weather and carpet. L. E. Voorhees. 2,108,459; Feb. 15.
Structural member, Welded. G. G. Greulich. 2,108,373; Feb. 15.
Structural unit. J. McDonough. 2,108,685; Feb. 15.
Structure and assembly of converters. R. C. Lasslat. 2,108,069; Feb. 15.
Structural elements to concrete supporting bodies, Anchoring. R. J. De Wees. 2,108,107; Feb. 15.
Submerged motor. L. L. Schauer and J. H. McKewen. 2,108,780; Feb. 15.
Sulphonation products, Purification of. W. H. McAllister. 2,108,755; Feb. 15.
Supporter, Hose. D. P. Williams. 2,108,461; Feb. 15.
Surge arrester. A. O. Austin. 2,108,465; Feb. 15.
Switch: *See*—
Rotary switch.
Switch for use in telephone or like systems, Automatic. H. J. Edwards. 2,108,110; Feb. 15.
Switch, particularly for use in control of railway vehicles, Electric. A. Brown, R. H. Dunn, and D. G. McKie. 2,108,428; Feb. 15.
Tab for web rolls, Binder. A. J. Horton. 2,108,200; Feb. 15.
Table: *See*—
Universal easel table.
Tack, Thumb. A. G. O. Anderson. 2,108,739; Feb. 15.
Take-up rod. R. H. Lawson. 2,108,773; Feb. 15.
Tally keeper. H. C. Catherwood. 2,108,103; Feb. 15.
Tank: *See*—
Storage tank.
Tape dispensing machine, Gummed. L. Link. 2,108,496; Feb. 15.
Tape projector, Broad. A. D. Eitzen. 2,108,053; Feb. 15.
Telephone system. W. G. Patterson and R. G. Dixon. 2,108,140; Feb. 15.
Telephone system, Automatic. A. Heyduck. 2,108,437; Feb. 15.
Television device. L. A. Lora. 2,108,132; Feb. 15.
Television transmitter. A. V. Bedford and R. D. Kell. 2,108,007; Feb. 15.
Temperature control of contact masses and apparatus therefor. H. A. Shabaker and R. C. Lasslat. 2,108,081; Feb. 15.
Temperature control system, Correlative. P. B. Parks and W. M. Smith. 2,108,507; Feb. 15.
Tenaculum. S. Mecker. 2,108,206; Feb. 15.
Testing apparatus. C. P. Bartgis. 2,108,637; Feb. 15.
Textile and method of finishing. B. Wolf, W. Kling, and M. Rau. 2,108,520; Feb. 15.
Textile frame. W. T. Bakely. 2,108,424; Feb. 15.
Textile machine attachment. J. V. Polcha. 2,108,509; Feb. 15.
Thermostat. E. Juchheim. 2,108,338; Feb. 15.
Threshold. P. R. Oftedal and D. G. Kingsley. 2,108,137; Feb. 15.
Thrust collar. A. Kurti. 2,108,679; Feb. 15.
Tie-back, Window curtain. W. Egger. 2,108,198; Feb. 15.
Tie plate and rail cushion retainer. G. T. Willard. 2,108,460; Feb. 15.
Tile, Building. A. C. Van Antwerp. 2,108,396; Feb. 15.

Tile, Composition. W. S. Johnston. 2,108,226; Feb. 15.
TiO_2, Preparing. R. H. Monk and A. S. Ross. 2,108,723; Feb. 15.
Tire casing and rim. B. D. Carter. 2,108,329; Feb. 15.
Tire. H. T. Kraft. 2,108,406; Feb. 15.
Toaster, Electric. J. D. Morgan. 2,108,778; Feb. 15.
Tobacco mass, Method and device for distributing. E. R. Dahlström and K. E. Granstedt. 2,108,369; Feb. 15.
Tool: *See*—

Vehicle signal light. W. H. Hill. 2,108,123; Feb. 15.
Waist band adjustment for garments. H. E. Miller. 2,108,175; Feb. 15.
Water and producing them, Kinds of. E. W. Washburn. 2,108,570; Feb. 15.
Water closet combination. B. O. Tilden. 2,108,625; Feb. 15.
Water heater. J. F. Mustee. 2,108,691; Feb. 15.
Water meter. R. S. Bassett. 2,108,425; Feb. 15.
Water ring for concrete pipe forms. J. C. French. 2,108,371; Feb. 15.
Waving pad, Permanent. C. J. Lewit. 2,108,590; Feb. 15.
Wearplate for rubber overshoes and the like. G. H. Wilkinson. 2,108,572; Feb. 15.
Web guiding device. W. C. Nash. 2,108,232; Feb. 15.
Welding clamp, Pipe joint. V. K. Robinson. 2,108,077; Feb. 15.
Wells, Apparatus for shooting. O. C. Mays. 2,108,174; Feb. 15.
Welting and article having such welting incorporated therein, Ornamental. R. W. Hale. 2,108,061; Feb. 15.
Wheel: *See*—
Tractor wheel.
Wheel assembly. B. M. Short. 2,108,145; Feb. 15.
Whipstock. O. B. Trotter. 2,108,419; Feb. 15.
Whisky, Aging. T. T. Miller. 2,108,317; Feb. 15.
Whizzer separator and mill. R. F. O'Mara. 2,108,609; Feb. 15.
Windshield and hatch, Aircraft. I. M. Laddon. 2,108,289; Feb. 15.
Wire screening applicator. R. Benedict. 2,108,638; Feb. 15.
Wood graining apparatus. R. E. Woolens. 2,108,155; Feb. 15.
Work feeding device. J. R. Townley and A. J. Mauntel. 2,108,626; Feb. 15.
Worm and worm gear assembly. F. D. Jones. 2,108,262; Feb. 15.
Writing board. E. J. Gerety. 2,108,481; Feb. 15.
Writing instrument. C. H. Phillips. 2,108,442; Feb. 15.
X-ray tube. J. Alfter. 2,108,573; Feb. 15.
Yarn dyeing dressing, and loom beaming. N. A. Batchelder. 2,108,188; Feb. 15.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 15, 1938

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

Simmon, Rudolph, Long Island City, N. Y. Photographic enlarger. 106,554; Feb. 22.
Slote & Klein, Inc. (See Slote, Reuben, assignor.)
Slote, Reuben, Mount Vernon, N. Y., assignor to Slote & Klein, Inc. Belt buckle. 106,555; Feb. 22.
Splaine, Edward M., assignor to American Optical Company, Southbridge, Mass. Ophthalmic mounting. 106,556; Feb. 22.
Splaine, Edward M., assignor to American Optical Company, Southbridge, Mass. Ophthalmic mounting. 106,583; Feb. 22.
Splaine, Edward M., assignor to American Optical Company, Southbridge, Mass. Bridge for an ophthalmic mounting. 106,584; Feb. 22.
Taylor, Walter J., Kansas City, Kans. Token dispenser. 106,585; Feb. 22.
Teague, Walter D., Forest Hills, N. Y., assignor to Warren Telechron Company. Clock face. 106,586; Feb. 22.
Tillman, Abe, New York, N. Y. Textile fabric or similar article. 106,587; Feb. 22.
Tullis, Boyd W., assignor to The Coleman Lamp and Stove Company, Wichita, Kans. Circulating heater. 106,588; Feb. 22.
Tuman, John, Mount Vernon, N. Y. Ensemble dress. 106,607; Feb. 22.
Tuman, John, Mount Vernon, N. Y. Ensemble dress. 106,608; Feb. 22.
Uncas Manufacturing Company. (See Barbieri, Nicholas, assignor.)
U. S. Reduction Co. (See Lindenberger, Henry, assignor.)
Wallace, Sadye E., New York, N. Y. Compact. 106,589; Feb. 22.
Warren Telechron Company. (See Teague, Walter D., assignor.)
Watinsky, David, Mount Vernon, N. Y. Bathing suit or similar article. 106,609; Feb. 22.
White, Murray, Brookline, Mass. Dress. 106,598; Feb. 22.
Zell, David H., Brooklyn, N. Y. Vanity case or similar article. 106,590; Feb. 22.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 22D DAY OF FEBRUARY, 1938

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abernathy, Clyde G., Hornell, N. Y. Road paver. 2,109,020; Feb. 22.
Adam, Florence S., et al. (See Adam, Sidney F., assignor.)
Adam, Robert G., et al. (See Adam, Sidney F., assignor.)
Adam, Sidney F., assignor of one-third to R. G. Adam and one-third to F. R. Adam, St. Louis, Mo. Vehicle direction signal. 2,109,406; Feb. 22.
Adams, Carroll E., Pawtucket, R. I. Drill grinder. 2,109,306; Feb. 22.
Adelman, Arthur. (See Huff, S. P., and Adelman.)
Aikman, Burton S., Wilkinsburg, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Compressor cooling system. 2,109,785; Feb. 22.
Ainsworth Manufacturing Corporation. (See Potter, Albert T., assignor.)
Airington Company, The. (See Airington, Marques J., assignor.)
Airington, Marques J., assignor to The Airington Company, Kansas City, Mo. Vending device. 2,109,377; Feb. 22.
Akau, George. (See Ley, G. J., Payne, and Akau.)
Aktiebolaget Gerh. Arehns Mekaniska Verkstad. (See Von Segebaden, E., and Johnson, assignors.)
Albright, Raymond W., assignor to American Anode, Inc., Akron, Ohio. Therapeutical appliance and making the same. 2,108,934; Feb. 22.
Alden, Reginald J., New York, N. Y., assignor to Chapin & Neal, Springfield, Mass. Decelerometer. 2,108,791; Feb. 22.
Aldridge, Blair G., Los Angeles, and B. Hopper, Palos Verdes Estates, assignor to Union Oil Company of California, Los Angeles, Calif. Process and apparatus for dewaxing oils. 2,109,125; Feb. 22.
American Anode, Inc. (See Albright, Raymond W., assignor.)
American Brake Company, The. (See Gantner, W. A., and McGowan, assignors.)
American Brake Company, The. (See Schwentler, Francis E., assignor.)
American District Telegraph Company. (See Farmer, P. M., and Evans, assignors.)
American District Telegraph Company. (See Johnson, Clarence C., assignor.)
American District Telegraph Company. (See Muehter, Manfred W., assignor.)
American Foundry Equipment Company, The. (See Soverhill, Harvey A., assignor.)
American Largi Corporation. (See Moriock, Emil, assignor.)
American Machine & Foundry Company. (See Crighton, John, assignor.)
American Machine & Foundry Company. (See Gwinn, George W., assignor.)
American Machine & Foundry Company. (See Leary, James W., assignor.)
American Smelting and Refining Company. (See Betterton, J. O., and Lebedeff, assignors.)
American Steel and Wire Company of New Jersey, The. (See Gleason, George A., assignor.)
American Stove Company. (See Frick, William H., assignor.)
American Stove Company. (See Meacham, Benjamin H. and E. M., assignors.)
American Telephone and Telegraph Company. (See McCann, Thomas A., assignor.)
American Telephone and Telegraph Company. (See Schott, Lionel, assignee.)
Anderson, Thomas A., Hartwell, Ga., assignor to The Patent Button Company, Waterbury, Conn. Folding and pressing attachment for sewing machines. 2,109,441; Feb. 22.
Andrews, Archie M., Greenwich, Conn. Cigarette lighter. 2,109,068; Feb. 22.
Anker-Werke, A. G. (See Imkamp, Karl, assignee.)
Anthony, George B., Detroit, Mich. Underground trap for leaking gas. 2,108,840; Feb. 22.
Anthracite Separator Company. (See Pardee, Frank, Jr., assignor.)
Archibald, Francis M., Elizabeth, and H. C. Schnaider, Roselle, N. J., assignors to Standard Alcohol Company. Secondary alcohol production. 2,109,004; Feb. 22.
Arcturus Development Company. (See Krahl, Walter L., assignor.)
Arrow-Hart & Hegeman Electric Company. (See Bentley, Robert H., assignor.)
Athey Truss Wheel Co. (See Kachar, Joseph, assignor.)
Austin, Walter M., Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Circuit breaker. 2,109,236; Feb. 22.
Autogas Corporation. (See Dufour, Raymond J., assignor.)
Automatic Drive & Transmission Company. (See Lewis, Robert P., assignor.)
Babcock & Wilcox Company, The. (See Schmidt, Karl C., assignor.)
Bach, Siegfried, Essen, Germany. Garment support. 2,109,280; Feb. 22.
Backstay Welt Company. (See MacLeod, William J., assignor.)
Baehr, Carl G. (See Greist, W. C., and Baehr.)
Bailey Meter Company. (See Ryder, John D., assignor.)
Bajanova, Elisaveta, New York, N. Y. Apparatus for restoring muscles in infantile paralysis. 2,109,188; Feb. 22.
Bake, Louis S., Penns Grove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of lead-sodium alloys. 2,109,005; Feb. 22.
Baker, Albert L., Sacramento, Calif. Fan. 2,108,841; Feb. 22.
Baker & Company. (See Maulen, Frederick, assignor.)
Ball, Donald A. (See Quick, C. G., Ball, and Whitehead.)
Ball, John B. (See Billiker, F. W., and Ball.)
Bamax Machine Co. (See Dayton, Max E., assignor.)
Barber-Colman Company. (See Ransome, Stafford M., assignor.)
Bardwell, Cecil, West Los Angeles, C. R. Erickson, and J. C. Rose, assignors to Motion Picture Electric Products, Los Angeles, Calif. Studio lamp. 2,109,056; Feb. 22.
Bareiss, Julius. (See Richter, M., and Bareiss.)
Barrett, Harry B., St. Louis, Mo., assignor to H. B. Barrett Company, Ltd., Los Angeles, Calif. Brake-relining machine. 2,109,327; Feb. 22.
Barrett, H. B., Company. (See Barrett, Harry B., assignor.)
Barrows, Donald S., assignor to The Symington-Gould Corporation, Rochester, N. Y. Draft rigging. 2,109,126; Feb. 22.
Bartlett, John N., Tonawanda, N. Y. Amusement apparatus. 2,109,041; Feb. 22.
Bartram, Charles E., Kansas City, Mo. Rolled stock holder. 2,109,007; Feb. 22.
Baumann, Erich. (See Ohlendorf, H., Baumann, and Holzach.)
Baumwollspinnerei Gronau. (See Stroink, Herbert, assignor.)
Bäwer, Johannes A., Gothenburg, Sweden. Hospital bed or the like. 2,108,913; Feb. 22.
Baxter, Clyde M., San Clemente, Calif. Wheel attachment. 2,109,093; Feb. 22.
Bazzoni, Lewis J., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Self-clinching rivet. 2,108,842; Feb. 22.
Beardsley, Orie L., Gary, Ind. Gun carriage. 2,108,792; Feb. 22.
Bechtner, Paul. (See Kauffman, Harold L., assignor.)
Beekhuis, Herman A., Jr., Syracuse, assignor, by mesne assignments, to The Solvay Process Company, New York, N. Y. Process and apparatus for the production of salts. 2,109,247; Feb. 22.
Bell Telephone Laboratories, Incorporated. (See Skellett, Albert M., assignor.)
Bendix Aviation Corporation. (See Chandler, M. E., and Wirth, assignors.)
Bendix Aviation Corporation. (See Hunt, Scott F., assignor.)
Bendix Aviation Corporation. (See Kerr, Henry H., Jr., assignor.)
Bendix Products Corporation. (See Clarke, Harold E., assignor.)
Bendix Products Corporation. (See Cole, Don, assignor.)
Bendix Products Corporation. (See Frank, Frederick C., assignor.)
Bendix Products Corporation. (See Press, Carl, assignor.)
Bendix Products Corporation. (See Wright, William S., assignor.)
Bennett, Clifford W., and B. H. Staats, Denver, Colo. Gate valve. 2,109,042; Feb. 22.
Bennett, James L., assignor to Hercules Powder Company, Wilmington, Del. Concentrating aqueous ammonia solutions. 2,108,914; Feb. 22.
Benson, Andrew, Wilmette, Ill. Power transmitting mechanism. 2,109,227; Feb. 22.
Bentley, Robert H., assignor to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn. Snap switch. 2,109,370; Feb. 22.
Berbé, Francois. (See Ferrero, P., Vandendries, and Berbé, assignors.)
Bergmann, Adolf, Berlin-Charlottenburg, Germany. Furniture frame. 2,109,080; Feb. 22.

Bernstein, Samuel S., Beverly Hills, Calif. Spring structure for furniture and the like. 2,109,282; Feb. 22.

Berst-Foster Dixfield Co. (See Garling, Karl E., assignor.)

Betterton, Jesse O., and Y. E. Lebedeff, Meutchen, N. J., assignors to American Smelting and Refining Company, New York, N. Y. Treating metal. 2,109,144; Feb. 22.

Bigelow, George E., Southgate, and A. R. Weis, assignors of one-half to Pacific Pump Works, Huntington Park, Calif. Duplex high pressure rotary pump. 2,108,786; Feb. 22.

Billker, Fredrick W., Milwaukee, Wis., and J. B. Ball, Chicago, Ill., assignors to Milwaukee Saw Trimmer Corporation, Milwaukee, Wis. Cutting machine. 2,109,057; Feb. 22.

Biro, Carl G., Marblehead, Ohio. Saw setting machine. 2,109,161; Feb. 22.

Blackburn, Jasper, Webster Groves, Mo. Frictional wire connecter. 2,108,957; Feb. 22.

Blackhawk Mfg. Co. (See Mandl, Sigmund, assignor.)

Blackwood, E. M., et al. (See Herndon, William T., assignor.)

Blanchard, Alva G., Shreveport, La. Illuminated boiler water level gauge. 2,109,348; Feb. 22.

Blee, John F., Los Angeles, Calif. Cementing plug. 2,109,058; Feb. 22.

Bly, Merwyn, Leesburg, Va. Electrical testing and detecting apparatus. 2,109,189; Feb. 22.

Boehle, Friedel, Mount Gilead, Ohio, assignor to The Hydraulic Press Corporation, Inc., Wilmington, Del. Piston valve with mid-position bypass. 2,109,162; Feb. 22.

Bogaty, Hermann S., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa. Apparatus for blending and conditioning tobacco. 2,109,409; Feb. 22.

Boothe, Eugene F., assignor to James R. Kearney Corporation, St. Louis, Mo. Fuse link. 2,108,843; Feb. 22.

Borg-Warner Corporation. (See Ingersoll, Stephen L., assignor.)

Bornemann, Hermann G., Zeglendorf-Klein, Machnow, Germany. Electric spark plug or the like for internal combustion engines. 2,109,364; Feb. 22.

Borton, George W., New Lisbon, N. J., assignor to Pennsylvania Crusher Company, Philadelphia, Pa. Crushing machinery. 2,108,793; Feb. 22.

Bosma, Alfred S., assignor to The Lauson Company, New Holstein, Wis. Engine starter. 2,109,281; Feb. 22.

Boston Wire Stitcher Company. (See Cavanagh, John F., assignor.)

Bowdil Company, The. (See Bowman, Charles L., assignor.)

Bowman, Charles L., assignor to The Bowdil Company, Canton, Ohio. Cutter bar. 2,109,081; Feb. 22.

Bowman, Charles L., assignor to The Bowdil Company, Canton, Ohio. Mining machine cutter bar. 2,109,082; Feb. 22.

Bowser, S. F., & Company. (See Carroll, William M., assignor.)

Boyer, John A., and C. G. Rose, assignors, by mesne assignments, to The Carborundum Company, Niagara Falls, N. Y. Hard carbide composition. 2,108,794; Feb. 22.

Boyer, John A., and C. G. Rose, assignors, by mesne assignments, to The Carborundum Company, Niagara Falls, N. Y. Dense nonmetallic bodies. 2,109,246; Feb. 22.

Boykow, Johann M., Berlin-Lichterfelde-West, assignor, by mesne assignments, to Deutsche Luftfahrt-und Handels-Aktien-Gesellschaft, Berlin, Germany. Instrument for indicating navigational factors. 2,109,283; Feb. 22.

Braden, Rene A., Collingswood, N. J., assignor to Radio Corporation of America. Electric discharge tube. 2,108,880; Feb. 22.

Brady, Frank C., Chicago, Ill. Stereopticon slide and projection apparatus therefor. 2,108,844; Feb. 22.

Bragg, Caleb S., Palm Beach, Fla., and Y. W. Kliesrath, Port Washington, assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y. Clutch control mechanism. 2,109,099; Feb. 22.

Bragg-Kliesrath Corporation. (See Bragg, C. S., and Kliesrath, assignors.)

Brandel, Louis P., et al. (See Flury, William J., assignor.)

Braren, Cornelius I. (See Kimball, W. D., and Braren.)

Breitenstein, Herbert G., assignor to R. T. Moloney, Chicago, Ill. Game. 2,109,410; Feb. 22.

Breitling, Ernst. (See Lehmann, K. A., and Breitling.)

Breitling, Ernst, Berlin-Tempelhof, Germany, assignor to The National Cash Register Company, Dayton, Ohio. Cash registers, accounting and the like machines. 2,109,309; Feb. 22.

Brigham, E. F. P. (See White, B. B., and Young, assignors.)

Brightwell, Walter J., Henderson, Tex. Air compressing machine. 2,108,958; Feb. 22.

Brinck, Erik J. M., Solvesborg, and R. V. A. Olsson, Kyrkhult, Sweden. Slack adjuster for motor vehicle brakes. 2,109,284; Feb. 22.

Brosius Reel Company. (See Schafer, John V., assignor.)

Brosser, Leslie G. S., and L. A. Smith, Rochester, N. Y., assignors, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J. Photographic emulsions containing trinuclear cyanine dyes. 2,108,845; Feb. 22.

Brooks, Henry M., et al., trustees. (See Fisher, John F., assignor.)

Brophy, John D., New York, N. Y. Container. 2,109,100; Feb. 22.

Brown, Charles M., Lincoln, Nebr. Display rack. 2,109,379; Feb. 22.

Brown, George R., Shaker Heights, assignor to The North American Manufacturing Company, Cleveland, Ohio. Valve. 2,108,959; Feb. 22.

Brown, Marshall H., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Alloy. 2,109,285; Feb. 22.

Brown, Walter O., Detroit, Mich. Radio cabinet. 2,108,846; Feb. 22.

Brownjohn, Joseph H., assignor to Imperial Typewriter Company Limited, Leicester, England. Teaching and practising typewriting. 2,109,442; Feb. 22.

Browne-Wintners Co. (See Wandell, James W., assignor.)

Brunner, Walter. (See Zerweck, W., Kunze, and Brunner.)

Budd, Edward G., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Double-walled sheet metal structure and making. 2,108,795; Feb. 22.

Budd, Edward G., Manufacturing Company. (See Budd, Edward G., assignor.)

Bull, William R. (See Hoppert, F. D., Bull, and Simpson.)

Bullard, William P., Albany, and J. S. Guy, Atlanta, assignors to National Pecan Growers Exchange, Albany, Ga. Treating nuts. 2,108,915; Feb. 22.

Bullard, William P., and O. L. Williams, assignors to National Pecan Growers Exchange, Albany, N. Y. Branding machine. 2,109,380; Feb. 22.

Bungay, George W., Brooklyn, N. Y., assignor to Bungaytype-Delaware, Inc. Apparatus for casting stereotype plates. 2,109,206; Feb. 22.

Bungay, George W., Plainfield, N. J., assignor to Bungaytype-Delaware, Inc. Casting stereotype plates. 2,109,207; Feb. 22.

Bungaytype-Delaware, Inc. (See Bungay, George W., assignor.)

Burke, Myra E., Madison, Wis. Infant's syringe. 2,109,059; Feb. 22.

Buttschau, Esther M., Vero Beach, Fla. Lipstick spreader. 2,109,411; Feb. 22.

California Spray-Chemical Corporation. (See Volck, William H. assignor.)

Calkins, Lyle E., and O. S. Levi, assignors to Save Electric Corporation, Toledo, Ohio. Electric lamp bulb. 2,108,847; Feb. 22.

Callaghan, George H. (See Dewan, Leon, assignor.)

Campbell, Donald J., Spring Lake Township, Ottawa County, assignor to Campbell, Wyant & Cannon Foundry Company, Muskegon Heights, Mich. Hollow crankshaft. 2,109,083; Feb. 22.

Campbell, John. (See Hanson, D., and Pell-Walpole.)

Campbell, Wyant & Cannon Foundry Company. (See Campbell, Donald J., assignor.)

Canadian Vickers Limited. (See Ferrier, Alan, assignor.)

Cappette, Floris. (See Coussement, H. P., and Cappette.)

Capstick, John W., Verdun, Quebec, Canada. Tape binding and package closing machine. 2,109,328; Feb. 22.

Carbondale Machine Corporation. (See Kroft, V. E., and Roe, assignors.)

Carborundum Company, The. (See Boyer, J. A., and Rose, assignors.)

Carey, Charles O., Miami, Fla. Submarine observatory. 2,108,796; Feb. 22.

Carleton, Ralph D., Snyder, N. Y., assignor, by mesne assignments, to Curtiss-Wright Corporation. Engine mount. 2,109,329; Feb. 22.

Carll, Clarence E. and W. G., Gorham, Maine. Corn trimming machine. 2,109,365; Feb. 22.

Carll, Willis G. (See Carll, Clarence E. and W. G.)

Carlson, Arnold W., Lewistown, Pa. Door stop and holder. 2,109,228; Feb. 22.

Carlson, John E., Forestville, assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn. Electrically heated brooder. 2,109,163; Feb. 22.

Carlson, Otto E., Vernonia, Oreg. Door stop. 2,109,127; Feb. 22.

Carrier Corporation. (See Lindsay, Daniel C., assignor.)

Carrillo, Jesus L., Long Beach, Calif. Closure operator. 2,109,128; Feb. 22.

Carroll, William M., assignor to S. F. Bowser & Company, Inc., Fort Wayne, Ind. Dispensing apparatus. 2,109,084; Feb. 22.

Carter, George R., Company, The. (See Creamer, Edgar R., assignor.)

Casper, Anthony B., assignor to Houde Engineering Corporation, Buffalo, N. Y. Hydraulic shock absorber. 2,108,881; Feb. 22.

Cavanagh, John F., Providence, R. I., assignor to Boston Wire Stitcher Company, Portland, Maine. Wire-stitching or stapling machine. 2,108,882; Feb. 22.

Cavins, Paul, et al. (See Flury, William J., assignor.)

Celanese Corporation of America. (See Ellis, G. H., and Wesson, assignors.)

Celanese Corporation of America. (See Whitehead, William, assignor.)

Ceramic Machinery Distributors Limited. (See Shurley, Frederick, assignor.)

Chandler, Milton E., and E. O. Wirth, assignors to Bendix Aviation Corporation, South Bend, Ind. Carburetor. 2,109,260; Feb. 22.

Chapin, Edward S., Boston, Mass. Mordanting and union dyeing. 2,109,261; Feb. 22.

Chapin & Neal. (See Alden, Reginald J., assignor.)

Chaplin, Herschel, assignor of one-fourth to S. A. Phillips, and fifteen per cent to R. E. Davis, Morgantown, W. Va. Connector plug. 2,108,916; Feb. 22.

Chilstrom, Gus E., and A. Thompson, Paullina, Iowa. Sickle cushioner. 2,109,085; Feb. 22.

Chisholm-Ryder Co. (See Thorold, Frederick W., assignor.)

Cinch Manufacturing Corporation. (See Dressel, Henry M., assignor.)

Cinch Manufacturing Corporation. (See Knutson, Carl L., assignor.)

Clark, Edwin L., Collingswood, N. J., assignor to Philco Radio & Television Corporation, Philadelphia, Pa. Electrical system. 2,109,021; Feb. 22.

Clarke, Harold E., Somerville, Mass., assignor to Bendix Products Corporation, South Bend, Ind. Control means for automobiles. 2,109,101; Feb. 22.

Clay, James R., assignor of one-half to P. L. Moore, Granite Falls, N. C. Variable speed drive for drafting machinery. 2,109,247; Feb. 22.

Cleaners Products, Inc. (See Trevellyan, Vernon B., assignor.)

Cleveland Tractor Company, The. (See Heller Julius, assignor.)

Clifford, Albert M., Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Rubber composition and preserving rubber. 2,109,164; Feb. 22.

Clifford, Charles C., Maplewood, N. J. Stenographer's notebook and copy holder. 2,109,349; Feb. 22.

Cocks, George W., Upper Montclair, N. J., assignor to Marathon Paper Mills Company, Rothschild, Wis. Preparing and serving ice cream. 2,109,102; Feb. 22.

Coffey, Joseph H., Rhos-on-Sea, North Wales. Method and apparatus for making rubber articles. 2,109,190; Feb. 22.

Cole, Don, Evanston, Ill., assignor to Bendix Products Corporation, South Bend, Ind. Ignition timing control. 2,109,103; Feb. 22.

Coles, Walter H., and B. J. Nelson, assignors to The Skinner Irrigation Company, Troy, Ohio. Irrigation device. 2,108,787; Feb. 22.

Columbus Auto Parts Company, The. (See Flumerfelt, William A., assignor.)

Communication Patents, Inc. (See Nicolson, Alexander M., assignor.)

Compo Shoe Machinery Corporation. (See Smith, John F, assignor.)

Compton, Bates, Vincentown, N. J. Sign. 2,109,330; Feb. 22.

Comstock, Gregory J., Fairfield, Conn. Producing hard cemented carbide composites. 2,108,797; Feb. 22.

Consortium für Elektrochemische Industrie, G. m. b. H. (See Sixt, J., and Mugdan, assignors.)

Contardi, Francisco, Buenos Aires, Argentina. Suspension and driving system for motor vehicles. 2,109,191; Feb. 22.

Cook, Earle S., Wilkinsburg, and E. E. Hewitt, Edgewood, assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Empty and load brake. 2,109,366; Feb. 22.

Cook, Willard G., Forest Hills, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electric control mechanism for voting machines. 2,109,229; Feb. 22.

Corbin, Wesley S., Ridley Park, assignor to Scott Paper Company, Chester, Pa. Multiple compartment dispensing cabinet. 2,109,412; Feb. 22.

Cordrey, Almon J., assignor to The Liquid Carbonic Corporation, Chicago, Ill. Water ice and dry ice refrigeration system. 2,109,310; Feb. 22.

Cornell Machine Company, The. (See Cornell, Mead, assignor.)

Cornell, Mead, assignor to The Cornell Machine Company, Cleveland, Ohio. Proportioning device. 2,109,331; Feb. 22.

Corona Products, Inc. (See Mayfield, Owen, assignor.)

Cotta, Ralph L. (See Johnson, J. R., Oberlotfken, and Cotta.)

Coussement, Hilaire P., and F. Cappette, Roubaix, France. Grinding instrument for use in dental work. 2,109,086; Feb. 22.

Cox, James A., Santa Fe, N. Mex. Padlock. 2,109,413; Feb. 22.

Creamer, Howard I., Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Preserving rubber and product. 2,109,165; Feb. 22.

Creamer, Edgar R., assignor to The George R. Carter Company, Detroit, Mich. Molded core strip. 2,108,981; Feb. 22.

Crighton, John, London, England, assignor to American Machine & Foundry Company, New York, N. Y. Feeding of cards or like articles from a stack. 2,109,208; Feb. 22.

Cubby, Richard, Paterson, N. J. Traffic device. 2,109,286; Feb. 22.

Curtiss-Wright Corporation. (See Carleton, Ralph D., assignor.)

Dahlberg, Fred W., assignor to The Hedman Manufacturing Company, Chicago, Ill. Check writer. 2,109,104; Feb. 22.

Daland, Elliot. (See Wilford, E. B., and Daland.)

Dalrymple, William P., Chicago, Ill. Filter. 2,108,798; Feb. 22.

Daniels, Leo A., Collinsville, Conn. Paint softening tool. 2,109,022; Feb. 22.

Davidson, William W., Evanston, Ill. Blank feeder and ejector. 2,108,799; Feb. 22.

Davidson, William W., Evanston, Ill. Mechanism for controlling the feeding and advancing of blanks. 2,108,800; Feb. 22.

Davis, Cecil B., Kingman, Ariz. Door threshold. 2,109,043; Feb. 22.

Davis, Clarence B., Vancouver, Wash. Upright piano action. 2,109,192; Feb. 22.

Davis & Furber Machine Company. (See Knight, Henry H., assignor.)

Davis, Richard E., et al. (See Chapling, Hershel W., assignor.)

Davis, William S., Knoxville, Tenn. Wall range. 2,109,006; Feb. 22.

Davol Rubber Company. (See Little, Jesse, assignor.)

Dayton, Donald G., et al. (See Roll, Walter H., assignor.)

Dayton, Max E., assignor to Bamax Machine Co., Inc., Rockford, Ill. Trailer wheel assembly. 2,109,311; Feb. 22.

De Groote, Melvin, University City, B. Keiser, Webster Groves, L. L. Faure, Kirkwood, and A. F. Wirtel, assignors to The Tret-O-Lite Company, Webster Groves, Mo. Breaking petroleum emulsions. 2,108,960; Feb. 22.

De Groote, Melvin, University City, B. Keiser, Webster Groves, L. L. Faure, Kirkwood, and A. F. Wirtel, assignors to The Tret-O-Lite Company, Webster Groves, Mo. Breaking petroleum emulsions. 2,108,961; Feb. 22.

Delters, August M., Atlanta, and E. R. Gillon, East Point, assignors to Southern Wood Preserving Company, Atlanta, Ga. Cutter for pole shaping machines 2,109,414; Feb. 22.

Delters, August M., assignor to Southern Wood Preserving Company, Atlanta, Ga. Pole shaping cutter. 2,109,415; Feb. 22.

Dennison, Edward S., New London, assignor to Electric Boat Company, Groton, Conn. Cross head and piston rod and piston construction. 2,109,060; Feb. 22.

Dentler, Arnold E., Hinsdale, assignor to W. H. Miner, Inc., Chicago, Ill. Shock absorber. 2,109,367; Feb. 22.

Detroit Lubricator Company. (See Wile, Daniel D., assignor.)

Deutsche Hydrierwerke Aktiengesellschaft. (See Morgenstern, S., and Eggert, assignors.)

Deutsche Luftfahrt-und Handels Aktien-Gesellschaft. (See Boykow, Johann M., assignor.)

Dewan, Leon, assignor of fifty percent to G. H. Callaghan, New York, N. Y. Method and apparatus for recording and reproducing sound-on-film. 2,108,801; Feb. 22.

Dickey, Joseph B. (See McNally, J. G., and Dickey.)

Diehl Corporation. (See Klimek, Gustav A., assignor.)

Dietrich, Henry J., Banning, Calif. Woodworking machine. 2,109,061; Feb. 22.

Dillon, Lyle, assignor to Union Oil Company of California, Los Angeles, Calif. Process and apparatus for dewaxing oil. 2,109,350; Feb. 22.

Dimmick, Blees C., assignor to Keystone Steel & Wire Company, Peoria, Ill. Die holder and guide. 2,109,312; Feb. 22.

Ditto, Incorporated. (See Haskell, R. R., and Morton, assignors.)

Doerr, Eva E. (See Lawlor, Simeon C., assignor.)

Dominion Silk Mills Limited. (See Goodings, Alfred C., assignor.)

Dorsey, Louis F., Washington, D. C. Baton. 2,108,802; Feb. 22.

Douglas, Stephen, Fresno, Calif. Riding saddle attachment. 2,109,209; Feb. 22.

Doull, Robert M., assignor to Gunite and Waterproofing Limited, Montreal, Quebec, Canada. Apparatus for protecting piles, piers, etc. 2,109,105; Feb. 22.

Draper Corporation. (See Jackson, Joseph B., assignor.)

Draper, William H., Bristol, England. Folding machine. 2,108,935; Feb. 22.

Dressel, Henry M., Chicago, Ill., assignor, by mesne assignments, to Cinch Manufacturing Corporation. Socket. 2,109,106; Feb. 22.

Drew, Donald E. (See Finzel, T. G., and Drew.)

Dufour, Raymond J., Oak Park, assignor to Autogas Corporation, Chicago, Ill. Combustion chamber. 2,109,262; Feb. 22.

Dunlop, James, Park Ridge, assignor to Westinghouse Electric Elevator Company, Chicago, Ill. Moving stairway. 2,109,210; Feb. 22.

Dunlop Tire and Rubber Corporation. (See Parkinson, Donald, assignor.)

Du Pont, E. I., de Nemours & Company. (See Bake, Louis S., assignor.)

Du Pont, E. I., de Nemours & Company. (See Brown, Marshall H., assignor.)

Du Pont, E. I., de Nemours & Company. (See Finzel, T. G., and Drew, assignors.)

Du Pont, E. I., de Nemours & Company. (See Hardy, Isaac A., assignor.)

Du Pont, E. I., de Nemours & Company. (See Nieuwland, J. A., and Sowa, assignors.)

Dyer, Lloyd W., Swissvale, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Circuit breaker. 2,109,211; Feb. 22.

Dziemczyk, Emanuel, Breslau-Goldschmieden, Germany. Rosin for violin bows, etc. 2,109,416; Feb. 22.

Eadie, John R., Jarvis, Ontario, Canada. Portable motor knife grinder. 2,109,107; Feb. 22.

Eastman Kodak Company. (See Brooker, L. G. S., and Smith, assignors.)

Eastman Kodak Company. (See McNally, J. G., and Dickey, assignors.)

Eby, Eugene D., Pittsfield, Mass., assignor to General Electric Company. High voltage bushing. 2,109,368; Feb. 22.

Eckersall, Alphonso B., Chicago, Ill. Head support for routing machines. 2,109,263; Feb. 22.

Eclipse Aviation Corporation. (See Mock, Frank C., assignor.)

Eclipse Aviation Corporation. (See Nowosielski, Edward B., assignor.)

Eclipse Machine Company. (See Sekella, Youston, assignor.)

Eggert, Johann. (See Morgenstern, S., and Eggert.)

Eggert, John, Leipsig-Gohlis, and F. Luft, Leipsig, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Apparatus for developing film in daylight. 2,109,982; Feb. 22.

Ehrgott, Karl, Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Two-compartment fry kettle. 2,109,212; Feb. 22.

Eidco, Inc. (See Hokanson, Martin, assignor.)

Eisenhut, Otto. (See von Weinberg, A., Rein, and Eisenhut.)

Elbaum, Filip, assignor to J. November, Brooklyn, and A. B. Just, Astoria, N. Y. Lock. 2,109,264; Feb. 22.

Elcan, Catherine B., Hot Springs National Park, Ark. Dental floss holder. 2,109,417; Feb. 22.

Elder, Flint C., Cleveland Heights, Ohio. Button former. 2,108,917; Feb. 22.

Electric Boat Company. (See Dennison, Edward S., assignor.)

Elkington, Vivian, Dover, England. Manhole cover and frame. 2,109,287; Feb. 22.

Ellingworth, Samuel, Blackley, Manchester, England, assignor to Imperial Chemical Industries, Limited. Dyestuff of the indigoid type. 2,109,369; Feb. 22.

Elliott Core Drilling Company. (See Snyder, Leonard L., assignor.)

Ellis, George H., and A. J. Wesson, Spondon, near Derby, England, assignors to Celanese Corporation of America. Manufacture and/or treatment of artificial materials. 2,108,803; Feb. 22.

Engel, Bruno. (See Pier, M., and Engel.)

Engel, Frank A., and F. Hudson, Roselle, assignors to Lanser-Tite Clamp Corporation, Elizabeth, N. J. Pipe joint. 2,108,848; Feb. 22.

Engel, Karl, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Manufacture of sandals. 2,108,849; Feb. 22.

Engelke, Henry. (See Natkiel, Harry, assignor.)

Enston, Harold V. (See Hilbshman, James R., assignor.)

Erickson, Carl R. (See Bardwell, C., Erickson, and Rose.)

Esmuns, Syvirous. (See Ritter, J., Jr., and Esmuns.)

Euth, John E., Chicago, Ill., assignor to United Autographic Register Co. Typewriter attachment. 2,109,288; Feb. 22.

Evans Case Company. (See Reilly, Alfred F., assignor.)

Evans, Francis C. (See Farmer, P. M., and Evans.)

Ewing, Samuel C., Schenectady, N. Y., assignor to General Electric Company. Motor control system. 2,109,370; Feb. 22.

Fabbrica Italiana Magneti Marelli Soc. An. (See Quintavalle, Umberto, assignor.)

Fafnir Bearing Company, The. (See Searles, Raymond R., assignor.)

Fagerl, William B. (See Leibing, W. E., and Fagerl.)

Falkenberg, William F., Chicago, Ill. Liquid fuel burner. 2,108,918; Feb. 22.

Farmer, Clyde C., Pittsburgh, and R. E. Miller, Wilkinsburg, assignors to Westinghouse Air Brake Company, Wilmerding, Pa. Electro-pneumatic brake. 2,108,785; Feb. 22.

Farmer, Clyde C., Pittsburgh, and E. E. Hewitt, Edgewood, assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure brake. 2,108,786; Feb. 22.

Farmer, Clyde C., Pittsburgh, and E. E. Hewitt, Edgewood, assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Brake control for high speed trains. 2,109,166; Feb. 22.

Farmer, Paul M., Maplewood, N. J., and F. C. Evans, Great Kills, Staten Island, N. Y., assignors to American District Telegraph Company, Jersey City, N. J. Diaphragm switch. 2,109,145; Feb. 22.

Farnsworth, Philo T., San Francisco, and F. J. Somers, San Jose, assignors to Farnsworth Television Incorporated, San Francisco, Calif. High power projection oscillograph. 2,109,289; Feb. 22.

Farnsworth Television Incorporated. (See Farnsworth, P. T., and Somers, assignors.)

Faure, Leonard L. (See De Groote, M., Keiser, Faure, and Wirtel.)

Fawcett, Eric W., and J. L. McCowen, Northwich, England, assignors to Imperial Chemical Industries Limited. Apparatus for high vacuum distillations. 2,109,129; Feb. 22.

Fearing, Allen C., South Weymouth, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Clip. 2,109,213; Feb. 22.

Ferodo and Asbestos Inc. (See Longley, James N., assignor.)

Ferrero, Paul, Tertre, C. Vandendriss, Baucour, and F. Berbo, St. Ghislain, assignors to Societe Carbochimique, Société Anonyme, Brussels, Belgium. Preparations of glycols from oxides of olefines. 2,108,936; Feb. 22.

Ferrier, Alan, Ottawa, Ontario, assignor to Canadian Vickers Limited, Montreal, Quebec, Canada. Winter landing gear for aeroplanes. 2,108,962; Feb. 22.

Fesler, Douglas F., Woodstock, Ill. Knife. 2,109,108; Feb. 22.

Field, Leslie O. (See Field, Wanda G., and L. O.)

Field, Oscar S., assignor to General Railway Signal Company, Rochester, N. Y. Thermal operated circuit controlling device. 2,109,160; Feb. 22.

Field, Wanda G. and L. O., Nappanee, Ind. Heel cover for ladies' shoes. 2,109,193; Feb. 22.

Finch, William G. H., New York, N. Y. Telepicture synchronising system. 2,108,963; Feb. 22.

Finch, William G. H., Spuyten Duyvil, N. Y. Continuous sheet facsimile recorder. 2,109,109; Feb. 22.

Finsel, Theron G., and D. E. Drew, Kenmore, N. Y., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Moistureproof material and making same. 2,108,804; Feb. 22.

Finsel, Theron G., and D. E. Drew, Kenmore, N. Y., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Transparent materials and producing same. 2,108,805; Feb. 22.

Finsel, Theron G., and D. E. Drew, Kenmore, N. Y., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Cellulose materials and treating same. 2,108,806; Feb. 22.

Finsel, Theron G., and D. E. Drew, Kenmore, N. Y., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Transparent material and making same. 2,108,807; Feb. 22.

Finsel, Theron G., and D. E. Drew, Kenmore, N. Y., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Transparent material and making same. 2,108,808; Feb. 22.

Finsel, Theron G., and D. E. Drew, Kenmore, N. Y., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Moistureproof material and making the same. 2,108,809; Feb. 22.

Finsel, Theron G., and D. E. Drew, Kenmore, N. Y., assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Transparent material and composition of matter for producing same. 2,108,810; Feb. 22.

Fisher, Charley W., Coffeyville, Kans. Oil well valve. 2,109,351; Feb. 22.

Fisher Flouring Mills Co. (See Sisley, L. J., and White, assignors.)

Fisher, George H., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Temperature control system. 2,109,062; Feb. 22.

Fisher, Harmon F., assignor to Union Oil Company of California, Los Angeles, Calif. Process and apparatus for dewaxing oil. 2,109,130; Feb. 22.

Fisher, Harmon F., assignor to Union Oil Company of California, Los Angeles, Calif. Process and apparatus for dewaxing oil. 2,109,131; Feb. 22.

Fisher, Henry A., Parkersburg, W. Va. Glass sheet, method and apparatus for making same. 2,108,811; Feb. 22.

Fisher, John F., Manheim, Pa., assignor to H. M. Brooks, New York, N. Y., W. T. Gardiner, Boston, Mass., and J. H. Nissley, Manheim, Pa., as trustees. Stoker. 2,109,332; Feb. 22.

Fisher, Lawrence E., and W. H. Frank, Detroit, Mich. Switch. 2,108,812; Feb. 22.

Fisher, Lloyd H., deceased, Wilmington, by A. B. Nixon, administrator, Holly Oak, assignor to Hercules Powder Company, Wilmington, Del. Production of aralkyl halides. 2,108,937; Feb. 22.

Fitch, Benjamin F., Greenwich, Con. Lock controlling mechanism for transferable freight containers. 2,108,813; Feb. 22.

Florman, Irving, New York, N. Y. Automobile signaling device. 2,109,381; Feb. 22.

Floss, Carl W., Detroit, Mich. Transmission. 2,109,007; Feb. 22.

Flumerfelt, William A., assignor to The Columbus Auto Parts Company, Columbus, Ohio. Joint construction. 2,108,814; Feb. 22.

Flury, William J., assignor of one-sixth to F. Halfen, one-sixth to L. P. Brandel, and one-half to P. Cavina, Long Beach, Calif. Differential pressure bailer. 2,109,008; Feb. 22.

Food Machinery Corporation. (See Thompson, Albert R., assignor.)

Food Machinery Corporation. (See Twomley, Herbert E., assignor.)

Formhals, Anton, assignor of forty-five one-hundredths to R. Schreiber-Gastell, Mainz, Germany. Artificial fiber construction. 2,109,333; Feb. 22.

Foss, Ernest. (See Hess, Harry A., assignor.)

Foster, Mortimer, Bronxville, N. Y. Inorganic building system. 2,109,265; Feb. 22.

Frank, Frederick C., assignor to Bendix Products Corporation, South Bend, Ind. Brake drum. 2,109,110; Feb. 22.

Frank, William H. (See Fisher, L. E., and Frank.)

Franklin, Albert W., New York, N. Y. Condenser. 2,109,266; Feb. 22.

Frantz, Walter A. (See Te Pas, Edmund J., assignor.)

Freeland Spool and Bobbin Corp. (See Markle, George B., Jr., assignor.)

Freudenberg, Gotthard, New York, N. Y., and A. E. Reimers, Harrington Park, N. J., assignors to The Nestle-Lemur Company, New York, N. Y. Hair waving. 2,108,963; Feb. 22.

Freudenberg, Gotthard, New York, N. Y., and A. E. Reimers, Harrington Park, N. J., assignors to The Nestle-Lemur Company, New York, N. Y. Electrical circuit for hair waving machines. 2,108,964; Feb. 22.

Frick, William H., Cleveland, Ohio, assignor to American Stove Company, St. Louis, Mo. Oven. 2,109,382; Feb. 22.

Fromm, Otto W., Frankfort-on-the-Main, Germany, assignor to United Shoe Machinery Corporation, Paterson, N. J. Marking machine. 2,108,850; Feb. 22.

Fuller, Hermoine. (See Fuller, William W., assignor.)

Fuller, William W., assignor to H. Fuller, Norfolk, Va. Power steering apparatus for vehicles. 2,109,418; Feb. 22.

Fulton, Melissa B., Chicago, Ill. Alarm. 2,108,851; Feb. 22.

Furnas, William C. (See Furnas, W. C., and Thompson, assignors.)

Furnas, William C., West Allis, and S. R. Thompson, Milwaukee, Wis.; said Thompson assignor to said Furnas, doing business under the name and style of Furnas Electric Company. Switch assemblage. 2,108,883; Feb. 22.

Gagnier, George E. (See Place, Blon C., assignor.)

Gallardo, Jose, Santa Tecla, El Salvador. Tire. 2,109,383; Feb. 22.

Gallupe, Charles A., Mars Hill, Maine. Spraying attachment for tractors. 2,109,384; Feb. 22.

Gallusser, Hans, Geneva, Switzerland. Electrically actuated device for increasing the braking action. 2,109,419; Feb. 22.

Gantner, William A., Wilkinsburg, and T. R. McGowan, Pittsburgh, assignors to The American Brake Company, Swissvale, Pa. Brake mechanism. 2,109,194; Feb. 22.

Garbell, Max, assignor to Victor Adding Machine Company, Chicago, Ill. Motor drive mechanism. 2,109,063; Feb. 22.

Garbsch, Paul. (See Hopf, H., Garbsch, and Teller.)

Gardiner, William T., et al., trustees. (See Fisher, John F., assignor.)

Garling, Karl E., Newark, N. J., assignor, by mesne assignments, to Berst-Forster Dixfield Co., New York, N. Y. Cut-off mechanism for straw making machines. 2,109,146; Feb. 22.

Garrison, Alfred C. (See Garrison, Mett L. and A. C.)

Garrison, Mett L. and A. C., England, Ark. Automatic cultivator foot for tractors. 2,109,385; Feb. 22.

Gearhart, Roy E., and E. L. Renshaw, Chicago, Ill. Electrical motor. 2,109,111; Feb. 22.

General Aniline Works, Inc. (See Holzach, K., Winter, and v. Bock, assignors.)

General Aniline Works, Inc. (See Kunz, M. A., and Koeberle, assignors.)

General Aniline Works, Inc. (See Nicodemus, O., and Schmidt, assignors.)

General Aniline Works, Inc. (See Ohlendorf, H., Baumann, and Holzach, assignors.)

General Aniline Works, Inc. (See Rappe, W., Hoelscher, and Achneevoigt, assignors.)

General Aniline Works, Inc. (See Roos, Hans, assignor.)

General Aniline Works, Inc. (See Zerweck, W., and Brunner, assignors.)

General Electric Company. (See Eby, Eugene D., assignor.)

General Electric Company. (See Ewing, Samuel C., assignor.)

General Motors Corporation. (See Gray, Floyd E., assignor.)

General Motors Corporation. (See Lyons, Paul M., assignor.)

General Motors Corporation. (See Schweller, S. M., assignor, and Schilling.)

General Motors Corporation. (See Vanderen, Bernard J., assignor.)

General Railway Signal Company. (See Field, Oscar S., assignor.)

General Railway Signal Company. (See Phinney, Robert M., assignor.)

General Railway Signal Company. (See Reichard, Wade H., assignor.)

General Steel Casting Corporation. (See Pflager, Harry M., assignor.)

Getteiman, Frederick, Milwaukee, Wis. Condenser. 2,109,064; Feb. 22.

Gettinger, Joseph, Chicago, Ill. Television apparatus. 2,108,852; Feb. 22.

Ghazal, Elie A., Marion, S. C. Garment hanger. 2,108,853; Feb. 22.

Gille, Benson D. (See Gillé, Earl S. and B. D.)

Gillé, Earl S. and B. D., assignors of one-half to R. W. Spofford, Los Angeles, Calif. Sound recording system. 2,108,815; Feb. 22.

Gillon, Elam R. (See Deiters, A. M., and Gillon.)

Gleason, George A., Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey. Retainer for reel lagging. 2,109,170; Feb. 22.

Goff, Leonard D., Three Rivers, Mich. Return trap. 2,108,854; Feb. 22.

Goodings, Alfred C., assignor to Dominion Silk Mills Limited, Toronto, Ontario, Canada. Improving the electrical resistance of animal fibers. 2,109,067; Feb. 22.

Goodman, Jack A. (See Welch, Clifton, assignor.)

Gould, Philetus S., Akron, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Device for demonstrating the action of cords and the like. 2,109,171; Feb. 22.

Gray, Floyd E., assignor to General Motors Corporation, Dayton, Ohio. Latch. 2,108,965; Feb. 22.

Green, Charles W., assignor to The National Cash Register Company, Dayton, Ohio. Cash register. 2,108,884; Feb. 22.

Green, Clarence J., assignor to Norton Company, Worcester, Mass. Cam grinding apparatus. 2,109,386; Feb. 22.

Green, Harry, Bronx, assignor of one-half to A. Wasserlauf, Jackson Heights, Long Island, N. Y. Window seat. 2,109,313; Feb. 22.

Green, Leslie P., Chicago, Ill. Scraper. 2,109,195; Feb. 22.

Green, Lucille, and J. Marks, Los Angeles, Calif. Brassière. 2,109,172; Feb. 22.

Greist Manufacturing Company, The. (See Greist, W. C., and Baehr, assignors.)

Greist, Walter C., and C. G. Baehr, New Haven, Conn, assignors to The Greist Manufacturing Company. Binding and piping attachment for sewing machines. 2,109,214; Feb. 22.

Grembecki, Elmer C., Chicago, Ill. Dampener for printing presses. 2,108,984; Feb. 22.

Griebach, Franz, Dessau, assignor to T. Junkers, Gauting, near Munich, Germany. Metallic wall structure. 2,108,885; Feb. 22.

Grieve, Price, Sigourney, Iowa. Leveling instrument. 2,109,044; Feb. 22.

Grigoriu, Cesar, Bucharest, Rumania. Target indicator. 2,108,919; Feb. 22.

Groene, William F., assignor to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio. Resilient work driving means. 2,109,371; Feb. 22.

Grosser, Mary, Chicago, Ill. Combined crib and wardrobe. 2,109,267; Feb. 22.

Grosso, Patrick P., Brooklyn, N. Y. Adjustable angle surgical instrument. 2,109,147; Feb. 22.

Guenther, Fritz, and H. Holsten, Ludwigshafen-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Sulphamic acid substance. 2,108,886; Feb. 22.

Guenther, Fritz, and H. Holsten, Ludwigshafen-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Sulphamic acid substance. 2,108,887; Feb. 22.

Guernsey, Charles O., Yeadon, Pa. Clutch control apparatus. 2,109,420; Feb. 22.

Gulf Coast Machine & Supply Company. (See O'Neal, James C., assignor.)

Gulf Oil Corporation. (See McCoy, William K., assignor.)

Gunite and Waterproofing Limited. (See Doull, Robert M., assignor.)

Gunter, Howard H., Baltimore, Md. Automobile lift. 2,108,888; Feb. 22.

Gutmann, Ferdinand, & Co. (See Rasmussen, Charles H., assignor.)

Guy, James S. (See Bullard, W. P., and Guy.)

Gwinn, George W., Hewlett, N. Y., assignor to American Machine & Foundry Company. Rotary cigarette Catcher. 2,109,148; Feb. 22.

Hadley, Homer M., Seattle, Wash. Cellular form for embedment in concrete construction. 2,109,009; Feb. 22.

Haffner, Louis D., St. Louis, Mo. Educational device. 2,108,855; Feb. 22.

Hague, Louis M., Rumson, assignor to Hanson-Van Winkle-Munning Company, Matawan, N. J. Fibrous buff. 2,108,985; Feb. 22.

Halfen, Frank, et al. (See Flury, William J., assignor.)

Halkyard, Charles C., assignor to Hume Pipe Company (Australia) Limited, Melbourne, Australia. Molding of concrete pipes and the like. 2,109,421; Feb. 22.

Hall, Elisha W., Scituate, Mass. Buring or polishing wheel. 2,108,966; Feb. 22.

Halperin, Herman, Chicago, Ill. Duct splice for high voltage cables. 2,108,889; Feb. 22.

Hammond, Theodore A., Upper Montclair, N. J. Filtering valve and the like. 2,109,230; Feb. 22.

Hanson, Andrew C., Racine, Wis. Controlling device for window shade rollers. 2,109,112; Feb. 22.

Hanson, Daniel, Haselor, Alcester, and W. T. Pell-Walpole, Tipton, assignors to J. Campbell, Kensington, England. Tin alloy. 2,109,387; Feb. 22.

Hanson-Van Winkle-Munning Company. (See Hague, Louis M., assignor.)

Harbison-Walker Refractories Company. (See Smalley, Henry L., assignor.)
Harder, Edwin L., Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Regulator rheostat. 2,109,214; Feb. 22.
Harder, Edwin L., Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Regulating system. 2,109,215; Feb. 22.
Hardy, Isaac A., Evansville, Ind., assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Machine for loading wrappers or pouches. 2,109,231; Feb. 22.
Harley-Davidson Motor Co. (See Harley, William S., assignor.)
Harley, William S., assignor to Harley-Davidson Motor Co., Milwaukee, Wis. Radio carrying attachment for bicycles and motorcycles. 2,109,315; Feb. 22.
Harley, William S., assignor to Harley-Davidson Motor Co., Milwaukee, Wis. Oil tank and battery assembly. 2,109,316; Feb. 22.
Hartmann Trunk Company. (See Ritter, J., Jr., and Hartmann, assignors.)
Haselton, Fern D., Newark, N. J. Drafting apparatus. 2,109,065; Feb. 22.
Haskell, Robert R., Swampscott, Mass., and H. J. Morton, Batavia, assignors to Ditto, Incorporated, Chicago, Ill. Assembling and laying master sheets for duplication. 2,109,066; Feb. 22.
Haughton, Wilfrid H., Carshalton Beeches, England. Deformable figure employable for production of animated cartoon films. 2,109,422; Feb. 22.
Havard, Charles S., New York, N. Y., assignor to Neptune Meter Company. Automatic seroiser for dispensing pumps. 2,109,352; Feb. 22.
Havard, Charles S., New York, N. Y., assignor to Neptune Meter Company. Automatic seroising device for dispensing pumps. 2,109,353; Feb. 22.
Heckman, Charles, West Palm Beach, Fla. Transmission. 2,109,290; Feb. 22.
Hedman Manufacturing Company, The. (See Dahlberg, Fred W., assignor.)
Heinitz, Woldemar, assignor to Schubert & Salzer Maschinenfabrik Aktiengesellschaft, Chemnitz, Germany. Flat rib knitting machine. 2,109,423; Feb. 22.
Heinrich, Walter A., assignor to James R. Kearney Corporation, St. Louis, Mo. Electrical connecter. 2,108,856; Feb. 22.
Heller, Julius, Vienna, Austria, assignor to The Cleveland Tractor Company, Cleveland, Ohio. Land vehicle equipped with lead-shifting devices. 2,109,388; Feb. 22.
Henderson, Douglas. (See McLaughlin, Frank.)
Henriksen, Alfred. (See Lincoln, B. H., and Henriksen.)
Henriksen, Ellen M., administratrix. (See Lincoln, B. H., and Henriksen.)
Henry, George W., Jr., assignor to Scobar Company, Philadelphia, Pa. Repricer. 2,109,389; Feb. 22.
Hercules Powder Company. (See Bennett, James L., assignor.)
Hercules Powder Company. (See Fisher, Lloyd H., assignor.)
Hercules Powder Company. (See Rummelsburg, Alfred L., assignor.)
Herger, Rudolph. (See Speckhart, S. J., and Herger.)
Herndon, William T., assignor of one-third to E. M. Blackwood and one-third to T. McInnis, Fayetteville, N. C. Wave motor. 2,109,173; Feb. 22.
Hess, Harry A., assignor of one-half to E. Foss, Elcho, Wis. Battery terminal and post. 2,109,424; Feb. 22.
Hewitt, Ellis E. (See Cook, E. S., and Hewitt.)
Hewitt, Ellis E. (See Farmer, C. C., and Hewitt.)
Hewitt, Ellis E., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure brake. 2,109,045; Feb. 22.
Hewitt, Ellis E., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Electropneumatic brake apparatus. 2,109,046; Feb. 22.
Hewitt, Ellis E., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure brake. 2,109,047; Feb. 22.
Hibshman, James R., Cleveland Heights, Ohio, assignor to H. V. Ensten. Headwear. 2,109,248; Feb. 22.
Hickman, John G., assignor to Ternstedt Manufacturing Company, Detroit, Mich. Ventilating window. 2,109,349; Feb. 22.
Higley, Walter C., Toledo, Ohio. Cigarette. 2,109,132; Feb. 22.
Hilderbrant, Daniel W., Farmersville, Calif. Clothespin. 2,109,023; Feb. 22.
Hill, Edward G., Richmond, Va., and J. X. Phillips, Washington, D. C., assignors to Hill Engineering Corporation, Richmond, Va. Automatic gear shifting mechanism. 2,109,443; Feb. 22.
Hill Engineering Corporation. (See Hill, E. G., and Phillips, assignors.)
Hinds, James W., Dallas, assignor of forty-nine per cent to P. J. Pond, Wichita Falls, Tex. Dye. 2,109,372; Feb. 22.
Hodgins, Theodore S. (See Hovey, A. G., and Hodgins.)
Hoe, R., & Co. (See Quick, C. G., Ball, and Whitehead, assignors.)
Hoelscher, Friederich. (See Reppe, W., Hoelscher, and Schneevoigt.)
Hokanson, Martin, assignor to Eidco, Inc., Duluth, Minn. Drill bit. 2,109,390; Feb. 22.
Holland, Alfred H., and R. A., Winston-Salem, N. C. Refectory table. 2,108,816; Feb. 22.
Holland, Robert A. (See Holland, Alfred H. and R. A.)
Holsten, Herman. (See Guenther, F., and Holsten.)
Holzach, Karl. (See Ohlendorf, H., Baumann, and Holzach.)
Holzach, Karl, C. Winter, and R. v. Bock, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Production of azo dyestuffs. 2,109,024; Feb. 22.
Honig, Morris, Bronx, N. Y. Fire ladder and Safety elevator. 2,109,196; Feb. 22.
Hooker, Albert H., Lewiston, assignor to Hooker Electrochemical Company, New York, N. Y. Reduction of contamination by metals in caustic alkali solutions. 2,109,250; Feb. 22.
Hooker Electrochemical Company. (See Hooker, Albert H., assignor.)
Hopf, Heinrich, P. Garbsch, and F. Teller, Ludwigshafen-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of artificial masses from vinyl esters. 2,108,857; Feb. 22.
Hopper, Basil. (See Aldridge, E. G., and Hopper.)
Hoppert, Filser D., W. R. Bull, and C. B. Simpson, Springfield, Mass. Machine gun. 2,108,817; Feb. 22.
Horn, Ralph B., Brighton, Ala., assignor to The Republic Steel Corporation, Cleveland, Ohio. Burner for sintering machines. 2,109,149; Feb. 22.
Houde Engineering Corporation. (See Casper, Anthony B., assignor.)
Hovey, Almon G., Pleasant Ridge, and T. S. Hodgins, assignors to H. Reichhold, doing business as Reichhold Chemicals, Detroit, Mich. Urea-formaldehyde-polyhydric alcohol-polybasic acid condensation products. 2,109,291; Feb. 22.
Hoyt, Richard H. Los Angeles, Calif. Holster. 2,109,232; Feb. 22.
Hribar, Joseph. Lockport, Ill. Grinding device. 2,109,292; Feb. 22.
Hudson, Franklin. (See Engel, F. A., and Hudson.)
Huff, Sargent P., Chevy Chase, Md., and A. Adelman, Chesaning, Mich. Practice bomb. 2,108,818; Feb. 22.
Huffstutter, John W., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Arc-extinguishing device. 2,109,216; Feb. 22.
Humason, Granville, A., Houston, Tex. Combination clean-out and sample tool. 2,109,197; Feb. 22.
Hume Pipe Company (Australia) Limited. (See Halkyard, Charles C., assignor.)
Humiston, Walter D., Flushing, N. Y. Indurating lumber. 2,108,920; Feb. 22.
Hunt, Scott F., assignor to Bendix Aviation Corporation, South Bend, Ind. Carburetor. 2,109,113; Feb. 22.
Hurxthal, Alpheus O., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa. Drying leather and similarly tautly stretched units. 2,109,425; Feb. 22.
Hutchison, Frank C., et al. (See Roll, Walter H., assignor.)
Hydraulic Press Corporation, The. (See Boehle, Friedel, assignor.)
I'Anson, Charles F., Kenosha, Wis. Key-identifying device. 2,109,268; Feb. 22.
I. G. Farbenindustrie Aktiengesellschaft. (See Eggert J., and Luft, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See Guenther, F., and Holsten, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See Hopf, H., Garbsch, and Teller, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See Neukirch, Eberhard, assignor.)
I. G. Farbenindustrie Aktiengesellschaft. (See Pier, M., and Engel, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See von Weinberg, A., Rein, and Eisenhut, assignors.)
Imkamp, Karl, assignor to Anker-Werke, A. G., Bielefeld, Germany. Printing and resetting mechanism. 2,108,858; Feb. 22.
Imperial Chemical Industries Limited. (See Ellingworth, Samuel, assignor.)
Imperial Chemical Industries Limited. (See Fawcett, E. W., and McCowen, assignors.)
Imperial Chemical Industries Limited. (See Lawrie, L. G., Reynolds, and Piggott, assignors.)
Imperial Chemical Industries Limited. (See Moore, Joseph G., assignor.)
Imperial Typewriter Company Limited. (See Brownjohn, Joseph H., assignor.)
Industrial Patents Corporation. (See McKim, Charles F., assignor.)
Industrial Patents Corporation. (See Mehlenbacher, Virgil C., assignor.)
Industrial Patents Corporation. (See Straeten, Charles L., assignor.)
Industrial Patents Corporation. (See Walter, Charles T., assignor.)
Industrial Patents Corporation. (See Young Harland H., Jr., assignor.)
Ingersoll Milling Machine Company, The. (See Johnson, J. R., Oberhoffner, and Cotta, assignors.)
Ingersoll Milling Machine Company, The. (See Lyon, Arthur H., assignor.)
Ingersoll-Rand Company. (See Mack, Albert R., assignor.)

Ingersoll, Stephen L., assignor to Borg-Warner Corporation, Chicago, Ill. Making laminated metal blanks. 2,109,010; Feb. 22.
Inner-Tite Clamp Corporation. (See Engel, F. A., and Hudson, assignors.)
Ion Corporation. (See Kott, Hermann, assignor.)
Inselbe, Sidney D., Shanley, Ohio. Tube cleaning apparatus. 2,108,790; Feb. 22.
International Patents Development Company. (See Kerr, Ralph W., assignor.)
Irvin, Richard, Pittsburgh, Pa. Cribbing structure. 2,109,025; Feb. 22.
Isaacson, Fred A., Tacoma, Wash. Brake beam safety carrier. 2,108,987; Feb. 22.
Jackson, Joseph B., assignor to Draper Corporation, Hopedale, Mass. Loom reed adjusting means. 2,109,444; Feb. 22.
Jacobson, Wilgot J., Buffalo, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Flashback-resistant blowpipe. 2,108,819; Feb. 22.
Jacobson, Wilgot J., Elizabeth, N. J., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Blowpipe. 2,108,820; Feb. 22.
Jacobson, Wilgot J., Elizabeth, N. J., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Fluid mixer. 2,109,321; Feb. 22.
Jacobson, Wilgot J., Elizabeth, N. J., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Blowpipe. 2,109,259; Feb. 22.
Jänicke, Hermann, Dessau (Anhalt), assignor to T. Junkers, Ganting, near Munich, Germany. Motor compressor of the free piston type. 2,108,850; Feb. 22.
Jensen, Louis, Chicago, Ill., assignor to United Autographic Register Co. Adapter for typewriters. 2,109,293; Feb. 22.
Johnson Bror. (See Von Sneidaden, R., and Johnson.)
Johnson, Clarence C., New York, N. Y., assignor to American District Telegraph Company, Jersey City, N. J. Water flow detector and alarm means. 2,109,317; Feb. 22.
Johnson, Elvin H., Winnetka, Ill. Door holder. 2,108,891; Feb. 22.
Johnson, John R., A. Oberhoffner, and R. L. Cotta, assignors to The Ingersoll Milling Machine Company, Rockford, Ill. Machine tool. 2,109,321; Feb. 22.
Johnson, Julius M. (See Lauck, A. G., and Johnson.)
Johnston, Howard M., assignor to Massey-Harris Company, Limited, Toronto, Ontario, Canada. Riveting device. 2,109,067; Feb. 22.
Jorgenson, Arthur P., assignor to Bean Manufacturing Company, Racine, Wis. Paint and liquid mixer. 2,109,233; Feb. 22.
Joyce, James J., Portsmouth, N. H. Night road marker. 2,109,011; Feb. 22.
Judd, Irving R., Detroit, assignor to Whitehead & Kales Company, River Rouge, Mich. Truck trailer combination. 2,108,968; Feb. 22.
Junkers, Therese. (See Gricksch, Franz, assignor.)
Junkers, Therese. (See Jänicke, Hermann, assignor.)
Just, Arthur R., et al. (See Hilbum, Philip, assignor.)
Kadel, Byers W., Baltimore, Md., assignor to The Symington-Gould Corporation, Rochester, N. Y. Draft rigging. 2,109,133; Feb. 22.
Kaden, Heinrich, Berlin-Siemensstadt, P. Thomas, Berlin-Wilmersdorf, and H. Wannemacher, Berlin-Spandau, assignors to Siemens & Halske, Aktiengesellschaft, Siemensstadt, Berlin, Germany. Communication cable comprising one or more screened core groups. 2,109,324; Feb. 22.
Kalko, Stephen, Bordentown Township, Burlington County, N. J. Variable speed transmission. 2,109,174; Feb. 22.
Kambli, Eduard, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Indigoid dyestuffs. 2,108,938; Feb. 22.
Kamborian, Jacob S., Newton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Method and means for use in lasting shoes. 2,108,859; Feb. 22.
Karolus, August, Leipzig, Germany, assignor to Radio Corporation of America. Television apparatus. 2,109,198; Feb. 22.
Katadyn Inc. (See Krause, George A., assignor.)
Kaufman, Harold L., Warren, Pa., assignor of one-half to P. Bechtner, Chicago, Ill. Method of and substance for treating tobacco smoke. 2,108,900; Feb. 22.
Kaufman, Cecil D. (See McDonald, Raymond W., assignor.)
Kaufmann, Hans, Munster, Germany. Manufacturing (1-phenyl-2,3-dimethyl-5-pyrazolonyl)-isopentyl-ketone. 2,109,445; Feb. 22.
Kearney, James R., Corporation. (See Boothe, Eugene F., assignor.)
Kearney, James R., Corporation. (See Heinrich, Walter A., assignor.)
Keenan, Walter M., Fieldston, N. Y. Centrifugal ash separators. 2,109,224; Feb. 22.
Keiser, Bernhard. (See De Groote, M., Keiser, Faure, and Wirtel, assignors.)
Kelsey-Hayes Wheel Company. (See Main, F. L., and Sawtelle, assignors.)
Kendall, Marcus T., Long Beach, Calif., assignor to The Texas Company, New York, N. Y. Refining of mineral oils. 2,109,446; Feb. 22.
Kendrick, Arthur B., East Orange, N. J., assignor to James R. Kendrick Co., Inc., Philadelphia, Pa. Surgical appliance. 2,109,124; Feb. 22.
Kendrick, James R., Co. (See Kendrick, Arthur B., assignor.)
Kennecott Copper Corporation. (See Larson, L., and Kinnear, assignors.)
Kennedy, William J., New York, N. Y. Turnstile. 2,109,354; Feb. 22.
Kenyon, Cecil T., Wilmerding, Pa. Aeroplane control mechanism. 2,108,861; Feb. 22.
Kerr, Henry H., Jr., assignor to Bendix Aviation Corporation, South Bend, Ind. Hydraulic Bowden control. 2,109,114; Feb. 22.
Kerr, Ralph W., Riverside, Ill., assignor to International Patents Development Company, Wilmington, Del. Halogenated thick boiling starch. 2,108,862; Feb. 22.
Kestenman Bros. Mfg. Co. (See Kestenman, Charles H., assignor.)
Kestenman, Charles H., assignor to Kestenman Bros. Mfg. Co., Providence, R. I. Insignia holding bracelet clasp. 2,108,892; Feb. 22.
Kerstone Steel & Wire Company. (See Dismick, Bless C., assignor.)
Kiefl, Abram T., Grand Haven, Mich. Dish. 2,108,863; Feb. 22.
Kiekhaefer, Elmer C. (See Stearns, R. H., and Kiekhaefer.)
Killian, Edward S., Akron, Ohio, assignor to Frank B. Killian, trustee. Method and apparatus for handling rubber articles. 2,109,150; Feb. 22.
Killian, Frank B., trustee. (See Killian, Edward S., assignor.)
Kilpatrick, John R., New York, N. Y. Stage exhibiting card plays of bridge games. 2,109,175; Feb. 22.
Kimball, Wallace D., Jackson Heights, and C. L. Braren, Jamaica, assignors to Standard-Knapp Corporation, Long Island City, N. Y. Case packing machine. 2,109,294; Feb. 22.
King, Henry H., West Palm Beach, Fla. Plant protector. 2,109,426; Feb. 22.
Kinnear, Blanch T., Still River, Mass. Antiskid device. 2,109,068; Feb. 22.
Kinnear, John C. (See Larson, L., and Kinnear.)
Kleine, Otto A., Chicago, Ill. Eyeshade. 2,109,115; Feb. 22.
Klimrath, Victor W. (See Bragg, C. S., and Klimrath.)
Klimek, Gustav A., East Rutherford, N. J., assignor to Diehl Corporation, New York, N. Y. Synchro selective constant mesh transmission. 2,108,986; Feb. 22.
Knight, Henry H., Canton, assignor to Davis & Furber Machine Company, North Andover, Mass. Fiber cutting mechanism for tape condenser or similar machines. 2,109,176; Feb. 22.
Knutson, Carl L., Maywood, assignor to Cinch Manufacturing Corporation, Chicago, Ill. Radio socket. 2,109,217; Feb. 22.
Koeberle, Karl. (See Kuns, M. A., and Koeberle.)
Koenig, Walter J., assignor to Sloane-Blabon Corporation, Philadelphia, Pa. Composition of matter and making the same. 2,108,893; Feb. 22.
Koerner, Theodore W., assignor, by mesne assignments, to Nash-Kelvinator Corporation, Detroit, Mich. Refrigerating apparatus. 2,109,199; Feb. 22.
Kohut, Julius B., Brooklyn, N. Y. Floodless radiator steam valve. 2,109,269; Feb. 22.
Kolstad, Welding J., Hyde Park, Mass. Stamping tool. 2,109,253; Feb. 22.
Kopp, Frank, Brooklyn, and L. Morris, Mount Vernon, N. Y. Slip construction. 2,108,894; Feb. 22.
Kott, Hermann, East Orange, assignor, by mesne assignments, to Ion Corporation, Short Hills, N. J. Radiation filter and utilizing the same. 2,109,235; Feb. 22.
Krackowizer, Hermann J., Chicago, Ill. Refrigerating apparatus. 2,109,270; Feb. 22.
Krahl, Walter L., Montclair, assignor, by mesne assignments, to Arcturus Development Company, Newark, N. J. Shock absorber for the elements of thermionic tubes. 2,108,987; Feb. 22.
Krause, Daniel E., Columbus, Ohio, assignor, by mesne assignments, to Monsanto Chemical Company. Vitreous enameled products. 2,109,271; Feb. 22.
Krause, Georg A., Munich, Germany, assignor, by mesne assignments, to Katadyn, Inc., New York, N. Y. Artificially aging alcoholic liquids and perfumes. 2,109,151; Feb. 22.
Kreft, Verney R., Pittsburgh, Pa., and A. Roe, Newark, assignor to Carbondale Machine Corporation, Harrison, N. J. Chilling apparatus. 2,109,135; Feb. 22.
Kroger, Fred H., Rocky Point, N. Y., assignor to Radio Corporation of America. Frequency control transmission line. 2,108,895; Feb. 22.
Krupp, Fried. Aktiengesellschaft. (See Naumann, Friedrich K., assignor.)
Kuchar, Joseph, assignor to Athey Truss Wheel Co., Chicago, Ill. Hydraulic door operator for wagons. 2,108,864; Feb. 22.
Kuns, Max A., Mannheim, and K. Koeberle, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Derivatives of the anthrapyrimidine series. 2,109,116; Feb. 22.
Kunze, Wilhelm. (See Zerweck, W., Kunze, and Brunner.)
Landgraf, Joseph, Chicago, Ill. Fastening device. 2,109,254; Feb. 22.

Landreck, Paul, Rochester, N. Y., assignor to Photostat Corporation, Providence, R. I. Photographic film indicator. 2,109,373; Feb. 22.

Lank, Clarence H., Gloucester, Mass. Liquid level gauge. 2,109,355; Feb. 22.

Larson, Ernest E. (See Turner, Howard H., assignor.)

Larson, Leonard, and J. C. Kinnear, McGill, Nev., assignors to Kennecott Copper Corporation, New York, N. Y. Selective converting of copper matte. 2,109,272; Feb. 22.

Larson, Louis G., Jersey City, N. J., assignor to Wirtheen Associates, Inc., New York, N. Y. Slotting machine. 2,109,350; Feb. 22.

Lauck, Albert G., and J. M. Johnson, Alton, Ill., assignors to Owens-Illinois Glass Company. Apparatus for surface treating glass containers. 2,109,291; Feb. 22.

Lauson Company, The. (See Bosma, Alfred S., assignor.)

Lawler, Simeon C., assignor to H. H. Doerr, Chicago, Ill. Mop holder. 2,109,335; Feb. 22.

Lawrance, Athol E. N., Johannesburg, Transvaal, Union of South Africa. Acoustical device. 2,109,012; Feb. 22.

Lawrie, Leslie G., R. J. Reynolds, and H. A. Piggott, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited. Textile fabric and making the same. 2,109,295; Feb. 22.

Leary, James W., Bloomfield, N. J., assignor to American Machine & Foundry Company. Cigarette tobacco feed. 2,109,200; Feb. 22.

Lebedeff, Yurii E. (See Betterton, J. O., and Lebedeff.)

Le Blanc, Charles, Los Angeles, Calif. Hydraulically controlled dirt moving machine. 2,109,392; Feb. 22.

Le Blanc, Charles, Los Angeles, Calif. Trailbuilder, bulldozer, and the like. 2,109,393; Feb. 22.

Le Blond, R. K., Machine Tool Company, The. (See Greene, William F., assignor.)

Lehmann, Karl A., Freudenstadt, and E. Breitling, Berlin-Tempelhof, Germany, assignors to The National Cash Register Company, Dayton, Ohio. Cash register. 2,108,896; Feb. 22.

Leibing, William E., Sausalito, Calif., and W. B. Fagaol, Kent, Ohio. Fuel control apparatus. 2,109,296; Feb. 22.

Levi, Ormonde S. (See Calkins, L. E., and Levi.)

Levin, Salomon, Lille, France. Machine for cutting, embossing, and printing sheets of paper and cardboard. 2,109,088; Feb. 22.

Levy, René L., Montrouge, France, assignor to Société d' Inventions Aéronautiques et Mécaniques S. I. A. M., Fribourg, Switzerland. Retractable landing gear. 2,109,427; Feb. 22.

Lewis Invisible Stitch Machine Company. (See Mueller, Charles W., assignor.)

Lewis, Robert P., Toledo, Ohio, assignor to Automatic Drive & Transmission Company, Gloucester City, N. J. Automatic clutch mechanism. 2,108,969; Feb. 22.

Lewis, William W., Port Washington, N. Y. Regulator for Venetian blinds. 2,108,939; Feb. 22.

Ley, Gaston J., J. H. Payne, and G. Akau, Honolulu, Hawaii, dedicated to the free use of the People of the United States. Making food product. 2,108,897; Feb. 22.

Lichter, Malvin, New Rochelle, assignor to The Stickless Corporation, New York, N. Y. Miniature mending kit. 2,109,318; Feb. 22.

Lincoln, Bert H., and A. Henriksen, deceased; by E. M. Henriksen, administratrix, Ponca City, Okla., assignors, by mesne assignments, to The Lubri-Zol Development Corporation, Cleveland, Ohio. Lubricating oil. 2,109,357; Feb. 22.

Lindsay, Daniel C., Johannesburg, Union South Africa, assignor, by mesne assignments, to Carrier Corporation, Newark, N. J. Mine cooling system. 2,109,236; Feb. 22.

Lippincott, Wells A., Chicago, Ill. Printing plate and formation thereof. 2,108,822; Feb. 22.

Lippold, Carl J., Wauwatosa, assignor to J. M. Nash Company, Milwaukee, Wis. Sanding and polishing machine. 2,109,009; Feb. 22.

Liquid Carbonic Corporation, The. (See Cordrey, Almon J., assignor.)

Little, Jesse, Warwick, assignor to Davol Rubber Company, Providence, R. I. Closure for nursing bottles and the like. 2,109,374; Feb. 22.

Little, John. (See Smeal, Ellis K., assignor.)

Livingston, Harry M., Rainier, Wash. Rotary scraper. 2,109,394; Feb. 22.

Logan, John W., Jr., Forest Hills, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. High speed brake equipment. 2,109,167; Feb. 22.

Long, Elmer C., Grosse Pointe Park, Mich. Piston for internal combustion motors. 2,108,865; Feb. 22.

Longley, James N., Chinley, England, assignor to Ferodo and Asbestos Inc., Ambler, Pa. Friction material and forming same. 2,108,988; Feb. 22.

Lorenzen, Bert L., assignor of one-half to M. O. McComb, Los Angeles, Calif. Juice extractor. 2,109,048; Feb. 22.

Lubri-Zol Development Corporation. (See Lincoln, B. H., and Henriksen, assignors.)

Ludlow, Edmund. (See Noblitt, Q. G., and Ludlow.)

Luft, Fritz. (See Eggert, J., and Luft.)

Lustig, Ludwig, Manhasset, N. Y. Power plant. 2,109,237; Feb. 22.

Lyon, Arthur H., assignor to The Ingersoll Milling Machine Company, Rockford, Ill. Machine tool. 2,108,823; Feb. 22.

Lyons, Paul M., assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,108,898; Feb. 22.

M. & D. Display Mfg. Corporation. (See Mapson, Robert L., assignor.)

MacDonald, William W., Mountain View, assignor to Max L. Rosenfeld, San Francisco, Calif. Truck. 2,109,177; Feb. 22.

MacIntire, Walter H., Knoxville, Tenn. Making di-calcium phosphate. 2,108,940; Feb. 22.

MacLeod, William J., Lochmoor, Grosse Pointe Village, Mich., assignor to Backstay Welt Company, Union City, Ind. Core for trimming moldings. 2,109,428; Feb. 22.

Mack, Albert R., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Rotation mechanism. 2,108,969; Feb. 22.

MacKenzie, Philip, Oakland, Calif. Air control valve for gear shifts. 2,109,070; Feb. 22.

Magazine Repeating Razor Company. (See Rodrigues, Octavius V., assignor.)

Main, Frank L., Birmingham, and C. A. Sawtelle, assignors to Kelsey-Hayes Wheel Company, Detroit, Mich. Brake mechanism. 2,109,013; Feb. 22.

Malm, Axel S., West Hartford, Conn. Swimming device. 2,109,429; Feb. 22.

Mandl, Sigmund, assignor to Blackhawk Mfg. Co., Milwaukee, Wis. Socket wrench. 2,108,866; Feb. 22.

Mapson, Robert L., assignor to M. & D. Display Mfg. Corporation, Los Angeles, Calif. Display fixture. 2,109,256; Feb. 22.

Marathon Paper Mills Company. (See Cocks, George W., assignor.)

Marathon Paper Mills Company. (See Rossman, J., and Wagner, assignors.)

Marden, William L., Jackson Heights, N. Y., assignor to Neptune Meter Company. Dispensing apparatus. 2,109,178; Feb. 22.

Markle, George B., Jr., assignor to Freeland Spool and Bobbin Corp, Hazelton, Pa. Bobbin. 2,109,430; Feb. 22.

Markle, Matthew G., Lake Bluff, and L. W. Tuttle, Mount Prospect, Ill. Atomizing type oil fogger. 2,109,136; Feb. 22.

Markley, George E., Cleveland Heights, Ohio. Mechanical movement applicable to material screening apparatus. 2,109,395; Feb. 22.

Marks, Jean. (See Green, L., and Marks.)

Marsden, Leonard, Newton-le-Willows, England. Machine for depositing cream, chocolate, or the like on biscuits. 2,109,336; Feb. 22.

Marsh, Harold A., Brooklyn, N. Y. Filler cap fastener. 2,109,137; Feb. 22.

Massey-Harris Company. (See Johnston, Howard M., assignor.)

Mastney, Edward J., Berwyn, assignor to Oak Manufacturing Company, Chicago, Ill. Switch. 2,109,319; Feb. 22.

Mather Spring Company, The. (See Nilsson, Robert W., assignor.)

Mathieu, Gaston A., Shirehall Park, London, England, assignor to Radio Corporation of America. Radio direction system. 2,108,867; Feb. 22.

Mathieson Alkali Works, Inc., The. (See Vincent, George P., assignor.)

Matsenaga, Yonosuke, Naka-ku, Yokohama, Japan. Aluminium alloy. 2,109,117; Feb. 22.

Maulen, Frederick, East Orange, N. J., assignor to Baker & Company, Inc. Tooth pins for artificial teeth. 2,109,128; Feb. 22.

Mautsch, Robert H., Brussels, Belgium, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Ventilating confined spaces. 2,109,071; Feb. 22.

Mayfield, Owen, Houston, Tex., assignor to Corona Products, Inc., Rogers, Ark. Amorphous silica drilling fluid. 2,109,337; Feb. 22.

McCann, Thomas A., East Orange, N. J., assignor to American Telephone and Telegraph Company. Telegraph repeating system. 2,109,028; Feb. 22.

McComb, Mary O. (See Lorenzen, Bert L., assignee.)

McCowen, John L. (See Fawcett, H. W., and McCowen.)

McCoy, William K., assignor to Gulf Oil Corporation, Pittsburgh, Pa. Thermocouple system. 2,109,896; Feb. 22.

McCullough, Edward J., New York, N. Y. Oil burner. 2,109,027; Feb. 22.

McDonald, Raymond W., assignor of one-half to C. D. Kaufmann, Washington, D. C. Radio apparatus. 2,109,431; Feb. 22.

McFadden, Rose M., Glendale, Calif. Curler. 2,109,218; Feb. 22.

McGowan, Thomas R. (See Gantner, W. A., and McGowan.)

McInnis, Thomas, et al. (See Heradon, William T., assignor.)

McKeel, Percy D., Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Antenna coupling device for five meter receivers. 2,109,219; Feb. 22.

McKim, Charles F., assignor to Industrial Patents Corporation, Chicago, Ill. Pimple removal. 2,108,921; Feb. 22.

McKinney, Edward G., Euid, Okla. System of speed regulation. 2,109,970; Feb. 22.

McKinney, William W. (See Springer, Robert R., assignee.)

McLaughlin, Frank, assignor, by mesne assignments, to Douglas Henderson, Toronto, Ontario, Canada. Closure for collapsible tubes and containers. 2,109,207; Feb. 22.

McMeans, Dewitt C., Lordsburg, N. Mex. Explosive. 2,109,049; Feb. 22.

McMurry, William F., and G. F. Phillips, assignors to Scientific Engineering Corporation, Tulsa, Okla. Hydraulic control for drilling rigs. 2,109,297; Feb. 22.

McNally, James G., and J. B. Dickey, assignors to Eastman Kodak Company, Rochester, N. Y. Azo compounds and process for dyeing therewith. 2,108,894; Feb. 22.

McNitt, Willard C., Winnetka, Ill. Tomato juice extractor. 2,109,298; Feb. 22.

Meacham, Benjamin H. and H. M., Lorain, Ohio, assignors to American Stove Company, St. Louis, Mo. Lighter arrangement for gas ranges. 2,109,209; Feb. 22.

Meacham, Edward M. (See Meacham, Benjamin H. and H. M.)

Mehlenbacher, Virgil C., assignor to Industrial Patents Corporation, Chicago, Ill. Stabilization of oil. 2,109,922; Feb. 22.

Meisel, Charles A., Milton, assignor to Meisel Press Manufacturing Company, Boston, Mass. Securing plate on printing press cylinders. 2,109,153; Feb. 22.

Meisel Press Manufacturing Company. (See Meisel, Charles A., assignor.)

Mendelsohn, Louis H., Paterson, N. J. Stocking. 2,108,923; Feb. 22.

Michael, Ferrie E., Rosel, Kans. Antiflooding attachment for carburetors. 2,109,179; Feb. 22.

Miescher, Karl, Riehen, near Basel. A. Wettstein, and C. Schols, assignors to the firm of Society of Chemical Industry in Basle, Basel, Switzerland. Esters of testosterone and making same. 2,109,400; Feb. 22.

Miller, Raymond E. (See Farmer, C. C., and Miller.)

Miller, Raymond E., Wilkinsburg, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Brake control means. 2,108,168; Feb. 22.

Miller, William J., Swissvale, Pa. Process and installation for making pottery. 2,109,026; Feb. 22.

Milwaukee Saw Trimmer Corporation. (See Billker, F. W., and Ball, assignors.)

Miner, W. H., Inc. (See Dentler, Arnold R., assignor.)

Minneapolis-Honeywell Regulator Company. (See Fisher, George H., assignor.)

Mock, Frank C., Montclair, assignor to Eclipse Aviation Corporation, East Orange, N. J. Internal combustion engine. 2,109,296; Feb. 22.

Mohun, Meade, San Mateo, Calif. Shoe construction. 2,109,180; Feb. 22.

Moloney, Raymond T. (See Breitenstein, Herbert G., assignor.)

Monsanto Chemical Company. (See Krause, Daniel E., assignor.)

Moore, Perry L. (See Clay, James R., assignor.)

Moore, Joseph G., Runcorn, England, assignor to Imperial Chemical Industries Limited. Chemical composition. 2,109,299; Feb. 22.

Morgan, Joseph T., Cardiff, Wales. Change speed gear mechanism for cycles and the like. 2,108,941; Feb. 22.

Morgenstern, Stefan, Berlin-Charlottenburg, and J. Eggert, Berlin, assignors to Deutsche Hydrierwerke Aktiengesellschaft, Berlin-Charlottenburg, Germany. Plastic composition. 2,109,432; Feb. 22.

Morin, Edward J., Omaha, Nebr. Picture storage and display cabinet. 2,109,433; Feb. 22.

Morlock, Emil, Frankfort-on-the-Main, Germany, assignor to American Lurgi Corporation, New York, N. Y. Apparatus for the continuous splitting of fats or oils. 2,108,990; Feb. 22.

Morris, Elmer C., Chicago, Ill. Dispensing device for paper napkins. 2,108,825; Feb. 22.

Morris, Lewis. (See Kopp, F., and Morris.)

Mortensen, Martin, Verdi, Nev. Gate. 2,109,300; Feb. 22.

Morton, Henry J. (See Haskell, R. R., and Morton.)

Motion Picture Electric Products. (See Bardwell, C., Erickson, and Rose, assignors.)

Moyes, Scoris M., assignor of two-fifths to H. M. Stagnaro, Stockton, Calif. Sink partition insert. 2,109,089; Feb. 22.

Muehter, Manfred W., Nutley, assignor to American District Telegraph Company, Jersey City, N. J. Non-interfering successive signaling system. 2,109,273; Feb. 22.

Mueller, Charles W., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo. Top feed mechanism for sewing machines. 2,109,014; Feb. 22.

Mueller, Otto, assignor of one-half to R. E. Strub, Toledo, Ohio. Mechanical movement. 2,108,991; Feb. 22.

Mugdan, Martin. (See Sirt, J., and Mugdan.)

Muldowney, John, St. Clair, Pa. Automatic cut-off for electric irons. 2,109,181; Feb. 22.

N. V. Philips' Gloeilampenfabrieken. (See Niclaasen, Hans, assignor.)

Nakane, Kazuji, Nada-ku, Kobe, Japan. Apparatus for after-treatment of fresh made rayon thread. 2,109,301; Feb. 22.

Nash, J. M., Company. (See Lippold, Carl J., assignor.)

Nash-Kelvinator Corporation. (See Koerner, Theodore W., assignor.)

National Cash Register Company, The. (See Breitling, Ernst, assignor.)

National Cash Register Company, The. (See Green, Charles W., assignor.)

National Cash Register Company, The. (See Lehmann, K. A., and Breitling, assignors.)

National Pecan Growers Exchange. (See Bullard, W. P., and Guy, assignors.)

National Pecan Growers Exchange. (See Bullard, W. P., and Williams, assignors.)

National Rubber Machinery Company. (See Shook, Florain J., assignor.)

Natkiel, Harry, Bronx, assignor to H. Bergelke, New York, N. Y. Flat hair curler. 2,109,338; Feb. 22.

Naumann, Friedrich K., Essen, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Manufacture of articles from steel alloys. 2,109,118; Feb. 22.

Naumann, Friedrich K. Essen, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Manufacture of articles from steel alloys. 2,109,119; Feb. 22.

Negretto, Sidney H., New Orleans, La. Machine gun cart. 2,108,826; Feb. 22.

Nelson, Bert J. (See Coles, W. H., and Nelson.)

Nelson, David V., Chicago, Ill. Wall construction. 2,109,072; Feb. 22.

Neptune Meter Company. (See Hazard, Charles S., assignor.)

Neptune Meter Company. (See Marden, William L., assignor.)

Nestle-Lemur Company, The. (See Freudenberg, G., and Reimers, assignors.)

Neukirch, Eberhard, Bitterfeld, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Carbon electrode. 2,109,302; Feb. 22.

Nichols Engineering & Research Corporation. (See Schilling, Frederick B., assignor.)

Niclaasen, Hans, Berlin, Germany, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Tube structure. 2,109,274; Feb. 22.

Nicodemus, Otto, and W. Schmidt, Frankfort-on-the-Main, Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Aminoalkyl-sulphonic acids and preparing them. 2,109,401; Feb. 22.

Nicolson, Alexander M., assignor to Communication Patents, Inc., New York, N. Y. Television scanning system. 2,108,827; Feb. 22.

Nicolson, Alexander M., assignor to Communication Patents, Inc., New York, N. Y. Variable speed television. 2,109,339; Feb. 22.

Niederl, Joseph B. and V., New York, N. Y. Polycyclic phenolic condensation products. 2,109,015; Feb. 22.

Niederl, Victor. (See Niederl, Joseph B. and V.)

Nieman, Marvin B., St. Louis, Mo. Wier terminal lug. 2,109,073; Feb. 22.

Nieuwland, Julius A., and F. J. Sowa, Notre Dame, Ind., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. New catalysts. 2,109,340; Feb. 22.

Nilsson, Robert W., assignor to The Mather Spring Company, Toledo, Ohio. Vehicle spring suspension. 2,109,074; Feb. 22.

Nimley, Jacob H., et al., trustees. (See Fisher, John F., assignor.)

Nixon, Anson B., administrator. (See Fisher Lloyd H.)

Noblitt, Quintin G., and E. Ludlow, assignors to Noblitt-Sparks Industries, Inc., Columbus, Ind. Muffler. 2,109,220; Feb. 22.

Noblitt-Sparks Industries, Inc. (See Noblitt, Q. G., and Ludlow, assignors.)

North American Manufacturing Company, The. (See Brown, George R., assignor.)

Norton Company. (See Green, Clarence J., assignor.)

November, Julius, et al. (See Elbaum, Filip, assignor.)

Nowosielski, Edward B., Bloomfield, assignor to Eclipse Aviation Corporation, East Orange, N. J. Ignition apparatus. 2,109,029; Feb. 22.

Nowosielski, Edward B., Bloomfield, assignor to Eclipse Aviation Corporation, East Orange, N. J. Ignition apparatus. 2,109,030; Feb. 22.

Oak Manufacturing Company. (See Mastney, Edward J., assignor.)

Obenshain, Noel, Piedmont, W. Va. Device for cutting fruit into sectors. 2,108,992; Feb. 22.

Oberhoffken, Alexander. (See Johnson, J. R., Oberhoffken, and Cotta.)

Ogletree, Hill, Austin, Tex. Cutting implement. 2,109,303; Feb. 22.

Ohlendorf, Heinrich, and E. Baumann, Dessau in Anhalt, and K. Holsach, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Monoazo compounds and their production. 2,109,182; Feb. 22.

Oliver, William J., Los Angeles, Calif. Steak pounder. 2,109,434; Feb. 22.

Olson, Carl E., and J. A. Peterson, Houston, Tex. Tong. 2,108,971; Feb. 22.

Olsson, Rune V. A. (See Brinck, E. J. M., and Olsson.)

O'Neal, James C., Beaumont, Tex., assignor to Gulf Coast Machine & Supply Company. Full hole casing or tubing head. 2,109,031; Feb. 22.

Ormsby, Elon A., Centerville, Calif. Crane. 2,109,304; Feb. 22.
Orner, Arnold E., Bendersville, Pa. Vegetable slicer. 2,108,972; Feb. 22.
Owens-Illinois Glass Company. (See Lauck, A. G., and Johnson, assignors.)
Owens-Illinois Glass Company. (See Slayter, Games, assignor.)
Pacific Clay Products. (See Washo, William, assignor.)
Pacific Pump Works. (See Bigelow, G. E., and Weis, assignors.)
Pardee, Frank, Jr., assignor to Anthracite Separator Company, Hazleton, Pa. Lowering apparatus. 2,109,130; Feb. 22.
Parfex Company, The. (See Williams, William E., assignor.)
Parkinson, Donald, Sutton Coldfield, England, assignor to Dunlop Tire and Rubber Corporation. Pneumatic tire. 2,108,973; Feb. 22.
Patent Button Company, The. (See Anderson, Thomas A., assignor.)
Payne, John H. (See Ley, G. J., Payne, and Akau.)
Peerless Wire Goods Co. (See Schweller, S. M., and Schilling, assignors.)
Pierce, Ralph S., Hinsdale, Ill. Tamperproof seal and production. 2,108,942; Feb. 22.
Pell-Walpole, William T. (See Hanson, D., and Pell-Walpole.)
Pennsylvania Crusher Company. (See Borton, George W., assignor.)
People of the United States, Dedicated to the free use of the. (See Ley, G. J., Payne, and Akau.)
Peterson, Harold O., Riverhead, N. Y., assignor to Radio Corporation of America. Automatic volume control. 2,108,899; Feb. 22.
Peterson, Harold O., Riverhead, N. Y., assignor to Radio Corporation of America. Ultrashort wave oscillation generator circuit. 2,108,900; Feb. 22.
Peterson, Joseph A. (See Olsen, C. E., and Peterson.)
Pflager, Harry M., St. Louis, Mo., assignor to General Steel Castings Corporation, Granite City, Ill. Railway car structure. 2,109,275; Feb. 22.
Pflager, Harry M., St. Louis, Mo., assignor to General Steel Castings Corporation, Granite City, Ill. Railway vehicle structure. 2,109,276; Feb. 22.
Philco Radio & Television Corporation. (See Clark, Edwin L., assignor.)
Phillips, George F. (See McMurry, W. F., and Phillips.)
Phillips, John X. (See Hill, E. G., and Phillips.)
Phillips, S. A., et al. (See Chaplin, Hershel W., assignor.)
Phinney, Robert M., assignor to General Railway Signal Company, Rochester, N. Y. Traffic direction controlling system for railroads. 2,109,153; Feb. 22.
Photostat Corporation. (See Landrock, Paul, assignor.)
Pier, Mathias, Heidelberg, and B. Engel, Mannheim, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of assistants for the textile and related industries. 2,108,901; Feb. 22.
Piggott, Henry A. (See Lawrie, L. G., Reynolds, and Piggott.)
Pilkington, William. (See Sansome, Ralph D., assignor.)
Pittman, Ralph R., and C. H. Walsh, Pine Bluff, Ark. High duty fuse switch. 2,109,090; Feb. 22.
Place, Elon C., assignor of one-half to G. E. Gagnier, Detroit, Mich. Carpet fastener. 2,109,402; Feb. 22.
Pleiss, Walter H., Ludington, Mich. Towel rack. 2,109,032; Feb. 22.
Podbielniak, Walter J., Chicago, Ill. Apparatus for effecting counter-current contact between fluids. 2,109,375; Feb. 22.
Pond, Paul J. (See Hinds, James W., assignor.)
Potter, Albert T., Detroit, Mich., assignor to Ainsworth Manufacturing Corporation. Windshield operating device. 2,109,256; Feb. 22.
Potter, Albert T., Detroit, Mich., assignor to Ainsworth Manufacturing Corporation. Windshield operating device. 2,109,257; Feb. 22.
Press, Carl, assignor to Bendix Products Corporation, South Bend, Ind. Brake. 2,109,091; Feb. 22.
Price, Mitchell D., Miami, Fla. Game and projectile therefor. 2,109,120; Feb. 22.
Procter & Schwarz, Incorporated. (See Bogaty, Hermann S., assignor.)
Procter & Schwarz, Incorporated. (See Hurxthal, Alpheus O., assignor.)
Pryor, James N., Baltimore, Md. Coin controlled mechanism. 2,108,943; Feb. 22.
Putman, Henry V. Sharon, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electrical apparatus. 2,109,221; Feb. 22.
Pyrate Corporation of Nevada, The. (See Ruth, Harold M., assignor.)
Quaker Hosiery Company. (See Smetana, Otto F., assignor.)
Quick, Cecil G., D. A. Ball, and W. A. Whitehead, London, England, assignors to R. Hoe & Co., Inc., New York, N. Y. Mechanism for delivering articles in counted bundles. 2,109,050; Feb. 22.
Quidas, Frederick W., New York, N. Y. Advertising device. 2,108,828; Feb. 22.
Quintavalle, Umberto, assignor to Fabbrica Italiana Magneti Marelli Soc. An., Milan, Italy. Ignition magneto. 2,108,924; Feb. 22.
Radio Corporation of America. (See Braden, Rene A., assignor.)
Radio Corporation of America. (See Karolus, August, assignor.)
Radio Corporation of America. (See Kroger, Fred H., assignor.)
Radio Corporation of America. (See Mathieu, Gaston A., assignor.)
Radio Corporation of America. (See Peterson, Harold O., assignor.)
Radio Corporation of America. (See Wright, George M., assignor.)
Ragatz, Edward G., assignor to Union Oil Company of California, Los Angeles, Calif. Process and apparatus for stabilising hydrocarbons. 2,109,201; Feb. 22.
Ramsey, Allan, Evanston, assignor to Schweitzer & Conrad, Inc., Chicago, Ill. Cut-out. 2,108,903; Feb. 22.
Ranco Incorporated. (See Raney, Estel C., assignor.)
Raney, Estel C., assignor to Ranco Incorporated, Columbus, Ohio. Refrigerating apparatus. 2,109,202; Feb. 22.
Ransome, Stafford M., assignor to Barber-Colman Company, Rockford, Ill. Precision motion-transmission mechanism. 2,109,033; Feb. 22.
Rasmussen, Charles H., assignor to Ferdinand Gutmann & Co., Brooklyn, N. Y. Dispensing package. 2,108,902; Feb. 22.
Raynor, Harry A., Nottingham, England. Knitted fabric and the production thereof. 2,108,925; Feb. 22.
Rebl, Carl, Brooklyn, N. Y. Electric lighting apparatus. 2,109,341; Feb. 22.
Rebl, Carl, Brooklyn, N. Y. Printing attachment for pencils. 2,109,342; Feb. 22.
Reconstruction Finance Corporation. (See Small, Thomas W., assignor.)
Reiber, Edward W., Miami, Fla. Storm shutter. 2,108,926; Feb. 22.
Reichard, Wade H., assignor to General Railway Signal Company, Rochester, N. Y. Intermittent inductive train control system. 2,109,154; Feb. 22.
Reichhold Helmuth. (See Hovey, A. G., and Hodgins, assignors.)
Reilly, Alfred F., assignor to Evans Case Company, North Attleboro, Mass. Forming jewelry mountings or the like. 2,109,376; Feb. 22.
Reimers, Alfred E. (See Freundenburg, G., and Reimers.)
Rein, Hanns. (See von Weinberg, A., Rein, and Eisenhut.)
Reiter, Hymin, New York, N. Y. Suspenders. 2,109,343; Feb. 22.
Renshaw, Everett L. (See Gearhart, R. E., and Renshaw.)
Reppe, Walter, F. Hoelscher, and A. Schneevoigt, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Dyestuff printing paste. 2,108,994; Feb. 22.
Republic Steel Corporation, The. (See Horn, Ralph B., assignor.)
Reynolds, Reginald J. W. (See Lawrie, L. G., Reynolds, and Piggott.)
Rheem, Richard S., Oakland, Calif., assignor to Rheem Manufacturing Company. Closing and reenforcing ring unit. 2,108,944; Feb. 22.
Rheem Manufacturing Company. (See Rheem, Richard S., assignor.)
Riberdy, William L. Pull cord attaching device. 2,109,051; Feb. 22.
Rice, Virginia M., Monticello, Ind. Mannequin. 2,108,927; Feb. 22.
Richter, Gus, New York, N. Y. Garment hanger and folder. 2,109,141; Feb. 22.
Richter, Max, West Reading, and J. Bareiss, assignors to Textile Machine Works, Wyomissing, Pa. Automatic spindle resetting mechanism. 2,109,140; Feb. 22.
Ringer, Henry, Blasdell, N. Y. Camping implement. 2,109,016; Feb. 22.
Ritter, Julius, Jr., and S. Essmus, assignors to Hartmann Trunk Company, Racine, Wis. Luggage case. 2,108,903; Feb. 22.
Rival Manufacturing Company. (See Rupert, Richard, assignor.)
Roan Manufacturing Company. (See Jorgenson, Arthur P., assignor.)
Rochester Telephone Corporation. (See Vincent, William J., assignor.)
Rodrigues, Octavius V., Passaic, N. J., assignor to Magazine Repeating Razor Company, New York, N. Y. Magazine for razor blades. 2,109,017; Feb. 22.
Roe, Arthur. (See Kroft, V. E., and Roe.)
Roll, Walter H., Kansas City, Mo., assignor of one-third to D. G. Dayton, Omaha, Nebr., and one-third to F. C. Hutchison, Kansas City, Mo. Trinket. 2,109,092; Feb. 22.
Roos, Hans, Leverkusen, I. G.-Werk, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Manufacture of azo dyestuffs. 2,109,163; Feb. 22.
Rose, Carl G. (See Boyer, J. A., and Rose.)
Rose, Jess C. (See Bardwell, C., Erickson, and Rose.)
Rosen, Abraham W., New York, N. Y. Clamping means for mirrors for motor vehicles. 2,109,142; Feb. 22.
Rosenfeld, Max L. (See MacDonald, William W., assignor.)

Rossman, Joseph, and C. L. Wagner, assignors to Marathon Paper Mills Company, Rothschild, Wis. Packaging sliced cheese. 2,109,093; Feb. 22.
Rousey, Louis, Paris, and R. Trubert, Virofiay, France. Guiding toy vehicles. 2,109,403; Feb. 22.
Ruben, Samuel, New Rochelle, N. Y. Electrical condenser. 2,108,995; Feb. 22.
Rummelsburg, Alfred L., assignor to Hercules Powder Company, Wilmington, Del. Polymerisation of rosin. 2,108,928; Feb. 22.
Rumsey, John C., assignor to The Rumsey Junior Vehicle Company, Lawrence, Kans. Chariot vehicle. 2,108,868; Feb. 22.
Rumsey Junior Vehicle Company. (See Rumsey, John C., assignor.)
Runge, Arnold, Villa Ballester, Buenos Aires, Argentina. Storage tank for liquids. 2,108,945; Feb. 22.
Rupert, Richard, assignor to F. L. Talge, Kansas City, Mo., operating as Rival Manufacturing Company. Vegetable cutter or grater. 2,109,358; Feb. 22.
Ruth, Harold M., Huntington Park, Calif., assignor to The Pyrate Corporation of Nevada. Device for cleaning tanks and the like. 2,109,075; Feb. 22.
Ryder, John D., Cleveland Heights, Ohio, assignor to Bailey Meter Company. Measuring and controlling apparatus. 2,109,222; Feb. 22.
St. Pierre, Henry, Worcester, Mass. Cross chain. 2,109,038; Feb. 22.
Sadtler, Robert E., Cincinnati, Ohio. Roof structure. 2,109,447; Feb. 22.
Sandmeyer, Ernest R., Yakima, Wash. Fruit sorting and packing system. 2,108,899; Feb. 22.
Sansome, Ralph D., Birmingham, assignor of one-half to W. Pilkington, Wylde Green, England. Producing a cast article with a facing of sheet metal. 2,108,996; Feb. 22.
Save Electric Corporation. (See Calkins, L. E., and Levi, assignors.)
Sawtelle, Charles A. (See Main, F. L., and Sawtelle.)
Sawyer, Leonard H., Royal, Nebr. Timber blasting device. 2,109,435; Feb. 22.
Schafer, John V., assignor to Bronson Reel Company, Bronson, Mich. Jewel mount. 2,109,035; Feb. 22.
Schering-Kahlbaum A. G. (See Wolff, Fritz, assignor.)
Schilling, Ernest H. (See Schweller, S. M., and Schilling.)
Schilling, Frederick B., Bayside, N. Y., assignor to Nichols Engineering & Research Corporation. Incineration of waste materials. 2,108,997; Feb. 22.
Schmidt, Hartman F., Unionville, Conn. Woven fabric. 2,109,223; Feb. 22.
Schmidt, Karl C., Western Springs, Ill., assignor to The Babcock & Wilcox Company, Newark, N. J. Steam boiler. 2,109,277; Feb. 22.
Schmidt, Karl C., Western Springs, Ill., assignor to The Babcock & Wilcox Company, Newark, N. J. Steam boiler. 2,109,278; Feb. 22.
Schmidt, Walter. (See Nicodemus, O., and Schmidt.)
Schneevoigt, Alwin. (See Reppe, W., Hoelscher, and Schneevoigt.)
Schneider, Helmuth G. (See Archibald, F. M., and Schneider.)
Schoenbucher, Frank C., Milwaukee, Wis. Hydroaeroplane. 2,109,320; Feb. 22.
Scholl, Clark, assignor to The Steel Products Engineering Company, Springfield, Ohio. Air control means for combustion apparatus. 2,109,239; Feb. 22.
Scholl, Clark, assignor to The Steel Products Engineering Company, Springfield, Ohio. Air control means for combustion apparatus. 2,109,240; Feb. 22.
Schols, Caesar. (See Miescher, K., Wettstein, and Schols.)
Schori, Fritz, Wetzikon, Switzerland. Apparatus for fusing and spraying pulverized substances. 2,108,998; Feb. 22.
Schott, Lionel, East Orange, N. J., assignor to American Telephone and Telegraph Company. Two-way signaling system. 2,108,974; Feb. 22.
Schowengerdt, Victor, Chamois, Mo. Harvester and thresher. 2,109,436; Feb. 22.
Schreiber-Gastell, Richard. (See Formhals, Anton, assignor.)
Schröter, Fritz, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Television. 2,109,321; Feb. 22.
Schubert & Salzer Maschinenfabrik Aktiengesellschaft. (See Heinits, Woldemar, assignor.)
Schweitzer & Conrad, Inc. (See Ramsey, Allan, assignor.)
Schweller, Sylvester M., Dayton, Ohio, and E. H. Schilling; said Schilling assignor to Peerless Wire Goods Co., Inc., La Fayette, Ind., and said Schweller assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,109,052; Feb. 22.
Schwentler, Francis E., St. Louis, Mo., assignor to The American Brake Company, Wilmerding, Pa. Automatic slack adjuster. 2,109,036; Feb. 22.
Schwentler, Francis E., St. Louis, Mo., assignor to The American Brake Company, Wilmerding, Pa. Automatic slack adjuster. 2,109,037; Feb. 22.
Scientific Engineering Corporation. (See McMurry, W. F., and Phillips, assignors.)
Scott Paper Company. (See Corbin, Wesley S., assignor.)
Searles, Raymond R., assignor to The Fafnir Bearing Company, New Britain, Conn. Bearing. 2,109,053; Feb. 22.
Seifer, Morton E., New York, N. Y., assignor, by mesne assignments, to Stanley Patents, Inc. Handle and locking member for pasteboard containers and the like. 2,109,034; Feb. 22.
Seifer, Theo, Berlin, Germany. Hydraulic boring mechanism. 2,108,946; Feb. 22.
Seifer, Theo, Berlin, Germany. Hydraulic motor for deep-boring mechanisms. 2,108,947; Feb. 22.
Seifert, George, Beverly Hills Township, Los Angeles County, Calif. Box-making machine. 2,109,359; Feb. 22.
Sekella, Youston, assignor to Eclipse Machine Company, Elmira, N. Y. Engine starter drive member. 2,109,155; Feb. 22.
Selger, Henry L., Newton, N. J. Ground joint pipe coupling. 2,109,344; Feb. 22.
Sereda, Alois T., Chicago, Ill. Vehicle signal. 2,109,184; Feb. 22.
Sessions, Donald W., Willesden, London, England. Hydraulic jacking system for vehicles. 2,109,238; Feb. 22.
Shakter, Louis, Brooklyn, assignor of fifty percent to F. Zoldo, New York, N. Y. Reversible setting. 2,108,904; Feb. 22.
Sheli Development Company. (See Tijmstra, Sijbren, assignor.)
Sheer, Harry, Brooklyn, N. Y. Metallic attachment. 2,108,905; Feb. 22.
Sheldon, Howard W., Clarksboro, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Apparatus for the recovery of sulphuric acid. 2,108,870; Feb. 22.
Shook, Florain J., assignor to National Rubber Machinery Company, Akron, Ohio. Tire building apparatus. 2,109,437; Feb. 22.
Shurley, Frederick, Salt Lake City, Utah, assignor to Ceramic Machinery Distributors Limited, Windsor, Ontario, Canada. Conveyer apparatus. 2,109,360; Feb. 22.
Siemens & Halske, Aktiengesellschaft. (See Kaden, H., Thomas, and Wassmansdorff, assignors.)
Siemens & Halske, Aktiengesellschaft. (See Thal, Wilhelm, assignor.)
Silverman, Herman, New York, N. Y. Ornamental adjustable shoulder strap. 2,109,345; Feb. 22.
Simpson, Clarence E. (See Hoppert, F. D., Bull, and Simpson.)
Sisley, Leslie J., and F. J. White, Seattle, Wash., assignors to Fisher Flouring Mills Co. Mixing machine. 2,108,999; Feb. 22.
Sixt, Johann, and M. Mugdan, assignors to Consortium für Elektrochemische Industrie, G. m. b. H., Munich, Germany. Producing ketene. 2,108,829; Feb. 22.
Skellett, Albert M., Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electron discharge apparatus. 2,108,830; Feb. 22.
Skinner Irrigation Company, The. (See Coles, W. H., and Nelson, assignors.)
Slayter, Games, Newark, Ohio, assignor to Owens-Illinois Glass Company. Sealing apparatus. 2,109,258; Feb. 22.
Sloane-Blabon Corporation. (See Koenig, Walter J., assignor.)
Small, Thomas W., Fort Wayne, Ind., assignor, by mesne assignments, to Reconstruction Finance Corporation, Chicago, Ill. Automatic record changing phonograph. 2,109,322; Feb. 22.
Smalley, Henry L., Chicago, Ill., assignor to Harbison-Walker Refractories Company, Pittsburgh, Pa. Checkerwork. 2,108,871; Feb. 22.
Smeal, Ellis K., Morrisdale, assignor of one-half to J. Little, Philipsburg, Pa. Roadway snow excavator. 2,109,094; Feb. 22.
Smetana, Otto F., assignor to Quaker Hosiery Company, Philadelphia, Pa. Stocking and making the same. 2,109,156; Feb. 22.
Smith, John F., Quincy, Mass., assignor to Compo Shoe Machinery Corporation, New York, N. Y. Shoe cementing apparatus. 2,109,323; Feb. 22.
Smith, Lloyd A. (See Brooker, L. G. S., and Smith.)
Smith, Robert L. H., Mottingham, London, England. Testing of lubrication and wear. 2,108,948; Feb. 22.
Snyder, Kirby T., Los Angeles, Calif. Fastener. 2,108,831; Feb. 22.
Snyder, Leonard L., Southgate, Calif., assignor to Elliott Core Drilling Company. Valve head structure for core barrels. 2,108,949; Feb. 22.
Soabar Company. (See Henry, George W., Jr., assignor.)
Societe Carbochimique. Societe Anonyme. (See Ferrero, P., Vandendries, and Berbé, assignors.)
Société d'Inventions Aéronautiques et Mécaniques S. I. A. M. (See Levy, René L., assignor.)
Society of Chemical Industry in Basle. (See Kambli, Eduard, assignor.)
Society of Chemical Industry in Basle. (See Miescher, K., Wettstein, and Schols, assignors.)
Socony-Vacuum Oil Company. (See Sheldon, Howard W., assignor.)
Solvay Process Company, The. (See Beekley, Herman A., Jr., assignor.)
Somers, Frank J. (See Farnsworth, P. T., and [illegible].)
Soreng, Edgar M., Chicago, Ill., and C. Will, assignors to Tropic-Aire, Incorporated, Minneapolis, Minn. Switch. 2,109,054; Feb. 22.

Sorensen, Henry P., Detroit, Mich. Reinforcing nut. 2,108,978; Feb. 22.
Southern Wood Preserving Company. (See Deiters, August M., assignor.)
Southern Wood Preserving Company. (See Deiters, A. M., and Gillen, assignors.)
Soverhill, Harvey A., Chicago, Ill., assignor to The American Foundry Equipment Company, Mishawaka, Ind. Electric heater. 2,109,279; Feb. 22.
Sowa, Frank J. (See Nieuwland, J. A., and Sowa.)
Spande, Alton, Mabel, Minn. Cultivator shovel positioning mechanism. 2,109,055; Feb. 22.
Speckhart, Stephen J., Maplewood, and R. Herger, Irvington, N. J. Capsule filling machine. 2,108,906; Feb. 22.
Spencer, Herman J., West View, Pa. Stapling mechanism. 2,109,203; Feb. 22.
Spiegel, Yetta, New York, N. Y. Safety device for homes. 2,109,361; Feb. 22.
Spofford, Robert W. (See Gillé, Earl S. and B. D., assignors.)
Springer, Robert R., assignor of one-half to W. W. McKinney, Harrison, Ark. Bun slicing machine. 2,109,138; Feb. 22.
Staats, Byron H. (See Bennett, C. W., and Staats.)
Staguaro, Eugene M. (See Moyes, Seoris M., assignor.)
Standard Alcohol Company. (See Archibald, F. M., and Schneider, assignors.)
Standard-Knapp Corporation. (See Kimball, W. D., and Brarens, assignors.)
Standard Oil Development Company. (See Wasson, Jones I., assignor.)
Stearns Magnetic Manufacturing Company. (See Stearns, R. H., and Kiekhaefer, assignors.)
Stearns, Roswell H., and E. C. Kiekhaefer, assignors to Stearns Magnetic Manufacturing Company, Milwaukee, Wis. Electromagnetic separator. 2,109,076; Feb. 22.
Steel Products Engineering Company, The. (See Scholl, Clark, assignor.)
Stickless Corporation, The. (See Lichter, Malvin, assignor.)
Stickney, Burnham C., Hillside, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 2,108,832; Feb. 22.
Stine, Paul J., Sanford, Fla. Clamp truck. 2,109,305; Feb. 22.
Stober, Albert, Berlin-Pankow, Germany. Clip for the adjustable attachment of partitions in showcases and the like. 2,108,950; Feb. 22.
Stockwell, Alexander M. (See Wilcox, E. M., and Stockwell.)
Stokes, F. J., Machine Company. (See Westin, Charles J., assignor.)
Straetan, Charles L., assignor to Industrial Patents Corporation, Chicago, Ill. Package paster. 2,108,929; Feb. 22.
Straight, Halver R., Adel, Iowa. Mixing a plastic material. 2,109,077; Feb. 22.
Stanley Patents, Inc. (See Seifer, Morton E., assignor.)
Stimmel, Stanton C. (See Warren, William W., assignor.)
Stroink, Herbert, assignor to Baumwollspinnerei Gronau, Gronau, Germany. Double three-roller drawing frame. 2,108,930; Feb. 22.
Strub, Robert R. (See Mueller, Otto, assignor.)
Surgident, Ltd. (See Van Roosen, Walter J., assignor.)
Swallow, Charles E., Worcester, Mass. Oil burner. 2,109,372; Feb. 22.
Swearingen, Clair Y., Chattanooga, Tenn. Chlorinator. 2,109,439; Feb. 22.
Symington-Gould Corporation. (See Barrows, Donald S., assignor.)
Symington-Gould Corporation, The. (See Kadel, Byers W., assignor.)
Talge, Foster L. (See Rupert, Richard, assignor.)
Talmage, John H., assignor to Wilson-Jones Company, Chicago, Ill. Loose leaf binder. 2,109,241; Feb. 22.
Tebbett, John T., Three Rivers, Quebec, Canada. Shoe. 2,109,324; Feb. 22.
Teeple, Lawrence R., Portland, Oreg. Pneumatic control for air supplied to a stoker. 2,108,873; Feb. 22.
Telefunken (Gesellschaft für Drahtlose Telegraphie m. b. H. (See Schröter, Fritz, assignor.)
Teller, Fritz. (See Hopf, H., Garbsch, and Teller.)
Te Pas, Edmund J., Rocky River, assignor to W. A. Frantz, Cleveland Heights, Ohio. Attachment plug. 2,108,907; Feb. 22.
Teppema, Jan, Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Mercaptazole derivatives and their preparation. 2,109,158; Feb. 22.
Ternstadt Manufacturing Company. (See Hickman, John G., assignor.)
Terso, John. (See Terso, Natale, assignor.)
Terso, Natale, assignor to J. Terso, New York, N. Y. Support and gauge for curtain rods. 2,109,346; Feb. 22.
Texas Company, The. (See Kendall, Marcus T., assignor.)
Textile Machine Works. (See Richter, M., and Bareiss, assignors.)
Thal, Wilhelm, Berlin-Siemensstadt, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany. System for measuring a component of an alternating current or an alternating voltage. 2,109,325; Feb. 22.
Theiss, Herbert C., St. Louis, Mo. Dust guard for journal boxes on railroad trucks. 2,108,874; Feb. 22.
Thomas, Paul. (See Kaden, H., Thomas, and Wassmansdorff.)
Thompson, Abel. (See Chilstrom, G. E., and Thompson.)
Thompson, Albert E., assignor to Food Machinery Corporation, San Jose, Calif. Cutting machine. 2,108,961; Feb. 22.
Thompson, Charles H., Sacramento, Calif. Internal combustion engine. 2,109,185; Feb. 22.
Thompson, Sigurd E. (See Furnas, W. C., and Thompson.)
Thorold, Frederick W., assignor to Chisholm-Ryder Co., Inc., Niagara Falls, N. Y. Method and apparatus for grading particles differing in specific gravity. 2,109,121; Feb. 22.
Thurber, William G., Santa Monica, Calif. Facial mask. 2,109,018; Feb. 22.
Tijmstra, Sijbren, Berkeley, assignor to Shell Development Company, San Francisco, Calif. Solvent extraction process. 2,109,157; Feb. 22.
Titus, Thomas L., assignor to The Wyott Manufacturing Company, Cheyenne, Wyo. Liquid pump. 2,109,224; Feb. 22.
Toledo Scale Manufacturing Company. (See Waltz, Foster V., assignor.)
Tollison, Paul L., Plainfield, N. J., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Synchronization indicating device. 2,109,362; Feb. 22.
Trepanier, Ivan, Waterbury, Conn. Electric clock mechanism. 2,108,931; Feb. 22.
Trut-O-Lite Company, The. (See De Groote, M., Keiser, Faure, and Wirtel, assignors.)
Trevellyan, Vernon B., assignor to Cleanser Products, Inc., Chicago, Ill. Pad holder. 2,109,404; Feb. 22.
Tricomi, Agatino and R. B., Brooklyn, N. Y. Steam-electric pressing iron. 2,109,326; Feb. 22.
Tricomi, Edward B. (See Tricomi, Agatino and E. B.)
Tropic-Aire, Incorporated. (See Sorong, E. M., and Will, assignors.)
Trubert, René. (See Rouzey, L., and Trubert.)
Trumbull Electric Manufacturing Company, The. (See Carlson, John E., assignor.)
Tullis, Boyd W., Wichita, Kans. Vaporising generator. 2,108,908; Feb. 22.
Turner, Howard H., Hawthorne, assignor of one-half to E. E. Larson, Inglewood, Calif. Stove top. 2,109,039; Feb. 22.
Tuttle, Loren W. (See Markel, M. G., and Tuttle.)
Twomley, Herbert E., Riverside, Calif., assignor, by mesne assignments, to Food Machinery Corporation. Box press. 2,109,040; Feb. 22.
Udy, Marvin J., Niagara Falls, N. Y. Making ferrochromium. 2,109,122; Feb. 22.
Uhlemann, William E., Evanston, Ill. Eyeglasses. 2,108,875; Feb. 22.
Ulrey, Dayton, Forest Hills, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Aging vacuum tubes. 2,109,225; Feb. 22.
Underwood Elliott Fisher Company. (See Stickney, Burnham C., assignor.)
Union Carbide and Carbon Company. (See Jacobsson, Wilgot J., assignor.)
Union Oil Company of California. (See Aldridge, B. G., and Hopper, assignors.)
Union Oil Company of California. (See Dillon, Lyle, assignor.)
Union Oil Company of California. (See Fisher, Harmon F., assignor.)
Union Oil Company of California. (See Ragatz, Edward G., assignor.)
United Autographic Register Co. (See Euth, John E., assignor.)
United Autographic Register Co. (See Jensen, Louis, assignor.)
United-Carr Fastener Corporation. (See Fearing, Allen C., assignor.)
United Shoe Machinery Corporation. (See Bazzoni, Lewis J., assignor.)
United Shoe Machinery Corporation. (See Engel, Karl, assignor.)
United Shoe Machinery Corporation. (See Fromm, Otto W., assignor.)
United Shoe Machinery Corporation. (See Kamborian, Jacob S., assignor.)
Urban, John, West New York, N. J. Striping tool. 2,108,952; Feb. 22.
v. Bock, Bernd. (See Holzach, K., Winter, and v Bock.)
Vandendries, Cornelie. (See Ferrero, P., Vandendries, and Berbé, assignors.)
Vandoren, Bernard J., assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,108,876; Feb. 22.
Van Roosen, Walter J., West Los Angeles, assignor to Surgident, Ltd., West Hollywood, Calif. Flexible package for hydrocolloid impression materials. 2,108,953; Feb. 22.
Veeder, Curtis H., Hartford, Conn. Theodolite. 2,109,186; Feb. 22.
Victor Adding Machine Company. (See Garbell, Max, assignor.)
Villerup, Chris J., Glasgow, Mont. Tractor truck loader. 2,109,440; Feb. 22.
Vincent, George P., Niagara Falls, assignor to The Mathieson Alkali Works, Inc., New York, N. Y. Production of chlorine dioxide. 2,108,976; Feb. 22.
Vincent, William J., assignor to Rochester Telephone Corporation, Rochester, N. Y. Telephone system. 2,109,909; Feb. 22.
Vogel, Joseph A., Wilmington, Del. Frostproof hydrant. 2,109,187; Feb. 22.

Volck, William H., Watsonville, assignor to California Spray-Chemical Corporation, Berkeley, Calif. Insecticidal oil composition. 2,109,059; Feb. 22.
Von Segebaden, Ernst, Drottningholm, and B. Johnson Alsten, assignors to Aktiebolaget Gasb. Arsane Mekaniska Verkstad, Stockholm, Sweden. Method of and apparatus for applying closure caps to receptacles. 2,108,932; Feb. 22.
Von Weinberg, Arthur, Frankfort-on-the-Main, H. Rein, Bad Homburg V. D. H., and O. Haushut, Heidelberg, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Wool-like artificial fibers and making same. 2,109,206; Feb. 22.
Von Weinberg, Arthur, Frankfort-on-the-Main, H. Rein, Bad Homburg V. D. H., and O. Haushut, Heidelberg, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Making wool-like artificial fibers. 2,109,207; Feb. 22.
Von Wilmowsky, Felix F., New York, N. Y. Apparatus for conditioning air. 2,109,019; Feb. 22.
Vuillerme, Marcel, Paris, France. Cooling and filtering liquids. 2,108,977; Feb. 22.
Wagner, Charley L. (See Eeeman, J., and Wagner.)
Wagner, Lewis E., United States Navy. Apparatus for testing ignition circuits. 2,108,935; Feb. 22.
Waldo, Theron L., Jr., Bath, N. Y. Making signs. 2,109,000; Feb. 22.
Wales, Fred A., Detroit, Mich. Rack. 2,108,978; Feb. 22.
Wallace, James D., Washington, D. C. Telegraphic keying circuit. 2,108,833; Feb. 22.
Walpole, John P., Jackson Heights, N. Y. Stand for cordless electric irons. 2,108,834; Feb. 22.
Walsh, Carroll H. (See Pittman, E. E., and Walsh.)
Walter, Charles T., assignor to Industrial Patents Corporation, Chicago, Ill. Preparing fiber containers. 2,108,910; Feb. 22.
Waltz, Foster V., assignor to Toledo Scale Manufacturing Company, Toledo, Ohio. Weighing scale. 2,109,001; Feb. 22.
Wandell, James W., assignor to Browne-Vintners Co., Inc., New York, N. Y. Bottle valve. 2,108,933; Feb. 22.
Warren, William W., Pittsburgh, assignor of one-half to S. C. Stimmel, Fox Chapel, Pa. Refrigerator. 2,109,002; Feb. 22.
Washo, William, Los Angeles, Calif., assignor to Pacific Clay Products. Casting clay pipe. 2,109,078; Feb. 22.
Wasserlauf, Adolph. (See Green, Harry, assignor.)
Wassmansdorff, Hans. (See Kaden, H., Thomas, and Wassmansdorff.)
Wasson, Jones I., Elizabeth, N. J., assignor to Standard Oil Development Company. Lubricating composition. 2,108,954; Feb. 22.
Weis, Arthur R. (See Bigelow, G. R., and Weis.)
Welch, Clifton, Pensacola, Fla., assignor, by mesne assignments, to Jack A. Goodman, Columbus, Ohio. Installing and assembling wallboards. 2,109,448; Feb. 22.
Wernäll, Karl J., Alsten, Sweden. Friction clutch. 2,109,405; Feb. 22.
Wernäll, Karl J., Alsten, Sweden. Friction clutch. 2,109,406; Feb. 22.
Wesson, Alexander J. (See Ellis, G. H., and Wesson.)
Westin, Charles J., assignor to F. J. Stokes Machine Company, Philadelphia, Pa. Tablet packaging machine. 2,109,407; Feb. 22.
Westinghouse Air Brake Company, The. (See Aikman, Burton S., assignor.)
Westinghouse Air Brake Company, The. (See Cook, H. S., and Hewitt, assignors.)
Westinghouse Electric & Manufacturing Company. (See Cook, Willard G., assignor.)
Westinghouse Air Brake Company. (See Farmer, C. C., and Hewitt, assignors.)
Westinghouse Air Brake Company. (See Farmer, C. C., and Miller, assignors.)
Westinghouse Air Brake Company, The. (See Hewitt, Ellis S., assignor.)
Westinghouse Air Brake Company, The. (See Logan, John W., Jr., assignor.)
Westinghouse Air Brake Company, The. (See Mautsch, Robert H., assignor.)
Westinghouse Air Brake Company, The. (See Miller, Raymond R., assignor.)
Westinghouse Electric Elevator Company. (See Dunlop, James, assignor.)
Westinghouse Electric & Manufacturing Company. (See Austin, Walter M., assignor.)
Westinghouse Electric & Manufacturing Company. (See Dyer, Lloyd W., assignor.)
Westinghouse Electric & Manufacturing Company. (See Ehrgott, Karl, assignor.)
Westinghouse Electric & Manufacturing Company. (See Harder, Edwin L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hufstutter, John W., assignor.)
Westinghouse Electric & Manufacturing Company. (See McKeel, Percy D., assignor.)
Westinghouse Electric & Manufacturing Company. (See Putman, Henry V., assignor.)
Westinghouse Electric & Manufacturing Company. (See Ulrey, Dayton, assignor.)
Westinghouse Electric & Manufacturing Company. (See Zworykin, Vladimir K., assignor.)
Wettlaufer, William L., Buffalo, N. Y. Testing device. 2,108,977; Feb. 22.
Wettstein, Albert. (See Mascher, K., Wettstein, and Schulz.)
Wetzel, Eugen, Haltingen, Bade, Germany. Fountain pen for concentrated ink. 2,108,911; Feb. 22.
White, Benjamin B., and C. H. Young, assignor of one-third to E. F. P. Brigham, Miami, Fla. Guard roller for sweeping machines. 2,109,123; Feb. 22.
White, Frank J. (See Sisley, L. J., and White.)
Whitehead & Kales Company. (See Judd, Irving H., assignor.)
Whitehead, William A. (See Quick, C. G., Ball, and Whitehead.)
Whitehead, William, Cumberland, Md., assignor to Celanese Corporation of America. Artificial textile material and making same. 2,108,836; Feb. 22.
Whitehead, William, Cumberland, Md., assignor to Celanese Corporation of America. Textile material containing organic esters of cellulose and preparing same. 2,108,837; Feb. 22.
Whitehead, William, Cumberland, Md., assignor to Celanese Corporation of America. Artificial material having modified characteristics and making same. 2,108,838; Feb. 22.
Wilcox, Edgar M., Chicago, Ill., and A. M. Stockwell, Elkhart, Ind. Fuel feeding device for locomotives or the like. 2,109,242; Feb. 22.
Wile, Daniel D., assignor to Detroit Lubricator Company, Detroit, Mich. Valve. 2,108,979; Feb. 22.
Wilford, Edward B., Merion, and E. Daland, Philadelphia, Pa. Aircraft. 2,108,839; Feb. 22.
Will, Carl. (See Sorong, E. M., and Will, assignors.)
Williams, Oswell L. (See Ballard, W. P., and Williams.)
Williams, William E., Los Angeles, Calif., assignor to The Partex Company. Coffeepot. 2,109,363; Feb. 22.
Wills, Noble G., Connersville, Ind. Dental model surveyor. 2,108,980; Feb. 22.
Wilson-Jones Company. (See Talmage, John H., assignor.)
Wilson, Lee, Cleveland, Ohio. Method and apparatus for annealing strips. 2,109,204; Feb. 22.
Winans, Charles F., Akron, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Preparing furfurylamines. 2,109,159; Feb. 22.
Wingfoot Corporation. (See Clifford, Albert M., assignor.)
Wingfoot Corporation. (See Cramer, Howard I., assignor.)
Wingfoot Corporation. (See Gould, Phinetus E., assignor.)
Wingfoot Corporation. (See Teppema, Jan, assignor.)
Wingfoot Corporation. (See Winans, Charles F., assignor.)
Winter, Carl. (See Holzach, K., Winter, and v. Bock.)
Wirtel, Arthur F. (See De Groote, M., Keiser, Faure, and Wirtel.)
Wirth, Emil O. (See Chandler, M. E., and Wirth.)
Wirthsen Associates, Inc. (See Larsen, Louis G., assignor.)
Wolff, Fritz, assignor to Schering-Kahlbaum A. G., Berlin, Germany. Dry disinfectant for seeds. 2,109,143; Feb. 22.
Wolsifer, John V., Indianapolis, Ind. Furnace. 2,109,243; Feb. 22.
Wood Newspaper Machinery Corporation. (See Tollison, Paul L., assignor.)
Woodward, Ralph, Leicester, Mass. Machine for producing raised printing. 2,109,206; Feb. 22.
Wright, George M., Chelmsford, England, assignor to Radio Corporation of America. Radio receiving system. 2,108,878; Feb. 22.
Wright, William S., Newark, Ohio, assignor to Bendix Products Corporation, South Bend, Ind. Automatic clutch release. 2,109,096; Feb. 22.
Wyott Manufacturing Company, The. (See Titus, Thomas L., assignor.)
Yirava, Charles R., Cleveland, Ohio. Portable dispensing apparatus. 2,109,250; Feb. 22.
Young, Charles H. (See White, B. B., and Young.)
Young, Essel G., Detroit, Mich. Dough pressing machine. 2,109,124; Feb. 22.
Young, Harland H., Jr., assignor to Industrial Patents Corporation, Chicago, Ill. Defoaming method and means. 2,108,912; Feb. 22.
Yurkovich, Anton M., Cleveland, Ohio. Auto window screen. 2,109,160; Feb. 22.
Zajicek, Frank, New York, N. Y. Instrument for curling the lashes of an eye. 2,109,244; Feb. 22.
Zeigler, Jacob B. (See Zeigler, Kenneth O. and J. B.)
Zeigler, Kenneth O. and J. B., Salem Ohio. Broiling apparatus. 2,109,079; Feb. 22.
Zerweck, Werner, W. Kunze, and W. Brunner, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. 4-hydroxynaphthostyrile compounds. 2,108,879; Feb. 22.
Zoldo, Frank. (See Shakter, Louis, assignor.)
Zublin, John A., Los Angeles, Calif. Fluid passage for drilling tools. 2,108,845; Feb. 22.
Zublin, John A., Los Angeles, Calif. Rotary [illegible] tool with rolling cutters. 2,108,846; Feb. 22.
Zworykin, Vladimir K., Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company. Vacuum tube. 2,109,245; Feb. 22.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 22D DAY OF FEBRUARY, 1938

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Brake drum, Composite. F. W. Schmidt. Re. 20,661; Feb. 22.
Burner, Gas. F. H. Schneider. Re. 20,662; Feb. 22.
Coating and apparatus therefor and product, Method of. E. C. Schacht. Re. 20,660; Feb. 22.
Control system for electric motors, Automatic. C. M. Knight. Re. 20,658; Feb. 22.
Floor polishing device. J. Glover. Re. 20,657; Feb. 22.
Refrigerating apparatus. B. B. Geyer. Re. 20,656; Feb. 22.
Vehicle direction indicator. A. D. Riggs. Re. 20,659; Feb. 22.

LIST OF DESIGN INVENTIONS

Ashtray and cigarette package opener, Combined. H. Flohr. 108,539; Feb. 22.
Bathing suit or similar article. D. Watinsky. 108,600; Feb. 22.
Belt buckle. R. Slote. 108,555; Feb. 22.
Bonnet. W. P. Fortune. 108,509; Feb. 22.
Bottle. E. W. Fuerst. 108,593; Feb. 22.
Box, Display. R. A. Nagle. 108,605–6; Feb. 22.
Bracelet or similar article. W. W. Hobé. 108,545; Feb. 22.
Bracket for a map or similar article. A. E. MacQuarrie. 108,596; Feb. 22.
Bridge for an ophthalmic mounting. E. M. Splaine. 108,584; Feb. 22.
Brooch or similar article. F. di Verdura. 108,536–7; Feb. 22.
Brooch or the like. N. Barbieri. 108,533–4; Feb. 22.
Brush or similar article, Lip. C. A. Mureau. 108,577; Feb. 22.
Building or the like, Service station. J. F. Cheney. 108,535; Feb. 22.
Building, Resort. T. R. Morgan. 108,550; Feb. 22.
Cabinet, Display. F. F. Melvin and B. C. Howell. 108,597; Feb. 22.
Case, Article display. T. J. Pilliod. 108,580; Feb. 22.
Case or similar article, Vanity. D. H. Zell. 108,590; Feb. 22.
Casing for electric clipper or the like, Handle. J. A. Hanley. 108,542; Feb. 22.
Clock face. W. D. Teague. 108,586; Feb. 22.
Coat. H. Miller. 108,601; Feb. 22.
Compact. S. E. Wallace. 108,589; Feb. 22.
Confection and handle, Combined frozen. M. Lasow. 108,540; Feb. 22.
Dispenser for interfolded sheets. F. L. Broeren, B. T. Hoffmaster, and A. S. Krueger. 108,561; Feb. 22.
Dispenser for paper napkins. F. L. Broeren and S. N. Hope. 108,560; Feb. 22.
Dispenser, Token. W. J. Taylor. 108,585; Feb. 22.
Doll. F. H. Morehead. 108,576; Feb. 22.
Dress. F. M. B. Burns. 108,604; Feb. 22.
Dress. M. White. 108,598; Feb. 22.
Dress ensemble. A. Engel. 108,568; Feb. 22.
Dress, Ensemble. J. Tuman. 108,607–8; Feb. 22.
Escutcheon plate for a combined radio tuning dial and control panel or the like. L. J. Leishman. 108,574; Feb. 22.
Fabric, Embroidered textile. I. J. Shorser. 108,582; Feb. 22.
Fabric or similar article, Textile. A. Tillman. 108,587; Feb. 22.
Fabric, Textile. W. Harm. 108,572; Feb. 22.
Glove. S. Shapiro. 108,603; Feb. 22.
Goblet or similar article, Stemmed. E. Bell. 108,557; Feb. 22.
Hanger, Coat. B. Perrone. 108,579; Feb. 22.
Hat. A. Rainess. 108,602; Feb. 22.
Heater, Circulating. B. W. Tullis. 108,588; Feb. 22.
Holder, Combined book and newspaper. J. I. Kumauchi. 108,595; Feb. 22.
Ingot or the like, Aluminum alloy. H. Lindenberger. 108,575; Feb. 22.
Jar. W. L. Kennedy. 108,594; Feb. 22.
Jar, Glass. R. H. Dallas. 108,592; Feb. 22.
Jug. L. Cella. 108,591; Feb. 22.
Lamp and fan or similar article, Combined. E. G. Shinner. 108,553; Feb. 22.
Lamp, smoking stand, and radio tuning unit, Combined. D. J. Crowley. 108,567; Feb. 22.
Marker or the like, House. O. O. Godwin. 108,571; Feb. 22.
Metal for making baking receptacles or similar articles, Sheet. J. G. Jackson. 108,573; Feb. 22.
Mounting, Ophthalmic. E. M. Splaine. 108,556; Feb. 22.
Mounting, Ophthalmic. E. M. Splaine. 108,583; Feb. 22.
Pencil tip. J. McNulty. 108,548; Feb. 22.
Photographic enlarger. R. Simmon. 108,554; Feb. 22.
Pin or similar article, Brooch. W. W. Hobé. 108,543–4; Feb. 22.
Pump, Sprayer. R. Bernhardt. 108,599; Feb. 22.
Redingote. E. M. Ciccone. 108,563–4; Feb. 22.
Refrigerator. A. O. Boyce and G. F. Appleby. 108,559; Feb. 22.
Ring, Finger. J. Granat. 108,540; Feb. 22.
Ring, Wedding. J. Granat. 108,541; Feb. 22.
Rug. W. W. Robinson. 108,581; Feb. 22.
Setting for a ring, Gem. H. Rufeisen. 108,551; Feb. 22.
Shoe eyelet. S. G. Mandalian. 108,547; Feb. 22.
Spoon or analogous article. A. J. Flauder. 108,538; Feb. 22.
Spoon or similar article. G. N. Allen, L. E. Ressegger, and M. P. Fleming. 108,532; Feb. 22.
Stand for jewelry and similar article, Display. R. Christen. 108,562; Feb. 22.
Stand, Smoking. J. K. Milton. 108,549; Feb. 22.
Stirrer and pick, Combined drink. G. W. Bergen, and R. B. Dabney. 108,558; Feb. 22.
Tooth brush and tumbler holder, Combined. R. S. Sanford. 108,552; Feb. 22.
Top, back splash panel and lighting unit for ranges, Combined. E. D. Pellegrin. 108,578; Feb. 22.
Truck, Automotive. V. G. and E. V. Garnett. 108,570; Feb. 22.
Washing machine and wringer, Combined. F. A. Conterman. 108,565; Feb. 22.
Watch bezel, Wrist. R. Jaccarino. 108,600; Feb. 22.
Wringer and washing machine, Combined. F. A. Conterman. 108,566; Feb. 22.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 22D DAY OF FEBRUARY, 1938

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acid, Apparatus for the recovery of sulphuric. H. W. Sheldon. 2,108,670; Feb. 22.
Acid substance, Sulphamic. F. Guenther and H. Holsten. 2,108,886–7; Feb. 22.
Acoustical device. A. E. N. Lawrence. 2,109,012; Feb. 22.
Adapter for typewriters. L. Jensen. 2,109,293; Feb. 22.
Advertising device. F. W. Quidas. 2,108,628; Feb. 22.
Aeroplane control mechanism. C. T. Kenyon. 2,108,861; Feb. 22.
Air, Apparatus for conditioning. F. F. von Wilmowsky. 2,109,019; Feb. 22.
Air compressing machine. W. J. Brightwell. 2,108,958; Feb. 22.
Air control means for combustion apparatus. C. Scholl. 2,109,239–40; Feb. 22.
Aircraft. E. B. Wilford and E. Daland. 2,108,839; Feb. 22.
Alarm. M. B. Fulton. 2,108,851; Feb. 22.
Alcohol production, Secondary. F. M. Archibald and H. G. Schneider. 2,109,004; Feb. 22.
Alloy: *See*—
Aluminum alloy. Tin alloy.
Alloy. M. H. Brown. 2,109,285; Feb. 22.
Alloys, Preparation of lead-sodium. L. S. Bake. 2,109,005; Feb. 22.
Aluminum alloy. Y. Matuenaga. 2,109,117; Feb. 22.
Aminoalkyl-sulphonic acids and preparing them. O. Nicodemus and W. Schmidt. 2,109,401; Feb. 22.
Amusement apparatus. J. N. Bartlett. 2,109,041; Feb. 22.
Antenna coupling device for five meter receivers. P. De F. McKeel. 2,109,219; Feb. 22.
Antiflooding attachment for carburetors. F. E. Michael. 2,109,179; Feb. 22.
Antiskid device. B. T. Kinnear. 2,109,063; Feb. 22.
Aqueous ammonia solutions, Concentrating. J. L. Bennett. 2,108,914; Feb. 22.
Aralkyl halides, Production of. L. H. Fisher. 2,108,937; Feb. 22.
Arc-extinguishing device. J. W. Huffstutter. 2,109,216; Feb. 22.
Article with a facing of sheet metal, Producing a cast. R. D. Sansome. 2,108,996; Feb. 22.
Articles from steel alloys, Manufacture of. F. K. Naumann. 2,109,118–9; Feb. 22.
Ash separation, Centrifugal. W. M. Keenan. 2,109,234; Feb. 22.
Assistants for the textile and related industries, Production of. M. Pier and B. Engel. 2,108,901; Feb. 22.
Attachment plug. E. J. Te Pas. 2,108,907; Feb. 22.
Auto window screen. A. M. Yurkovich. 2,109,160; Feb. 22.
Azo compounds and dyeing therewith. J. G. McNally and J. B. Dickey. 2,108,824; Feb. 22.
Bailer, Differential pressure. W. J. Flury. 2,109,008; Feb. 22
Bar: *See*—
Cutter bar.
Baton. L. F. Dorsey. 2,108,802; Feb. 22.
Battery terminal and post. H. A. Hess. 2,109,424; Feb. 22.
Bearing. R. R. Searles. 2,109,053; Feb. 22.
Bed or the like, Hospital. J. A. Bäwer. 2,108,913; Feb. 22.
Binder, Loose leaf. J. H. Talmage. 2,109,241; Feb. 22.
Bit: *See*—
Drill bit.
Blank feeder and ejector. W. W. Davidson. 2,108,799; Feb. 22.
Blanks, Making laminated metal. S. L. Ingersoll. 2,109,010; Feb. 22.
Blanks, Mechanism for controlling the feeding and advancing of. W. W. Davidson. 2,108,800; Feb. 22.
Blowpipe. W. J. Jacobsson. 2,108,820; Feb. 22.
Blowpipe. W. J. Jacobsson. 2,109,252; Feb. 22.
Blowpipe, Flashback-resistant. W. J. Jacobsson. 2,108,819; Feb. 22.
Bobbin. G. B. Markle, Jr. 2,109,420; Feb. 22.
Bodies, Dense nonmetallic. J. A. Boyer and C. G. Rose. 2,109,246; Feb. 22.
Boiler: *See*—
Steam boiler.
Boiler water level gauge, Illuminated. A. G. Blanchard. 2,109,345; Feb. 22.
Bomb, Practice. S. P. Huff and A. Adelman. 2,108,818; Feb. 22.
Boring mechanism, Hydraulic. T. Seifer. 2,108,946; Feb. 22.
Bottle valve. J. W. Wandell. 2,108,938; Feb. 22.
Bowden control, Hydraulic. H. H. Kerr, Jr. 2,109,114; Feb. 22.
Box-making machine. G. Seifert. 2,109,359; Feb. 22.
Box press. H. E. Twomley. 2,109,040; Feb. 22.
Brake: *See*—
Electro-pneumatic brake. Fluid pressure brake.
Empty and load brake.
Brake. C. Press. 2,109,091; Feb. 22.
Brake apparatus, Electropneumatic. E. E. Hewitt. 2,109,046; Feb. 22.
Brake beam safety carrier. F. A. Isaacson. 2,108,967; Feb. 22.
Brake control for high speed trains. C. C. Farmer and E. E. Hewitt. 2,109,166; Feb. 22.
Brake control means. R. E. Miller. 2,109,168; Feb. 22.
Brake drum. F. C. Frank. 2,109,110; Feb. 22.
Brake equipment, High speed. J. W. Logan, Jr. 2,109,167; Feb. 22.
Brake mechanism. W. A. Gantner and T. R. McGowan. 2,109,194; Feb. 22.
Brake mechanism. F. L. Main and C. A. Sawtelle. 2,109,013; Feb. 22.
Brake-relining machine. H. B. Barrett. 2,109,327; Feb. 22.
Branding machine. W. P. Bullard and O. L. Williams. 2,109,380; Feb. 22.
Brassière. L. Green and J. Marks. 2,109,172; Feb. 22.
Broiling apparatus. K. O. and J. B. Zeigler. 2,109,079; Feb. 22.
Brooder, Electrically heated. J. E. Carlson. 2,109,163; Feb. 22.
Buff, Fibrous. L. M. Hague. 2,108,985; Feb. 22.
Buffing or polishing wheel. E. W. Hall. 2,108,966; Feb. 22.
Building system, Inorganic. M. Foster. 2,109,265; Feb. 22.
Bun slicing machine. R. R. Springer. 2,109,438; Feb. 22.
Burner: *See*—
Liquid fuel burner. Oil burner.
Burner for sintering machines. R. B. Horn. 2,109,149; Feb. 22.
Bushing, High voltage. E. D. Eby. 2,109,368; Feb. 22.
Button former. F. C. Elder. 2,108,917; Feb. 22.
Cabinet: *See*—
Dispensing cabinet. Radio cabinet.
Cable comprising one or more screened core groups, Communication. H. Kaden, P. Thomas, and H. Wassmannsdorff. 2,109,334; Feb. 22.
Cam grinding apparatus. C. J. Green. 2,109,386; Feb. 22.
Camping instrument. H. Ringer. 2,109,016; Feb. 22.
Cap fastener, Filler. H. A. Marsh. 2,109,137; Feb. 22.
Caps to receptacles, Method of and apparatus for applying closure. E. von Segebaden and B. Johnson. 2,108,932; Feb. 22.
Capsule filling machine. S. J. Speckhart and R. Herger. 2,108,906; Feb. 22.
Car structure, Railway. H. M. Pfiager. 2,109,275; Feb. 22.
Carbide composites, Producing hard cemented. G. J. Comstock. 2,108,797; Feb. 22.
Carbide composition, Hard. J. A. Boyer and C. G. Rose. 2,108,794; Feb. 22.
Carbon electrode. E. Neukirch. 2,109,302; Feb. 22.
Carburetor. M. E. Chandler and E. O. Wirth. 2,109,260; Feb. 22.
Carburetor. S. F. Hunt. 2,109,113; Feb. 22.
Card plays of bridge games, Stage exhibiting. J. R. Kilpatrick. 2,109,175; Feb. 22.
Cards or like articles from a stack, Feeding of. J. Crighton. 2,109,208; Feb. 22.
Carpet fastener. B. C. Place. 2,109,402; Feb. 22.
Carrier: *See*—
Brake beam safety carrier.
Cart, Machine gun. S. H. Negrotto. 2,108,826; Feb. 22.
Case: *See*—
Luggage case.
Case packing machine. W. D. Kimball and C. I. Braren. 2,109,294; Feb. 22.
Cash register, accounting and the like machines. E. Breitling. 2,109,309; Feb. 22.
Casing or tubing head, Full hole. J. C. O'Neal. 2,109,031; Feb. 22.
Catalysts, New. J. A. Nieuwland and F. J. Sowa. 2,109,340; Feb. 22.
Cementing plug. J. F. Blee. 2,109,058; Feb. 22.
Chain: *See*—
Cross chain.
Chariot vehicle. J. C. Rumsey. 2,108,868; Feb. 22.
Check writer. F. W. Dahlberg. 2,109,104; Feb. 22.

Checkerwork. H. L. Smalley. 2,108,871; Feb. 22.
Cheese, Packaging sliced. J. Rossman and C. L. Wagner. 2,109,093; Feb. 22.
Chemical composition. J. G. Moore. 2,109,299; Feb. 22.
Chilling apparatus. V. E. Kroft and A. Roe. 2,109,135; Feb. 22.
Chlorinator. C. V. Swearingen. 2,109,439; Feb. 22.
Chlorine dioxide, Production of. G. P. Vincent. 2,108,976; Feb. 22.
Cigarette. W. C. Higley. 2,109,132; Feb. 22.
Cigarette catcher, Rotary. G. W. Gwinn. 2,109,148; Feb. 22.
Cigarette tobacco feed. J. W. Leary. 2,109,200; Feb. 22.
Circuit: *See*—
Generator circuit. Telegraphic keying circuit.
Circuit breaker. W. M. Austin. 2,109,226; Feb. 22.
Circuit breaker. L. W. Dyer. 2,109,211; Feb. 22.
Circuit controlling device, Thermal operated. O. S. Field. 2,109,169; Feb. 22.
Circuit for hair waving machines, Electrical. G. Freudenberg and A. E. Reimers. 2,108,964; Feb. 22.
Circuits, Apparatus for testing ignition. L. E. Wagner. 2,108,835; Feb. 22.
Clamping means for mirrors for motor vehicles. A. W. Rosen. 2,109,142; Feb. 22.
Clasp. Insignia holding bracelet. C. H. Kestenman. 2,108,892; Feb. 22.
Clean-out and sample tool, Combination. G. A. Humason. 2,109,197; Feb. 22.
Clip. A. C. Fearing. 2,109,213; Feb. 22.
Clip for the adjustable attachment of partitions in showcases and the like. A. Stober. 2,108,950; Feb. 22.
Clock mechanism, Electric. L. Trepanier. 2,108,931; Feb. 22.
Closure for collapsible tubes and containers. F. McLaughlin. 2,109,397; Feb. 22.
Closure for nursing bottles and the like. J. Little. 2,109,374; Feb. 22.
Closure operator. J. L. Carrillo. 2,109,128; Feb. 22.
Clothespin. D. W. Hilderbrant. 2,109,023; Feb. 22.
Clutch: *See*—
Friction clutch.
Clutch control apparatus. C. O. Guernsey. 2,109,420; Feb. 22.
Clutch control mechanism. C. S. Bragg and V. W. Kliesrath. 2,109,099; Feb. 22.
Clutch mechanism, Automatic. R. P. Lewis. 2,108,969; Feb. 22.
Clutch release, Automatic. W. S. Wright. 2,109,096; Feb. 22.
Coffeepot. W. E. Williams. 2,109,363; Feb. 22.
Coin controlled mechanism. J. N. Pryor. 2,108,943; Feb. 22.
Combustion chamber. R. J. Dufour. 2,109,262; Feb. 22.
Composition of matter and making the same. W. J. Koenig. 2,108,893; Feb. 22.
Compressor cooling system. B. S. Aikman. 2,108,785; Feb. 22.
Condenser: *See*—
Electrical condenser.
Condenser. A. W. Franklin. 2,109,266; Feb. 22.
Condenser. F. Gettelman. 2,109,064; Feb. 22.
Connecter: *See*—
Electrical connecter. Wire connecter.
Connecter plug. H. W. Chaplin. 2,108,916; Feb. 22.
Container. J. D. Brophy. 2,109,100; Feb. 22.
Containers, Preparing fiber. C. T. Walter. 2,108,910; Feb. 22.
Contamination by metals in caustic alkali solutions, Reduction of. A. H. Hooker. 2,109,250; Feb. 22.
Control for drilling rigs, Hydraulic. W. F. McMurry and G. F. Phillips. 2,109,297; Feb. 22.
Control means for automobiles. H. E. Clarke. 2,109,101; Feb. 22.
Control mechanism for voting machines, Electric. W. G. Cook. 2,109,229; Feb. 22.
Controlling device for window shade rollers. A. C. Hanson. 2,109,112; Feb. 22.
Conveyer apparatus. F. Shurley. 2,109,360; Feb. 22.
Copper matte, Selective converting of. L. Larson and J. C. Klugar. 2,109,272; Feb. 22.
Cord attaching device, Pull. W. L. Riberdy. 2,109,051; Feb. 22.
Core for trimming moldings. W. J. MacLeod. 2,109,428; Feb. 22.
Corn trimming machine. C. E. and W. G. Carll. 2,109,345; Feb. 22.
Counter-current contact between fluids, Apparatus for effecting. W. J. Podbielniak. 2,109,375; Feb. 22.
Coupling: *See*—
Pipe coupling.
Cover and frame, Manhole. V. Elkington. 2,109,287; Feb. 22.
Cover for ladies' shoes, Heel. W. G. and L. O. Field. 2,109,193; Feb. 22.
Crane. R. A. Ormsby. 2,109,304; Feb. 22.
Crankshaft, Hollow. D. J. Campbell. 2,109,083; Feb. 22.
Crib and wardrobe, Combined. M. Groesser. 2,109,267; Feb. 22.
Cribbing structure. R. Irvin. 2,109,025; Feb. 22.
Cross chain. H. St. Pierre. 2,109,038; Feb. 22.
Cross head and piston rod and piston construction. E. S. Dennison. 2,109,060; Feb. 22.
Crushing machinery. G. W. Borton. 2,108,793; Feb. 22.
Cultivator foot for tractors, Automatic. M. L. and A. C. Garrison. 2,109,385; Feb. 22.
Cultivator shovel positioning mechanism. A. Spande. 2,109,055; Feb. 22.
Curler. R. M. McFadden. 2,109,218; Feb. 22.
Curler, Flat hair. H. Natkiel. 2,109,338; Feb. 22.
Cut-off for electric irons, Automatic. J. Muldowney. 2,109,181; Feb. 22.
Cut-off mechanism for straw making machines. K. E. Garling. 2,109,146; Feb. 22.
Cut-out. A. Ramsey. 2,108,993; Feb. 22.
Cutter: *See*—
Pole shaping cutter.
Cutter bar. C. L. Bowman. 2,109,081; Feb. 22.
Cutter bar, Mining machine. C. L. Bowman. 2,109,082; Feb. 22.
Cutter for pole shaping machines. A. M. Deiters and E. R. Gillon. 2,109,414; Feb. 22.
Cutter or grater, Vegetable. R. Rupert. 2,109,358; Feb. 22.
Cutting implement. H. Orietrea. 2,109,803; Feb. 22.
Cutting machine. F. W. Billiker and J. B. Ball. 2,109,057; Feb. 22.
Cutting machine. A. R. Thompson. 2,108,951; Feb. 22.
Dampener for printing presses. M. C. Grembecki. 2,108,984; Feb. 22.
Decelerometer. R. J. Alden. 2,108,791; Feb. 22.
Defoaming method and means. H. H. Young, Jr. 2,108,912; Feb. 22.
Dental floss holder. C. B. Elcan. 2,109,417; Feb. 22.
Dental model surveyor. N. G. Wills. 2,108,980; Feb. 22.
Derivatives of the anthrapyrimidine series, M. A. Kuns and K. Koeberle. 2,109,116; Feb. 22.
Device for cutting fruit into sectors. N. Obenshain. 2,108,992; Feb. 22.
Device for demonstrating the action of cords and the like. P. S. Gould. 2,109,171; Feb. 22.
Diaphragm switch. P. M. Farmer and F. C. Evans. 2,109,145; Feb. 22.
Di-calcium phosphate, Making. W. H. McIntire. 2,108,940; Feb. 22.
Dirt moving machine, Hydraulically controlled. C. Le Bleu. 2,109,392; Feb. 22.
Dish. A. T. Kieft. 2,108,863; Feb. 22.
Disinfectant for seeds, Dry. F. Wolff. 2,109,143; Feb. 22.
Dispensing apparatus. W. M. Carroll. 2,109,084; Feb. 22.
Dispensing apparatus. W. L. Marden. 2,109,178; Feb. 22.
Dispensing apparatus, Portable. C. R. Yirava. 2,109,259; Feb. 22.
Dispensing cabinet, Multiple compartment. W. S. Corbin. 2,109,412; Feb. 22.
Dispensing device for paper napkins. E. C. Morris. 2,108,825; Feb. 22.
Display rack. C. M. Brown. 2,109,379; Feb. 22.
Distillation, Apparatus for high vacuum. E. W. Fawcett and J. L. McCowen. 2,109,129; Feb. 22.
Door holder. E. H. Johnson. 2,108,891; Feb. 22.
Door operator for wagons, Hydraulic. J. Kuchar. 2,108,864; Feb. 22.
Door threshold. C. B. Davis. 2,109,043; Feb. 22.
Dough pressing machine. E. G. Young. 2,109,124; Feb. 22.
Draft rigging. D. S. Barrows. 2,109,126; Feb. 22.
Draft rigging. B. W. Kadel. 2,109,133; Feb. 22.
Drafting apparatus. F. D. Hazelton. 2,109,065; Feb. 22.
Drawing frame, Double three-roller. H. Stroink. 2,108,990; Feb. 22.
Drill bit. M. Hohanson. 2,109,290; Feb. 22.
Drive for drafting machinery, Variable speed. J. R. Clay. 2,109,347; Feb. 22.
Drive mechanism, Motor. M. Garbell. 2,109,063; Feb. 22.
Dye. J. W. Hinds. 2,109,372; Feb. 22.
Dyeing, Mordanting and union. E. S. Chapin. 2,109,261; Feb. 22.
Dyestuff of the indigoid type. S. Ellingworth. 2,109,360; Feb. 22.
Dyestuffs, Indigoid. E. Kambli. 2,108,938; Feb. 22.
Dyestuffs, Manufacture of azo. H. Roos. 2,109,183; Feb. 22.
Dyestuffs, Production of azo. K. Holzach, C. Winter and B. v. Bock. 2,109,024; Feb. 22.
Educational device. L. D. Haffner. 2,108,855; Feb. 22.
Electric discharge tube. R. A. Braden. 2,108,880; Feb. 22.
Electric heater. H. A. Sovereign. 2,109,379; Feb. 22.
Electrical apparatus. H. V. Putman. 2,109,221; Feb. 22.
Electrical condenser. S. Ruben. 2,108,995; Feb. 22.
Electrical connecter. W. A. Heinrich. 2,108,856; Feb. 22.
Electrical motor. R. H. Gearhart and H. L. Renshaw. 2,109,111; Feb. 22.
Electrical system. E. L. Clark. 2,109,021; Feb. 22.
Electrical testing and detecting apparatus. M. Bly. 2,109,180; Feb. 22.
Electrically actuated device for increasing the braking action. H. Gallusser. 2,109,419; Feb. 22.

Electromagnetic separator. R. H. Stearns and B. C. Kiekhaefer. 2,109,076; Feb. 22.
Electron discharge apparatus. A. M. Skellett. 2,108,830; Feb. 22.
Electro-pneumatic brake. C. C. Farmer and E. B. Miller. 2,108,755; Feb. 22.
Empty and load brake. E. S. Cook and R. M. Hewitt. 2,109,366; Feb. 22.
Emulsions containing trinuclear cyanine dyes, Photographic. L. G. S. Brooker and L. A. Smith. 2,108,845; Feb. 22.
Engine: *See*—
Internal combustion engine.
Esters of testosterone and making same. K. Miescher, A. Wettstein, and C. Scholz. 2,109,400; Feb. 22.
Excavator, Roadway snow. E. K. Russel. 2,109,094; Feb. 22.
Explosive. D. C. McMeans. 2,109,049; Feb. 22.
Extractor: *See*—
Juice extractor. Tomato juice extractor.
Eyeglasses. W. R. Uhlemann. 2,108,875; Feb. 22.
Eyeshade. O. A. Kleine. 2,109,115; Feb. 22.
Fabric: *See*—
Woven fabric.
Fabric and making the same, Textile. L. G. Lawrie, R. J. W. Reynolds, and H. A. Piggott. 2,109,295; Feb. 22.
Fabric and the production thereof, Knitted. H. A. Raynor. 2,108,925; Feb. 22.
Fan. A. L. Baker. 2,108,841; Feb. 22.
Fastener: *See*—
Cap fastener. Carpet fastener.
Fastener. K. T. Snyder. 2,108,931; Feb. 22.
Fastening device. J. Landgraf. 2,109,264; Feb. 22.
Fats or oils, Apparatus for the continuous splitting of. E. Moriock. 2,108,980; Feb. 22.
Ferrochromium, Making. M. J. Udy. 2,109,122; Feb. 22.
Fiber construction, Artificial. A. Fernbach. 2,109,333; Feb. 22.
Fiber cutting mechanism for tape condenser of similar machines. H. H. Knight. 2,109,176; Feb. 22.
Fibers and making same, Wool-like artificial. A. von Weinberg, H. Rein, and O. Eisenhut. 2,109,306; Feb. 22.
Fibers, Improving the electrical resistance of animal. A. C. Goodings. 2,109,087; Feb. 22.
Fibers, Making wool-like artificial. A. von Weinberg, H. Rein, and O. Eisenhut. 2,109,307; Feb. 22.
Figure employable for production of animated cartoon films, Deformable. W. H. Haughton. 2,109,422; Feb. 22.
Film in daylight, Apparatus for developing. J. Eggert and F. Luft. 2,108,982; Feb. 22.
Filter. W. P. Dalrymple. 2,108,798; Feb. 22.
Filter and utilising the same, Radiation. H. Kott. 2,109,235; Feb. 22.
Fixture, Display. R. L. Mapson. 2,109,255; Feb. 22.
Fluid mixer. W. J. Jacobsson. 2,109,261; Feb. 22.
Fluid pressure brake. C. C. Farmer and E. B. Hewitt. 2,108,760; Feb. 22.
Fluid pressure brake. E. B. Hewitt. 2,109,045; Feb. 22.
Fluid pressure brake. E. B. Hewitt. 2,109,047; Feb. 22.
Folding machine. W. H. Draper. 2,109,035; Feb. 22.
Food products, Making. G. J. Ley, J. H. Payne, and G. Akau. 2,108,897; Feb. 22.
Form for embedment in concrete construction, Cellular. H. M. Hadley. 2,109,009; Feb. 22.
4-hydroxynaphthoyrille compounds. W. Herwock, W. Kunze, and W. Brunner. 2,108,879; Feb. 22.
Frame: *See*—
Drawing frame. Furniture frame.
Friction clutch. K. J. Worsell. 2,109,405-6; Feb. 22.
Fruit sorting and packing system. E. E. Lindemeyer. 2,108,869; Feb. 22.
Fuel control apparatus. W. E. Leibing and W. B. Fageol. 2,109,296; Feb. 22.
Fuel feeding device for locomotives or the like. E. M. Wilcox and A. M. Stockwell. 2,109,242; Feb. 22.
Furfurylamines, Preparing. C. F. Winans. 2,109,159; Feb. 22.
Furnace. J. V. Wolsiffer. 2,109,243; Feb. 22.
Furniture frame. A. Bergmann. 2,109,060; Feb. 22.
Fuse link. E. F. Beethe. 2,108,843; Feb. 22.
Fuse switch, High duty. E. E. Pittman and C. H. Walsh. 2,109,090; Feb. 22.
Game. H. G. Bratenstein. 2,109,410; Feb. 22.
Game and projectile therefor. M. D. Price. 2,109,120; Feb. 22.
Garment hanger. E. A. Ghisoni. 2,108,853; Feb. 22.
Garment support. S. Buch. 2,109,280; Feb. 22.
Gate. M. Mortensen. 2,109,200; Feb. 22.
Gate valve. C. W. Bennett and B. H. Staats. 2,109,042; Feb. 22.
Gauge: *See*—
Boiler water level gauge. Liquid level gauge.
Gear: *See*—
Retractable landing gear.
Gear for aeroplanes, Winter landing. A. Ferrier. 2,108,962; Feb. 22.
Gear mechanism for cycles and the like, Change speed. J. T. Morgan. 2,108,941; Feb. 22.
Gear shifting mechanism, Automatic. E. G. Hill and J. X. Phillips. 2,109,443; Feb. 22.
Generator: *See*—
Vaporizing generator.
Generator circuit, Ultrashort wave oscillation. H. O. Peterson. 2,108,900; Feb. 22.
Glass sheet, method and apparatus for making same. H. A. Fisher. 2,108,811; Feb. 22.
Glycols from oxides of olefines, Preparation of. P. Ferrero, C. Vandendriessche, and F. Berbe. 2,108,936; Feb. 22.
Grinder, Drill. C. E. Adams. 2,109,506; Feb. 22.
Grinder, Portable motor knife. J. E. Eadie. 2,109,107; Feb. 22.
Grinding device. J. Hribar. 2,109,292; Feb. 22.
Grinding instrument for use in dental work. H. P. Cosmesment and F. Cappette. 2,109,066; Feb. 22.
Guard for journal boxes on railroad trucks, Dust. H. C. Theiss. 2,108,874; Feb. 22.
Gun carriage. O. L. Beardsley. 2,108,792; Feb. 22.
Gun, Machine. F. D. Hoppert, W. R. Bull and C. E. Simpson. 2,108,817; Feb. 22.
Hair waving. G. Freudenberg and A. E. Reimers. 2,108,963; Feb. 22.
Handle and locking member for pasteboard containers and the like. M. E. Seifer. 2,109,034; Feb. 22.
Hanger: *See*—
Garment hanger.
Hanger and folder, Garment. G. Richter. 2,109,141; Feb. 22.
Harvester and thresher. V. Schowengerdt. 2,109,436; Feb. 22.
Headwear. J. R. Hinshman. 2,109,248; Feb. 22.
Heater: *See*—
Electric heater.
Holder: *See*—
Dental floss holder. Notebook and copy holder.
Door holder. Pad holder.
Mop holder.
Holder and guide, Die. B. C. Dimmick. 2,109,312; Feb. 22.
Holster. R. H. Hoyt. 2,109,232; Feb. 22.
Hydrant, Frostproof. J. A. Vogel. 2,109,187; Feb. 22.
Hydroaeroplane. F. C. Schoenbucher. 2,109,320; Feb. 22.
Hydrocarbons, Process and apparatus for stabilising. E. G. Ragatz. 2,109,201; Feb. 22.
Ice and dry ice refrigeration system, Water. A. J. Cordrey. 2,109,310; Feb. 22.
Ice cream, Preparing and serving. G. W. Cocks. 2,109,102; Feb. 22.
Ignition apparatus. E. B. Nowosielski. 2,109,029-30; Feb. 22.
Ignition timing control. D. Cole. 2,109,103; Feb. 22.
Indicator: *See*—
Photographic film indicator. Target indicator.
Instrument for curling the lashes of an eye. F. Zajicek. 2,109,244; Feb. 22.
Instrument for indicating navigational factors. J. M. Beyhaw. 2,109,283; Feb. 22.
Internal combustion engine. F. C. Mock. 2,109,298; Feb. 22.
Internal combustion engine. C. H. Thompson. 2,109,185; Feb. 22.
Iron, Steam-electric pressing. A. and E. B. Tricomi. 2,109,326; Feb. 22.
Irrigation device. W. H. Coles and B. J. Nelson. 2,108,787; Feb. 22.
Jacking system for vehicles, Hydraulic. D. W. Sessions. 2,109,238; Feb. 22.
Jewelry mountings or the like, Forming. A. F. Reilly. 2,109,376; Feb. 22.
Joint: *See*—
Pipe joint.
Joint construction. W. A. Flumerfelt. 2,108,814; Feb. 22.
Juice extractor. B. L. Lorensen. 2,109,045; Feb. 22.
Ketene, Producing. J. Sixt and M. Mugdan. 2,108,829; Feb. 22.
Kettle, Two-compartment fry. K. Ehrgott. 2,109,212; Feb. 22.
Key-identifying device. C. F. I'Anson. 2,109,268; Feb. 22.
Kit, Miniature mending. M. Lichter. 2,109,318; Feb. 22.
Knife. D. F. Foster. 2,109,108; Feb. 22.
Knitting machine, Flat rib. W. Heinitz. 2,109,423; Feb. 22.
Ladder and safety elevator, Fire. M. Honig. 2,109,196; Feb. 22.
Lamp: *See*—
Studio lamp.
Lamp bulb, Electric. L. E. Calkins and O. S. Levi. 2,108,847; Feb. 22.
Latch. F. E. Gray. 2,108,965; Feb. 22.
Leather and similarly tautly stretched units, Drying. A. O. Hurxthal. 2,109,425; Feb. 22.
Leveling instrument. P. Grieve. 2,109,044; Feb. 22.
Lift, Automobile. H. H. Gunter. 2,108,886; Feb. 22.
Lighter arrangement for gas ranges. B. B. and E. M. Meacham. 2,109,290; Feb. 22.
Lighter, Cigarette. A. M. Andrews. 2,109,003; Feb. 22.
Lighting apparatus, Electric. C. Rebl. 2,109,241; Feb. 22.
Lipstick spreader. E. M. Buttschau. 2,109,411; Feb. 22.
Liquid fuel burner. W. F. Falkenberg. 2,108,918; Feb. 22.

Liquid level gauge. C. H. Lank. 2,109,355; Feb. 22.
Liquid pump. T. L. Titus. 2,109,224; Feb. 22.
Liquids and perfumes, Artificially aging alcoholic. G. A. Krause. 2,109,151; Feb. 22.
Liquids, Cooling and filtering. M. Vuilleme. 2,108,977; Feb. 22.
Loader, Tractor truck. C. J. Villerup. 2,109,440; Feb. 22.
Lock. F. Elbaum. 2,109,264; Feb. 22.
Lock controlling mechanism for transferable freight containers. B. F. Fitch. 2,108,813; Feb. 22.
Loom reed adjusting means. J. B. Jackson. 2,109,444; Feb. 22.
Lowering apparatus. F. Pardee, Jr. 2,109,139; Feb. 22.
Lubricating composition. J. I. Wasson. 2,108,954; Feb. 22.
Lubrication and wear, Testing of. R. L. H. Smith. 2,108,948; Feb. 22.
Luggage case. J. Ritter, Jr., and S. Esmus. 2,108,903; Feb. 22.
Lumber, Indurating. W. D. Humiston. 2,108,920; Feb. 22.
Machine for depositing cream, chocolate, or the like on biscuits. L. Marsden. 2,109,336; Feb. 22.
Machine for loading wrappers or pouches. I. A. Hardy. 2,109,231; Feb. 22.
Machine for producing raised printing. R. Woodward. 2,109,205; Feb. 22.
Machine tool. J. R. Johnson and R. L. Cotta. 2,108,821; Feb. 22.
Machine tool. A. H. Lyon. 2,108,823; Feb. 22.
Magazine for razor blades. O. V. Rodrigues. 2,109,017; Feb. 22.
Magneto, Ignition. U. Quintavalle. 2,108,924; Feb. 22.
Mannequin. V. M. Rice. 2,108,927; Feb. 22.
Marker, Night road. J. J. Joyce. 2,109,011; Feb. 22.
Marking machine. O. W. Fromm. 2,108,850; Feb. 22.
Mask, Facial. W. G. Thurber. 2,109,018; Feb. 22.
Masses from vinyl esters, Production of artificial. H. Hopf, P. Garbsch, and F. Teller. 2,108,857; Feb. 22.
Material and composition of matter for producing same, Transparent. T. G. Finsel and D. E. Drew. 2,108,810; Feb. 22.
Material and forming same, Friction. J. N. Longley. 2,108,988; Feb. 22.
Material and making same, Artificial textile. W. Whitehead. 2,108,836; Feb. 22.
Material and making same, Moistureproof. T. G. Finsel and D. E. Drew. 2,108,804; Feb. 22.
Material and making the same, Waterproof. T. G. Finsel and D. E. Drew. 2,108,809; Feb. 22.
Material containing organic esters of cellulose and preparing same, Textile. W. Whitehead. 2,108,837; Feb. 22.
Material having modified characteristics and making same, Artificial. W. Whitehead. 2,108,838; Feb. 22.
Material, Mixing a plastic. H. H. R. Straight. 2,109,077; Feb. 22.
Materials and making same, Transparent. T. G. Finsel and D. E. Drew. 2,108,807–8; Feb. 22.
Materials and producing same, Transparent. T. G. Finsel and D. E. Drew. 2,108,806; Feb. 22.
Materials and treating same, Cellulose. T. G. Finsel and D. E. Drew. 2,108,806; Feb. 22.
Materials, Incineration of waste. F. B. Schilling. 2,108,997; Feb. 22.
Materials, Manufacture and/or treatment of artificial. G. H. Ellis and A. J. Wesson. 2,108,803; Feb. 22.
Measuring a component of an alternating current or an alternating voltage, System for. W. Thal. 2,109,325; Feb. 22.
Measuring and controlling apparatus. J. D. Ryder. 2,109,222; Feb. 22.
Mechanical movement. O. Mueller. 2,108,991; Feb. 22.
Mechanical movement applicable to material screening apparatus. G. E. Markley. 2,109,395; Feb. 22.
Mechanism for delivering articles in counted bundles. C. G. Quick, D. A. Ball, and W. A. Whitehead. 2,109,050; Feb. 22.
Mercaptazole derivatives and their preparation. J. Teppema. 2,109,158; Feb. 22.
Metal structure and making. Double-walled sheet. E. G. Budd. 2,108,795; Feb. 22.
Metal, Treating. J. O. Betterton and Y. E. Lebedeff. 2,109,144; Feb. 22.
Metallic attachment. H. Sheer. 2,108,905; Feb. 22.
Mine cooling system. D. C. Lindsay. 2,109,236; Feb. 22.
Mixer: *See*—
Fluid mixer. Paint and liquid mixer.
Mixing machine. L. J. Sisley and F. J. White. 2,108,999; Feb. 22.
Monensо compounds and their production. H. Ohlendorf, E. Baumann, and K. Holzach. 2,109,182; Feb. 22.
Mop holder. S. C. Lawlor. 2,109,335; Feb. 22.
Motion-transmission mechanism, Precision. S. M. Ransome. 2,109,033; Feb. 22.
Motor: *See*—
Electrical motor. Wave motor.
Motor compressor of the free piston type. H. Jänicke. 2,108,890; Feb. 22.
Motor control system. S. C. Ewing. 2,109,370; Feb. 22.
Motor for deep-boring mechanisms, Hydraulic. T. Seifer. 2,108,947; Feb. 22.
Mount, Engine. R. D. Carleton. 2,109,329; Feb. 22.
Mount, Jewel. J. V. Schafer. 2,109,035; Feb. 22.
Muffler. O. G. Noblitt and E. Ludlow. 2,109,220; Feb. 22.
Muscles in infantile paralysis, Apparatus for restoring. E. Bajanova. 2,109,188; Feb. 22.
Notebook and copy holder, Stenographer's. C. C. Clifford. 2,109,349; Feb. 22.
Nut, Reinforcing. H. P. Sorensen. 2,108,975; Feb. 22.
Nuts, Treating. W. P. Bullard and J. S. Guy. 2,108,915; Feb. 22.
Observatory, Submarine. C. O. Carey. 2,108,796; Feb. 22.
Oil burner. E. J. McCullough. 2,109,027; Feb. 22.
Oil burner. C. E. Swallow. 2,108,872; Feb. 22.
Oil composition, Insecticidal. W. H. Volck. 2,109,095; Feb. 22.
Oil fogger, Atomizing type. M. G. Markle and L. W. Tuttle. 2,109,136; Feb. 22.
Oil, Lubricating. B. H. Lincoln and A. Henriksen. 2,109,357; Feb. 22.
Oil, Process and apparatus for dewaxing. L. Dillon. 2,109,350; Feb. 22.
Oil, Process and apparatus for dewaxing. H. F. Fisher. 2,109,130–1; Feb. 22.
Oil stabilization. V. C. Mehlenbacher. 2,108,922; Feb. 22.
Oil well valve. C. W. Fisher. 2,109,351; Feb. 22.
Oils, Process and apparatus for dewaxing. B. G. Aldridge and B. Hopper. 2,109,126; Feb. 22.
Oils, Refining of mineral. M. T. Kendall. 2,109,446; Feb. 22.
(1-phenyl-2, 3-dimethyl-5-pyrasolonyl)- isopentyl-ketone, Manufacturing. H. Kaufmann. 2,109,445; Feb. 22.
Oscillograph, High power projection. P. T. Farnsworth and F. J. Somers. 2,109,269; Feb. 22.
Oven. W. H. Frick. 2,109,382; Feb. 22.
Package, Dispensing. C. H. Rasmussen. 2,108,902; Feb. 22.
Package for hydrocolloid impression materials, Flexible. W. J. van Rossem. 2,108,953; Feb. 22.
Pad holder. V. B. Trevellyan. 2,109,404; Feb. 22.
Padlock. J. A. Cox. 2,109,413; Feb. 22.
Paint and liquid mixer. A. P. Jorgenson. 2,109,233; Feb. 22.
Paint softening tool. L. A. Daniels. 2,109,022; Feb. 22.
Particles differing in specific gravity, Method and apparatus for grading. F. W. Thorold. 2,109,121; Feb. 22.
Partition Insert, Sink. S. M. Moyes. 2,109,089; Feb. 22.
Paste, Dyestuff printing. W. Rappe, F. Hoelscher, and A. Schneevoigt. 2,108,994; Feb. 22.
Paster, Package. C. L. Streeter. 2,108,929; Feb. 22.
Paver, Road. C. G. Abernathy. 2,109,020; Feb. 22.
Pen for concentrated ink, Fountain. E. Wetsel. 2,108,911; Feb. 22.
Petroleum emulsions, Breaking. M. De Groote, B. Keiser, L. L. Faure, and A. F. Wirtel. 2,108,960–1; Feb. 22.
Phenolic condensation products, Polycyclic. J. B. Niederl and V. Niederl. 2,109,015; Feb. 22.
Phonograph, Automatic record changing. T. W. Small. 2,109,322; Feb. 22.
Photographic film indicator. P. Landrock. 2,109,373; Feb. 22.
Piano action, Upright. C. B. Davis. 2,109,192; Feb. 22.
Picture storage and display cabinet. E. J. Morin. 2,109,433; Feb. 22.
Piles, piers, etc., Apparatus for protecting. R. M. Douil. 2,109,105; Feb. 22.
Pins for artificial teeth, Tooth. F. Maulen. 2,109,138; Feb. 22.
Pipe, Casting clay. W. Washo. 2,109,078; Feb. 22.
Pipe coupling, Ground joint. H. L. Selger. 2,109,344; Feb. 22.
Pipe joint. F. A. Engel and F. Hudson. 2,108,848; Feb. 22.
Pipes and the like, Molding of concrete. C. C. Halkyard. 2,109,407; Feb. 22.
Piston for internal combustion motors. E. C. Long. 2,108,865; Feb. 22.
Pizzle removal method. C. F. McKim. 2,108,921; Feb. 22.
Plant protector. H. H. King. 2,109,426; Feb. 22.
Plastic composition. S. Morgenstern and J. Eggert. 2,109,432; Feb. 22.
Plate on printing press cylinders, Securing. C. A. Meisel. 2,109,152; Feb. 22.
Plug: *See*—
Attachment plug. Connecter plug.
Cementing plug.
Plug or the like for internal combustion engines, Electric spark. H. G. Bornemann. 2,109,364; Feb. 22.
Pneumatic control for air supplied to a stoker. L. R. Teeple. 2,108,873; Feb. 22.
Pole shaping cutter. A. M. Deiters. 2,109,415; Feb. 22.
Pottery, Process and installation for making. W. J. Miller. 2,109,028; Feb. 22.
Pounder, Steak. W. J. Oliver. 2,109,434; Feb. 22.
Power plant. L. Lustig. 2,109,237; Feb. 22.
Power steering apparatus for vehicles. W. W. Fuller. 2,109,418; Feb. 22.
Power transmitting mechanism. A. Benson. 2,109,227; Feb. 22.
Press: *See*—
Box press.
Printing and resetting mechanism. K. Imkamp. 2,108,858; Feb. 22.

Printing attachment for pencils. C. Rebl. 2,109,342; Feb. 22.
Printing plate and formation thereof. W. A. Lippincott. 2,108,822; Feb. 22.
Proportioning device. M. Cornell. 2,109,331; Feb. 22.
Protector: *See*—
Plant protector.
Pulverised substances, Apparatus for fusing and spraying. F. Schori. 2,108,998; Feb. 22.
Pump: *See*—
Liquid pump. Rotary pump.
Rack: *See*—
Display rack. Towel rack.
Rack. F. A. Wales. 2,108,978; Feb. 22.
Radiator steam valve, Floodless. J. B. Kohut. 2,109,209; Feb. 22.
Radio apparatus. R. W. Mcdonald. 2,109,431; Feb. 22.
Radio cabinet. W. O. Brown. 2,108,846; Feb. 22.
Radio carrying attachment for bicycles and motorcycles. W. S. Harley. 2,109,315; Feb. 22.
Radio direction system. G. A. Mathieu. 2,108,867; Feb. 22.
Radio receiving system. G. M. Wright. 2,108,878; Feb. 22.
Range, Wall. W. S. Davis. 2,109,006; Feb. 22.
Recorder, Continuous sheet facsimile. W. G. H. Finch. 2,109,109; Feb. 22.
Refectory table. A. H. and R. A. Holland. 2,108,816; Feb. 22.
Refrigerating apparatus. T. W. Keerner. 2,109,199; Feb. 22.
Refrigerating apparatus. H. J. Krackowiser. 2,109,270; Feb. 22.
Refrigerating apparatus. P. M. Lyons. 2,108,898; Feb. 22.
Refrigerating apparatus. E. C. Raney. 2,109,202; Feb. 22.
Refrigerating apparatus. S. M. Schweller and E. H. Schilling. 2,109,052; Feb. 22.
Refrigerating apparatus. B. J. Vandoren. 2,108,876; Feb. 22.
Refrigerator. W. W. Warren. 2,109,002; Feb. 22.
Register, Cash. C. W. Green. 2,108,884; Feb. 22.
Register, Cash. K. A. Lehmann and E. Breitling. 2,108,896; Feb. 22.
Regulating system. E. L. Harder. 2,109,215; Feb. 22.
Regulator for Venetian blinds. W. W. Lewis. 2,108,939; Feb. 22.
Repricer. G. W. Henry, Jr. 2,109,389; Feb. 22.
Retainer for reel lagging. G. A. Gleason. 2,109,170; Feb. 22.
Retractable landing gear. R. L. Levy. 2,109,427; Feb. 22.
Return trap. L. D. Goff. 2,108,854; Feb. 22.
Rheostat, Regulator. E. L. Harder. 2,109,214; Feb. 22.
Ring unit, Closing and reenforcing. R. S. Rheem. 2,108,944; Feb. 22.
Rivet, Self-clinching. L. J. Bazzoni. 2,108,842; Feb. 22.
Riveting device. H. M. Johnston. 2,109,067; Feb. 22.
Roller for sweeping machines, Guard. B. B. White and C. H. Young. 2,109,123; Feb. 22.
Roof structure. R. E. Sadtler. 2,109,447; Feb. 22.
Rosin for violin bows, etc. E. Dalemczyk. 2,109,416; Feb. 22.
Rosin, Polymerisation of. A. L. Rummelsburg. 2,108,928; Feb. 22.
Rotary pump, Duplex high pressure. G. E. Bigelow and A. R. Weis. 2,108,786; Feb. 2.
Rotation mechanism. A. R. Mack. 2,108,989; Feb. 22.
Rubber and product, Preserving. H. I. Cramer. 2,109,165; Feb. 22.
Rubber articles, Method and apparatus for handling. E. S. Killian. 2,109,150; Feb. 22.
Rubber articles, Method and apparatus for making. J. H. Coffey. 2,109,190; Feb. 22.
Rubber composition and preserving rubber. A. M. Clifford. 2,109,164; Feb. 22.
Saddle attachment, Riding. S. Douglas. 2,109,209; Feb. 22.
Safety device for homes. Y. Spiegel. 2,109,361; Feb. 22.
Salts, Process and apparatus for the production of. H. A. Beekhuis, Jr. 2,109,347; Feb. 22.
Sandals, Manufacture of. K. Engel. 2,108,849; Feb. 22.
Sanding and polishing machine. C. J. Lippold. 2,109,069; Feb. 22.
Saw setting machine. C. G. Biro. 2,109,161; Feb. 22.
Scale, Weighing. F. V. Waltz. 2,109,001; Feb. 22.
Scraper. L. P. Green. 2,109,195; Feb. 22.
Scraper, Rotary. H. M. Livingston. 2,109,394; Feb. 22.
Screen: *See*—
Auto window screen.
Seal and production, Tamperproof. R. S. Peirce. 2,108,942; Feb. 22.
Sealing apparatus. G. Slayter. 2,109,258; Feb. 22.
Seat: *See*—
Window seat.
Separator: *See*—
Electromagnetic separator.
Setting, Reversible. L. Shakter. 2,108,904; Feb. 22.
Sewing machines, Binding and piping attachment for. W. C. Greist and C. G. Baehr. 2,109,314; Feb. 22.
Sewing machines, Folding and pressing attachment for. T. A. Anderson. 2,109,441; Feb. 22.
Sewing machines, Top feed mechanism for. C. W. Mueller. 2,109,014; Feb. 22.
Sheets for duplication, Assembling and laying master. R. R. Haskell and H. J. Morton. 2,109,066; Feb. 22.
Sheets of paper and cardboard, Machine for cutting, embossing, and printing. S. Levin. 2,109,068; Feb. 22.
Shock absorber. A. E. Dentler. 2,109,367; Feb. 22.
Shock absorber for the elements of thermionic tubes. W. L. Krahl. 2,108,967; Feb. 22.
Shock absorber, Hydraulic. A. B. Casper. 2,108,881; Feb. 22.
Shoe. J. T. Tebbutt. 2,109,324; Feb. 22.
Shoe cementing apparatus. J. F. Smith. 2,109,323; Feb. 22.
Shoe construction. M. Mohun. 2,109,180; Feb. 22.
Shoes, Method and means for use in lasting. J. S. Kamborian. 2,108,859; Feb. 22.
Shoulder strap, Ornamental adjustable. H. Silverman. 2,109,345; Feb. 22.
Shutter, Storm. E. W. Reiber. 2,108,926; Feb. 22.
Sickle cushioner. G. E. Chilstrom and A. Thompson. 2,109,085; Feb. 22.
Sign. B. Compton. 2,109,330; Feb. 22.
Signs, Making. T. L. Waldo, Jr. 2,109,000; Feb. 22.
Signal: *See*—
Vehicle direction signal. Vehicle signal.
Signaling device, Automobile. I. Florman. 2,109,381; Feb. 22.
Signaling system, Noninterfering successive. M. W. Muether. 2,109,273; Feb. 22.
Signaling system, Two-way. L. Schott. 2,108,974; Feb. 22.
Silica drilling fluid, Amorphous. O. Mayfield. 2,109,337; Feb. 22.
Slack adjuster, Automatic. F. E. Schwentler. 2,109,036–7; Feb. 22.
Slack adjuster for motor vehicle brakes. E. J. M. Brinck and R. V. A. Olsson. 2,109,284; Feb. 22.
Slicer, Vegetable. A. E. Orner. 2,108,972; Feb. 22.
Slip construction. F. Kopp and L. Morris. 2,108,894; Feb. 22.
Slotting machine. L. G. Larsen. 2,109,356; Feb. 22.
Snap switch. R. H. Bentley. 2,109,378; Feb. 22.
Socket. H. M. Dressel. 2,109,106; Feb. 22.
Socket, Radio. C. L. Knutson. 2,109,217; Feb. 22.
Socket wrench. S. Mandl. 2,108,866; Feb. 22.
Solvent extraction process. S. Tijmstra. 2,109,157; Feb. 22.
Sound-on-film, Method and apparatus for recording and reproducing. L. Dewan. 2,108,801; Feb. 22.
Sound recording system. E. S. Gille and B. D. Gille. 2,108,815; Feb. 22.
Speed regulation, System of. E. D. McKinney. 2,108,970; Feb. 22.
Speed transmission, Variable. S. Kalko. 2,109,174; Feb. 22.
Spindle resetting mechanism, Automatic. M. Richter and J. Bareiss. 2,109,140; Feb. 22.
Splice for high voltage cables, Duct. H. Halperin. 2,108,880; Feb. 22.
Spraying attachment for tractors. C. A. Gallupe. 2,109,384; Feb. 22.
Spring structure for furniture and the like. S. S. Bernstein. 2,109,282; Feb. 22.
Stairway, Moving. J. Dunlop. 2,109,210; Feb. 22.
Stamping tool. W. J. Kolstad. 2,109,253; Feb. 22.
Stand for cordless electric irons. J. P. Walpole. 2,108,834; Feb. 22.
Stapling mechanism. H. J. Spencer. 2,109,203; Feb. 22.
Starch, Halogenated thick boiling. R. W. Kerr. 2,108,862; Feb. 22.
Starter drive member, Engine. Y. Sekella. 2,109,155; Feb. 22.
Starter, Engine. A. S. Bosma. 2,109,281; Feb. 22.
Steam boiler. K. C. Schmidt. 2,109,277–8; Feb. 22.
Stereopticon slide and projection apparatus therefor. F. C. Brady. 2,108,844; Feb. 22.
Stereotype plates, Apparatus for casting. G. W. Bungay. 2,109,206; Feb. 22.
Stereotype plates, Casting. G. W. Bungay. 2,109,207; Feb. 22.
Stock holder, Rolled. C. E. Bartram. 2,109,097; Feb. 22.
Stocking. L. H. Mendelsohn. 2,108,923; Feb. 22.
Stocking and making the same. O. F. Smetana. 2,109,156; Feb. 22.
Stoker. J. P. Fisher. 2,109,332; Feb. 22.
Stop and holder, Door. A. W. Carlson. 2,109,228; Feb. 22.
Stop, Door. O. E. Carlson. 2,109,127; Feb. 22.
Stove top. H. H. Turner. 2,109,039; Feb. 22.
Strap: *See*—
Shoulder strap.
Strip, Molded core. E. R. Cramer. 2,108,961; Feb. 22.
Strips, Method and apparatus for annealing. L. Wilson. 2,109,204; Feb. 22.
Striping tool. J. Urban. [illegible]52; Feb. 22.
Studio lamp. C. Bardwell, C. R. Erickson, and J. C. Rose. 2,109,056; Feb. 22.
Support: *See*—
Garment support.
Support and gauge for curtain rods. N. Terzo. 2,109,346; Feb. 22.

Support for routing machines, Head. A. B. Eckersall. 2,109,263; Feb. 22.
Surface treating glass containers, Apparatus for. A. G. Leech and J. M. Johnson. 2,109,251; Feb. 22.
Surgical appliance. A. B. Kendrick. 2,109,134; Feb. 22.
Surgical instrument, Adjustable angle. P. F. Greaso. 2,109,147; Feb. 22.
Suspension. H. Reiter. 2,109,243; Feb. 22.
Suspension and driving system for motor vehicles. F. Contardi. 2,109,191; Feb. 22.
Swimming device. A. S. Malm. 2,109,429; Feb. 22.
Switch: See—
Diaphragm switch. Snap switch.
Fuse switch.
Switch. L. E. Fisher and W. H. Frank. 2,108,812; Feb. 22.
Switch. E. J. Mastney. 2,109,219; Feb. 22.
Switch. E. M. Soreng and C. Will. 2,109,054; Feb. 22.
Switch assemblage. W. C. Furnas and S. R. Thompson. 2,108,883; Feb. 22.
Synchronisation indicating device. P. L. Tollison. 2,109,362; Feb. 22.
Syringe, Infant's. M. E. Burke. 2,109,059; Feb. 22.
Table: See—
Refectory table.
Tablet packaging machine. C. J. Westin. 2,109,407; Feb. 22.
Tank and battery assembly, Oil. W. S. Harley. 2,109,316; Feb. 22.
Tank for liquids, Storage. A. Runge. 2,108,945; Feb. 22.
Tanks and the like, Device for cleaning. H. M. Ruth. 2,109,075; Feb. 22.
Tape binding and package closing machine. J. W. Capstick. 2,109,328; Feb. 22.
Target indicator. C. Grigoriu. 2,108,919; Feb. 22.
Telegraph repeating system. T. A. McCann. 2,109,026; Feb. 22.
Telegraphic keying circuit. J. D. Wallace. 2,108,833; Feb. 22.
Telephone system. W. J. Vincent. 2,108,909; Feb. 22.
Telepicture synchronising system. W. G. H. Finch. 2,108,983; Feb. 22.
Television. F. Schröter. 2,109,321; Feb. 22.
Television apparatus. J. Gettinger. 2,108,852; Feb. 22.
Television apparatus. A. Karolus. 2,109,198; Feb. 22.
Television scanning system. A. M. Nicolson. 2,108,827; Feb. 22.
Television, Variable speed. A. M. Nicolson. 2,109,339; Feb. 22.
Temperature control system. G. H. Fisher. 2,109,062; Feb. 22.
Terminal lug, Wire. M. B. Nieman. 2,109,073; Feb. 22.
Testing device. W. L. Wettlaufer. 2,108,877; Feb. 22.
Theodolite. C. H. Veeder. 2,109,186; Feb. 22.
Therapeutical appliance and making the same. R. W. Albright. 2,108,934; Feb. 22.
Thermocouple system. W. K. McCoy. 2,109,396; Feb. 22.
Thread, Apparatus for after-treatment of fresh made rayon. K. Nakane. 2,109,301; Feb. 22.
Timber blasting device. L. H. Sawyer. 2,109,435; Feb. 22.
Tin alloy. D. Hanson and W. T. Pell-Walpole. 2,109,387; Feb. 22.
Tire. J. Gallardo. 2,109,383; Feb. 22.
Tire building apparatus. F. J. Shook. 2,109,437; Feb. 22.
Tire, Pneumatic. D. Parkinson. 2,108,973; Feb. 22.
Tobacco, Apparatus for blending and conditioning. H. S. Bogaty. 2,109,409; Feb. 22.
Tobacco smoke, Method of and substance for treating. H. L. Kauffman. 2,108,960; Feb. 22.
Tomato juice extractor. W. C. McNitt. 2,109,398; Feb. 22.
Tong. C. E. Olsen and J. A. Peterson. 2,108,971; Feb. 22.
Tool: See—
Clean-out and sample tool. Stamping tool.
Machine tool. Striping tool.
Paint softening tool.
Tool with rolling cutters, Rotary earth boring. J. A. Zublin. 2,108,956; Feb. 22.
Tools, Fluid passage for drilling. J. A. Zublin. 2,108,965; Feb. 22.
Towel rack. W. H. Pleim. 2,109,032; Feb. 22.
Toy's vehicles, Guiding. L. Roussy and R. Trubert. 2,109,403; Feb. 22.
Traffic device. R. Cubby. 2,109,286; Feb. 22.
Traffic direction controlling system for railroads. R. M. Phinney. 2,109,153; Feb. 22.
Trailbuilder, bulldozer, and the like. C. Le Bleu. 2,109,393; Feb. 22.
Train control system, Intermittent inductive. W. H. Reichard. 2,109,154; Feb. 22.
Transmission. C. W. Floss. 2,109,007; Feb. 22.
Transmission. C. Heckman. 2,109,290; Feb. 22.
Transmission line, Frequency control. F. H. Kroger. 2,108,895; Feb. 22.
Transmission, Synchro selective constant mesh. G. A. Klimek. 2,108,986; Feb. 22.
Trap: See—
Return trap.
Trap for leaking gas, Underground. G. B. Anthony. 2,108,840; Feb. 22.
Trinket. W. H. Roll. 2,109,092; Feb. 22.
Truck. W. W. MacDonald. 2,109,177; Feb. 22.
Truck, Clamp. P. J. Stine. 2,109,305; Feb. 22.
Truck trailer combination. I. H. Judd. 2,108,908; Feb. 22.
Tube: See—
Electric discharge tube. Vacuum tube.
Tube drawing apparatus. S. D. Inscho. 2,108,790; Feb. 22.
Tube structure. H. Nielsen. 2,109,274; Feb. 22.
Tubes, Aging vacuum. D. Ulry. 2,109,225; Feb. 22.
Turnstile. W. J. Kennedy. 2,109,254; Feb. 22.
Typewriter attachment. J. B. Ruth. 2,109,288; Feb. 22.
Typewriting machine. B. C. Stickney. 2,108,832; Feb. 22.
Typewriting, Teaching and practicing. J. H. Brownjohn. 2,109,442; Feb. 22.
Urea-formaldehyde-polyhydric alcohol-polybasic acid condensation products. A. G. Hovey and T. S. Hodgins. 2,109,291; Feb. 22.
Vacuum tube. V. K. Zworykin. 2,109,245; Feb. 22.
Valve: See—
Bottle valve. Oil well valve.
Gate valve. Radiator steam valve.
Valve. G. R. Brown. 2,108,959; Feb. 22.
Valve. D. D. Wile. 2,108,979; Feb. 22.
Valve and the like, Filtering. T. A. Hammond. 2,109,230; Feb. 22.
Valve for gear shifts, Air control. P. MacKensie. 2,109,070; Feb. 22.
Valve head structure for core barrels. L. L. Snyder. 2,108,949; Feb. 22.
Valve with mid-position bypass, Piston. F. Boehle. 2,109,163; Feb. 22.
Vaporising generator. B. W. Tullis. 2,108,908; Feb. 22.
Vehicle: See—
Chariot vehicle.
Vehicle direction signal. S. F. Adam. 2,109,408; Feb. 22.
Vehicle equipped with load-shifting devices, Land. J. Heller. 2,109,368; Feb. 22.
Vehicle signal. A. T. Sereda. 2,109,184; Feb. 22.
Vehicle spring suspension. R. W. Nilsson. 2,109,074; Feb. 22.
Vehicle structure, Railway. H. M. Pflager. 2,109,276; Feb. 22.
Vending device. M. J. Airington. 2,109,377; Feb. 22.
Ventilating confined spaces. R. H. Mautsch. 2,109,071; Feb. 22.
Vitreous enameled products. D. E. Krause. 2,109,271; Feb. 22.
Volume control, Automatic. H. O. Peterson. 2,108,899; Feb. 22.
Wall construction. D. V. Nelson. 2,109,072; Feb. 22.
Wallboards, Installing and assembling. C. Welch. 2,109,448; Feb. 22.
Water flow detector and alarm means. C. C. Johnson. 2,109,317; Feb. 22.
Wave motor. W. T. Herndon. 2,109,173; Feb. 22.
Well structure, Metallic. F. Griebach. 2,108,885; Feb. 22.
Wheel: See—
Buffing or polishing wheel.
Wheel assembly, Trailer. M. E. Dayton. 2,109,311; Feb. 22.
Wheel attachment. C. M. Baxter. 2,109,098; Feb. 22.
Window seat. H. Green. 2,109,313; Feb. 22.
Window, Ventilating. J. G. Hickman. 2,109,249; Feb. 22.
Windshield operating device. A. T. Potter. 2,109,256–7; Feb. 22.
Wire connecter, Frictional. J. Blackburn. 2,108,957; Feb. 22.
Wire-stitching or stapling machine. J. F. Cavanagh. 2,108,882; Feb. 22.
Woodworking machine. H. J. Dietrich. 2,109,061; Feb. 22.
Work driving means, Resilient. W. F. Groene. 2,109,371; Feb. 22.
Woven fabric. H. F. Schmidt. 2,109,223; Feb. 22.
Wrench: See—
Socket wrench.
Zeroiser for dispensing pump, Automatic. C. S. Hazard. 2,109,352; Feb. 22.
Zeroising device for dispensing pumps, Automatic. C. S. Hazard. 2,109,353; Feb. 22.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 22, 1938

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

1— 3: 2,108,888
10: 2,108,049
49: 2,108,288

U. S. GOVERNMENT PRINTING OFFICE: 1938

Patents Nos. 2,106,698 to 2,107,264

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 487—No. 1 TUESDAY, FEBRUARY 1, 1938 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $16.00 per annum, including annual index, $15.75; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adjudicated Patents

(D. C. Md.) Wolf patent, No. 1,787,098, for union suit, *Held* invalid, but, if valid, not infringed. *Wolf v. Stewart & Co.*, 21 F. Supp. 125.

(D. C. Del.) Rosenberg patent, No. 1,809,758, for fastener, *Held* invalid. *Rosenberg v. Shakeproof Lock Washer Co.*, 20 F. Supp. 980. (Correcting notice 486 O. G. 231.)

Disclaimers

1,997,976.—*Axel Carl Georg Petersen*, Copenhagen, Denmark. FILM HAVING A PHOTOGRAPHIC SOUND RECORD FOR PREPARING SAME. Patent dated April 16, 1935. Disclaimer filed December 27, 1937, by the inventor.

Hereby enters this disclaimer to claims 1, 2, 3, 4, 5, 7, 8, 9, 10, 19, and 20 of said specification.

2,061,767.—*Roy C. Nelson*, Willoughby Township, Ohio. CAR TRUCK. Patent dated November 24, 1936. Disclaimer filed January 11, 1938, by the assignee, *National McCleeb and Steel Castings Company*.

Hereby disclaims from the scope of claim 1 of said patent any car truck except one wherein the "projection" from the bolster consists of a single element through which the shear stresses are imparted to the respective rubber elements; and further disclaims from the scope of claim 11 of said patent any car truck except one wherein the "cushioning" of "movements of the bolster member in directions at right angles to each other" is accomplished primarily by the absorption of energy from said bolster movements by the "rubber means".

2,065,369.—*George W. Fyler*, Schenectady, N. Y. RADIO TRANSMITTING SYSTEM. Patent dated December 22, 1936. Disclaimer filed January 8, 1938, by the assignee, *General Electric Company*.

Hereby disclaims claims 1 and 11 of said Letters Patent.

2,093,399.—*Noel Pemberton Billing*, London, England. FILM CARRIER FOR PHOTOGRAPHIC CAMERAS. Patent dated September 21, 1937. Disclaimer filed January 8, 1938, by the patentee.

Hereby disclaims from the patent claims 7, 8, and 9.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 2,008,906, C. H. Snydam, Radio amplifier, decided November 19, 1937, claims 1 and 2.

Pat. 2,011,315, R. W. Gilbert, Potentiometric indicator, decided February 15, 1937, claims 1 and 2.

Pat. 2,022,634, H. C. Britton, W. C. Stoessner, and G. G. Georgen, decided January 8, 1938, claims 1, 2, 3, 4, 5, 6, and 14.

Pat. 2,037,575, F. Benedict and P. E. Carter, Train dispatching system for railroads, decided January 10, 1938, claims 2, 8, 19, 21, 22, and 24.

Pat. 2,040,443, H. G. Pasholan, Paper clip, decided January 12, 1936, claim 3.

Pat. 2,044,128, H. J. Smith, Weather integrator, decided January 11, 1938, claim 1.

Pat. 2,063,342, A. L. Samuel, Electron discharge device, decided January 11, 1938, claims 10 and 11.

Pat. 2,064,764, H. M. Playford, R. H. Hogue, and C. Cone, decided January 12, 1938, claim 4.

Pat. 2,071,597, A. J. Vassolli, Stem for electron discharge devices, decided January 10, 1938, claim 4.

Pat. 2,080,984, C. A. Miseres, Apparatus for attaching fasteners, decided January 11, 1938, claims 17 and 18.

Condition of Applications Under Examination at Close of Business January 15, 1938

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 44,866; Trade-Mark Division, 1,749. Oldest new case, July 23, 1937; oldest amended, July 8, 1937.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application and oldest action by applicant awaiting office action: New	Amended	No. of applications awaiting action
6024	1. TUCKER, M. (Act.), Baths and Closets; Sewerage; Domestic Cooking Vessels; Closure Operators; Fences; Gates; Tillage.	Aug. 16	Aug. 16	730
6703	2. HERRMANN, D., Fishing and Trapping; Dairy, Animal Husbandry; Presses. Tobacco; Butchering; Bee Culture.	Sept. 9	Sept. 10	801
4600	3. LINDSEY, A., Heating; Metal Founding; Metallurgy; Metal Treatment; Electric Furnaces	Nov. 15	Nov. 15	285
7000	4. DONNELLY, A. E., Conveyors; Hoists; Handling Apparatus and Implements; Excavating; Elevators; Fire Escapes; Ladders, Scaffolds; Store Service; Pneumatic Despatch; Fluid Pressure Brakes.	Oct. 21	Oct. 6	808
3977	5. ROBINSON, C. W., Harvesters; Music; Acoustics; Sound Recording; Knotters; Buckles, Buttons	Oct. 15	Oct. 15	827
4600C	6. LEWERS, A. M., Carbon Chemistry (part)	Oct. 6	Oct. 6	760
5720	7. JARBOE, C. G., Optics; Photography	Oct. 1	Oct. 1	1,105
4600	8. ADAMS, F. L., Beds; Chairs; Kitchen and Table Articles; Racks and Cabinets	Oct. 1	Oct. 14	439
4600	9. ADAMS, R. E., Pumps; Fluid and Fluid-Current Motors	Sept. 27	Sept. 29	421
6123	10. HUNTER, O. P., Land Vehicles—Animal Draft Appliances, Wheel Substitutes, Bodies, and Tops; Vehicle Fenders; Spring Devices.	Aug. 28	Sept. 8	360
6007D	11. BENHAM, R. V., Boots, Shoes, and Leggings; Buttons, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Appendages; Skins, Glues, and Leathers.	Oct. 7	Oct. 12	805
7701	12. HENRY, C. C., Machine Elements; Cylinders and Pistons; Mechanical Starters; Stop Mechanisms; Valve Gearing	Aug. 11	Aug. 11	778
5000	13. BORLIK, F. J., Gear Cutting, Milling, and Planing; Metal Drawing, Forging, and Welding, and Rolling; Metal and Plastic Metal Working; Needle and Pin Making; Turning; Boring and Drilling.	Sept. 8,	Sept. 8	648
6007	14. SMITH, G. A., Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet Metal Ware, Making; Wire Fabrics; Wire Working; Metal Working, Blanks and Processes.	Oct. 20	Oct. 16	800
4007	15. HENRY, BERT., Glass; Plastic Blank and Earthenware Apparatus; Plastics	Sept. 30	Sept. 30	1,172
5716	16. SPENCER, C. J., Telegraphy; Telephony	Sept. 15	Sept. 15	880
5701	17. ARMSTRONG, H., Communication; Paper Manufactures; Printing; Type Casting; Sheet-Material Associating or Folding; Sheet or Web Feeding; Type Setting.	Oct. 15	Oct. 16	807
4012	18. KURZ, JOS. A., Meters, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices	Sept. 13	Sept. 15	454
4003	19. KENNEDY, A. R., Furnaces and Stoves; Fuel Burning	Sept. 21	Sept. 17	776
6000	20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Safes; Undertaking; Bread, Pastry, and Confection Making.	Sept. 23	Sept. 20	485
7733	21. THOMPSON, T. J., Textiles; Cloth Finishing	Oct. 15	Oct. 16	840
5009	22. RINGLE, D., Aeronautics; Firearms, Ordnance, and Explosive Devices; Air Guns; Catapults, and Targets; Boats and Buoys; Ships; Marine Propulsion.	Oct. 19	Oct. 20	573
7024	23. BUTTNER, W. J., Registers (part)	July 22	July 3	221
5000	24. DURAN, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	Oct. 12	Oct. 15	810
5709	25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors.	Oct. 11	Oct. 9	668
5000	26. YOUNG, R. R., Electricity, Generation"; Motive Power	Sept. 21	Sept. 16	800
5703	27. CLARK, W. N., Brushing, Scrubbing, and Cleaning; Washing Apparatus; Textiles, Ironing	Aug. 3	Aug. 3	807
4020	28. SOLYOM, H. L., Internal-Combustion Engines	Oct. 14	Oct. 14	326
6000	29. SHKLARIN, J. B., Woodworking; Tools; Furniture; Metal Working; Cloth, Leather, and Rubber Receptacles; Baggage; Package and Article Carriers; Deposit and Collection Receptacles; Tables.	Sept. 2	Sept. 9	883
4003	30. SHIPMAN, J. L., Automatic Temperature and Humidity Regulation; Illuminating Burners; Illumination; Thermostats and Humidostats.	Aug. 16	Aug. 16	906
4716	31. DUNCOMBE, C. S., Mineral Oils; Hydrocarbons	Oct. 15	Oct. 15	574
4000	32. LESH, KARL, Gas and Liquid Contact; Heat Exchange; Gas Separation; Agitating	Oct. 7	Oct. 7	826
6000	33. WYMAN, W. L., Bridges; Masonry, Concrete, Metallic, and Wooden Structures; Roofs; Roads	Oct. 15	Sept. 29	820
6000	34. SAPERSTEIN, S., Electricity, Transmission to Vehicles; Railways, Rolling Stock, Switches, and Signals; Tract Sanders.	Oct. 20	Oct. 20	314
3576	35. REYNOLDS, E. C., Card and Sign Exhibiting; Signals; Dispensing; Portable Receptacles	Oct. 13	Oct. 21	820
7000	36. McFADYEN, A. D., Measuring and Testing; Power Measuring Automatic Weighers	Sept. 10	Sept. 10	548
6000B	37. WEAVER, M. E., Electricity, Circuit Makers and Breakers; Light-Sensitive Circuits	Sept. 15	Sept. 20	784
3004	38. KRAFFT, C. F., Earth Boring; Hydraulic and Earth Engineering; Mining and Quarrying; Stoneworking; Wells; Plastic Compositions.	Aug. 30	Sept. 4	600
4570	39. WHITNEY, F. L., Fluid-Pressure Regulators; Multiple Valves; Valves; Water Distribution; Railway Draft Appliances.	Sept. 7	Sept. 13	651
7000	40. OBERLIN, J. J., Metallic, Wood, Paper, and Special Receptacles	Sept. 15	Sept. 15	1,200
7012	41. WHITNEY, M. L., Typewriting Machines; Coin Handling; Recorders; Registers (part)	Oct. 9	Sept. 29	291
5000	42. CUTTING, H. O., Electric Signaling	Sept. 21	Sept. 2	534
4007D	43. ELINGE, B. F., Medicines, Poisons, and Cosmetics; Bleaching and Dyeing; Explosive Compositions; Sugar and Starch.	Oct. 7	Oct. 6	572
4007D	44. HARVEY, L. P., Refrigeration; Dispensing Beverages	Aug. 19	Aug. 17	905
7000	45. BILL, H. D., Shafting and Couplings; Lubrication; Bearings and Guides; Meters; Valve-Operating Mechanisms; Engine Cooling; Resilient Tires and Wheels; Wheels and Axles.	Sept. 24	Oct. 1	788
4613	46. TAYLOR, M., Evaporators; Fluid Sprinkling; Fire Extinguishers; Boilers; Heating Systems; Coating Implements and Machines.	Sept. 20	Sept. 20	657
6023	47. LOWE, R. R. (Act.), Checkers; Brakes	Oct. 8	Oct. 9	841
5731	48. ROEPKE, O. H., Electricity, General Applications; Igniters	Oct. 5	Oct. 5	894
7720	49. SHEFFIELD, E. L., Clock-Controlled Apparatus; Ventilation; Driers; Liquid Purification	Aug. 2	July 29	872
4703	50. BLAKE, C. L., Varnish; Coating Processes; Carbohydrate and Condensation Products	Oct. 15	Oct. 13	874
5023	51. BACKUS, C. D., Radiant Energy	Oct. 8	Oct. 8	906
7700	52. KNOTTS, M. K., Supports; Chucks; Joint Packings; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Conduits and Housings; Laminated Packing; Pipes and Tubular Conduits	Oct. 4	Oct. 6	877
6007	53. PECK, M. E., Books; Manifolding; Printed Matter; Stationery; Education; Paper Files and Binders; Tents, Canopies, Umbrellas, and Canes; Curtains, Shades, and Screens; Toilet; Label Pasting and Paper Hanging.	Sept. 16	Sept. 16	816
3674	54. STRACHAN, C. W., Electric Lamps; Vapor Electric Devices; Space Discharge Tubes	Oct. 20	Oct. 27	806
6000	55. BOWEN, S. T., Cutlery; Artificial Body Members; Dentistry; Surgery	Aug. 28	Sept. 1	1,004
4720	56. COOKERILL, S., Electrochemistry; Laminated Fabrics; Paper Making	Aug. 24	Aug. 24	1,175
6013	57. NICOLSON, G. D. G., Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Jewelry; Nut and Bolt Locks; Toys.	Sept. 14	Sept. 13	835
5000	58. DOWELL, E. F., Abrading; Bottles and Jars	Sept. 21	Sept. 22	370
4700	59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Carbon Chemistry (part); Subfoseno Preparation.	Oct. 9	Oct. 15	617
5000	60. GLASS, E. L., Electric Heating and Welding; Batteries; Resistances; Dynamo Plants	Sept. 15	Sept. 15	554
6734	61. PARKS, G. E., Laminated Electrical Insulation; Belt, Hose, Tire, and Mold Making; Winding and Reeling; Packing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery.	Aug. 11	July 28	604
4600	62. PUGH, R. C., Gauges; Geometrical Instruments	Oct. 19	Oct. 20	362
4700	63. WINKELSTEIN, A. H., Foods and Beverages; Preserving, Disinfecting, and Fermentation	Sept. 28	Oct. 19	411
4700	64. NASH, P. M., Acetylene; Distillation; Gas Mixers; Oils, Fats, and Glue; Liquid Coating Compositions; Fuel.	Oct. 5	Oct. 6	1,091
5612	65. McDERMOTT, F. P., Electricity, Conductors; Repeaters; Relays; Wave Transmission	Sept. 9	Sept. 16	670
2000D	TRADE-MARKS, LABELS, AND PRINTS: F. A. RICHMOND (Trade-Marks, Labels and Prints)	Dec. 7 / Dec. 11	Dec. 27 / Dec. 31	1,438 / 311
2005	DIMONS, H. H. KALUPY	Dec. 18	Dec. 31	670

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE ADAMSON

No. 3,858. Decided November 22, 1937

[92 F.(2d) 717]

PATENTABILITY—TAILORED BUSINESS SUIT.

Claims for a tailored business suit made of a special fabric *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Walter L. Pigis, Messrs. Gourley & Budlong, and *Mr. Charles C. Willson* for Adamson.

Mr. R. F. Whitehead and *Mr. Howard S. Miller* for the Commissioner of Patents.

LENROOT, J.:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office, affirming a decision of the Examiner rejecting all of the claims of appellant's application. Ten claims are involved, numbered 13 to 22, inclusive; claim 13 is illustrative of all the claims in issue and reads as follows:

13. A tailored business suit formed primarily of a one-way stretch woven fabric having the softness, flexibility and appearance characteristic of suiting material and made of inelastic warps and wefts having interposed at intervals between the inelastic wefts one or more elastic wefts of a character not appreciably longer than the inelastic wefts, said elastic wefts being constructed and arranged to impart to the fabric a small degree of stretch in the body encircling direction of the fabric.

The references cited are: Field, 1,919,292, July 25, 1933; Heltewig (Australian), 16,067, July 8, 1929.

Appellant's application relates to an outer garment such as a suit of clothes, constructed from a woven fabric consisting of inelastic warp threads, and both inelastic and elastic weft threads. The fabric is placed in the suit in such position that the elastic wefts impart a small degree of stretch in the body encircling direction of the fabric.

The patent to Field relates to undergarments, such as corsets, girdles, etc., comprising a knitted or woven fabric made of two-way stretch material, by the use of elastic yarn made of rubber filaments incorporated in both the warp and weft of the fabric. Both warp and weft are composed principally of elastic threads, but the patent states:

. . . Relatively non-elastic threads may cooperate with at least one of said groups of threads to limit the stretch of the material in one of said directions, or possibly in both. Two examples of such material are shown in Figs. 6 and 7, and will be described below in more detail.

. . . . . .

When material of the character shown in Fig. 6 is employed for the main panels of the garment, it is preferable to have the non-elastic strands, which limit the stretching of the material in the direction of their length, extend up and down in the panels, to control their stretching in this direction. However, these strands may run crosswise, or even diagonally. Thus, for example, there are shown in Figure 2 non-elastic strands 25 running crosswise of the wearer, said non-elastic strands limiting the stretch around the body of the wearer.

The preamble of the patent contains the following:

. . . it has been proposed to make garments, adapted to be worn about the hips, of sheet rubber, but these are unsatisfactory for ordinary use on account of obvious reasons, principally lack of permeability. On the other hand, suggestions have been made to the effect that pieces of material which are elastic to give direction could be sewed or otherwise secured together so that parts of the garment are able to stretch in one direction and parts in other directions. However, for one reason or another, none of the proposals in the art has proven satisfactory. [Italics ours.]

The patent to Heltewig discloses a woven fabric in which elastic threads are incorporated in the weft only. The patent states some of the uses for which the fabric is suitable, such as varix bandages, knee protectors for sport, mittens, etc. The claim of the patent, however, is very broad and reads as follows:

1. A rubber-elastic woven or knitted fabric in which rubber-threads at stretched state are shot as weft alternately with yarn-wefts into the warp or row of loops adjusted wider in accordance with the rubber-stretching.

The Examiner in his statement recited several grounds of rejection as follows:

The invention in this case does not appear to reside in garments. No garment structure is recited in the claims. The structure recited is for the most part that of the fabric. Such expressions as "outer garment" and "tailored business suit" are too indefinite to convey any particular structure, and each of the claims was rejected as being indefinite.

. . . . . .

It is not apparent that applicant has, by selecting a material of the character disclosed for an outer garment or business suit, done anything of a radical nature to warrant invention, and each of the claims accordingly was further rejected as calling for lack of invention, for this reason.

Each of the claims was further rejected on the art above explained. While Field discloses the use of an inherently stretchable elastic fabric in an undergarment, it would not involve invention to employ such a fabric in an outer garment. Field faced applicant's problem of constructing a fabric that would conform to the body of the wearer when assuming different postures and so solved it as did applicant, by employing fabric embodying elastic threads. Therefore, in view of this teaching of Field it would not involve invention to employ such a fabric in an outer garment, whether it be a suit, a vest, a pair of trousers, or a dress.

While the claims do not specifically disclose that the elastic threads lie only in the weft of the fabric, nevertheless, the patent to Heltewig discloses this feature and the claims accordingly were further rejected on Field in view of Heltewig.

The Board of Appeals in its decision stated:

All of the appealed claims are directed to a garment such as a business or tailored suit made from woven fabric having practically no stretch in the vertical direction but having a considerable stretch circumferentially. No special type or style of suit is claimed. The novelty, if any, must necessarily reside in the particular kind of cloth used. As described, this cloth is made of the usual woolen thread for the warp and weft, but interposed at suitable intervals in the wefts are elastic threads having a rubber core wrapped with fiber so as to resemble ordinary woolen thread. These elastic threads are put under slight tension so as to hold the other weft threads in a slightly slack condition.

Each of the patents to Field and Heltewig shows that it is old to make up woven fabric in the manner set forth in these claims, but it is clear from the description that the fabric disclosed in these patents was intended for use mainly in making under-garments, bandages, mittens, socks, etc. It is also well known that in making up suits from ordinary woven fabric, it is the rule that the length of the garment shall run in the direction of the warp. This is done for the reason that such cloth is practically inextensible in the direction of the warp, and is extensible to a limited degree in the direction of the wefts. Appellant has accentuated the latter characteristic by the addition of his rubber threads. It is probable that the real reason of not using rubber threads of this type heretofore in making men's clothing was due to the fact that suitable rubber thread was not available. It appears to us that in view of the prior art that appellant's addition was more or less obvious, and, therefore, not entitled to patent protection.

It will be observed that the Board did not specifically affirm the first two grounds of rejection by the Examiner, but relied principally upon the third

ground of rejection, viz., lack of patentability over the cited references.

It is our opinion that this was a valid ground of rejection. However, in so holding we do not pass upon the question of whether or not the material described in the claims, out of which the outer garments are made, is itself patentable. The only claims before us are for a manufacture, viz., an outer garment such as a suit of clothes, made out of specified material. If invention be involved in the claims at all, it is in the conception of a suit of clothes made out of a material so formed as to stretch in a body encircling direction. If the prior art discloses fabric having a one-way stretch, and a use of such fabric that would make it obvious to one skilled in the art of making clothes that material possessing this property could be utilized in making an outer garment such as a suit of clothes, then the claims here involved lack patentability and it is immaterial whether the fabric out of which the clothes are made, as described in the claims, is a patentable improvement over the material disclosed by the prior art.

The patent to Field states that the invention relates to "corsets, girdles, and the like," but the claims are broad and specifically cover all garments worn next to the body. While it is true that the patent discloses a fabric possessing primarily two-way stretch, it also discloses that it had been proposed in the prior art to use, in the making of undergarments, "pieces of material which are elastic in one direction," and the patent further discloses, as a part of the invention, the insertion of non-elastic threads in the weft of the fabric to limit the stretch of the elastic threads in the weft.

As hereinbefore noted, the patent to Heltewig discloses a fabric having elastic threads only in the weft, and that such material is useful for mittens, among other things.

The articles embraced in the involved claims, those embraced in the Field patent, and some at least of those named in Heltewig, come under the general designation of wearing apparel. *Arnold* v. *United States*, 147 U. S. 494.

A bathing suit would clearly be covered by the Field patent, and we think it clear, in view of the Heltewig patent, that it would not involve invention to produce a bathing suit which stretched in one direction only. While it might not be so clearly obvious to employ material disclosed by the cited art in the production of an outer garment, we are not satisfied that the Patent Office tribunals erred in holding that such use would be obvious, and therefore, in accordance with the well established rule that concurring decisions of the Patent Office tribunals will not be reversed in such cases unless manifestly wrong, the decision of the Board of Appeals should be affirmed.

We think the case at bar is distinguishable from the case of *Van Heusen Products, Inc., et al.* v. *Bard & Wilson*, 300 Fed. 922, decided by the District Court for the Southern District of New York. In that case, while fabric of the general nature there involved was known to the prior art, no prior use of such fabric was shown that would lead anyone to believe that it might be employed in the making of collars. Therefore, without approving or disapproving the holding in that case, we do not think that it is relevant here.

For the reasons stated herein, the decision of the Board of Appeals is affirmed.

Affirmed.

GRAHAM, *P. J.*, sat during the argument of this case, but died before the opinion was prepared.

CEN-AID

For Prepared Carbon Black for Use in the Cement Industry.

Claims use since Nov. 9, 1937.

Ser. No. 400,082. BINNEY & SMITH CO., New York, N. Y. Filed Nov. 24, 1937.

CEN BEADS

For Prepared Carbon Black for Use in the Cement Industry.

Claims use since Nov. 9, 1937.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 399,545. THE AMERICAN ROLLING MILL COMPANY, Middletown, Ohio. Filed Nov. 10, 1937.

H.T.-50

For Iron or Steel Sheets.

Claims use since Feb. 8, 1936.

Ser. No. 400,560. MACKINTOSH-HEMPHILL COMPANY, Pittsburgh, Pa. Filed Dec. 7, 1937.

TECHNALLOY

For Cast Rolls of Ferrous Metal for Metal Working.

Claims use since Nov. 17, 1937.

Ser. No. 400,561. MACKINTOSH-HEMPHILL COMPANY, Pittsburgh, Pa. Filed Dec. 7, 1937.

TECHNICHILL

For Cast Rolls of Ferrous Metal for Metal Working.

Claims use since Sept. 27, 1937.

Ser. No. 400,562. MACKINTOSH-HEMPHILL COMPANY, Pittsburgh, Pa. Filed Dec. 7, 1937.

TECHNIGRAIN

For Cast Rolls of Ferrous Metal for Metal Working.

Claims use since Sept. 28, 1937.

Ser. No. 400,564. MACKINTOSH-HEMPHILL COMPANY, Pittsburgh, Pa. Filed Dec. 7, 1937.

TECHNISAND

For Cast Rolls of Ferrous Metal for Metal Working.

Claims use since Aug. 26, 1937.

Ser. No. 400,621. VANADIUM CORPORATION OF AMERICA, Bridgeville, Pa. Filed Dec. 8, 1937.

GRAPHIDOX

For Deoxidising and Graphitising Alloy for Cast Iron.

Claims use since Nov. 22, 1937.

CLASS 15

Oils and Greases

Ser. No. 399,695. STANDARD OIL COMPANY OF CALIFORNIA, Wilmington, Del., and San Francisco, Calif. Filed Nov. 12, 1937.

For Lubricating Oils, Flushing Oils.

Claims use since May 23, 1936.

Ser. No. 399,774. NEW YORK & NEW JERSEY LUBRICANT COMPANY, New York, N. Y. Filed Nov. 15, 1937.

N.F.O.

For Lubricating Oils and Greases.

Claims use since 1905.

CLASS 16

Paints and Painters' Materials

Ser. No. 394,289. I. F. LAUCKS, INC., Seattle, Wash. Filed June 19, 1937.

CHINX

For Wood Putty and Wood Filler, Which Also May Be Used as a Putty or Filler for Stucco, Cement, or Plaster to Provide a Uniform Surface to be Painted or Otherwise Decorated.

Claims use since June 12, 1937.

[ACT OF MARCH 19, 1920, SEC. 1 (b)]

THESE REGISTRATIONS ARE NOT SUBJECT TO OPPOSITION

354,170. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ELECTROLINE COMPANY, Chicago, Ill. Filed July 11, 1936. Serial No. 380,907.

TAPLOK

For Electrical Connectors.
Claims use since June 20, 1936.

354,171. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PULLMAN CHEMICAL COMPANY, Camden, N. J. Filed Sept. 25, 1936. Serial No. 383,641.

Pullman

For Chemical Rust Preventive, Radiator Stop-Leak, Radiator Flush in Liquid Form and in Granular Form in Capsules, Chemical Tar Remover, Hydraulic Brake Fluid, Shock Absorber Fluid, Gas Gauge Fluid, Lighter Fluid, Non-Evaporating Anti-Freeze, Alcohol and Glycerin Anti-Freeze.
Claims use since Nov. 15, 1932.

354,172. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) PULLMAN CHEMICAL COMPANY, Camden, N. J. Filed Sept. 25, 1936. Serial No. 383,644.

Pullman

For Touch-Up Enamel, Tire Enamel, Under-Fender Paint, Aluminum Bronze, Engine Enamel, Auto Polish, Automobile Polishing Preparation Which Polishes and Cleans in a Single Operation, Auto Wax, Top Putty, Bearing Blue.
Claims use since Nov. 15, 1932.

354,173. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HELEN HARRISON CANDIES, INC., Chicago, Ill. Filed Jan. 22, 1937. Serial No. 388,057.

Helen Harrison

For Candies.
Claims use since Nov. 10, 1936.

354,174. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) SWANK PRODUCTS, INC., Attleboro, Mass. Filed Feb. 10, 1937. Serial No. 388,732.

ELBO-LINK

For Jewelry for Personal Wear, Not Including Watches.
Claims use since Dec. 15, 1936.

354,175. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) OMEGA SHOE POLISH CO., Los Angeles, Calif. Filed Feb. 20, 1937. Serial No. 389,194.

RE-WHITE

For Shoe Cleaners.
Claims use since Dec. 20, 1936.

354,176. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) KELLEY ELECTRIC MACHINE COMPANY, Buffalo, N. Y. Filed Apr. 10, 1937. Serial No. 391,183.

POWER FLOAT

For Power Apparatuses and/or Power Tools for Treating Concrete or Other Cementitious Mixtures Such as Rotary Floating and Troweling Apparatus and Parts Thereof.
Claims use since April, 1934.

354,177. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GILDA AUDREY PRODUCTS, INC., New York, N. Y. Filed May 11, 1937. Serial No. 392,587.

Paula Margon

For Toilet Preparations and Cosmetics—Namely, Moulding Cream, Revitalizing Oil, Astringent, Cleansing Cream, Pine Balsam Cream, Circulation Stimulant, Eye Bath, Liquid Make-Up, Hand Lotion, Brilliantine, Tissue Cream, Pore Cleanser, Pomade, Make-Up Base, Rouge, Lipstick, Face Powder, Mascara, Medicated Cream (a Healing Preparation for Blemished Skins), Mild Toner (Lotion for Dry and Sensitive Skins), Instant Remover (Lotion for Removing Make-Up), and Medicated Lotion (Antiseptic Lotion Applied to Face).
Claims use since Dec. 28, 1936.

354,178. (CLASS 32. FURNITURE AND UPHOLSTERY.) THE GENERAL FIREPROOFING CO., Youngstown, Ohio. Filed May 24, 1937. Serial No. 393,166.

Good Form

For Chairs Especially Designed for the Office.
Claims use since Oct. 26, 1936.

354,179. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) OXNARD CITRUS ASSOCIATION, Hueneme, Calif. Filed June 1, 1937. Serial No. 393,502.

Besgrade

For Fresh Citrus Fruits.
Claims use since Sept. 1, 1919.

354,180. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE VITAMIN CEREAL CO., Topeka, Kans. Filed Oct. 25, 1937. Serial No. 396,946.

A vitamin BRAND food

For Cereal Breakfast Foods.
Claims use since January, 1935.

354,181. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) COWEN BROS., New York, N. Y. Filed Nov. 1, 1937. Serial No. 399,167.

CUSHION COMFORT

For Wrist Watch Straps Made of Leather or Fabric.
Claims use since Sept. 26, 1936.

TRADE-MARK REGISTRATIONS RENEWED

119,627. CIGARS. Registered December 11, 1917. AMERICAN EXCHANGE CIGAR COMPANY, New York, N. Y. Renewed December 11, 1937, to The Deisel-Wemmer-Gilbert Corporation, Detroit, Mich., a corporation of Ohio, assignee.

119,653. CANNED SALMON. Registered December 11, 1917. CARLISLE PACKING CO. Renewed December 11, 1937, to F. R. Chambers, Seattle, Wash., assignee.

119,748. WHEAT-FLOUR. Registered December 11, 1917. THE MIDLAND MILLING COMPANY. Renewed December 11, 1937, to The Midland Flour Milling Company, Kansas City, Mo., a corporation of Kansas, assignee.

120,278. WHEAT-FLOUR. Registered January 29, 1918. THE MIDLAND MILLING COMPANY, a firm, assignor to Midland Milling Company, a corporation. Renewed January 29, 1938, to The Midland Flour Milling Company, Kansas City, Mo., a corporation of Kansas, assignee.

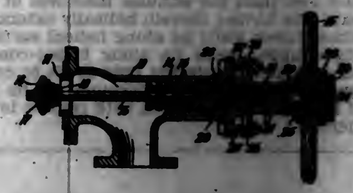
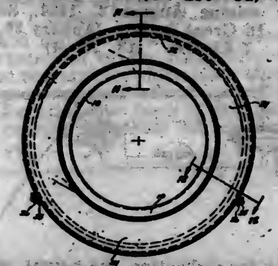
REISSUES



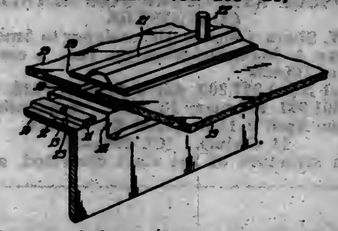
FEBRUARY 1, 1938

20,642
PRIMER VALVE
Philip S. Gess, Portland, Oreg.
Original No. 1,970,744, dated August 21, 1934, Serial No. 650,695, March 6, 1933. Application for reissue November 23, 1936, Serial No. 112,612
5 Claims. (Cl. 182—12)



1. A priming valve for a trap defined in part as a body member having a bore therein, a plunger in said bore that is movable under the influence of liquid flow therethrough, a valve member carried by said plunger, a co-operating valve seat for said valve, a metering discharge outlet beyond and spaced from said valve and seat, a stem projecting through said metering outlet that is attached to the valve and movable therewith to prevent clogging of said metering outlet, a passageway below said metering outlet, and air gaps in said passageway, the said stem being arranged to direct flow from said metering outlet past said air gap.

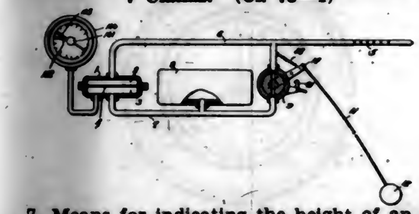
20,643
SAFETY DEVICE
Lester M. Goldsmith, Philadelphia, Pa.
Original No. 2,022,149, dated January 21, 1936, Serial No. 722,200, May 21, 1934. Application for reissue February 27, 1937, Serial No. 128,286
12 Claims. (Cl. 137—152)



1. A valve operating mechanism comprising a handle for manually operating a valve stem, and means interposed between said handle and said valve stem for automatically actuating said valve stem, said means comprising a spring under compression for actuating said valve stem, said spring being substantially out of contact with fluid passing about said valve stem and a fusible member, which upon fusion, permits automatic actuation of said stem independently of said handle.

20,644
METALLIC TIRE COVER
Frederick Hammond, Charlotte, N. C., assignor to Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan
Original No. 1,916,232, dated May 23, 1933, Serial No. 437,698, March 19, 1930. Application for reissue April 16, 1934, Serial No. 720,887
4 Claims. (Cl. 152—54)

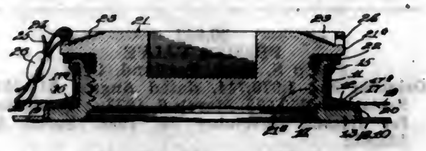
1. In a metallic tire cover, two uninterrupted annular members, each of said members being approximately semi-circular in cross section, and having inwardly projecting peripheral flanges, the flange of one of said members having a radially outwardly projecting portion forming with said flange a groove extending circumferentially somewhat less than half the circumference of the member, the other of said members having an inwardly projecting tongue adapted to fit into said groove, coinciding lugs on the outer periphery of said members, and means for securing said lugs together, thereby to secure the members together in flange to flange abutting relation.



20,645
GLAZING CONSTRUCTION
Sanford K. Huston, Jr., Chicago, Ill.
Original No. 2,002,536, dated May 28, 1935, Serial No. 743,397, September 10, 1934. Application for reissue January 22, 1937, Serial No. 122,915
7 Claims. (Cl. 108—16)

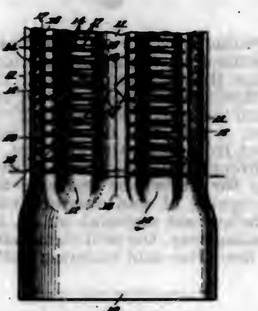
1. A support for a glazing construction comprising a rafter bar providing a plurality of holes in its upper edge, a plurality of apertured spacer members respectively overlying said holes and each providing detent means extending through the adjacent holes in operative engagement with the bar, a longitudinally extending supporting member resting upon the spacer members and providing a plurality of apertures respectively in register with the apertures in the spacer members, a plurality of bolts having their lower ends

respectively extending through said registering apertures and each providing a shoulder in engagement with the supporting member, and a nut threaded on the lower end of each bolt to clamp the shoulder into close fitting engagement with the supporting member.



20,646
MEANS FOR INDICATING THE HEIGHT OF AIRCRAFT, PARTICULARLY FOR USE WHEN THE AIRCRAFT IS LANDING
David Frederick Lucking, Felixstowe, England, assignor to Temple N. Joyce, Dundalk, Md.
Original No. 1,949,166, dated February 27, 1934, Serial No. 685,471, August 16, 1933. Application for reissue August 2, 1934, Serial No. 738,116. In Great Britain January 20, 1932
7 Claims. (Cl. 73—4)

7. Means for indicating the height of an aircraft, comprising a height indicating mechanism, a device for controlling the operation of said mechanism, and means for actuating the control device and including a weight adapted to be suspended from the aircraft, the arrangement being such that the control device is actuated by the dragging of the weight on the surface of the land or water after the aircraft has descended to and lower than a pre-determined height above the land or water, said height indicating mechanism being operated by virtue of the difference between the atmospheric pressure in its neighborhood when said mechanism is first put into operation at the pre-determined height and the varying atmospheric pressure or dynamic air pressure which exists in the neighborhood of said mechanism after the height indicating mechanism has been put into operation and as the aircraft descends below the pre-determined height.



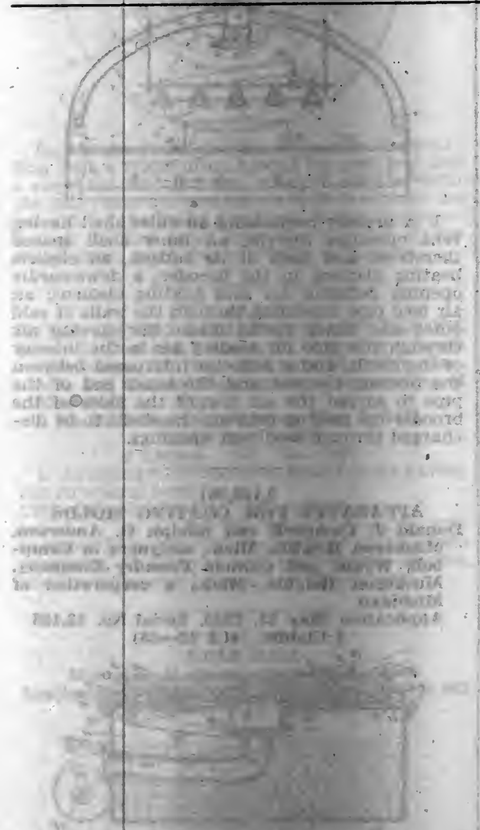
20,647
CLOSURE STRUCTURE FOR METALLIC CONTAINERS
John W. Shera, Chicago, Ill., assignor to American Flange & Manufacturing Co. Inc., a corporation of Illinois
Original No. 1,997,202, dated April 9, 1935, Serial No. 591,941, February 10, 1932. Application for reissue April 9, 1937, Serial No. 136,628
11 Claims. (Cl. 220—39)

8. In structure of the class described, a wall having an opening therein, a flange projecting from said wall and surrounding said opening, a ring member having an upwardly extending body portion and an angularly disposed and laterally extending rim portion embracing the outer sur-

face of said flange and having an attachment extension projecting therefrom and means applied independently of said flange and located on the outer end of said flange for securing said ring member thereto against movement bodily in any direction.

20,648
WELL SCREEN
William Edward Harrington, Beaumont, Tex.
Original No. 1,994,244, dated March 12, 1935, Serial No. 666,749; April 18, 1933. Application for reissue October 21, 1936, Serial No. 106,929
12 Claims. (Cl. 166—5)

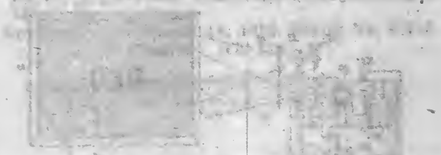
1. A well screen comprising an integral tubular body having inward longitudinally disposed ribs joined to the remaining portions of the tubular body, the external surfaces of said ribs being offset inwardly from the external surfaces of the remaining portions of the tubular body by a distance not less than the annular thickness of the body, said ribs having therein helically extending slots whose lower walls lie along helical surfaces and whose upper walls lie along helico-conical surfaces so that the entering fluid tends to cause an upward and rotational movement of the column of fluid within the screen with respect to the axis thereof.



PLANT PATENTS

GRANTED FEBRUARY 1, 1938

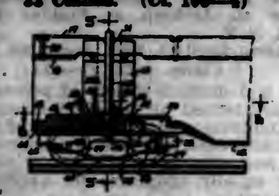
Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.



269
ROSE
Luther Burbank, deceased, late of Santa Rosa, Calif., by Elizabeth Waters Burbank, executrix, Santa Rosa, Calif., assignor to Stark Bro's Nurseries & Orchards Company, Louisiana, Mo.
Application May 8, 1937, Serial No. 141,545
1 Claim. (Cl. 47—61)

A new and distinct variety of hybrid tea rose plant characterized as to novelty by the bush or dwarf form, its strength, hardiness and resistance to heat and drouth, its everblooming habit and the profuseness of flowers compared with hybrids of similar color, substantially as shown and described.

270
ROSE
Gerrit de Ruyter, Hazerswonde, Netherlands, assignor to Jackson & Perkins Company, Newark, N. Y.
Application April 14, 1937, Serial No. 136,920
1 Claim. (Cl. 47—61)

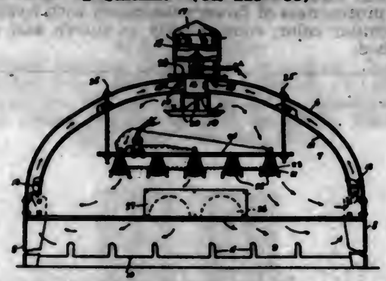


A new and distinct variety of polyantha rose plant characterized by the distinctiveness, uniformity and permanence of the color of its bloom, as shown and described, and the improved compactness and attractive form of the plant, rendering it equally adaptable for garden use or forcing in pot.

PATENTS

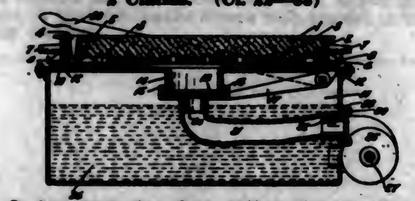
GRANTED FEBRUARY 1, 1938

2,106,696
ARTICULATED TOY TRAIN
Joseph L. Bonanno, Forest Hills, N. Y., assignor to The Lionel Corporation, New York, N. Y., a corporation of New York
Application July 27, 1935, Serial No. 33,435
33 Claims. (Cl. 105—4)



1. In an articulated toy train, in combination, a coupling section comprising a truck having wheels and axles, a truck-carried member, a spring normally holding the truck-carried member in one position, the member being freely manually movable to another predetermined position, a fixed truck-supported element, a movable element carried by the movable member and normally held thereby in a predetermined position opposite the fixed element, and car bodies each having draft elements extending between the fixed and movable elements and having a configuration to interlock with one of said elements to prevent separation of the corresponding car body from the coupling section when the movable member is in normal position and to transmit pull from one draft element to the other without changing the load on the spring, the draft elements being unlocked when said member is manually moved to the other position.

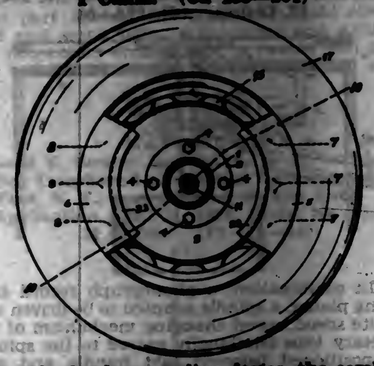
2,106,699
ILLUMINATED SIGN
John Gordon Best, Toronto, Ontario, Canada, assignor to Varilux Holding Corporation, Limited, Nassau, Bahama, a company of Bahama Islands
Application January 14, 1936, Serial No. 59,018
3 Claims. (Cl. 40—130)



1. A sign comprising contacting indicia and background portions of different colors, the color of one of said portions being deficient in the distinguishing hues of the other portion which is deficient in the distinguishing hue of said first portion, means for illuminating said sign with light of the color of the background and with light of the color of the indicia, said means comprising an electrically energized source of light of each color, a pair of interrupters, circuit connections between both light sources and one interrupter for effecting periodic alternate energization of said light source by means of said interrupter, circuit connections between both light sources and the remaining interrupter for effecting periodic alternate energization of said light sources by means of said remaining interrupter and means to operate said interrupters at different speeds.

2,106,700
BROODER
James A. Ackerman, Peru, Ind.
Application September 19, 1936, Serial No. 101,671
4 Claims. (Cl. 119—33)

1. A brooder comprising an outer shell having vent openings therein, an inner shell spaced therefrom and open at its bottom, an electric heating element in the brooder, a downwardly opening deflector for said heating element, an air feed pipe extending through the walls of said outer and inner shells, means for forcing air through the pipe for feeding air to the interior of the shells, and a deflector interposed between the heating element and the inner end of the pipe to spread the air toward the sides of the brooder for passing between the shells to be discharged through said vent openings.



2,106,701
APPARATUS FOR COATING MOLDS
Donald J. Campbell and Adolph G. Andersen, Muskegon Heights, Mich., assignors to Campbell, Wyant and Cannon Foundry Company, Muskegon Heights, Mich., a corporation of Michigan
Application May 22, 1935, Serial No. 22,166
2 Claims. (Cl. 22—93)

2. An apparatus for coating the interior of molds, which apparatus consists of a wash solution container tank having a cover provided with a hole therethrough for delivering mold wash solution from said container tank to the top of said cover and to the mold thereon, a valve

for closing the said hole to prevent the flow of wash solution from the top of said cover into said container tank, and a pump having its discharge flange flexibly connected to the said valve by a flexible hose and its suction connected with the said container tank below the discharge of said pump.

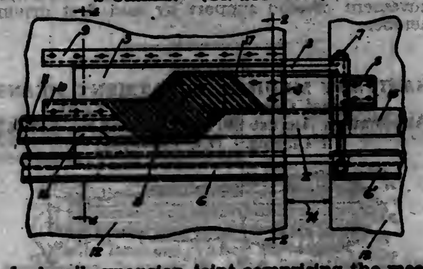
2,106,702
BRAKE DRUM COOLING DEVICE
Donald J. Campbell, Spring Lake Township, Ottawa County, Mich.
Application October 21, 1936, Serial No. 106,327
1 Claim. (Cl. 188—264)

In a brake drum cooling device, the combination with a brake drum having an open end and a cover for the open end, means associated with the said cover for causing air to flow against the exterior of the brake drum and means for causing air to flow away from the exterior of the brake drum when the vehicle is in motion.

2,106,703
MIXED ESTER DERIVATIVES OF GLYCOL
Henry L. Cox and Thomas F. Carruthers, South Charleston, W. Va., assignors to Union Carbide and Carbon Corporation, a corporation of New York
No Drawing. Application May 6, 1934, Serial No. 724,622
6 Claims. (Cl. 260—105)

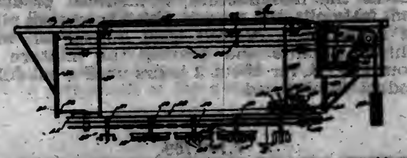
1. As chemical compounds, mixed esters having the structural formula

$$CH_3—CO—O—R^2—O—(CO—(CH_2)_n—CO—O—R^2—O—)_x—CO—CH_3$$



in which R^2 is a radical of a member of the group consisting of alkylene and polyalkylene glycols, and the value of x is from 2 to 10 inclusive.

2,106,704
GOLF BALL
Henry K. B. Davis, Springfield, Mass.
Application February 20, 1936, Serial No. 64,902
2 Claims. (Cl. 273—63)



1. As a new article of manufacture, a golf ball consisting of a sphere formed to have on its outer surface a plurality of rows of alternately arranged relatively depressed and raised portions, said portions having four sides and the raised portions being disposed so as to abut one another at the corners thereof only.

2,106,705
RAIL EXPANSION JOINT
Harold H. Gilbert, Sacramento, Calif.
Application August 11, 1936, Serial No. 95,968
2 Claims. (Cl. 238—238)

1. A rail expansion joint comprising the meeting rail ends, a base plate for supporting said rail ends, said rail ends being each cut obliquely and their end faces lying in non-parallel oblique vertical planes, one rail end being fixed to the base plate, the other rail end being slidably movable with respect to both the base plate and the fixed rail end, means positioned between the rail ends and supported on the base plate to form a continuous rail tread, said means comprising vertical laminations positioned parallel to the oblique face of the fixed rail end and substantially filling the space between the rail end faces; and guide means for the said laminations, said guide means consisting of horizontal splines in the said laminations so that vertical loads will be carried by a group of laminations acting together to form a continuous rail tread, and means for maintaining adjacent laminations in contact one with another and parallel with said oblique face of the fixed rail end, certain of said laminations being maintained in alignment with the meeting rails whereby a rail tread is formed.

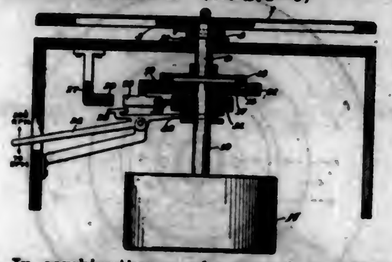
2,106,706
CONVEYER MECHANISM
Robert H. Gordon, Detroit, Mich., assignor to Parker Rust Proof Company, a corporation of Michigan
Application February 14, 1935, Serial No. 6,418
17 Claims. (Cl. 214—17)

1. Conveying mechanism including a vertically reciprocable support, means including a driving member for reciprocating said support between predetermined limits, conveyer means including a second driving member carried by said support for holding and moving articles horizontally from one position on said support to another position thereon, and control mechanism on both said driving members comprising a control element responsive to downward movement of said support adapted to de-energize said first driving

member when said support is at its lowermost position and to maintain the same inoperative for a predetermined period, a control element responsive to upward movement of said support for rendering said first driving member inoperative when said support is at its upper limit and for simultaneously initiating operation of said second driving member, and a control element responsive to horizontal conveyer section for de-energizing said second driving member when said article reaches said last mentioned position on said support and simultaneously initiating downward movement of said support by said first driving member.

2,106,707
SANITARY MEDICAL TREATMENT MEANS
August Groth, Los Angeles, Calif.
Application August 30, 1933, Serial No. 687,463
7 Claims. (Cl. 128—260)

5. A treatment device of the character disclosed and for the purpose set forth comprising a central treatment member adapted for initial independent treatment of the walls of a normally collapsed cavity and formed at its forward terminus with a blunt entering point adapted to facilitate the entrance of said member into a normally collapsed cavity; and a tubular member having an open bore from end to end and adapted to be applied to and over said central member; said tubular member having a blunt terminal formation at its forward end, said terminal formation facilitating the entrance of the tubular member into such collapsed cavity when in association with and applied to and over said central treatment member and with said blunt entering point projecting forwardly of said blunt terminal formation.



2,106,708
MANUFACTURE OF MODIFIED ORGANIC ISOCOLLOID MATERIALS
Laszlo Auer, Budapest, Hungary, assignor to J. Randolph Newman, Washington, D. C., as trustee
No Drawing. Application July 8, 1930, Serial No. 466,557. Renewed October 13, 1936. In Great Britain July 8, 1929
22 Claims. (Cl. 87—12)

1. In the manufacture of modified products from fatty oils, the process which comprises mixing a stand oil, derived from linseed oil, with lithium sulphite and heating the mixture to about 250° C. for about 2 hours until a solidified product is obtained.

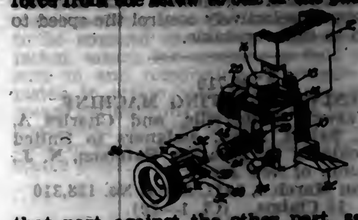
2,106,709
PAPER AND PROCESS FOR THE MANUFACTURE OF PAPER
Webster E. Byron Baker, Lock Haven, Pa.
No Drawing. Application April 4, 1933, Serial No. 664,347. Renewed April 20, 1937
3 Claims. (Cl. 91—68)

1. The improvement in the art of paper manufacture which comprises applying to the surface of paper an aqueous suspension of starch and finely divided water-insoluble, inorganic material, said suspension containing starch to the extent of not exceeding 5% of the starch and water present, said water-insoluble, inorganic material being present in amount not exceeding the amount of starch present, thereafter drying and thereafter calendering the said sheet.

2,106,710
PHONOGRAPH TURNTABLE DRIVING MECHANISM
Frederick C. Barton, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 13, 1933, Serial No. 656,764
15 Claims. (Cl. 274—9)

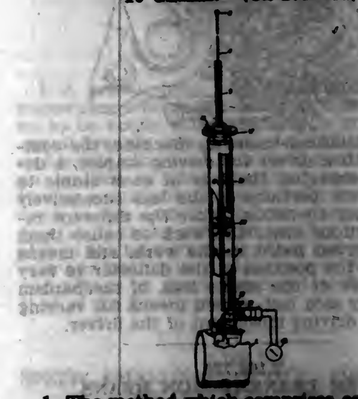
1. In combination, a phonograph record supporting platen, a spindle adapted to be driven at a definite speed, speed changing mechanism of the planetary type frictionally geared to the spindle and positioned between said spindle and said platen, and means for restraining from rotating, at will, a portion of said mechanism.

2,106,711
FOOD CUTTER
Herbert A. Berkman, Chicago, Ill.
Application July 26, 1935, Serial No. 33,256
2 Claims. (Cl. 146—192)



1. A food cutter comprising a frame, a food receiving cup resting on the frame, a worm attached to the lower end of the cup, food cutting and discharging means attached to the lower end of the worm, a casing enclosing the worm and resting on the said means, whereby said elements may all be elevated and removed from the frame, and means for rotating relatively the casing and the worm.

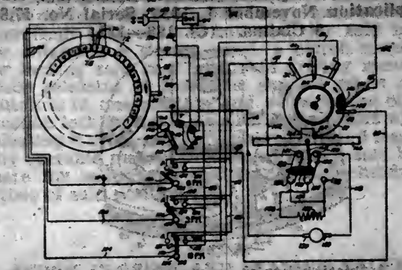
2,106,712
SOLE FITTING MACHINE
Frederic E. Bertrand, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application October 29, 1935, Serial No. 47,285
7 Claims. (Cl. 12—37)



1. In a sole fitting machine, a support, a tool carrier slidably mounted for adjustment on said support, a clamping screw threaded into one of said parts and extending through an opening in

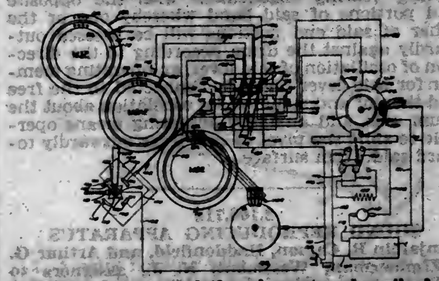
the other part, and a member bridging the opening through which said screw passes to transmit force from the screw to one of the parts to clamp

that part against the other part, said member and said screw being constructed and arranged for non-rotary engagement to enable said member to serve as a wrench for turning said screw.



2,106,713
WAVE-METER
Arnold E. Bowen, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 21, 1936, Serial No. 75,656
10 Claims. (Cl. 172—44)

1. The method which comprises converting dielectrically guided waves into conduction current waves in a coaxial conductor line, relating the frequency of said waves and the length of said line to establish standing waves in said line, and obtaining an indication of the field intensity at some point within the space occupied by said standing waves.



2,106,714
AUTOMATIC RADIO STATION SELECTOR
Emile Brugger, Valley Stream, N. Y.
Application March 24, 1930, Serial No. 438,292
Renewed September 1, 1936
5 Claims. (Cl. 250—20)

5. A radio set having station selecting mechanism and an operating circuit for the set, in combination, a single settable member having a neutral position and a plurality of station selecting positions and movable from any position directly to any other position, means under control of said settable member to move said selecting mechanism to the station selected and to close the operating circuit at the instant said selecting mechanism is positioned at the station selected, and means when said member is moved to its neutral position to break the operating circuit through said first means and when moved from any station selecting position to another to break the operating circuit through said first means, cause the selecting mechanism to be positioned

to the new station selected and reestablish the operating circuit at the instant said selecting mechanism is so positioned.

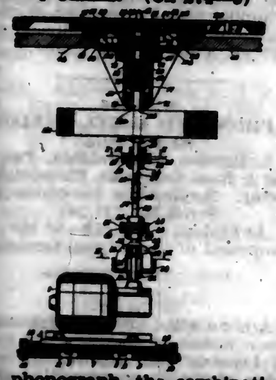
2,106,715
AUTOMATIC RADIO CONTROL
Emile Brugger, Valley Stream, N. Y.
Application January 29, 1936, Serial No. 61,395
13 Claims. (Cl. 250—20)

13. In a device of the character described, in combination, circuit selecting means, time unit devices, a plurality of determinators each having means to cooperate with the same circuit selecting means to determine the closing of the selected circuit and simultaneously to cooperate with a different number of said time unit devices to determine different time intervals during which the selected circuit shall remain closed.

2,106,716
SULPHONATED ALKYL-ARYLOXY-ALKYLOLS
Herman A. Bruson, Philadelphia, Pa., assignor to Röhm & Haas Company, Philadelphia, Pa.
No Drawing. Application December 30, 1936, Serial No. 118,267
14 Claims. (Cl. 260—99.12)

6. A compound of the general formula

$$A-R-O-R'(OSO_3M)_x$$
$$(SO_3M)_y$$

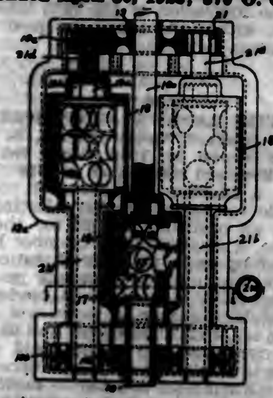


in which A is an alkyl group containing at least eight carbon atoms, R is one of the group consisting of benzene and naphthalene nuclei, R' is a member of the group consisting of alkylene radicals containing at least two carbon atoms and polyalkylene ether radicals in which the alkylene groups contain at least two carbon atoms, M is a member of the group consisting of hydrogen, alkali metals, ammonium and substituted ammonium radicals, and x and y each have the value of one or two.

2,106,717
BRAKE
Addi Benjamin Cadman, Beloit, Wis.
Application November 1, 1935, Serial No. 47,856
8 Claims. (Cl. 188—138)

1. A friction brake comprising, in combination, a rotatable drum, a fixed stop disposed adjacent the internal drum surface, a friction band extending around the internal surface of said drum with its ends disposed on opposite sides of and normally drawn into abutment with said stop, a lever swingable about a pivot adjacent said drum and disposed substantially radially when in brake-released position, oppositely projecting arms rigid with said lever intermediate the ends thereof and having bearing engagement with the opposite end portions of said band whereby one or the other of said end portions will be pressed outwardly against the drum according to the direction of oscillation of said lever, an operating member for said lever pivotally connected to the free end thereof and mounted for oscillation about the drum axis, and auxiliary actuating means operable to shift the pivot of said lever outwardly toward said drum surface.

2,106,718
SOUND REPRODUCING APPARATUS
Benjamin R. Carson, Haddonfield, and Arthur G. Zimmerman, Westmont, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Original application March 30, 1935, Serial No. 13,796. Divided and this application September 30, 1936, Serial No. 103,241
6 Claims. (Cl. 274—9)



1. In a phonograph, the combination with a turntable of means for driving said turntable, and means coupling said driving means to said turntable, said coupling means including a shaft driven at a constant speed, a selectively variable speed transmission interposed between said shaft and said turntable, said transmission including a controllable element for varying the speed transmitted thereby, an inertia member on said shaft, and movably mounted means for selective movement into and out of engagement with said element whereby to selectively control the speed to be imparted to said turntable.

2,106,719
FASTENING-INSERTING MACHINE
John A. Caswell, Somerville, and Charles A. Robinson, Salem, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application March 1, 1937, Serial No. 128,810
14 Claims. (Cl. 1—20)

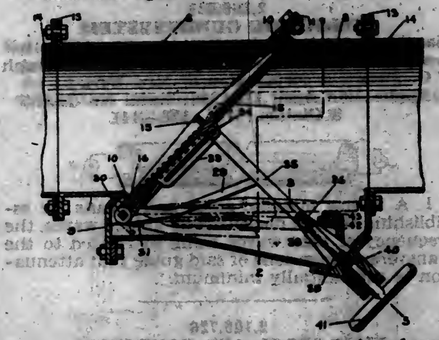
1. In a fastening-inserting machine, the combination with a driver for driving staples, a deflector for engaging the legs of each staple to curve different portions of the legs successively in the driving operation before the different respective portions enter the work to cause them to follow curved paths in the work, and means for varying the position of the deflector to vary the curvature of the staple legs, of mechanism controlled by said last-named means for varying the limit of driving movement of the driver.

2,106,720
POWER TRANSMISSION MEANS
Allan J. Chantry, United States Navy
Application October 2, 1931, Serial No. 566,692
25 Claims. (Cl. 74—364)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a transmission means the combination of two members adapted to transmit driving

torque, one of said members being provided with a piston mounted to move therewith as well as at an angle to the members, the other of said members being provided with a surface adapted to be engaged in driving engagement by said piston, means for applying a fluid under pressure to and removing the pressure from said piston to attain said driving engagement, and means for applying a fluid under pressure to the engageable surfaces of the piston and the other member to disengage said surfaces when the first stated pressure is removed.

2,106,721
IGNITION BREAKER
Carl V. Chermendy, Chicago, Ill., assignor to Frieda Chermendy, Chicago, Ill.
Application June 17, 1935, Serial No. 26,896
7 Claims. (Cl. 200—20)



1. A replacement part for ignition breakers comprising a block of insulating material adapted to be bodily substituted for a pivoted metal circuit breaker arm, means for adjustably setting and holding the block in a fixed position adjacent an ignition breaker operating cam, the block having a continuous bore therethrough, a contact fixed in one end of the bore having a contact face at its inner end, and another contact movable in the bore from the other end by a breaker cam and having its contact face at the inner end and always in fixed alignment to flatly engage that of the fixed contact.

2,106,722
SPEED CHANGING DEVICE FOR PHONOGRAPH TURNTABLES
Edward E. Colleen and Emil Nyman, Fort Wayne, Ind.
Application December 17, 1931, Serial No. 581,694
2 Claims. (Cl. 274—9)

1. In a phonograph, the combination of a base plate, a turntable located above said base plate and adapted to rotate records of different reproducing speeds, and turntable rotating mechanism located below said base plate, said mechanism comprising a motor for driving said turntable, a shaft driven by said motor at a predetermined speed having a driving member on the end thereof, a spindle connected with said turntable having a driven member mounted thereon, said driven member being adapted to embrace said driving member, a stationary support for said turntable and spindle, a plurality of balls mounted for rotation in said driven member adapted to be engaged and rotated by said driving member, a ball race adapted to be locked with said balls and driven member for causing said driven member to be directly driven therethrough and unlocked therefrom to provide a ball race for said balls for obtaining a slower speed, a clutch member for locking said race with said driving member while releasing it from the support when said clutch is in one position and when in the other position locking the same with said support while releasing it from said driven member, and manually operable means extending through said base plate for selectively positioning said clutch in either of said positions.

2,106,723
QUICK CLOSING AND SEALING VALVE
Robert W. Colleen, Takoma Park, Md.
Application December 14, 1936, Serial No. 115,849
5 Claims. (Cl. 251—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A valve housing with bonnet offset and containing a valve seat as an integral part; a hinge pin, rotatably mounted within and extending through a stuffing box in said bonnet offset to which is attached means for manually operating said hinge pin; a valve containing an annular rubber packing ring and mounted upon said hinge pin within the valve housing in such a manner that when the hinge pin is rotated the valve will be caused to close upon the valve seat; a bent arm loosely mounted upon the hinge pin and to which movement is imparted by means of a lug rigidly mounted upon the hinge pin; a prop slidably mounted to the underneath side of the valve and so placed that when the bent arm is raised it will come in contact with the prop and cause the upper end of the prop to slide along the slots in the underneath side of the valve; this prop is slidably pivoted on its lower end in slots contained in a jack screw housing; a manually operated jack screw mounted in a stuffing box, and so centered that its inner end will be opposed to the lower end of the prop after the valve is in a closed position, and used to tightly seal the valve upon the valve seat.

2,106,724
CONNECTER
Burton H. Cope, Smithfield, Ohio
Application March 16, 1935, Serial No. 11,476
10 Claims. (Cl. 173—373)

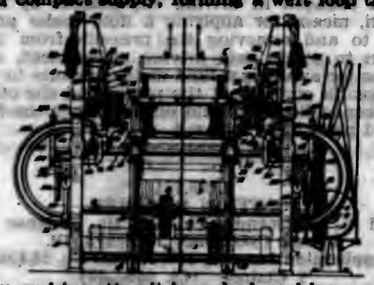
1. A connecter comprising a clamping member having a base portion with a central longitudinal downwardly eccentrically arched portion and two side portions adapted to receive a

pair of parallelly-arranged conductors therebetween, and an insert with parallel sides, shaped to be guided between and along said conductors from a point outside said side portions when said conductors are initially inclined slightly to each other to form an inclined guiding camway

for said insert, said insert, when forced into final position, being adapted to press said conductors against said side portions and maintain all contacting surfaces of said conductors, side portions and insert in position parallel to the axis of said clamping member.

2,106,725
DIELECTRIC GUIDE SYSTEM
Harold Everdell Curtis, East Orange, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application April 11, 1936, Serial No. 73,955
8 Claims. (Cl. 178—44)

1. A hollow metallic guide and means for establishing therein dielectrically guided waves, the frequency of said waves being so related to the transverse dimensions of said guide that attenuation is substantially minimum.



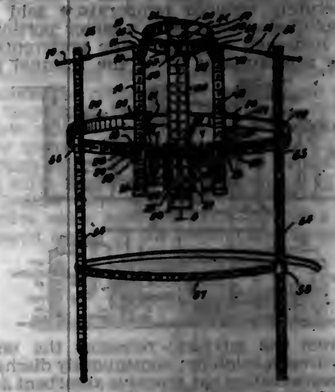
2,106,726
FILM SPOOL AND CONTAINER
Rupert H. Draeger, United States Navy
Application November 14, 1935, Serial No. 49,755
3 Claims. (Cl. 242—71)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A film spool comprising a flange, an inner hub extending from said flange with a flared end of said inner hub penetrating said flange, an outer hub enclosing said inner hub, an external flare on the other end of said inner hub and a flange on said outer hub underlying said flare on said inner hub to hold said hubs and flange in assembled position.

2,106,727
LOOM
Albert W. Drebile, Wayne, Pa., assignor to Collins & Aikman Corporation, Philadelphia, Pa., a corporation of Delaware
Application August 23, 1933, Serial No. 686,458
20 Claims. (Cl. 139—20)

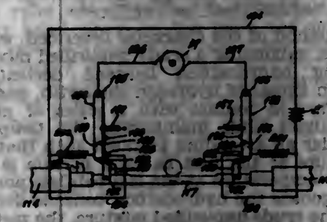
1. In a loom of the character described, the combination with means for forming warp sheds and a support for a compact supply of weft yarn outside of the sheds formed by the said means, of a reciprocable weft carrier movable into warp sheds formed by said means, a device positively controlling the movements of said weft carrier throughout its travel into and out of such sheds, means for stretching a weft yarn from such supply in the path of reciprocation of said weft carrier, said weft carrier drawing out yarn from said compact supply, forming a weft loop there-

from and inserting it in a shed, and loom mechanism independent of the sheds for gripping said yarn and preventing the withdrawal of the inserted pick during the stretching of a subsequent weft length in the path of said weft carrier.



2,106,728
SEPARABLE FASTENER
Paul E. Fenton, Thomaston, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application February 4, 1936, Serial No. 62,242
2 Claims. (Cl. 24—216)

2. A snap fastener socket installation comprising, in combination, a socket member made from a single piece of sheet metal having a substantially cylindrical center wall of only one thickness of metal inturned along its free, front end and notched at spaced points for such distance as to form a plurality of resilient stud-engaging fingers, an annular breast of arcuate cross-section extending outwardly and forwardly from the rear end of the wall for such distance that the outer margin thereof lies in a plane at right angles to and forward of the free ends of such fingers, and a retaining ring of U-shaped cross-section extending rearwardly and inwardly from the edge of the breast and terminating at such point that the inner edge thereof lies opposite and spaced from the curved rear face of the breast; a sheet of supporting material having one face thereof engaging such member at the rear end of the wall; and an attaching element having a radial flange engaging the other face of the material, and a plurality of pointed prongs passing through the material and snugly engaging the breast from the rear end of the wall to the retaining ring so as to provide an additional thickness of metal for backing up the breast, and with its points disposed within the retaining ring and clamped between the opposite faces thereof so as to provide three thicknesses of metal at the outermost edge of the breast.

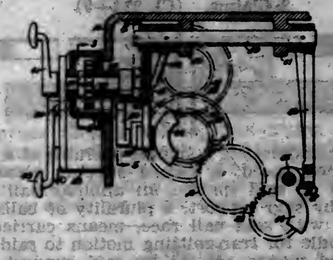


2,106,729
TAILOR'S MEASURING DEVICE
James J. Fichtel, Pottstown, Pa.
Application September 17, 1936, Serial No. 101,266
6 Claims. (Cl. 33—15)

1. A tailor's measuring device of the class described comprising a neck ring, shoulder strap members, intermediate strips depending with relation to the straps, fastening clamps common to said neck ring, straps and strips, a measuring ring, clamps mounting said measuring ring, said strips passing adjustably through said clamps, and means to secure said clamps to said strips,

side strips adjustably carried by said measuring ring, said measuring ring being in sections terminating adjacent the front center and rear center of the device, center strips depending from the neck ring, yokes connected to said center strips, and means connecting the ends of said sections to said yokes.

2,106,730
ART OF MACHINE CONTROL
Warren Hanham Foster, Washington Township, Bergen County, N. J., assignor to Kinatone Patents Corporation, New York, N. Y., a corporation of New York
Original application September 19, 1925, Serial No. 57,392, now Patent No. 1,942,262. Divided and this application November 7, 1933, Serial No. 697,469. In Great Britain September 19, 1925. Renewed March 21, 1936
59 Claims. (Cl. 88—17)

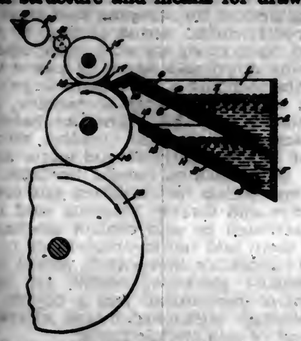


1. In combination with a machine, a motor, an operable connection between said motor and said machine, control mechanism operative independently of said motor and actuable by said machine, means operable by said control mechanism for rendering said connection inoperative and thereby stopping said machine, and means actuated by said control mechanism for slowing down said motor preparatory to rendering said connection inoperative.

11. The combination with a machine having a part movable along a work path, and a source of power connected to said machine for operating the same to move said part along its work path, of control means connected to said movable part and to said source of power, said control means including devices for stopping said movable part for a predetermined period of time at a predetermined point along its work path, and devices for slowing down said source of power preparatory to the stopping of said operable part.

18. In combination with a machine, an electric motor, an operable connection between said motor and said machine, control mechanism operative independently of said motor and actuable by said machine, means operable by said control mechanism for rendering said connection inoperative and thereby stopping said machine, means actuated by said control mechanism for slowing down said motor preparatory to rendering said connection inoperative, means including an actuating electrical circuit for operating said control mechanism, and a circuit for said last previously mentioned means separate from the circuit of said electric motor.

2,106,731
SPEED-CHANGE MECHANISM
Keith F. Gallimore, Fond du Lac, Wis., assignor to Giddings & Lewis Machine Tool Co., Fond du Lac, Wis., a corporation of Wisconsin
Application August 9, 1934, Serial No. 739,076
10 Claims. (Cl. 74—473)



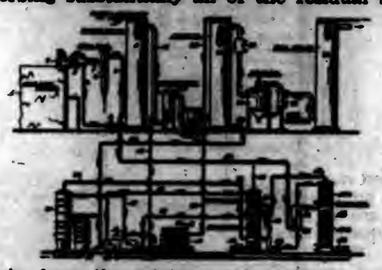
1. A speed-change mechanism comprising, in combination, a speed-change gearing having a shiftable gear element, a shiftable shoe engaging said element, a rock shaft, a lever fixed at one end on said shaft and having a pin and notch connection at the other end with said shoe, a second lever fixed at one end on said shaft and formed with a generally longitudinal cam groove, a crank shaft having an eccentric crank pin on one end projecting transversely into said groove, and means for rotating said crank shaft, whereby said rock shaft will be oscillated to shift said element in opposite directions, said cam groove having clearance recesses formed in the sides thereof for preventing over-travel of said shiftable gear element.

2,106,732
WATER FEED FOR ROTARY OFFSET AND LITHOGRAPHIC PRESSES
John G. Goodlin, San Antonio, Tex.
Application August 7, 1937, Serial No. 157,874
3 Claims. (Cl. 101—147)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a printing press, the combination of a water feed and a distributing system including dual ink covered rollers, means for maintaining said rollers covered with ink and means for feeding water to said rollers and collecting any excess of water therefrom, said last mentioned means comprising a dual trough structure, a

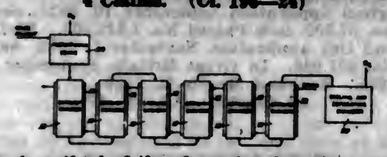
source of water supply in one of the troughs of said dual structure and means for drawing any

excess of water from said rollers into the other trough of said structure.



2,106,723
SPEED CHANGING MECHANISM
Thaddeus R. Goldsborough, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 30, 1932, Serial No. 589,968
2 Claims. (Cl. 274—9)

1. In combination, a spindle operable at a predetermined speed, a record support rotatably mounted on said spindle, an annular ball race carried by said support, a plurality of balls associated with said ball race, means carried by said spindle for transmitting motion to said ball race, and means carried by said support and adapted to co-act with said balls whereby said support may be rotated relatively to said spindle.

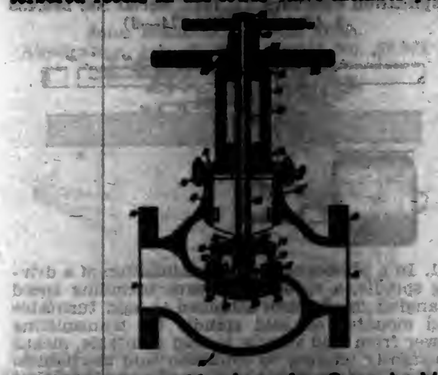


2,106,724
GAS PURIFICATION PROCESS
Herbert A. Gollmar, Union Township, N. J., assignor, by mesne assignments, to Koppers Company, a corporation of Delaware
Application February 27, 1935, Serial No. 8,501
15 Claims. (Cl. 23—3)

1. A process for recovery of hydrogen sulphide from coal-gas, comprising: absorbing the hydrogen sulphide by scrubbing the coal-gas with its own ammoniacal liquor fortified with ammonia to an extent greatly in excess of the normal ammonia content of such liquor, the excess being maintained by recirculation of ammonia from a further stage in the treatment system; expelling the hydrogen sulphide and part of the ammonia from the fouled scrubbing liquor by hot vapors from the distilling of ammonia from part of said liquor and returning the scrubbing liquor containing the remaining part of the ammonia to the scrubbing step; partially dephlegmating the so expelled hydrogen sulphide and admixture of ammonia and scrubbing the said gaseous mixture with a concentrated selective absorbent solution of an ammonia absorbent effective to raise the vapor pressure of hydrogen sulphide as compared with the vapor pressure of ammonia and hydrogen sulphide in simple water solution, in continuous flow into and out of contact with said gaseous mixture of hydrogen sulphide and ammonia without admixture of the selective absorbent solution with the coal gas scrubbing liquor, to effect a preferential absorption of the ammonia from the mixture, the dephlegmating being so limited that at the resulting moderately reduced temperature said absorbent solution absorbs only a minor portion of the said hydrogen sulphide while preferentially absorbing substantially all of the residual am-

monia from the mixture; releasing the unabsorbed hydrogen sulphide; continuously discharging and regenerating the selective absorbent solution separately from the expelling of the hydrogen sulphide from the fouled coal-gas scrubbing-liquor by reheating and distilling to remove the residual absorbed hydrogen sulphide and the absorbed ammonia; returning the ammonia as excess to fortify the gas scrubbing liquor by recirculating the so removed constituents through the prior scrubbing steps; and recirculating said regenerated absorbent solution.

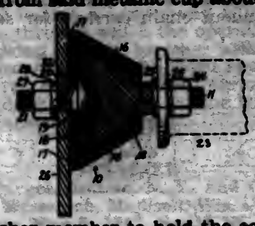
2,106,725
METHOD OF CATALYTIC HYDROGENATION OF CRUDE BENZENE DERIVATIVES
Marion H. Gwynn, Bound Brook, N. J.
Application September 17, 1932, Serial No. 633,684
4 Claims. (Cl. 196—24)



2. A method of the character described, which comprises, vaporizing a crude unpurified mixture containing hydrocarbon benzene derivatives, mixing an excess of hydrogen therewith, passing the mixture in contact with a series of nickel type catalysts while maintaining the temperatures under an ascending gradient such that the temperature at the first catalyst portion is less than the temperature at the last catalyst portion to hydrogenate the hydrocarbon benzene derivatives of the crude unpurified mixture, the method being carried out at a relatively low substantially constant pressure, the average temperature being substantially 145° C. while maintaining a partial pressure of hydrocarbon vapors less than three atmospheres.

2,106,726
VALVE ASSEMBLY
Walter H. Haas, United States Navy
Application February 12, 1935, Serial No. 6,292
1 Claim. (Cl. 251—27)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A valve assembly comprising a valve body, a pair of spaced aligned cylindrical valve seats in

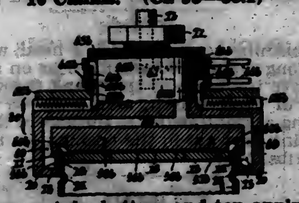


said valve body, a piston valve member, a packing ring on said valve member, said piston valve member including two valve member parts, one telescoped within the other with the inner of said valve member parts having an extending flange whose diameter is substantially equal to the diameter of the other valve member part, said packing ring being located between said extended flange and said other valve member part whereby it is adapted to be expanded into cooperation with either seat, and means for expanding and releasing the pressure on said ring for movement between said seats including a hollow valve stem secured to the upper of said valve member parts and a valve rod extending through said valve stem secured to the other of said valve member parts, the means for securing the hollow valve stem and valve rod to their respective valve member parts including a counterbored recess in the lower valve member part,

an abutment on said valve rod, a flange bushing on said rod above said abutment threaded into said counterbored recess thereby rotatably securing said valve rod to said lower valve member part, an abutment on the hollow stem within the upper valve member part and a nut threaded on said hollow stem without the upper valve member part to secure said hollow stem thereto, the abutment of said hollow stem being internally threaded and cooperative with threads on said valve rod extending therethrough, an auxiliary hand wheel on the valve rod for moving said valve rod axially relative to said hollow stem and thereby telescoping said valve member parts toward or from each other to compress or release the compression on the packing ring therebetween, and a main hand wheel on said hollow stem for rotating said hollow stem to move said valve member parts as a unit from one seat to the other when the compression on the packing ring has been released.

2,106,727
FLEXIBLE CONNECTER
Homer H. Halvo, Washington, D. C.
Application December 5, 1936, Serial No. 114,240
2 Claims. (Cl. 287—85)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A connecter for yieldably connecting two members, comprising a cone shaped resilient cushioning cup having an open end and a closed base, a bolt having a correspondingly shaped cone head inserted within said cushioning cup, a metallic conical cup placed about the side of said cushioning cup, a washer member covering said cushioning cup base, a securing member extending through said washer member, and a flange extending from said metallic cup about the edges

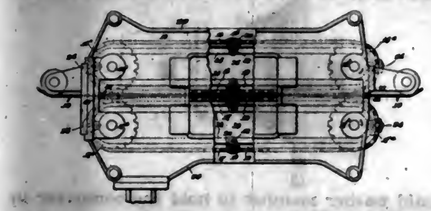


of said washer member to hold the connecter in assembled position.

2,106,728
PAPER AND ANALOGOUS MATERIAL CONTAINER
John K. M. Harrison, Ogonts, Pa.
Application December 19, 1935, Serial No. 55,241
22 Claims. (Cl. 93—55.1)

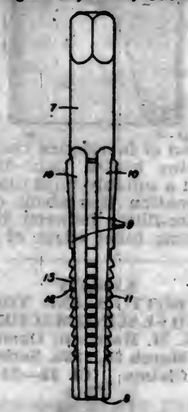
1. The method of fabricating containers which comprises forcing heated tight-fitting closures into the ends of a suitably-lined tube section with incidental formation thereabout of permanent sealing juncture-fillets between the tube wall and the adjoining inner edges of said closures.

2,106,729
CONTAINER BOTTOM AND TOP APPLYING AND SEALING MACHINE
John K. M. Harrison, Ogonts, Pa.
Application March 30, 1936, Serial No. 69,305
10 Claims. (Cl. 93—55.1)



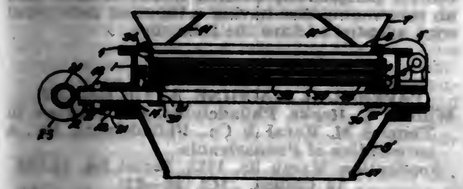
1. In paper tube bottom and top applying and inserting machines, the combination of a stationary heater head having a hollow for the individual reception of the tube ends, an inner concentric peripherally-flanged heater holder, and an intervening disc having a tapering peripheral edge adapted to flare the tube edge.

2,106,740
PAPER-BAG MACHINE ATTACHMENT
William C. Hepke, Philadelphia, Pa., assignor to Thomas M. Royal & Co., Philadelphia, Pa., a corporation of Pennsylvania
Application March 25, 1935, Serial No. 12,938
14 Claims. (Cl. 93—37)



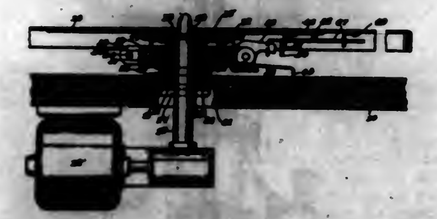
1. Means for effecting permanent engagement of the bottom turned or folded portions of paper

bags, comprising cooperating clamping members between which said folded portions may be tightly held, continuous chain carriers for said clamp-



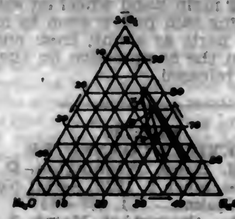
ing members whereby they may be brought into registering position to engage said folded bottom portions, and means for heating said cooperating clamping members as they are moved.

2,106,741
BUSHING REMOVER
Joseph F. Herbert, Audubon, N. J.
Application July 30, 1936, Serial No. 93,414
1 Claim. (Cl. 81—71)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



In a bushing removing tool, a head, a tapered shank, longitudinal rectangular ribs on and conforming to the taper of the shank throughout a portion of their length, and teeth on the ribs extending at right angles to the axis of the shank for cutting keyways in the bushing for reception of the ribs.

2,106,742
SIFTING DEVICE
Raymond Hinkle, Hanover, Pa.
Application January 18, 1936, Serial No. 59,777
5 Claims. (Cl. 209—244)

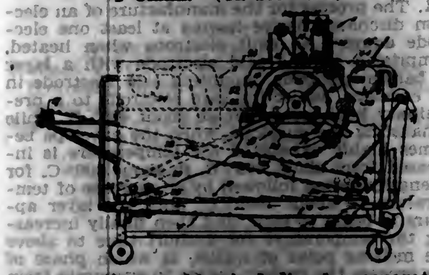


3. A sifting device comprising a casing, a pair of bearings provided at each end of said casing, a pair of supporting bars slidably arranged within said bearings, a yoke connected to said bars, means for reciprocating said yoke, a sieve box detachably secured to said bars and having an open upper side, a plurality of sieves detachably supported in said box in superimposed positions, a cover plate removably secured to the upper open side of the casing and being provided with a feed opening therethrough, a feed hopper secured to said box and sieves being removable as a unit from the casing upon displacement of the cover plate said plate in registry with said opening.

2,106,743
POWER TRANSMISSION DEVICE
John J. Heehn, Camden, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 27, 1932, Serial No. 595,458
3 Claims. (Cl. 274—9)

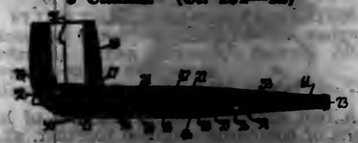
1. In a phonograph, the combination of a driving spindle, a turntable, means including speed changing mechanism attached to said turntable and mounted on said spindle for transmitting power from said spindle to said turntable, means constantly tending to condition said mechanism to drive said turntable at a speed other than that of said spindle, and means for rendering said last named means ineffective to so condition said mechanism whereby said mechanism is conditioned to drive said turntable at the same speed as said spindle.

2,106,744
TREATED BOROSILICATE GLASS
Harrison Porter Hood and Martin Emery Nordberg, Corning, N. Y., assignors to Corning Glass Works, Corning, N. Y., a corporation of New York
Application March 19, 1934, Serial No. 716,418
19 Claims. (Cl. 106—38.1)



1. A shaped article of glass made from another glass, the composition of which lies in a limited region of the ternary system—$R_2O \cdot B_2O_3 \cdot SiO_2$, said region comprising compositions which will separate by heat treatment into two phases, one of which is easily soluble and the other insoluble, the final glass containing a substantially less percentage of boric acid and alkali than the initial glass.

2,106,745
PROCESS FOR THE PREPARATION OF SILICA FOR GLASS BATCHES
Harrison P. Hood, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application March 23, 1936, Serial No. 70,545
5 Claims. (Cl. 106—106)

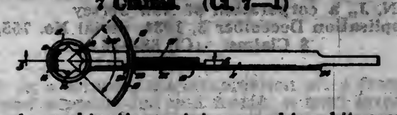


1. The method of preparing silica for use in glass batches, which includes introducing the silica into an acid solution, adding thereto a flotation reagent including a naphthylamine compound, agitating the solution in a flotation apparatus to float off the iron impurities, and drying the silica.

2,106,746
GRAIN CLEANER FOR THRESHING MACHINES
John Heimbit, Detroit, Mich.
Application July 6, 1936, Serial No. 88,962
1 Claim. (Cl. 209—318)

A separating machine including two separately and independently mounted and independently operated horizontal shaker sieves, one above the other, and means for sucking air out of the space between them at one end of that space and for blowing that air into a collector bag, and means for blowing air into the space between them at the other end of that space, the upper sieve being substantially horizontal, and the lower sieve being disposed at an acute angle with respect thereto so that the vertical distance between the sieves, near the air blowing means, is larger than the vertical distance between the sieves near the air sucking means, the lower sieve being formed as part of a plate having an imperforate area disposed between the sieve part of the plate and the air sucking means, the machine also having a third sieve, secured to the plate and disposed below the second sieve, and arranged at an acute angle with respect to the first sieve so as to incline down towards the air blowing means end of the machine.

2,106,747
SMOKING PIPE
Norman K. Jellinghaus, Philadelphia, Pa.
Application March 1, 1934, Serial No. 713,564
9 Claims. (Cl. 131—18)



1. A pipe comprising a bowl, a mouthpiece, a piston type displacement force pump between the bowl and the mouthpiece through the chamber of which the draft connection between the bowl and the mouthpiece is effected, the chamber of the pump having a headed end adjoining the mouth-piece through which the operating piston rod of the pump extends, together with a lateral port to atmosphere at said headed end, and the said piston rod having a hollow interior through which the draft connection of the mouthpiece with the chamber is effected.

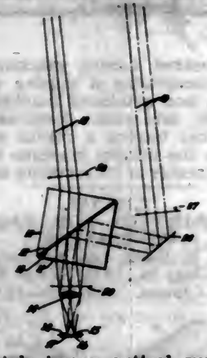
2,106,748
CONTAINER
James C. Karnes, Buffalo, N. Y., and Gregory J. Kenzenich, Madison, Wis.
Application May 6, 1933, Serial No. 669,666
25 Claims. (Cl. 229—51)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A sheet of flexible material for forming a wrapped container, said sheet having spaced homogeneous banded portions of increased thickness and having a tab projecting from one end in continuation of the intermediate portion between the banded portions.

2,106,749
COMBINATION MINING BIT GAUGE AND WRENCH
Jesse L. Knight, Provo, W. Va., assignor of one-half to J. A. Rogers, Montgomery, W. Va.
Application March 21, 1935, Serial No. 11,319
7 Claims. (Cl. 7—1)

1. A combination mining machine bit gauge and wrench comprising a mining machine set screw wrench, and a mining machine bit gauge secured thereto, said gauge comprising a curved limiting member having a radius equal to the desired length the mining machine bit is to extend from the center of its securing set screw.

2,106,750
SAFETY APPARATUS FOR LIQUID FUEL CONTAINERS
Nicholas E. Koch, Los Angeles, Calif.
Application May 31, 1934, Serial No. 728,459
13 Claims. (Cl. 220—85)



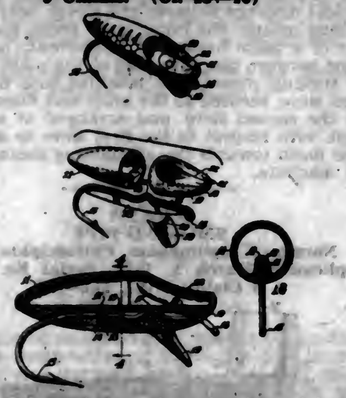
1. In a device as described, a fuel tank having a filler opening with a closure means therefor, an inlet pipe connected to an upper portion of the tank, said tank having an outlet adjacent an upper portion and remote from the inlet pipe, an exhaust pipe adapted for connection to an internal combustion engine and having a discharge opening, the inlet pipe being connected to the exhaust pipe, and a by-pass valve to by-pass a portion of the exhaust gases from the exhaust pipe through the inlet pipe to the tank.

2,106,751
FILM PROCESSING
Victor Krupa, New York, N. Y., assignor to Pearless Film Processing Corporation, a corporation of New York
Application September 28, 1935, Serial No. 42,256
3 Claims. (Cl. 95—88)

1. A method of treating exposed and developed films comprising dehydrating said films by subjecting them to a high degree of vacuum; admitting while under a high degree of vacuum successive vapors for softening the base of the films and for hardening them; again subjecting said films to a vacuum, and thereafter introducing an atomized lubricant for covering said films while under the high vacuum.

2,106,752
FIELD DIVIDER
Edwin H. Land, Wellesley Farms, Mass., assignor to Sheet Polarizer Company, Inc., Union City, N. J., a corporation of New Jersey
Application December 3, 1934, Serial No. 755,679
8 Claims. (Cl. 88—16.6)

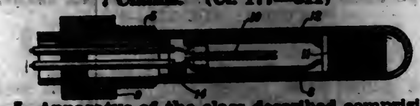
5. A multiple image optical system comprising, in combination, a light-dividing unit and an objective, said unit having a plane transparent surface at the critical angle of reflection to the axis of said objective to provide a transmitted and a reflected beam, and reflecting means adjacent the transparent surface for providing common focal planes for the said beams.



2,106,753
ELECTRIC DISCHARGE TUBE OR LAMP
Anton Lederer, Vienna, Austria; Catherine Danzer and General Conrad Randa, executors of said Anton Lederer, deceased, assignors to Ernest Anton Lederer, Glen Ridge, N. J.
No Drawing. Application January 14, 1931, Serial No. 508,801. Renewed May 15, 1936. In Austria June 27, 1930
26 Claims. (Cl. 250—27.5)

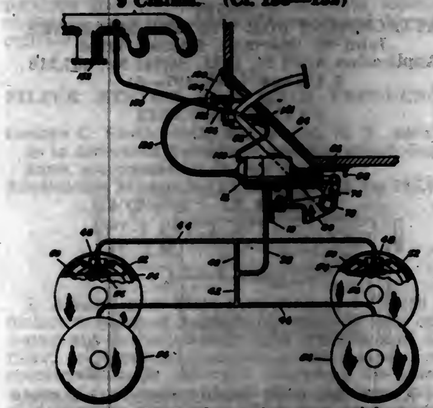
20. A method for the production of an electric discharge device having at least two electrodes of which at least one is adapted to emit electrons when heated, which comprises providing said electron emitting electrode with successive coatings containing barium peroxide in suspended form, each coating being dried before the next coating is applied, mounting said electrode in a tube, exhausting said tube to a relatively high vacuum, subjecting said tube to preliminary heating while the same is being exhausted, and then, whilst maintaining the vacuum, subjecting the emitting electrode at least to heat treatment at a temperature at least to nearly the melting point of nickel.

2,106,754
ELECTRIC DISCHARGE DEVICE
Anton Lederer, deceased, late of Vienna, Austria, by Katherine Danzer and Conrad Randa, executors, Vienna, Austria, assignors to Ernest Anton Lederer, Glen Ridge, N. J.
No Drawing. Application November 30, 1932, Serial No. 645,135. In Austria December 1, 1931
29 Claims. (Cl. 250—27.5)



1. The process for the manufacture of an electron discharge device having at least one electrode adapted to emit electrons when heated, comprising coating said electrode with a layer of barium peroxide, mounting said electrode in an envelope, subjecting said electrode to a preliminary heat treatment at about 400° C. while exhausting the envelope, when the envelope becomes highly exhausted the temperature is increased from about 600° C. to about 800° C. for a lengthy period followed by an increase of temperature to about 1000° C. until the layer appears to begin to melt, and then finally increasing the temperature for a short time to above the melting point of nickel, at which phase of the process the barium begins to evaporate from the layer, which phenomenon becomes manifest by the layer assuming a black color characteristic.

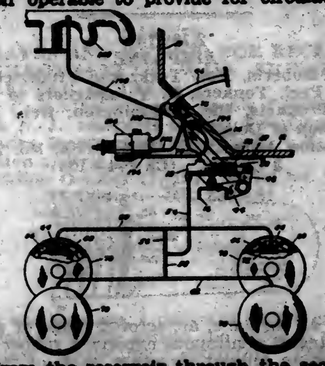
2,106,755
FISH LURE
Joseph McArthur, Dowagiac, Mich., assignor to James Heddon's Sons, Dowagiac, Mich., a corporation of Michigan
Application May 1, 1936, Serial No. 77,369
9 Claims. (Cl. 43—46)



1. A bait consisting of a plurality of hollow sections of composition united together, at least one of the sections being provided with an exteriorly grooved rib, affording a continuous longitudinally extending channel, and a hook having its shank positioned within the channel.

2,106,756
LIQUID LEVEL CHANGE DETECTOR
John A. Obermaier, Chicago, Ill.
Original application October 3, 1935, Serial No. 43,294. Divided and this application April 13, 1936, Serial No. 74,012
7 Claims. (Cl. 177—311)

5. Apparatus of the class described comprising a tube of material of high heat conductivity, an electric heating element at one end thereof, a thermal responsive switch at the other end and heated by said element, and a second tube surrounding the first tube and of a material having a substantially lower heat conductivity than the first tube, the heat generated by the heater being dissipated through the first tube to the second and thence to the ambient medium, and thermal switch controlled circuit connections within one of said tubes for controlling the treating element.



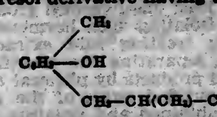
2,106,757
HYDRAULIC BRAKE SYSTEM
Wallace F. Oliver, Detroit, Mich., assignor to Hydraulic Brake Company, Detroit, Mich., a corporation of California
Application February 26, 1934, Serial No. 712,258
9 Claims. (Cl. 188—153)

1. A hydraulic brake system comprising a primary means for producing pressure in the system, a secondary means for producing pressure connected to the system through the primary means, a source of a predetermined quantity of stored energy for actuating the secondary means, said predetermined quantity being just sufficient to remove slack from the system, means for releasing the stored energy, and means for actuating the primary means including means controlling the release means.

2,106,758
FLUID PRESSURE BRAKE SYSTEM
Wallace F. Oliver, Detroit, Mich., assignor to Hydraulic Brake Company, Detroit, Mich., a corporation of California
Application February 26, 1934, Serial No. 713,259
10 Claims. (Cl. 188—153)

2. A fluid pressure operated system comprising a primary means for producing pressure, a secondary means for producing pressure, a reservoir for supplying fluid to both pressure producing means, a valve connected between the primary and secondary pressure producing means and the reservoir operable to provide for circulation of

fluid from the reservoir through the secondary pressure producing means and back to the reservoir.



2,106,759
WHEELED SCRAPER
Thomas R. Paulsen, South Milwaukee, Wis., assignor to Bucyrus-Erie Company, South Milwaukee, Wis., a corporation of Delaware
Application January 9, 1937, Serial No. 119,790
14 Claims. (Cl. 37—123)

5. In a scraper, the combination of: a frame; ground supports for said frame; a bowl pivoted on the frame for tilting movement in a vertical plane, said bowl being open at both front and rear, and having a digging edge at its front end; a front apron, pivotally supported by means which is independent of the bowl and which is in turn supported by the frame, in such manner that the apron accompanies the bowl when the latter is tilted to its dumping position; means to restrain the apron from accompanying the bowl when the latter is tilted to its digging position; an end gate pivoted on the bowl; means to open the gate when the bowl is tilted from its carrying position to its dumping position; and means carried by the frame for tilting the bowl.

2,106,760
p-METHYL BUTYL CRESOLS
George W. Raiziss and Le Roy W. Clemence, Philadelphia, Pa., assignors to Abbott Laboratories, North Chicago, Ill., a corporation of Illinois
No Drawing. Original application June 22, 1934, Serial No. 731,896. Divided and this application February 17, 1937, Serial No. 126,201
4 Claims. (Cl. 260—154)

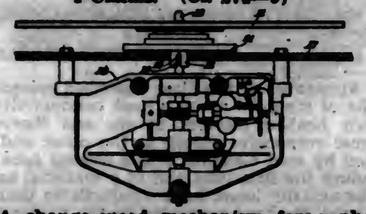
1. A cresol derivative having the formula:

said derivative having high germicidal value com-

bined with low toxicity in the presence of blood serum and being completely soluble in dilute alkali.

2,106,761
AIRPLANE
Dudley Roberts, New York, and Frederick William Peel, Yonkers, N. Y., assignors to Rubatex Products, Inc., Wilmington, Del., a corporation of Delaware
Application January 15, 1934, Serial No. 706,772
3 Claims. (Cl. 244—133)

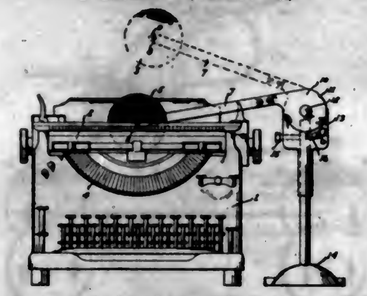
1. In an airplane, an aerofoil made of a hard rigid integral continuous expanded rubber made of a minute cellular structure, each of the cells being individually sealed from the other cells, each containing a gas admitted at the relatively high pressure of 3000 pounds per square inch; and reinforcing members imbedded in said rubber for supporting fittings, said rubber containing a tough crust of rubber along the reinforcing members.



2,106,762
CONTROLLED-GRAIN SUGAR
Reed W. Robinson and Andrew Olsen, Jr., San Francisco, Calif.
No Drawing. Application November 27, 1934, Serial No. 755,000
8 Claims. (Cl. 99—134)

1. The process of making an extremely fine controlled-grain sugar which comprises cooking sugar and water together with a small proportion of an edible non-crystallizable film forming material adapted to form a film between the sugar crystals, lowering the temperature of the mass, and before appreciable crystallization sets up stirring the same to inhibit coarse granulation thereof, thereafter drying and finely dividing the mass, whereby a product results which consists of a substantially dry loose material adapted to retain its extremely fine substantially grainless characteristic and yield a smooth substantially grainless fondant-type of candy body upon remelting or softening with water and heat and again cooling without a creaming step.

2,106,763
METHOD OF PURIFYING CRUDE EXTRACTS OF THE GERMINAL GLAND HORMONES AND OF ISOLATING THE LATTER THEREFROM
Erwin Schwenk, New York, N. Y., Max Gehrke, Birkenwerder, near Berlin, and Friedrich Hildebrandt, Hohen Neuendorf, near Berlin, Germany, assignors to Schering-Kahlbaum A. G., Berlin, Germany, a corporation of Germany
No Drawing. Application May 4, 1934, Serial No. 723,928. In Germany May 5, 1933
16 Claims. (Cl. 260—121)



1. A method of purifying crude extracts containing male and female germinal gland hormones having at least one hydroxyl group in the molecule and of isolating such hormones therefrom, comprising treating said extracts with acylating agents, separating the esterified from the non-esterified products by physical methods, saponifying the purified esters of the germinal gland hormones obtained and isolating the germinal gland hormones.

2,106,764
PHONOGRAPH
Hudson R. Searing, New York, and Axel F. Shipsteád, North Pelham, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application January 27, 1932, Serial No. 589,062
4 Claims. (Cl. 274—9)

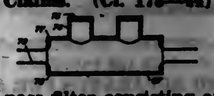
1. A change-speed mechanism for a phonograph comprising in combination a turn table, a central shaft, a ring surrounding said shaft, pinions connected to said turn table and located between said ring and said shaft and forming therewith a unitary differential gearing, said shaft being hollow and being adapted to engage the driving shaft of the phonograph in either of two positions, in one of which said ring engages and is held by a fixed part of the phonograph, and in the other of which it is free.

2,106,765
ATTACHMENT FOR WRITING MACHINES
John Q. Sherman, Dayton, Ohio
Application April 21, 1933, Serial No. 667,210
3 Claims. (Cl. 197—6)

1. As an article of manufacture, a relatively hard flexible disc having parallel corrugations, said disc being centrally perforated for revolubly mounting upon a support, and adapted to be positioned behind a record sheet to receive the pressure of the writing operation whereby the corrugated surface of the disc will be impressed in the record sheet, but in progressively different angular relation.

2,106,766
PROCESS FOR MAKING SAFETY GLASS
James H. Sherts and Brock J. Dennison, Tarentum, Pa., assignors to Duplate Corporation, a corporation of Delaware
Application December 22, 1934, Serial No. 758,706
4 Claims. (Cl. 49—81)

1. A process of making safety glass which consists in applying a layer of plasticized resin in powder form to a glass plate which layer is heated and pressed onto the plate so that the particles adhere to each other and to the plate but without colloiding, assembling a second glass plate on the first plate with the resin layer therebetween and subjecting the sandwich thus formed to pressure and to sufficient heat to colloid the

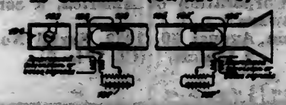


layer into a solid transparent sheet tightly adherent to the glass sheets.

2,106,767
PROCESS FOR PRODUCING A HYDROCARBON FLUORESCENT PRODUCT
Lloyd R. Smith, Moorestown, N. J., Stanard R. Funston, Rosemont, and Hugh W. Field, Glen Mills, Pa., assignors to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application September 23, 1933, Serial No. 690,766
7 Claims. (Cl. 196—151)

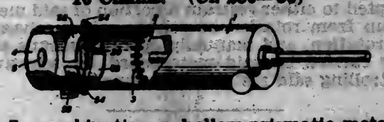
1. The process for producing a hydrocarbon product capable of rendering a hydrocarbon oil fluorescent from high molecular weight derivatives of coal tar which comprises, commingling said derivative with an unsaturated hydrocarbon liquid, separating the undissolved portions of said derivative from the solution formed with other portions thereof, and adding to such solution sufficient saturated hydrocarbon liquid to precipitate at least a portion of the solute.

2,106,768
FILTER SYSTEM FOR HIGH FREQUENCY ELECTRIC WAVES
George C. Southworth, Ridgewood, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application September 25, 1934, Serial No. 745,457
33 Claims. (Cl. 178—44)



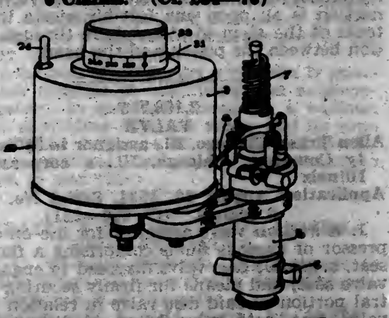
1. A band-pass filter consisting of a length of dielectric guide of suitable diameter to pass only waves above the lower critical frequency of the filter, and branch dielectric guide stubs of respective suitable different diameters to absorb waves of frequencies higher than the upper critical frequency whereby the filter as a whole passes only those waves of frequency between the two critical frequencies.

2,106,769
TRANSMISSION OF GUIDED WAVES
George C. Southworth, Red Bank, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application August 22, 1935, Serial No. 37,557
21 Claims. (Cl. 178—44)



1. A metal sheathed wave guide, a source of electromagnetic waves, a metallic-walled chamber enclosing said source and connected with said guide to establish dielectrically guided waves therein, the impedance of said guide being matched with the impedance presented by said source.

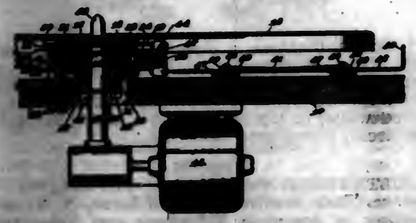
2,106,770
APPARATUS AND METHOD FOR RECEIVING ELECTROMAGNETIC WAVE SIGNALS ON DIELECTRIC GUIDES
George C. Southworth and Archie P. King, Red Bank, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 12, 1935, Serial No. 44,641
15 Claims. (Cl. 250—8)



1. In combination, a dielectric guide, an electron discharge tube within the guide, a pair of conductors projecting oppositely therefrom along the direction of the lines of force of received waves in the guide, and a signal indicating circuit comprising said tube.

2,106,771
ULTRAHIGH FREQUENCY SIGNALING
George Clark Southworth, Red Bank, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application April 11, 1936, Serial No. 73,940
In France September 11, 1935
16 Claims. (Cl. 250—36)

6. In combination, a hollow prismatic metallic chamber having an orifice in one end thereof for the passage of high frequency electromagnetic waves, a conduction current circuit, and means for coupling said circuit in energy transfer relation with waves in said chamber, the proportions of said chamber and the size of said orifice being such that said chamber is resonant at or about the frequency of said waves.



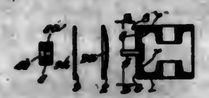
2,106,772
PRESSURE RECORDING APPARATUS AND METHOD
Joseph A. Stein, Pittsburgh, and Hugo F. Semrau, Rosedale, Pa., assignors to Bacharach Industrial Instrument Company, a corporation of Pennsylvania
Application July 29, 1936, Serial No. 93,304
6 Claims. (Cl. 234—76)

1. In apparatus for recording pressure fluctuations, a pressure operated marking device, a rec-

ord receiving drum in position to be engaged by the marking device, means whereby a spinning impetus may be given to the drum but which leaves it free therefrom, after such impetus, to rotate at decreasing speed under its own inertia, and means connected to the drum for indicating the proper peripheral speed of rotation thereof for application of the marking device.

2,106,773
POWER TRANSMISSION DEVICE
John B. Sucmala, Camden, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application August 30, 1932, Serial No. 630,985
9 Claims. (Cl. 274—9)

1. In combination, a motorboard, a phonograph record supporting platen including a depending hub, a selective speed changing mechanism permanently journaled on said hub, means adapted to either restrain a portion of said mechanism from rotation or release said mechanism for rotation, and manually operable means slidably carried by said motorboard for selectively controlling said restraining means at will.

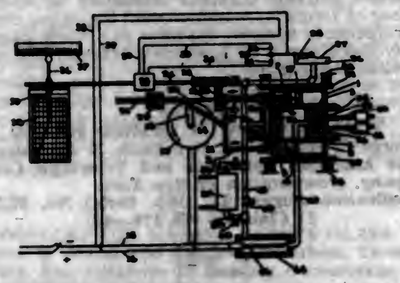


2,106,774
SMOKING PIPE
John P. Tarbox, Philadelphia, Pa.
Application March 1, 1934, Serial No. 713,558
18 Claims. (Cl. 131—12)

2. A pipe comprising a bowl, a stem having a fixed head at one end, a piston in the stem adapted to be reciprocated therein to and from the head, and means establishing a valved connection between the headed end of the stem and the atmosphere independent of the bowl whereby reciprocation of the piston when the valved connection is an open one forcibly ejects the contents of the stem to atmosphere through co-action between the piston and the head.

2,106,775
VALVE
Allen Trask, Chicago, Ill., assignor to Mills Novelty Company, Chicago, Ill., a corporation of Illinois
Application August 10, 1934, Serial No. 739,193
8 Claims. (Cl. 230—221)

1. A suction valve assembly for use on a compressor of gaseous fluids comprising a flat valve seat, a flexible disc valve disposed to engage said valve seat, and means for firmly securing a central portion of said disc valve in relation to said valve seat, said valve being of dished formation, whereby to normally maintain the valve in unseated position on the valve seat, the flexibility of said valve being of such degree that the valve will lag in closing on the compression



stroke, thereby allowing a greater volume of fluid to enter the compression chamber than would be allowed by a normally seated valve.

2,106,776
RECEIVING SYSTEM
Bertram Trevor and Ralph Waldo George, Riverhead, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application February 23, 1935, Serial No. 7,903
13 Claims. (Cl. 250—20)

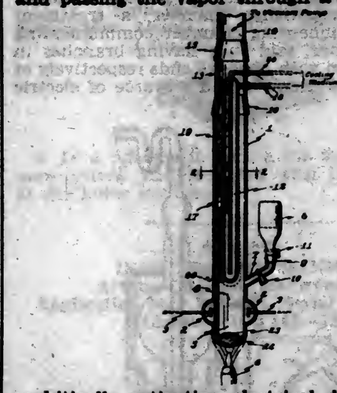
1. The combination with an ultra high frequency oscillatory circuit comprising inner and outer concentric tubular conductors which are coupled together at both ends, said conductors being capacitively coupled together at least at one end, said capacitive coupling comprising a hollow metallic drum conductively connected to and mounted on said inner tubular conductor, of two spaced conductors within and separated from said inner tubular conductor, said spaced conductors extending into the interior of said hollow drum, whereby the potentials of said two spaced conductors vary in accordance with variations in potential of said hollow drum.

2,106,777
PROCESS AND APPARATUS FOR ANALYZING GAS
Louis L. Vayda, Aspinwall, Pa.
Application April 26, 1934, Serial No. 722,491
5 Claims. (Cl. 23—255)

3. A method of analyzing gas, which consists in pumping separately into a sampling system a gas mixture containing a constituent, the percentage of which it is desired to determine, and a fixed proportion of some other gas which will react with the constituent in a definite manner so that the volume of the gaseous products of the reaction is different from the initial volume of the reacting gases, pumping said mixture into

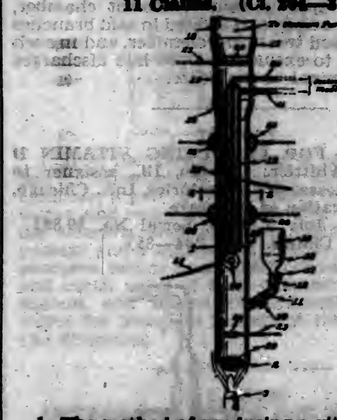
a closed testing system, causing said reaction to occur, pumping from the sampling system, coincident with the supply of gas thereto, a quantity of the gaseous products of the reaction, varying the relative volumes of gas delivered into and removed from the testing system so that the pressure in the testing system is maintained constant, and during the pumping of gas into and out of the sampling system, measuring the difference between the volume of gas delivered to the testing system and that withdrawn therefrom to give a determination of said constituent.

4. Apparatus for analyzing gas containing a constituent whose percentage it is desired to determine, comprising a closed testing system, a collateral sampling system, means for pumping into and at the same time pumping from the sampling system a gas mixture, means in the closed testing system for treating the mixture so that its volume is modified dependent upon the amount of said constituent, said means for delivering the gas and exhausting it comprising a cylinder provided with a driven plunger and a driven follower, one end of the cylinder receiving the gas to be supplied to the sampling system as the plunger and follower move in one direction and supplying it to the testing system on the reverse stroke, and the other end of the cylinder receiving the gas from the testing system as the plunger and follower move in one direction and discharging it to the atmosphere on the reverse stroke, said plunger having a constant displacement and the follower being adjustable as to displacement and means for indicating the variable displacement of the follower during the pumping operation.



2,106,778
PHONOGRAPH
Joseph A. Volk, St. Louis, Mo., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application December 10, 1931, Serial No. 580,040
5 Claims. (Cl. 274—9)

1. In a phonograph turn-table construction, the combination of a hub adapted to be placed upon and have non-rotative engagement with a spindle of a phonograph, a support revolubly mounted on said hub, a turn-table carried by said support, and means arranged in said support for operative association of said hub with said turn-table whereby the latter is operated by said phonograph spindle at differential speed with respect thereto.

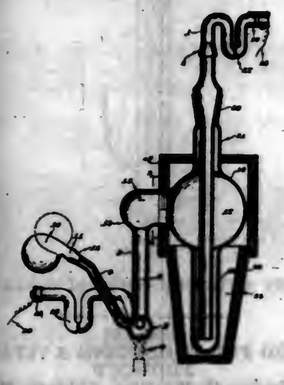


2,106,779
METHOD AND MEANS FOR PRODUCING VITAMIN D
Charles C. Whittier, Chicago, Ill.
Application May 2, 1934, Serial No. 723,495
3 Claims. (Cl. 204—81)

1. The method of producing vitamin D characteristics in ergosterol, which consists in vaporizing the ergosterol on a heated mass of indium and passing the vapor through a zone of anti-

rachitically activating electrical discharge in a vacuum.

2,106,780
METHOD FOR PRODUCING A VITAMIN D PRODUCT
Charles C. Whittier, Chicago, Ill.
Application May 2, 1934, Serial No. 723,496
Renewed February 9, 1937
11 Claims. (Cl. 204—81)



1. The method of producing a vitamin D product, which consists in vaporizing ergosterol and subjecting the vapor to the influence of antirachitically activating electrical discharges in successive zones in which the discharges pass in respectively different directions.

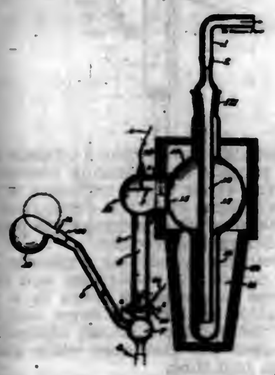
5. The method of producing a vitamin D product, which consists in vaporising and condensing ergosterol in successive zones in a vacuum tube and subjecting both the vapor and its condensate to the influence of an antirachitically activating electrical discharge while subject to a vacuum in said tube.

2,106,781
APPARATUS FOR PRODUCING ANTIRACHITIC PRODUCTS
Charles C. Whittier, Chicago, Ill., assignor to Nutrition Research Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application July 5, 1935, Serial No. 29,881
2 Claims. (Cl. 204—81)

1. In apparatus for antirachitic activation of

alimentary substances, a vacuum tube having means to maintain a vacuum therein, a supply chamber, a vaporizing chamber, a treatment chamber, a condensing chamber communicating with each other, said tube having branches in communication with opposite ends respectively of said treatment chamber and a source of electric

current having terminals exposed to the contents of said tube for causing an electric current to flow through the vapor in said treatment chamber, said terminals being each located in said branches remote from said treatment chamber, and in such disposition as to exclude straight line discharges from one terminal to the other.



2,106,782

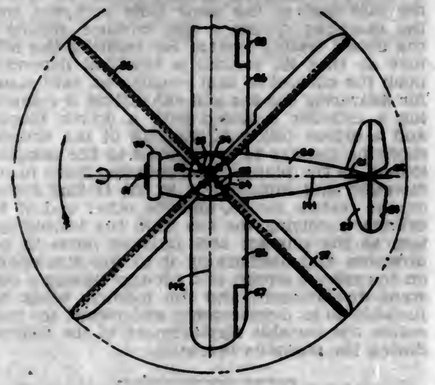
APPARATUS FOR PRODUCING VITAMIN D

Charles C. Whittier, Chicago, Ill., assignor to Nutrition Research Laboratories, Inc., Chicago, Ill., a corporation of Delaware

Application July 5, 1935, Serial No. 29,882

4 Claims. (Cl. 204—31)

1. Apparatus for producing antirachitic activation of suitable substances, comprising a tube of dielectric material forming a treating chamber, a vaporizing chamber directly below said tube, an upwardly inclined supply duct leading to said tube, a supply receptacle at the upper end of said supply tube having a tangentially arranged throat and being rotatable about the axis of said supply tube, whereby the flow of material from said throat may be regulated by rotating said supply receptacle, a transversely disposed enlarged tubular branch at the upper end of said treating chamber, a further enlarged expansion chamber communicating with said branch and having a depending arm, an evacuating tube extending through said expansion chamber into said arm, and pumping means for evacuating the apparatus through said evacuating tube.



2,106,783

GYROPLANE

Edward Burke Wilford, Marion, Pa.

Application July 17, 1933, Serial No. 680,695

3 Claims. (Cl. 244—6)

1. In aircraft, a normally aerodynamically driven rotary wing system comprising a hub, a shaft having an axis and journalled diametrically on said hub, a blade having a longitudinal axis mounted on said shaft with its longitudinal axis substantially parallel with said shaft but rearwardly offset therefrom, and control means for moving said blade on and relative to the axis of the diametrically disposed shaft.

2,106,784

MANUFACTURE OF YEAST

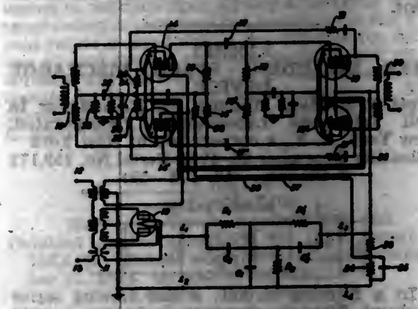
John F. Wretea, Baltimore, Md.

No Drawing. Application July 29, 1933, Serial No. 681,573

11 Claims. (Cl. 195—30)

10. A process of manufacturing yeast comprising the steps of preparing a yeast nutrient medium deficient in yeast assimilable sugar, and converting soluble starch to sugar by diastatic action in said medium simultaneously with the propagation of yeast therein.

2,106,785



ELECTRIC FILTER

Herbert W. Augustadt, Valley Stream, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application May 22, 1936, Serial No. 81,400

7 Claims. (Cl. 178—44)

1. An electrical filter comprising a pair of symmetrical T-networks connected in separate paths between a pair of common input terminals and a pair of common output terminals, one of said networks consisting of two series resistances and a shunt capacity, and the other of said networks consisting of two series capacities and a shunt resistance, said capacities and resistances

being proportioned to provide maximum attenuation in the filter at a preassigned frequency.

2,106,786

PELLICLES AND PROCESS RELATING TO SAME

Thomas F. Banigan, Kenmore, N. Y., assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application December 18, 1935, Serial No. 55,079

10 Claims. (Cl. 91—68)

7. The process which comprises treating a non-fibrous, hollow cellulosic gel pellicle containing a pigment and being subject to shrinking by loss of water and to staining when shrunk in contact with iron, with an aqueous solution of a water-soluble nitrite of a metal taken from the class consisting of alkali and alkaline earth metals.

2,106,787

MECHANICAL MOVEMENT

George T. Bauler, Louisville, Ky.

Application February 24, 1936, Serial No. 65,283

2 Claims. (Cl. 185—39)

1. A device for converting reciprocating to rotary motion, comprising a framework, a shaft and fly-wheel mounted in the framework, counterweights on the fly-wheel, a pair of reciprocating elements swingingly mounted on the framework, and a crank-shaft connection between said elements and the rotary shaft, said crank-shaft connection including a roller mounted in a slot in the swingable elements, and vanes on said swingable elements projecting outwardly therefrom, together with means for controlling and compensating irregularities in the pendulum-like motion of said swingable elements.

2,106,788

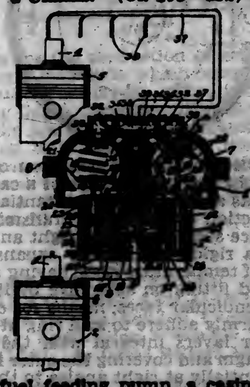
PNEUMATIC HEEL

Emil Berman, Chicago, Ill.

Application August 14, 1936, Serial No. 95,960

3 Claims. (Cl. 36—35)

3. In a pneumatic heel, a top wall being concavo-convex and provided with reinforcements at the lower surface.



2,106,789

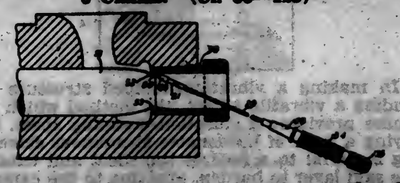
INJECTING MECHANISM

Arthur C. Boyd, Maywood, Ill.

Application May 26, 1934, Serial No. 727,629

3 Claims. (Cl. 103—152)

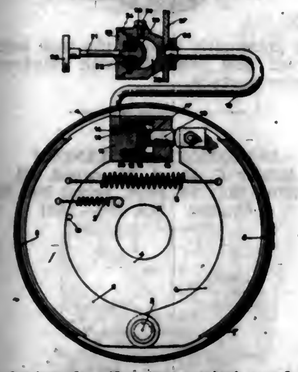
1. In a fuel feeding pump, a casing having a pair of chambers, a pumping element in each chamber, a pair of rods slidably mounted in said casing and respectively connected to said pumping elements, each chamber having a fluid inlet passage and a fluid outlet passage, valves in said passages, means operatively connecting the inlet and outlet valve of each chamber with the rod therein, and means for connecting said inlet valves for alternate movement thereof in opposite directions.



2,106,790

METHOD AND DEVICE FOR MEASURING

Rudolph S. Brescka, Cranford, and Edward J. Meagher, Newark, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

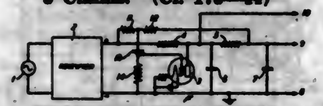


Application September 19, 1935, Serial No. 41,200

6 Claims. (Cl. 33—125)

1. A gauging device comprising a handle, means to secure a plastically deformable slug thereto, a plastically deformable slug in the securing means, and means carried by the handle actuable to exert a hammering action on the slug.

2,106,791
RESILIENT DIAPHRAGM
Louis Charles Brisson, Neuilly-sur-Seine, France, assignor to Société Anonyme: Société des Freins Hydrauliques S. de Lavaud, Paris, France
Application October 27, 1936, Serial No. 107,782
1 Claim. (Cl. 60—54.6)



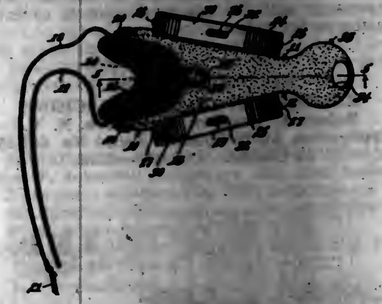
In a device for the transmission of forces, a rubber diaphragm in the shape of a cap, the edge of which has a side surface substantially parallel to the direction of the forces transmitted and a front surface substantially at right angles to this direction, a rigid ring slightly expansible under the effect of temperature rises, having an L cross-section, and fitting on said edge by its substantially perpendicular faces, means for causing the rubber to firmly adhere to said ring at said faces, thin rubber layers integral with the rubber of the diaphragm and covering the outer faces of the ring substantially at right angles to the direction of the forces transmitted, and means for applying clamping pressure to said faces.

2,106,792
METHOD OF MAKING VIBRATION-DAMPED STRUCTURE
Donald S. Bruce, Somerville, and Roy E. Berg, Plainfield, N. J., assignors to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application July 5, 1935, Serial No. 29,928
1 Claim. (Cl. 154—23)

In making a vibration-damped structure including a vibratile object, the method which includes providing a vibration-damping sheet, applying a layer of hardenable bituminous cementing material to a face of the sheet and causing the said layer to harden, applying to the exposed face of the hardened layer a flowable mixture including rubber dissolved in a volatile solvent for the cementing material, to soften the said exposed face, and then adhering the product by means of the softened face to the vibratile object, the proportion of the rubber being adequate to increase substantially the viscosity of the said solvent but not substantially in excess of about two parts by weight to one hundred parts of the solvent.

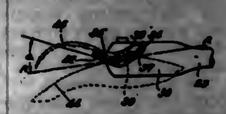
2,106,793
FILTER INCLUDING SPACE DISCHARGE DEVICE
Everett T. Burton, Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 26, 1934, Serial No. 759,172
8 Claims. (Cl. 178—44)

1. In a filtering circuit, a line having series and shunt filtering elements including a grid controlled space discharge tube whose space path impedance is effectively shunted across the line, input and output terminals for said filter, impedances connecting said grid to receive voltage variations appearing across both the input and the output terminals of said filter, said grid producing impedance changes in the space path of said tube in correspondence with said voltage variations for variably shunting current from the line to reduce the voltage fluctuations appearing across said output terminals.



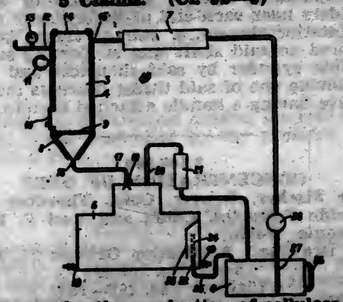
2,106,794
FABRIC
Boughton Cobb, Hewlett, N. Y., assignor to The Esmond Mills, New York, N. Y., a corporation of Massachusetts
Application April 12, 1934, Serial No. 720,261
5 Claims. (Cl. 139—413)

1. A patterned blanket fabric made of light warp threads, and two sets of relatively heavy filling threads tied in at intervals by the warp threads, woven one substantially over the other to conceal the warp threads and to form the face and reverse of said fabric with the threads of one set only appearing at a time respectively on the face and reverse of the fabric, the threads of both sets each appearing for alternate respective distances complementally to the other over and under said warp threads to form a patterned face with the threads of one set forming the ground and the threads of the other set forming the pattern and a reverse having a complemental reverse pattern with the threads of the second set forming the ground and the threads of the first set forming the pattern, each thread of one set being spun from one percentage mixture of cotton and wool fibres, said percentage mixture having certain dye receiving properties and each thread of the other set being spun from a different percentage mixture of cotton and wool fibres, said different percentage mixture having different dye receiving properties, whereby said fabric may be piece-dyed with a dye for each of said species of fibres to produce in the respective pattern and ground portions substantially standard shades of any two of a plurality of different colors.



5. A fabric comprising warp threads and a plurality of sets of undyed pattern-forming filling threads, at least three of said sets of filling threads being each spun from a different percentage mixture of a plurality of different species of fibres, said plurality of species being identical for the different sets, each species of fibre having different dye receptive properties and interwoven to produce upon dyeing a plurality of successive stripes of variegated shades, whereby when said fabric is dyed with a dye suitable for dyeing one of said species of fibres, each of said sets of threads will take said dye in amounts proportionate to the amount of said species of fibres therein to produce varying shades of dye color in each respective set.

2,106,795
RESPIRATOR
Harvey S. Cover, South Bend, Ind.
Original application April 27, 1934, Serial No. 722,619. Divided and this application September 21, 1934, Serial No. 744,979
7 Claims. (Cl. 128—146)

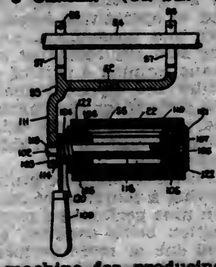


1. The combination of a respirator having a flexible face contacting margin and a cut-out for the nose, and a face contacting flexible member adapted to be applied to said respirator in the cut-out area thereof, so arranged that the bridge of the nose will move the face contacting flexible member and thereby move the flexible face contacting margin of the respirator into close contact with the usual depressions found on each side of the bridge of the nose.

2,106,796
PEELER
Ralph F. De Vault, South Pasadena, Calif.
Application March 26, 1935, Serial No. 13,025
16 Claims. (Cl. 30—239)

1. A paring device comprising a body portion embodying a length of metal bent intermediate its ends providing a handle and parallel leg members, a cutter pivotally mounted between the free end portions of the parallel leg members, said cutter embodying a pair of end members, a blade secured to the end members, a rod connecting the end members and disposed in spaced relation with the blade and providing a guide for the blade, and trunnions extending outwardly from said end members for pivotal engagement with said leg members, said trunnions being so positioned as to define an axis of rotation between the lower portions of said blade and said rod and lying substantially in the plane defined by the lower edges of said blade and said rod.

2,106,797
PRODUCTION OF CELLULOSE FROM LIGNO-CELLULOSIC MATERIALS
Henry Dreyfus, London, England
Application May 26, 1934, Serial No. 727,666
In Great Britain June 12, 1933
5 Claims. (Cl. 92—9)



1. Process for the production of cellulose from ligno-cellulosic materials, which comprises bringing an organic true solvent composition, capable of dissolving lignin from the materials, into contact with the materials at an elevated temperature, causing it to flow through the materials whereby lignin is dissolved out of the materials by the solvent composition, and removing from the materials the solution of lignin so formed after at most 20 minutes.

2,106,798
PROCESS OF MAKING LOWER ALIPHATIC ACID ANHYDRIDES AND ALDEHYDES
Henry Dreyfus, London, England
No Drawing. Application November 1, 1935, Serial No. 47,797. In Great Britain November 24, 1934
16 Claims. (Cl. 260—123)

1. Process for the production of an anhydride and an aldehyde of the lower aliphatic series, which comprises subjecting to thermal decomposition the vapor of an alkylidene diester of a lower aliphatic acid while diluted with at least one-third of its own volume of an inert gaseous medium.

2,106,799
PACKAGE CORE HOLDER FOR YARN PACKAGING DEVICE
William J. Kivin, Cumberland, Md., and Joseph L. Killoran, Drummondville, Quebec, Canada, assignors to Celanese Corporation of America, a corporation of Delaware
Original application August 30, 1934, Serial No. 742,108. Divided and this application February 13, 1936, Serial No. 63,730
5 Claims. (Cl. 242—72)

1. In a machine for producing on a core a cross-wound package of yarn, the combination

with a stationary support forming a part of the machine and a bracket adapted to rotate on said stationary support, of means for releasably holding the package, said means including a non-rotatable shaft mounted in said bracket and supported at one end only, an expansible cylinder for expanding against the inside of a core, shoulders near each end of the cylinder and on the interior thereof, a pair of thrust bearings mounted on said shaft and supporting said expansible cylinder by said shoulders and means for moving one of said thrust bearings including a sleeve having a handle attached thereto.

2,106,900

CONCENTRATION OF ORES

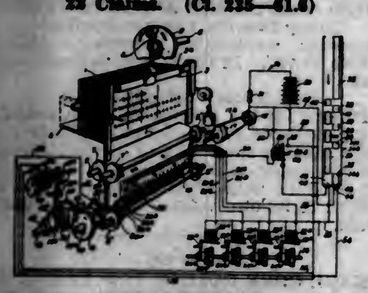
Oscar Fischer, Denver, Colo., Theodore Earle, Pacific Palisades, Calif., and Earl F. Haffey, Tacoma, Wash.

No Drawing. Application October 21, 1936, Serial No. 106,900

6 Claims. (Cl. 209—167)

1. The process of concentrating oxidised ores containing silicious gangue material which comprises adding to the ore pulp a fatty acid or salt thereof to act as a collecting agent and a soluble cyanide to act as a depressing agent for silica and other gangue and subjecting the pulp to froth flotation.

2,106,901



RECORD CONTROLLED MACHINE

Robert L. Houston, West Brattleboro, Vt.

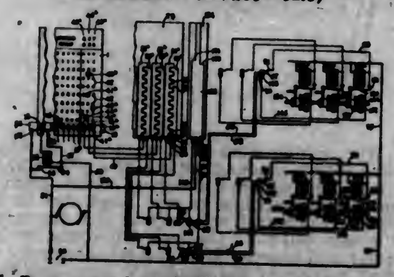
Application June 16, 1928, Serial No. 286,625

Renewed November 11, 1933

22 Claims. (Cl. 235—61.6)

1. In a record controlled apparatus utilising a record card having a plurality of columns each containing a plurality of index point positions thereon of different values, the combination of means for sensing the perforations in a column, means for producing relative movement between the record card and the sensing means, an accumulator order for said column, mechanism for actuating said accumulator order, an electromagnet adapted to operatively connect said accumulator order and mechanism, an operating circuit including said electromagnet and sensing means, and means forming a part of said circuit adapted to render the electromagnet operative for one or more periods for the column and the duration of said period or periods being proportional to the value or values of said index point or points being registered.

3. A record controlled machine utilising a perforated card having a plurality of columns each having less than nine perforation positions, each perforation position being assigned a predetermined value and one or more perforation positions being adapted to be perforated in each column to express any digit comprising a single sensing member for a column of the card which sensing member cooperates with each perforation in the column, an electric circuit for the column of the card including the sensing member, the circuit being controlled by the sensing member and one or more perforations in the column; feeding means for the card, a clutch controlling the feeding means, a commutator for disengaging the feeding means clutch so that the card is arrested for predetermined intervals of time proportional to the assigned value of the perforation position when each perforation position of the column is aligned with the sensing member, means for closing and opening the circuit of the sensing member so that the circuit is closed a predetermined period of time proportional to the assigned value of the perforation position as it is aligned with the sensing member and an accumulator order controlled by the circuit for registering upon the accumulator order a value or values proportional to the duration of current which corresponds with the assigned value of each perforation in the column.



2,106,902

RECORD CONTROLLED MACHINE

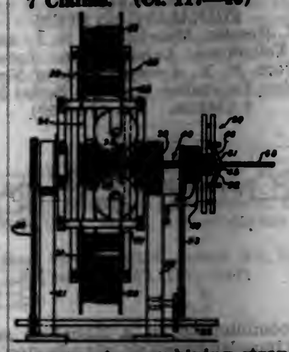
Robert L. Houston, New York, N. Y.

Application April 25, 1930, Serial No. 447,351

14 Claims. (Cl. 235—61.6)

1. In a record controlled machine utilising a record card having a plurality of designation columns and each column having a plurality of sets of independent designation positions, said designation positions in each column being in columnar alignment and interspaced with respect to each other, the combination of means for sensing the independent designations in each column of the card, an accumulator order for each set of independent designation positions, and means for distributing impulses derived from the sensing means upon contact with each independent designation to a different one of said accumulator orders upon one passage of the card over the sensing means.

10. In a record controlled machine utilising a record card having a plurality of sets of independent designation positions in each column of the card, said positions in each column being in columnar alignment and the designation positions of each set being interspaced with respect to the positions of another set, comprising, in combination, a feed roller to feed the cards into the machine; an accumulator order for each set of independent designation positions; means operating each accumulator order to enter the value of a designation thereupon; and an electric circuit for each accumulator order connected with and controlling the operating means therefor, the electric circuits for each column of the card having a single sensing means for these circuits to sense each designation in that column of the card; each electric circuit including a selector for each set of independent designation positions in each column of the card; each selector including a roller rotating at the same speed as the feed roller, a metallic strip on said roller, projections extending from the strip, the number of projections equalling the number of designation positions in each set in one column of the card, means cooperating with the metallic strip and the projections to close its respective electric circuit as the sensing means passes over each designation position of its respective set of independent positions and to break the circuit as the sensing means passes over other positions; an electrical holding circuit for each accumulator order and controlling the operating means therefor to enter the value of said designation upon the accumulator order including a commutator for all of said circuits and rotating at the same speed as the selectors, a metallic strip upon the commutator for each independent set of designation positions in one column of the card and common to corresponding sets of designation positions in all columns, and means cooperating with the strips to retain the holding circuit closed for a predetermined period to enter the value of designations upon the accumulator order.



2,106,903

APPARATUS FOR HANDLING STRANDS

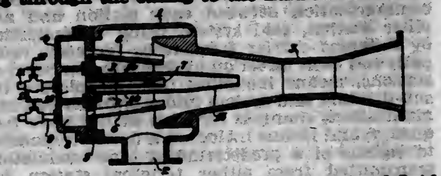
Fred V. Johnson, Baltimore, Md., and Roland E. Nydegger, Wilmington, Del., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application October 20, 1936, Serial No. 106,523

7 Claims. (Cl. 117—46)

1. An apparatus for combining strands which comprises a rotatable frame, a plurality of strand supplies in the frame, and a strand delivery guide mounted axially of the frame to receive the strands and deliver them from the frame, the said guide comprising an elongated hollow member to receive and pass one of the strands and having a passage therefor sufficiently narrow to prevent lateral deformation of the strand therein.

2,106,904



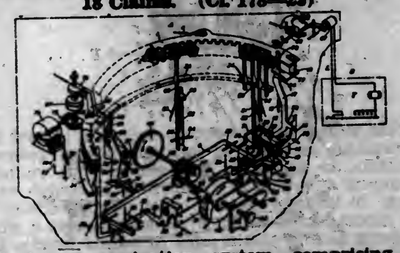
REGULATING DEVICE FOR THERMOCOMPRESSORS

John Kirgan, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey

Application March 23, 1936, Serial No. 70,213

7 Claims. (Cl. 230—103)

1. A thermo-compressor having a casing and a number of nozzles therein, means for supplying a power fluid to the nozzles, means for throttling the flow of fluid to some of said nozzles to vary the pressure of such fluid, and means within the casing for returning a part of the fluid discharging through the casing to the fluid streams issuing from the unthrottled nozzles, the rate of fluid return being controlled by the pressure of the throttled fluid.



2,106,905

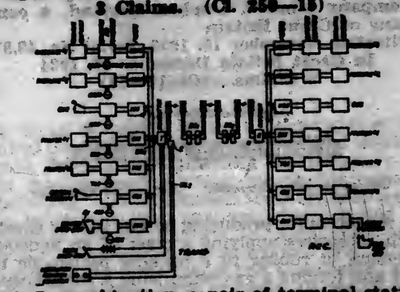
TELETYPEWRITER

Wilmarth Y. Lang, Tewaco, N. J., and Edward F. Watson, Larchmont, N. Y.; said Lang assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York, and said Watson assignor to American Telephone and Telegraph Company, a corporation of New York

Application September 28, 1935, Serial No. 42,554

18 Claims. (Cl. 178—23)

1. A communication system comprising in combination a first station having a teletypewriter, a second station having a teletypewriter and connected to the first station by a communication line, instrumentalities at the second station for suppressing printing and spacing of the teletypewriter at that station, and means for operating said instrumentalities.



2,106,906

RELAY SYSTEM

Chester W. Latimer, West Orange, N. J., and James L. Finch, Patchogue, and Harold H. Beverage, Riverhead, N. Y., assignors to Radio Corporation of America, a corporation of Delaware

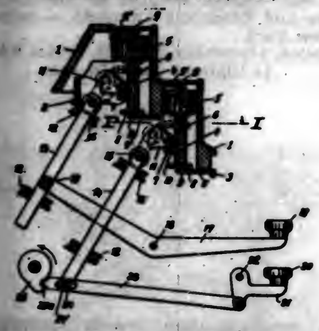
Application July 8, 1936, Serial No. 89,606

3 Claims. (Cl. 250—15)

1. In combination, a pair of terminal stations, an intermediate station, said intermediate sta-

tion comprising a receiver normally operative and a transmitter normally inoperative, means including a carrier wave system for establishing communication between each station and another station, said system being characterized by different carrier frequencies for each radio path and each direction of transmission between stations, means including tone modulators for sub-dividing said system into a plurality of communications channels for each carrier wave frequency, and means including a device responsive to signals of a predetermined tone modulation transmitted from either terminal station for starting up the transmitter at the intermediate station.

2,106,807



ZERO RESETTING MECHANISM FOR REGISTERS

Karl Locke and Rudolf Brunhuber, Berlin-Tempelhof, Germany

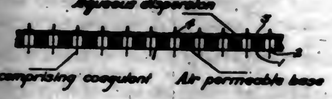
Application June 5, 1935, Serial No. 24,996

In Germany August 2, 1934

14 Claims. (Cl. 235—144)

1. The combination in a calculating machine or the like, having a counting mechanism, including a plurality of parallel rotatable shafts having indicator wheels fixed thereon, comprising clearing cams on said shafts, and clearing means rockable about an axis adjacent and substantially transverse to the axis of said shafts and adapted to engage said clearing cams to restore said indicator wheels to their initial position.

2,106,808



PROCESS FOR PRODUCING POROUS SHEETS OF RUBBER

Edward Arthur Murphy, Wylde Green, Birmingham, and Stanley Douglas Taylor, Sutton Coldfield, England, assignors to Dunlop Rubber Company Limited, London, England, a company of Great Britain

Application November 15, 1935, Serial No. 49,972

In Great Britain December 22, 1934

6 Claims. (Cl. 18—58)

1. A process for producing porous rubber sheets which comprises applying a layer of an aqueous dispersion of rubber to a backing permeable to gases and forcing a gas comprising a coagulating reagent in minute separated streams through said dispersion.

2,106,809

SWAGED DENTURE AND METHOD OF MAKING THE SAME

Charles H. Prange, Lyndhurst, N. J., and Erich H. Zahn, Port Washington, N. Y., assignors to Austenal Laboratories, Inc., New York, N. Y., a corporation of New York

Application December 15, 1934, Serial No. 757,654

9 Claims. (Cl. 32—2)

1. A metallic denture base comprising two nested plies of metallic denture base material coextensive in area with each other and individually swaged into conformity with the same uniquely irregular pattern, the inner ply being relatively weak but of great deformability, the outer ply being less deformable but of greater strength, whereby the denture base is of adequate rigidity and has an inner surface bearing an accurate and detailed imprint of the pattern; and a fused spacer between the plies bonding them together into a completely integrated unit, said spacer comprising metallic foil coextensive in area with said plies and consisting of a metal of the group which includes silver, gold, and alloys thereof.

2,106,810

SIGNALING SYSTEM

Ralph E. Ressler, Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application December 11, 1935, Serial No. 53,948

8 Claims. (Cl. 178—59)

1. In combination in a signaling system, a polarized impulse receiving relay having an operating winding and a holding winding, a polarized impulse repeating relay having two operating windings, a circuit including the armature of said impulse receiving relay in one of its two operated positions for energizing said holding winding in a direction to maintain the position of its armature, a circuit including the armature of said impulse receiving relay in said one of its positions for energizing one of the operating windings of said impulse repeating relay to position and hold the armature of said impulse repeating relay in one of its two operated positions, a circuit including the armature of said impulse receiving relay in the other of its two operated positions for energizing said holding winding in a direction to maintain the position of its armature, and a circuit including the armature of said impulse receiving relay in said other of its two operated positions for energizing the other of the operating windings of said impulse repeating relay to position and hold the armature of said impulse repeating relay in the other of its two operated positions.

2,106,811

PREPARATION OF ACETONE-SOLUBLE CELLULOSE ACETATE

George A. Richter, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a corporation of Maine

No Drawing. Application September 16, 1936, Serial No. 100,212

6 Claims. (Cl. 260—102)

1. In a practice of transforming a solution of chloroform-soluble cellulose acetate in its acetylating mixture to acetone-soluble form by treatment of such solution with hydrolyzing reagents, that improvement which comprises adding hydrogen peroxide to such solution in the amount of about 0.2 to 0.5%, based on the dry weight of cellulose, in the course of the treatment of such solution with the hydrolyzing reagents.

2,106,812

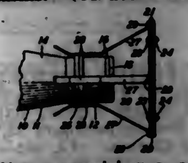
PROCESS OF XANTHATING CELLULOSE

George A. Richter and Harold P. Vannah, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a corporation of Maine

No Drawing. Application February 14, 1936, Serial No. 63,876

7 Claims. (Cl. 260—190)

1. A process of producing cellulose xanthate solution, which comprises admixing and agitating cellulose fibers with aqueous caustic soda solution in amount sufficient to yield a suspension of fibers substantially devoid of lumps or fiber aggregates in such caustic soda solution; and admixing with the resulting suspension of fibers in caustic soda solution carbon bisulphide in the presence of an emulsifying agent acting to induce at the early stage of mixing microscopically fine particle size emulsification of the carbon bisulphide in the caustic soda solution and thus to promote the xanthation of the cellulose fibers and the dissolution of the cellulose xanthate in the caustic soda solution.



2,106,813

ACOUSTIC DEVICE

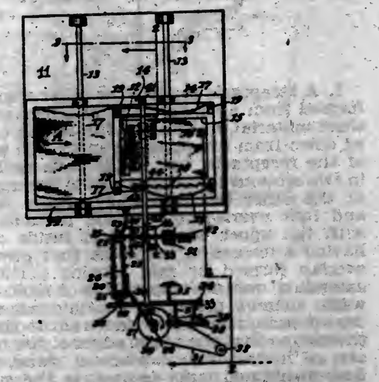
Frank F. Romanow, West Hempstead, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application June 9, 1934, Serial No. 729,759

5 Claims. (Cl. 179—187)

1. A transmitter comprising a casing having an opening therein, a diaphragm mounted in said casing and juxtaposed to said opening, an acoustic screen of uniform fabric in fixed axial alignment with and in front of said diaphragm and spaced from the wall of said casing to define an open lateral space between said screen and said casing, and means including a plurality of spacer members for supporting said screen.

2,106,814



AUTOMATIC MULTIPHOTO APPARATUS

Elizabeth Ellmer, New York, N. Y.

Application January 15, 1937, Serial No. 120,669

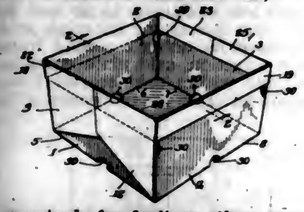
2 Claims. (Cl. 88—16)

1. In an automatic multiple photograph apparatus, means to support a light sensitive plate medium, a lens adapted to throw the picture on a predetermined portion of said medium, means to successively move said medium in a right and left hand and in up and down directions so as to cover the major portion of said medium with a multiple of pictures, in a multiple of series both in right and left hand and in up and down directions; a movable frame carrying said medium; said means including a second frame movable in one direction, said plate carrying frame being movable within said second frame in a transverse direction to the movement of said second frame; a source of power, said means being operated by said source of power in an automatic manner; said means also including an endless chain driven by said source of power, a member to intermittently stop the movement of said chain, a second member to connect said chain to said second frame to intermittently and gradually move the same in one direction upon the intermittent movement of the chain, and an element intermittently operated by said chain and adapted to intermittently move said first plate carrying frame in a transverse direction.

2,106,815

ACOUSTIC DIAPHRAGM AND METHOD OF MAKING SAME

Marvel W. Scheldorf, Haddon Heights, N. J., assignor to Radio Corporation of America, a corporation of Delaware



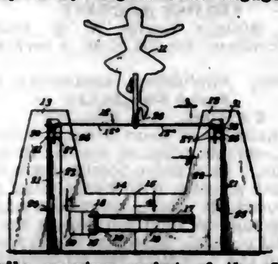
Application July 31, 1935, Serial No. 34,065

15 Claims. (Cl. 181—32)

1. In an acoustical device, a diaphragm of the conical type, translating means attached thereto, means for flexibly supporting the periphery of said diaphragm, compliant means for radially subdividing the diaphragm non-symmetrically into inner and outer sections, characterized by successive sectors varying in mechanical and acoustic characteristics continuously around the circumferential expanse of the diaphragm, said translating means being attached to one of said sections.

2,106,816
BERRY BASKET
Frank K. Shimizu and Esau Shimizu, San Jose, Calif.
Application January 13, 1937, Serial No. 120,326
7 Claims. (Cl. 229—32)

1. A receptacle for fruit or other commodities, formed from a single blank of paper or suitable sheet material, having two full length cuffs folded down from two opposite upper side wall edges of the receptacle, two inside cuffs each formed in two sections folded down from the upper edges of the other two side walls of the receptacle, and four overlapping outside portions integral with the upper edges of said inside cuffs and having a formation therewith that prevents the overlap formed by said lapping portions from extending over the upper edge of said other side walls, thereby providing abutting edges on the top of each said other side wall at the middle thereof, so that the upper edges of the receptacle are all in the same horizontal plane, with the first mentioned cuffs secured to the surface of the two side walls, and the inside cuffs secured to the inner surface of the other two side walls, serving to hold said outside portions in overlapping relation.

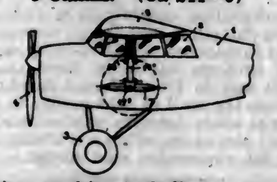


2,106,817
SEALING GASKET
Kenneth J. Soule, Ridgewood, N. J., assignor to Raybestos-Manhattan, Inc., Passaic, N. J., a corporation of New Jersey
Application April 12, 1935, Serial No. 15,970
4 Claims. (Cl. 288—1)

1. A unitary gasket element, comprising a flexible body confined within two perimetric lines, the portion of said body adjacent its outer extremity being of relatively soft sealing material and having a homogeneous transverse section, while the portion of said body adjacent its inner extremity is substantially entirely of fibrous material.

2,106,818
DISPLAY FIGURE
William J. Sweeney, Belleville, N. J.
Application April 3, 1937, Serial No. 134,822
5 Claims. (Cl. 40—126)

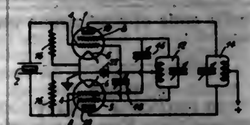
1. In display apparatus, a figure having a downwardly opening socket on the back of the same, spaced supports having upwardly opening sockets on the back of the same and wire pieces having upwardly angled ends engaged in said



downwardly opening socket of the figure and downwardly angled ends entered in said upwardly opening sockets on the support.

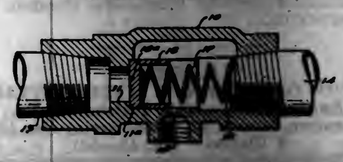
2,106,819
METHOD FOR MAKING TRANSPARENT PUFFING
Frank Tavin, New York, N. Y., and Hans Haas, Freehold, N. J., assignors to Isidore Eckstein and Morris Landau, doing business as I. D. Manufacturing Co., New York, N. Y.
Application July 26, 1937, Serial No. 155,654
5 Claims. (Cl. 2—278)

1. A method of producing translucent puffing consisting of joining together two pieces of material by stitching, said stitching creating pockets to receive different colored threads by inserting a hollow needle through the material into said pockets and forcing a blast of air through said hollow needle whereby a colored thread within said hollow needle is forced into said pockets to produce a translucent, ornamental, colored, puffed fabric.



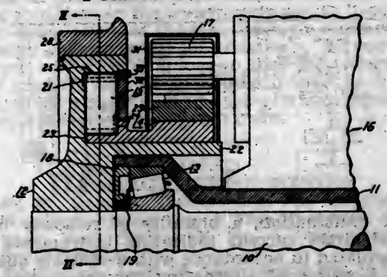
2,106,820
FLYING MACHINE
Emile Henri Thibault, Paris, France
Application March 5, 1936, Serial No. 67,188
In France February 23, 1935
5 Claims. (Cl. 244—9)

1. A flying machine including a complete airplane fuselage, at least one fixed wing, two further wings symmetrically disposed with reference to said fuselage and adapted to be applied against two parts respectively of said fixed wing so as to make with said fixed wing a supporting surface of a section analogous to a normal aerofoil section, said further wings being mounted on



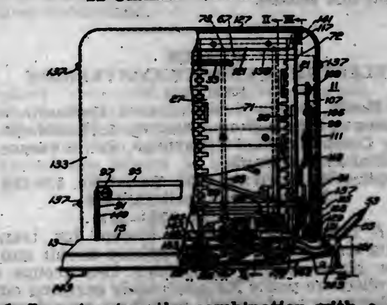
symmetrically disposed axis for free and unlimited angular movement, transverse with reference to the fuselage, means for displacing together said further wings so as to be brought in a position permitting self rotation, a fixed motor adapted to cooperate with said axis and to start said self rotation, means for braking simultaneously said further wings and means for locking said wings in the position in which they are adapted to be applied against the fixed wing.

2,106,821
PIEZOELECTRIC CRYSTAL CONTROLLED OSCILLATOR CIRCUITS
Harry Tunick, Rye, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Original application February 6, 1932, Serial No. 591,365. Patent No. 2,044,137, dated June 16, 1936. Divided and this application October 19, 1933, Serial No. 694,229. In Great Britain February 6, 1933
4 Claims. (Cl. 250—36)



3. In an oscillation generator having a push-pull network including two multi-electrode electron discharge tubes and a piezo-electric device having at most two electrodes and circuit connections therefrom to similarly disposed electrodes in said tubes, the method of deriving oscillatory energy in a utilization circuit connected thereto, which comprises the steps of resonating said push-pull network at a natural frequency of said piezo-electric device, neutralizing the interelectrode capacitive feed-back of energy in said tubes by mutual interchange of electrostatic charges externally of said tubes, and as between unlike electrodes of said tubes, causing pulsations of electronic flow to take place contraphasally in one of said tubes with respect to the other, resonating said utilization circuit at an even harmonic of the natural frequency of said piezo-electric device, and utilizing said pulsations as the sole and entire control of the output energy in said utilization circuit.

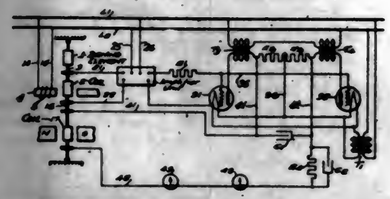
2,106,822
FLUID SUPPLY SYSTEM
Gerald E. White, Lansing, Mich.
Application September 23, 1936, Serial No. 102,078
6 Claims. (Cl. 137—78)



1. In combination, a valve comprising an elongated casing having an inlet opening in one end and an outlet opening in the other end of substantially the same size, the casing having a smaller auxiliary inlet opening formed in its side intermediate its opposite ends, a piston arranged within the casing to move longitudinally therein, the piston adapted to be moved to alternately close the large and small inlet openings, and a spring positioned within the casing, between the outlet end thereof and the piston to resiliently urge the piston to closed position with respect to the large inlet opening.

2,106,823
FLEXIBLE DRIVE
Frank L. Alben, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 8, 1936, Serial No. 89,572
4 Claims. (Cl. 105—131)

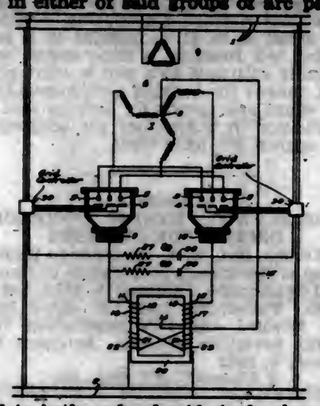
1. In a flexible driving mechanism, in combination, an axle, an axle housing, a roller bearing for supporting the housing on the axle, said housing having an enlarged portion for containing the bearing, a wheel center secured to the axle, said wheel center having an annular recess disposed therein and an extended portion overlapping the enlarged portion of said housing, a gear rotatably mounted on the extended portion of the wheel center, said gear having an annular flange disposed within the annular recess in the wheel center and a plurality of slots in said flange, and a plurality of flexible spring members disposed in said slots to engage the wheel center to flexibly transmit torque between the gear and the wheel center.



2,106,824
ELECTRIC TOASTER
George M. Bayne, Hamilton, Ontario, Canada, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 27, 1934, Serial No. 754,992
11 Claims. (Cl. 219—19)

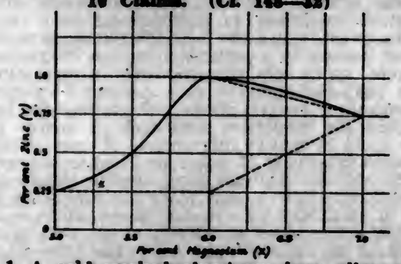
1. In a toaster, the combination with a base, spaced end plates thereon, bread slice supports vertically movable in the end plates, a linkage pivotally mounted on the end plates and connected to the bread slice supports and a side bar operatively connected to the linkage and constituting with the linkage a carrying means for the

toaster and effective to raise toasted slices of bread resting on the supports partly above the end plates.



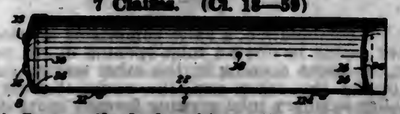
2,106,825
ELECTRONIC REMOTE METERING SYSTEM
Henry L. Bernardo, Kearny, N. J., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 5, 1934, Serial No. 705,471
1 Claim. (Cl. 177—351)

In combination, a plurality of remotely disposed direct current indicating instruments to be actuated in accordance with a variable quantity, a source of alternating current, a pair of electronic discharge devices each comprising a cathode, an anode and a control element, means for conductively interconnecting said cathodes and anodes, energizing means included in the individual anode circuits for energizing the respective anodes with opposite alternating potentials relative to their respective cathodes, impedance means included in each anode circuit between the individual energizing means and the common cathode connecting means, a line circuit for energizing the instruments comprising conductive means extending from the point in each anode circuit between the individual impedance means and the energizing means whereby the instruments are energized in accordance with the difference of the voltages across the impedances, a measuring device having an armature element responsive to said variable quantity, and translating means for applying an alternating voltage derived from said source to said control elements, said translating means including an element controlled by said armature element acting in a direction to increase the energization of said line circuit, and an element responsive to the current in said line circuit tending to reduce the current in said line circuit.



2,106,826
ELECTRIC CURRENT CONVERSION SYSTEM
Max Boesch, Berlin-Reinickendorf, Germany, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 14, 1937, Serial No. 136,896
In Germany April 15, 1936
5 Claims. (Cl. 172—281)

5. A frequency converter system for transferring energy between a polyphase circuit and a single phase circuit comprising two groups of controlled arc paths for alternately carrying current between said circuit, polyphase transformer means for connecting said core paths to the polyphase circuit, single phase transformer means for connecting said arc paths to the single phase circuit, a neutral point in each of said transformer means, a common connection to said neutral points and a harmonic by-pass across said single base transformer means whereby harmonics generated in either of said groups of arc paths are



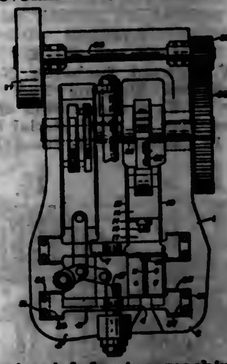
applied to both ends of said single phase transformer means.

2,106,827
ALUMINUM ALLOY
Robert H. Brown, New Kensington, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Application May 25, 1936, Serial No. 81,599
10 Claims. (Cl. 148—32)

1. A cold worked aluminum base alloy containing from 5 to 7 per cent magnesium and a relatively small amount of zinc dependent upon the magnesium content, the proportion of zinc being between 0.25 and 1 per cent for a magnesium content of 5 to 6 per cent, and with linearly converging maximum and minimum limits of 1 to 0.75 per cent and 0.25 to 0.75 per cent zinc, respectively, with an increasing concentration of magnesium of from 6 to 7 per cent, said alloy being characterized by substantial freedom from stress cracking.

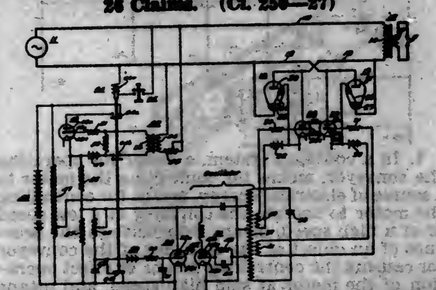
2,106,828
METHOD OF MAKING A LINED CONTAINER
Eugene L. Chappell, Pittsburgh, Pa.
Application March 11, 1935, Serial No. 10,539
7 Claims. (Cl. 18—59)

4. In a method of making a lined container or receptacle, the steps consisting in providing sections of the receptacle including an end section, applying a coating or lining of plastic protective material to said end section, assembling the lined



section and an unlined section, and applying said protective material centrifugally to the unlined section and forming the edge thereof against the lining of the lined end section.

2,106,829
PACKING ASSEMBLY
George Christensen, Plainfield, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application March 27, 1935, Serial No. 13,269
2 Claims. (Cl. 286—34)



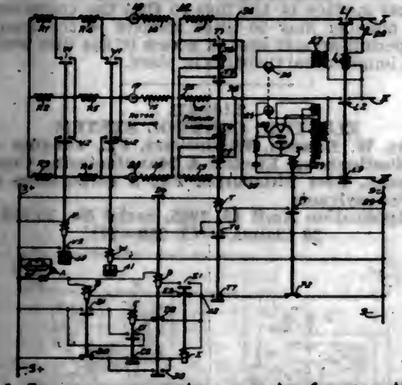
1. An assembly including a cylinder wall of regular surface, a piston in contact at its periphery with the said wall and movable within the cylinder, and an annular packing element supported by the portion of the piston adjacent to the periphery thereof and in packing contact with the inside of the cylinder wall, the said packing element including a resilient and penetrable packing composition in annular form and the portion of the piston supporting the packing being provided with teeth penetrating into and engaging the packing composition, said teeth constituting the sole positive connecting means between the packing element and piston.

2,106,830
FORGING MACHINE
William W. Criley, Cleveland, Ohio
Application February 6, 1936, Serial No. 62,641
3 Claims. (Cl. 78—13)

1. In a horizontal forging machine having a horizontal frame, one portion thereof being substantially U-shaped in upright cross section, transversely spaced lugs at the free ends of the U-shaped portion respectively and extending upwardly of the frame and terminating longitudinally of the frame short of the ends of the frame, clamping dies relatively movable laterally of the frame within the U-shaped portion and buttressed laterally thereby, a ram and cooperating die relatively movable longitudinally of the frame, whereby said U-shaped portion is stressed during operation of the ram and dies and tends to spread transversely of the frame, a longitudinal tie bar reinforcing the frame longitudinally, a transverse tie member having inwardly facing shoulders near the ends thereof, said lugs having outwardly facing shoulders in abutting relation to the inwardly facing shoulders, said transverse tie member having a hole extending longitudinally of the frame for accommodating the longitudinal tie bar, said longitudinal tie bar being offset laterally of the frame from the work engaging plane of the gripping dies, said transverse tie member being movable along the longitudinal tie bar to a position wherein the shoulders on the transverse tie member are free from the shoulders on the transversely spaced lugs, and the end portions of the transverse tie member are spaced longitudinally of the frame beyond the upper surface of the lugs so that the transverse tie member may be tilted relative to the frame to permit greater ease of access to the dies while the longitudinal tie bar is in place.

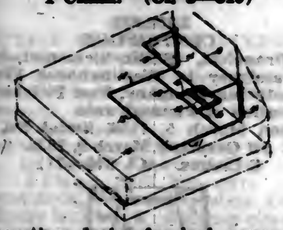
2,106,831
ELECTRIC CONTROL SYSTEM
John W. Dawson, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 10, 1935, Serial No. 15,730
26 Claims. (Cl. 250—27)

2. An electric system comprising, in combination, a source of low-frequency current, a load device, circuit means connecting the load device to the current source including a pair of inversely connected unidirectional conducting valves for permitting successive half cycles of the low-frequency current to flow, control means individual to each valve, and high-frequency current means for energizing said control means to render said valves conducting.



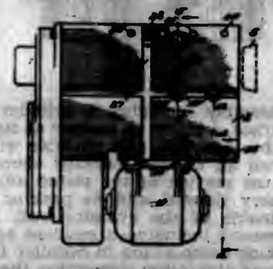
2,106,832
CENTRIFUGE
Hubert Dransfeld, Berlin-Siemensstadt, Germany, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 5, 1936, Serial No. 67,253
In Germany March 9, 1935
6 Claims. (Cl. 210—71)

1. In a centrifuge, a body to be rotated, a stationary support, a resilient connection support-



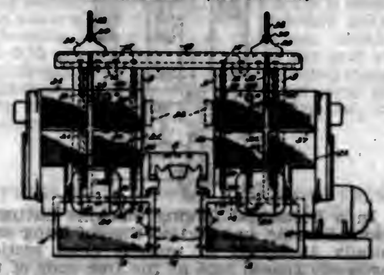
ing said body from said support, a plate also supported by said connection, a motor and a preselected counter-balance on said plate on opposite sides of said resilient connection, a thrust bearing structure for said body mounted on said plate, and means for driving said body by said motor.

2,106,823
MOVING STAIRWAY
William F. Ramsey, Edgewood, Pa., assignor to Westinghouse Electric Elevator Company, Chicago, Ill., a corporation of Illinois
Application February 6, 1936, Serial No. 62,626
13 Claims. (Cl. 198—16)



1. In a conveyor system, a motor for operating the conveyor, means for connecting the motor to a source of electrical energy, means for controlling the motor to operate the conveyor at a low speed or at a high speed, means responsive to the presence of an object at the entrance of the conveyor for causing the controlling means to effect operation of the motor at said high speed, and means responsive to movement of the conveyor for more than a predetermined distance for causing said controlling means to effect deceleration of the motor to said low speed.

2,106,824
ATTACHMENT FOR BEDS
Charles J. Ewald, Columbus, Ohio
Application September 14, 1933, Serial No. 689,397
1 Claim. (Cl. 5—319)

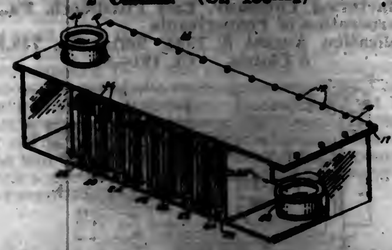


A supporting device for bed covers, said device comprising a base section and a cover-supporting section adjustably associated therewith, said base section comprising a U-shaped member horizontally and detachably disposed beneath the mattress of a bed and having its free ends merging into upwardly extending spaced vertical tubular arms, means for maintaining the arms in fixed spaced relation, said cover supporting section comprising a structure of U-shaped configuration having its spaced ends freely slidable in said tubular extending arms respectively, a member slidable in each of the tubular arms, pivot means for connecting the ends of the cover supporting section to the slidable members, said slidable members and arms cooperating to serve as stops and supports to hold the cover supporting section substantially in horizontal position.

2,106,825
TOOL HEAD FOR MILLING MACHINES
Worthy J. F. Forward, Rochester, N. Y., assignor to Consolidated Machine Tool Corporation, Rochester, N. Y., a corporation of Delaware
Application May 28, 1937, Serial No. 145,312
6 Claims. (Cl. 90—18)

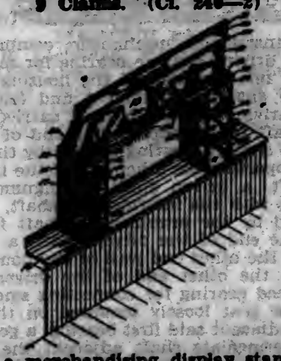
1. A self-contained tool head that is reversibly attachable to a support of a machine tool, including a box-like housing having opposite flat sides which are symmetrical and reversibly attachable to said support, a tool spindle arranged within and extending between the ends of said housing and projecting beyond one end thereof, a tool supported on said spindle beyond one end of the housing, a motor located at one edge of the housing between said flat sides, and gear connections between said motor and tool spindle.

2,106,826
MACHINE TOOL
Worthy J. F. Forward, Rochester, N. Y., assignor to Consolidated Machine Tool Corporation, Rochester, N. Y., a corporation of Delaware
Application May 28, 1937, Serial No. 145,313
12 Claims. (Cl. 90—18)



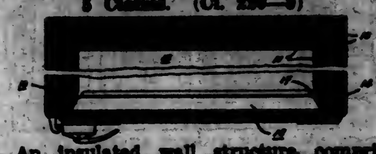
1. In a machine tool including a work table and a tool head support, a tool head removably attachable to the support and including a housing having opposite flat sides which are symmetrical and provided with intersecting keyways for cooperation with keys and keyways upon either vertical or horizontal supports, permitting the head to be reversibly attached to a vertical support or to be interposed horizontally between portions of a frame.

2,106,827
ELECTRIC SWITCH
Julius Fuchs, Cleveland, Ohio, assignor of one-half to Henry P. Hellman, Cleveland, Ohio
Application August 13, 1935, Serial No. 35,821
3 Claims. (Cl. 200—67)



1. In a switch, an insulating chambered block containing an upper and lower chamber, a floor intermediate the aforesaid chambers, a common fulcrum extending from the upper chamber, into the lower chamber through the floor, two levers mounted at one end on the common fulcrum in the upper chamber, a pair of parallel cheeks forming jaws located at an angle relative to the fulcrum, the jaws adapted to receive and guide one of the levers mounted on the common fulcrum, a securing bolt passing through the jaws and projecting into the lower chamber, an upstanding pin centrally located in the lever adjacent the end remote from the fulcrum, an upstanding pin in the other lever adjacent the common fulcrum a helical spring mounted on the upstanding pins and adapted to exert controlling action upon the lever entering the jaws on actuation of the other lever, the last mentioned lever having an insulated end portion, the projecting portion of the fulcrum and the projecting portion of the bolt securing the jaws, providing connecting means for electric-current distributing wires in the lower chamber, and a shell cover in detachable connection with the upper chamber.

2,106,828
ELECTRICAL APPARATUS
Henry S. Gates, Sharon, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 28, 1936, Serial No. 98,102
2 Claims. (Cl. 183—4)

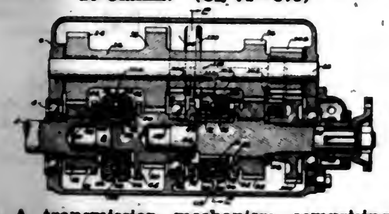


1. In an absorber for use with an electrical apparatus containing a dielectric material which will evolve chemically active gases when decomposed, a housing comprising a cover, bottom, end and side walls integrally secured together for receiving the evolved gases, an inlet into the housing, a gas-impervious diaphragm capable of being ruptured by an abnormal rise in pressure of the evolved gases in the electrical apparatus disposed in the inlet wholly within an end of the housing for admitting the gases to the housing, baffles carried in spaced relation in the housing for directing the flow of evolved gases in the housing, said baffles being alternately disposed and carried by the cover and bottom of the housing and extending across the housing between the side walls to provide a plurality of sections having openings alternately at the top and bottom of the adjacent baffles forming the sections for the ingress and egress of the gases, a tray of gas absorbing material removably disposed in each of the sections for absorbing the gases as they flow through the housing, said tray comprising a channel member frame having an opening therein for receiving the gas absorbing material and side walls of screen carried by the frame for retaining the gas absorbing material and permitting free access of the gases thereto, means for retaining the tray in spaced relation to the adjacent baffles forming the section and to the cover and bottom of the housing for providing spaces therebetween for the flow of gases, and means for permitting the gases to escape from the housing when the pressure of the gases in the housing reaches a predetermined value.

2,106,839
MERCHANDISING DISPLAY STAND
Alfred C. Gilbert, Hamden, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a corporation of Maryland
Application June 18, 1935, Serial No. 27,169
9 Claims. (Cl. 240—2)

1. In a merchandising display stand, an upright supporting wall, means to hold merchandise at spaced locations along the front surface of said wall comprising shelves of opaque material extending forwardly from said wall, one of said shelves separating the said locations, a source of light positioned at the front edge of the last said shelf and disposed to illuminate merchandise displayed on the last said shelf together with merchandise displayed therebelow, and a light shade disposed to be flush with the front edge of the shelf and shaped to extend partially around said source of light.

2,106,840
REFRIGERATING APPARATUS
Richard E. Gould, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application October 26, 1935, Serial No. 46,918
5 Claims. (Cl. 220—9)



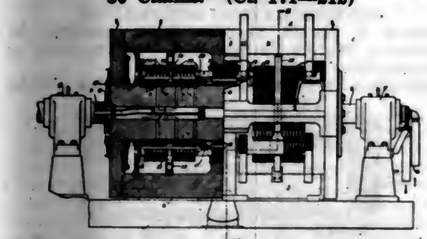
1. An insulated wall structure comprising, spaced apart sheet metal members having an

expanded rubber insulation therebetween, each of said sheet metal members having an aperture therein registering with one another to provide an opening in said structure, and said insulation having a hard impervious crust bonded to said members and extending from the edge of the aperture in one of said members to the edge of the aperture in the other of said members to form the walls of said opening and to seal the space between the metal members.

2,106,841
MOTOR VEHICLE

Walter R. Griswold, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan

Application March 6, 1935, Serial No. 9,616
10 Claims. (Cl. 74—375)

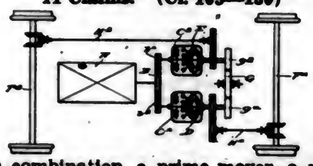


1. A transmission mechanism comprising a housing, a driving shaft, a bearing for said shaft carried by one end wall of the housing, an intermediate shaft in alignment and telescoping with the driving shaft, a bearing carried by the driving shaft for supporting one end of the intermediate shaft, a bearing carried by the housing for supporting the other end of the intermediate shaft, a driven shaft in alignment and telescoping with the intermediate shaft, a bearing carried by the intermediate shaft for supporting one end of the driven shaft, a bearing carried by the other end wall of the housing for supporting the other end of the driven shaft, change speed gearing for connecting said shafts including a gear loosely mounted on the driving shaft adjacent said first bearing, a gear fixed to the intermediate shaft adjacent the second intermediate shaft bearing, a gear loosely mounted on the driven shaft, gears arranged to mesh respectively with said above mentioned gears and means for controlling the gear connections between the shafts.

2,106,842
CURRENT-COLLECTION APPARATUS

Floyd T. Hague, Pittsburgh, and Frederick R. Davis, Irwin, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application December 17, 1935, Serial No. 54,898
30 Claims. (Cl. 171—212)

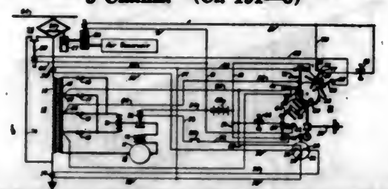


30. Current-collection apparatus particularly adapted for heavy-duty unipolar generators of low voltage and high current-capacity, comprising a rotating, solid collector-cylinder, a stator part having a plurality of axially extending arms spaced around the collector-cylinder, brushholders disposed between successive pairs of said arms and supported thereby, brushes so supported by said brushholders as to bear substantially radially on said collector-cylinder, axially extending air-distributor members mounted under the several axially extending arms and each having a plurality of nozzles directed toward the collector surface, and separable segmental air-ducts surrounding said axially extending arms and separably connected to said air-distributor members for supplying air thereto.

2,106,843
POWER TRANSMISSION GEAR FOR RAIL VEHICLES

Wilhelm Hahn, Heidenheim-on-the-Brenz, Germany

Application February 15, 1936, Serial No. 64,165
In Germany February 16, 1935
11 Claims. (Cl. 105—130)

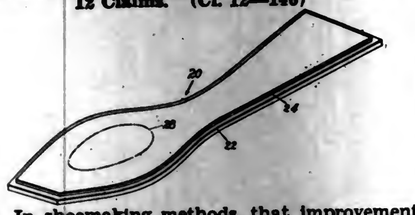


1. In combination, a prime mover, a plurality of driven axles, a plurality of hydraulic power transmitters separately connected to said prime mover and arranged to be alternately engageable selectively for power transmission, a positive drive mechanism arranged to connect a selected transmitter with one of said axles, and a yielding drive mechanism having a slip coupling with relatively slipping elements arranged to yieldingly connect the selected transmitter with another of said axles.

2,106,844
RAILWAY CONTROL SYSTEM

Edwin L. Harder and Lloyd J. Hibbard, Forest Hills, and William R. Taliaferro, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application August 8, 1934, Serial No. 738,978
5 Claims. (Cl. 191—8)



1. In a protective relay system, in combination, electrical apparatus, a pantograph collector for connecting said apparatus to a power conductor, means for grounding the pantograph, means for lowering the pantograph to disconnect the apparatus from the power conductor, relay means responsive to abnormal current conditions in said apparatus for causing the operation of said grounding means and said pantograph lowering means in sequential relation, and contact members associated with said relay and disposed to energize the operating element of the relay to automatically reset the relay under predetermined conditions.

2,106,845
MANUFACTURE OF SHOE BOTTOM UNITS

Raymond E. Hopkins, Weymouth, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey

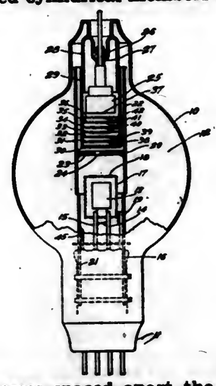
Application May 1, 1936, Serial No. 77,373
12 Claims. (Cl. 12—146)

1. In shoemaking methods, that improvement which consists in securing two layers of material together by means of adhesive to form a laminated sole blank, making a preliminary cut extending through one of said layers near the toe end of the blank thereby initiating the division of said blank by a rearwardly progressing splitting operation into an insole having an opening in its forepart and an outsole having a forepart projection complemental to said opening, and thereafter making a second cut complementing said first cut and completing said division of said blank.

2,106,846
FOOTBALL CARD GAME

Sidney Katz, Boston, Mass.

Application December 24, 1935, Serial No. 56,098
3 Claims. (Cl. 273—152)



1. A football game apparatus comprising a deck of cards including a series of movement cards, certain of said cards having a numeral in each corner, a movement indication at each end between each pair of numerals, with the movement indication on one end of each card contradistinguished from the movement indication on the other end of the card, and each of said cards having a play indication on each edge at diametrically opposed corners, and a series of penalty cards provided with characters indicative of the ball carrier at each corner and also provided with a penalty indication adjacent each end and between said characters.

2,106,847
ELECTRIC DISCHARGE APPARATUS

Heinrich Kniepkamp, Berlin-Pankow, Germany, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a corporation of Germany

Application February 20, 1936, Serial No. 64,873
In Germany March 4, 1935
6 Claims. (Cl. 250—27.5)

1. An electric discharge device comprising a container, a gaseous medium therein, a press at one portion of said container, a press at another portion of said container, an anode structure sealed through said first press, a cathode structure sealed through said second press, and separate grid structures supported on each press including nested cylindrical members supported on

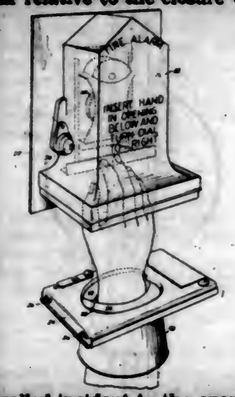
different presses spaced apart the order of the mean free path of an electron of the gaseous medium.

2,106,848
REMOVABLE OVEN VENT GRILLE FOR ELECTRIC RANGES

Edwin H. Lockwood, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application February 27, 1936, Serial No. 66,018
1 Claim. (Cl. 126—21)

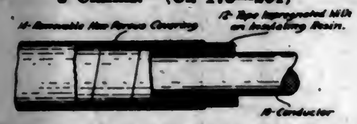
An openwork disc constituting a duct outlet for insertion in a back splasher, said disc being dome shaped and having an inwardly extending flange at its edge, and spring fingers extending from the inner edge of said flange into said duct and frictionally engaging the walls thereof to hold the disk in the mouth of said duct at the back splasher.



2,106,849
FIRE ALARM BOX

Robert B. Long, Dayton, Ohio

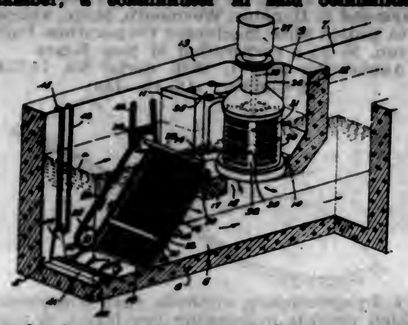
Application October 2, 1935, Serial No. 43,214
6 Claims. (Cl. 177—379)



1. A device for identifying the operator of a fire alarm transmitting device including a combination with means for operating the signal transmitting device, said means including manually operable split knob portions having an annular peripheral groove intermediate said portions and diametrically arranged stationary members extending into said groove, said stationary members obstructing a portion of the periphery of the knob while leaving the remainder of the knob unobstructed, an enclosure for the signal transmitting device having an opening, a contractible handcuff detachably mounted contiguous to said opening through which the operator's hand may be inserted to operate said knob, means

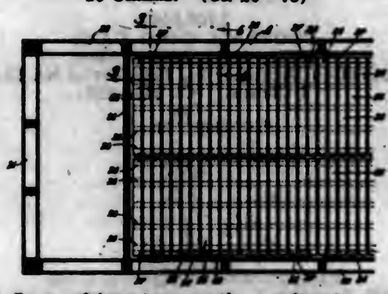
for actuating and locking the handcuff in contracted position, means for releasably supporting the handcuff relative to the closure opening and

means controlled incident to the operating of the transmitting device for releasing the handcuff and effecting through said actuating means contraction thereof upon the arm of the operator.



2,106,250
METHOD OF INSULATING CONDUCTORS
Leon McCulloch, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 1, 1935, Serial No. 24,581
3 Claims. (Cl. 173—264)

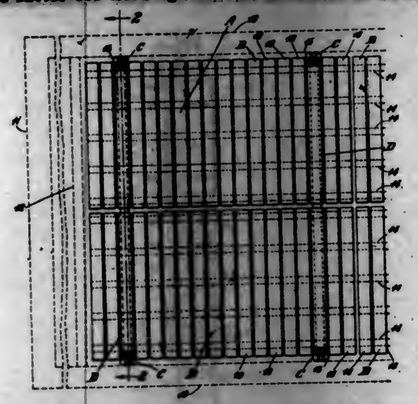
1. In the method of insulating conductors, in combination, impregnating tape with an insulating solution of polystyrol in monostyrol, winding the conductors to be insulated with the impregnated tape, covering the wound conductor with a pliable non-porous sheet material to protect it, immersing the covered conductor in hot resin and applying pressure thereto to harden the insulating solution, removing the conductor from the hot resin when the insulating solution is hardened, and removing the non-porous sheet material from the insulated conductor.



2,106,251
COMBINED STRAINING AND COMMINUTING APPARATUS
Carl H. Nordell, Chicago, Ill., assignor to Chicago Pump Company, Chicago, Ill., a corporation of Illinois
Application July 2, 1936, Serial No. 88,570
10 Claims. (Cl. 210—152)

9. The combination of a screen chamber having side and bottom walls, a comminuter chamber therein having an end wall and a bottom wall extending between the side walls of the screen chamber, the bottom of the screen chamber being in part located below the bottom wall of the comminuter chamber and said comminuter chamber having an inlet, opening thereto, from the screen chamber, and a discharge opening, leading to the screen chamber, a grid screen extending between the bottom of the screen chamber to the bottom of the comminuter chamber, a comminuter in said comminuter

chamber having a strainer wall above and around said discharge opening, and scraping means for ridding the grid screen of solids and semi-solids.



2,106,252
FLOOR RACK
Roland J. Olander, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application July 10, 1936, Serial No. 90,617
16 Claims. (Cl. 20—78)

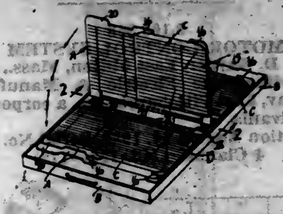
1. In a refrigerator car, the combination with a removable floor rack; of hinge means pivotally supporting said rack including cooperating pivotally connected pairs of hinge members, one of said members of said hinge means being fixed to the rack; and means for detachably securing the other of said hinge members to the car including a fixed anchoring member on the car and a cooperating fixed anchoring member on said last named hinge member, having shouldered engagement with said first named anchoring member and being slidable into and out of shouldered engagement with said first named anchoring member.

2,106,253
FLOOR RACK FOR REFRIGERATOR CARS
Roland J. Olander, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application July 11, 1936, Serial No. 90,119
14 Claims. (Cl. 20—78)

1. In a refrigerator car having spaced opposed walls and a floor, the combination with a longitudinally divided, sectional floor rack covering said floor, said floor rack fitting between said walls; of means for pivotally supporting said sections for swinging movement at said walls; removable spreading means extending transversely of said sectional rack and interposed between said pivot means in shouldered engagement with the latter for holding said sections against rela-

tive movement toward each other in a transverse direction.

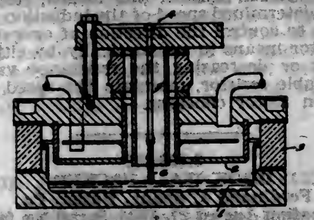
2,106,254
APPLICATOR GRID FOR CEMENTING MACHINES
Frank H. Paquin, Groveland, Mass.
Application December 14, 1936, Serial No. 115,886
3 Claims. (Cl. 91—67)



8. Apparatus for applying cement comprising a reticulated body having a multiplicity of curviform crests of the body between the reticular openings thereof, said crests being spaced little distances apart in directions both along and across the body.

2,106,255
SPACE-CURRENT DEVICE
Noah C. Fearey, Park Ridge, Ill., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Original application February 26, 1934, Serial No. 712,023. Divided and this application July 17, 1937, Serial No. 153,411
4 Claims. (Cl. 250—27.5)

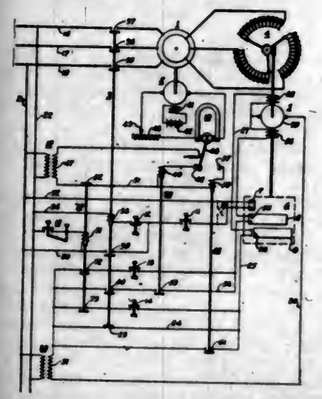
1. A luminous electrical discharge tube enclosing a gaseous atmosphere of such a pressure that gas ions carry a substantial part of the current, and comprising an anode and a thermionic cathode comprising a heating element and a refractory insulating member in good thermal relation therewith, said insulating member having a coating comprising a sintered mixture of metal particles and thermionically active particles.



2,106,256
RECORD KEEPING DEVICE
Bernard E. Rosene, Evanston, Ill.
Application February 8, 1934, Serial No. 710,488
20 Claims. (Cl. 129—16)

2. In a record keeping device, the combination with a substantially rectangular holder mounted at one edge on a base of support for pivotal movements in respect thereto, of a record sheet folded over the free edge of the holder to afford a pair of leaves overlying opposite sides of the holder, and means detachably anchoring the folded portion of the sheet to the free edge portion of the holder, the said opposite leaves of the folded sheet being free except at the fold and terminating with their free edges in relatively close proximity to but not beyond the axis of the pivoted edge of the holder.

9. In a record keeping device, the combination with a record carrying card, of laterally spaced apertures adjacent one edge of the card, a resilient wire-like element formed near opposite ends with laterally offset U-shaped loops spaced equal to that of the apertures in the card and normally embracing opposite sides of the card adjacent the apertures, said loops being offset approximately at right angles to the intermediate portion of the wire-like element and the free ends of said loops extending at approximately that angle to a point normally beyond the edge of the card and terminating in aligned outturned trunnions that are insertable through the card apertures by bowing the intermediate portion of the wire-like element.



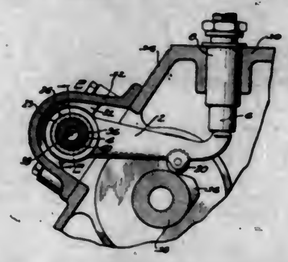
2,106,257
VAPOR ELECTRIC DEVICE
Joseph Slepian, Pittsburgh, and Leon R. Ludwig, Forest Hills, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 26, 1935, Serial No. 33,292
6 Claims. (Cl. 250—27.5)

1. An electric valve comprising a mercury cathode, an anode closely spaced from and directly exposed to said cathode, said anode serving as a condenser for the vapor emitted from said cathode, said anode-condenser during normal operation of said valve being subject to periods of inverse potential and means for maintaining the negative reluctance during said periods, said means including a quantity of carbon monoxide at a pressure of several microns in said valve, a

make-alive electrode in said valve, at least a portion of said make-alive electrode consisting of a material which will evolve carbon monoxide on the passage of current therethrough.

2,106,858
MOTOR CONTROL SYSTEM
Frederick D. Snyder, East Milton, Mass., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 14, 1936, Serial No. 95,966
4 Claims. (Cl. 172—179)

4. In a system of control for a wound rotor induction motor, in combination, an induction motor having a primary winding and a secondary winding, a source of alternating current, switching means for connecting the primary winding to and disconnecting the primary winding from the source of alternating current, a variable resistor connected in circuit relation with the secondary winding, motor means adapted to vary the resistance value of said variable resistor, means adapted to energize said motor means when the primary is disconnected from the source of alternating current to increase the resistance value of the variable resistor to a maximum, means adapted to energize said motor means with the interconnection of the primary winding with the source of alternating current to automatically decrease the resistance value of the variable resistor, and means, responsive to a predetermined speed of the induction motor, adapted to control the direction of operation of said motor means to automatically, by either increasing or decreasing the resistance value of the variable resistor, maintain the speed of the induction motor constant.



2,106,859
HOOK WALL PACKER
Ferdinand J. Spang, Butler, Pa.
Application August 27, 1936, Serial No. 98,159
7 Claims. (Cl. 166—12)

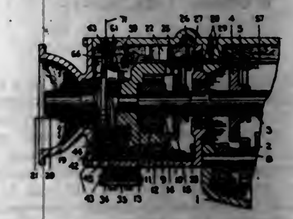
1. A packer comprising a tubular body, an expansible element carried by said body, a member having a conical surface carried by said body and engaging said element, a ring member slidable on said body, a slotted hook depending from said ring, a relatively heavy outwardly bowed spring secured at one end to said hook below the slot therein and having the other end engaging said ring, a series of slips carried by said ring, and relatively light outwardly bowed springs secured to said ring having one end engaging said

slips for holding the same against said conical surface.

2,106,860
BEARING
Milton Tibbetts, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application February 20, 1935, Serial No. 7,311
14 Claims. (Cl. 308—240)

1. A bearing construction comprising members arranged for relative rotation and having spaced bearing surfaces and floating bearing means interposed between said members and provided with a series of relatively fixed separated contact portions each having substantially a line contact with the bearing surface of one of said members and a series of relatively fixed separated contact portions each having substantially a line contact with the bearing surface of the other of said members.

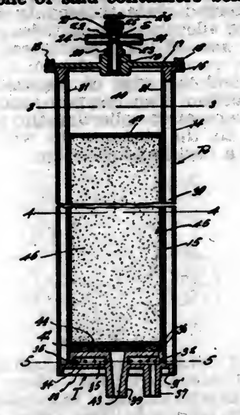
2,106,861
DRINK MIXER
Harold Tofte, Syracuse, N. Y., assignor to T. N. Benedict Manufacturing Company, East Syracuse, N. Y., a corporation of New York
Application December 26, 1935, Serial No. 56,199
10 Claims. (Cl. 259—106)



1. In a drink mixer, the combination of a suitable standard, upper and lower supports movable along the standard, a motor carried by the upper support and having a stirrer depending from its rotor, a cup holder mounted on the lower support and motion transmitting and reversing mecha-

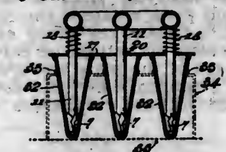
nism between the supports including opposing racks carried respectively by the supports and a

reversing gear means supported by the standard between the racks and meshing with the racks.



2,106,862
CONTROL SYSTEM FOR TRANSMISSIONS
Phillip R. Wheeler, Alexandria, Va.
Application July 22, 1932, Serial No. 624,112
22 Claims. (Cl. 192—4)

1. In a no-back device, a portion of a driving shaft, a circular clamp ring fitting around the said shaft, a lever having two lines of connection with the said clamp ring near one end of said lever, means releasably engaging the end of the lever, means operably associated with a transmission having forward and reverse speeds to cause the release of the said lever end when a shift is made to reverse, and a means operable to cause the lever end to be re-engaged when a shift is made to low.

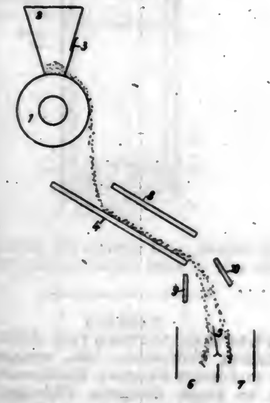


2,106,863
DECOLORIZING SYSTEM FOR PURIFICATION OF LUBRICATING OIL IN INTERNAL COMBUSTION ENGINES
Ralph D. Whitney, New York, N. Y.
Application April 26, 1933, Serial No. 668,139
3 Claims. (Cl. 210—131)

1. An oil decolorizing device comprising a pair of oil containers having substantially imperforate side walls one of said containers having a portion thereof disposed within the other container, at least one wall of the said portion of the said one container being arranged in spaced relation to at least one wall of the said other container thereby defining a heat exchange chamber, one of said containers being formed with passage means communicating with said heat exchange chamber, each of said containers being formed with outlet means, and one of said containers being formed

with inlet means, and means for preventing flow of oil from one of said outlet means to the other.

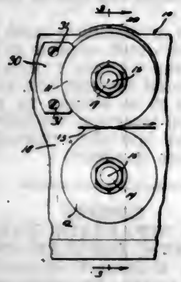
2,106,864
LABEL PLACING APPARATUS AND METHOD
James Balton, Baltimore, Md., assignor of one-fourth to Joseph Shapiro, Baltimore, Md., one-fourth to Isaac Shapiro, Chicago, Ill., one-fourth to Nathan Shapiro, and one-fourth to Samuel Shapiro, both of Chelsea, Mass.
Application June 2, 1936, Serial No. 83,155
9 Claims. (Cl. 216—12)



3. In apparatus for labeling cup pastry, a tube, means temporarily to establish a negative air pressure in the tube to hold a label to the end of the tube, a label folder into which the label and tube are insertable and having means to fold the label around the end of the tube into a cup-like form.

8. The method of placing a label in the tip of an ice cream cone which consists in taking a flat polygonal label and forming it into a cup shape by folding it around the end of a rod-like member and causing it to adhere to said rod-like member and then inserting the label closed-end down into a cone and then releasing the label from said rod-like member.

2,106,865
METHOD AND APPARATUS FOR ELECTROSTATIC SEPARATION
Theodor Bantz, Frankfort-on-the-Main-Praunheim, Georg Grave, Frankfort-on-the-Main-Heddernheim, and Erich Oppen, Hanover-Kirchrode, Germany, assignors to American Lurgi Corporation, New York, N. Y., a corporation of New York
Application March 1, 1935, Serial No. 8,934
In Germany January 31, 1935
4 Claims. (Cl. 209—127)

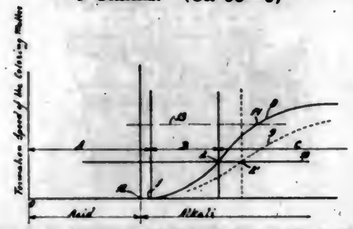


1. Process for the electrostatic separation of mixtures of finely divided conductive and non-

conductive particles which comprises dropping the same from a height onto an inclined, conductive, uncharged plate thereby breaking up agglomerates, allowing said particles to slide along said plate and off the edge thereof whereby the conductive particles are thrown a greater distance beyond the edge of the plate in a horizontal direction than the non-conductive particles, and separately collecting the particles with reference to the distance to which they are thrown in a horizontal direction.

3. Apparatus for the electrostatic separation of finely divided material comprising an inclined conductive uncharged plate, means for showering the material from a considerable height onto said plate adjacent the higher edge thereof, means adjacent the lower edge of the plate for separately collecting the particles falling over the edge of the plate and a second uncharged plate arranged above and substantially parallel to said inclined conductive uncharged plate.

2,106,866
METALWORKING MACHINE
Frank A. Best, East Windsor, Ontario, Canada
Application October 15, 1934, Serial No. 748,415
15 Claims. (Cl. 153—54)



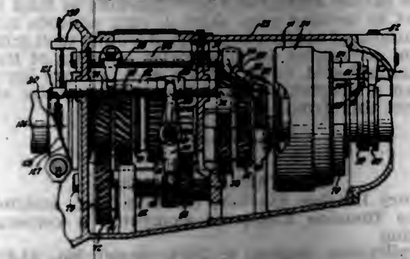
10. In a rolling machine, a frame, an eccentric journaled in said frame, a second eccentric journaled in the first eccentric, the throw of said eccentrics being substantially the same, a shaft journaled in the second eccentric, a second shaft journaled in said frame in substantially parallel relation to the first shaft and having a fixed axis, and opposed forming rolls carried by said shafts.

2,106,867
LAMINATED MATERIAL
Charles V. Brady, Webster Groves, Mo., assignor to Bemis Bro. Bag Co., St. Louis, Mo., a corporation of Missouri
Application April 22, 1935, Serial No. 17,584
1 Claim. (Cl. 154—50)

A laminated material comprising a layer of fabric having a relatively loose weave, a layer of paper adhered to said fabric, and a relatively thin film of chlorinated rubber material adhered to the other surface of the paper, said fabric supplying strength to the laminated material, while the paper buttresses the reticulations of the fabric against diagonal stretching, and the said chlorinated rubber material being capable of yielding to an extent sufficient to adhere to the paper even when the paper is stretched in buttressing the fabric as aforesaid, thereby to maintain the laminated material liquid-proof even while in use.

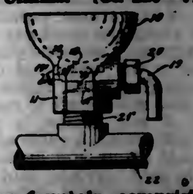
2,106,868
METHOD OF OBTAINING PHOTOGRAPHIC CONTRASTS
Jan Hendrik de Boer and Klaas Hinderikus Klaassens, Eindhoven, Netherlands, assignors to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands
Application December 19, 1934, Serial No. 758,232
In Germany December 27, 1933
6 Claims. (Cl. 95—6)

1. In the method of producing photographic contrasts by selectively exposing to actinic light a layer sensitized with a naphthalene diazonium compound and forming coloring matter by the union of the diazonium compound and its light-decomposition product, the step of imparting to said layer prior to exposure a pH value lying within a range having an upper limit corresponding to the point at which there will be substantially no formation of coloring matter during the exposure and a lower limit greater than 7 and corresponding to the point at which the color formation subsequent to the exposure can be obtained solely by the influence of water and without the addition and removal of any chemical substance.



2,106,869
DRIER FOR GRANULAR AND LIKE MATERIALS
Engelbert Falkenstein, Duesseldorf-Gerresheim, and Emil Bartholmess, Duesseldorf-Oberkassel, Germany
Application May 21, 1937, Serial No. 144,034
In Germany January 13, 1936
8 Claims. (Cl. 34—34)

1. Method of drying granular and like material which comprises the step of injecting the material substantially vertically upwards into a counter-current of drying gas so that the material

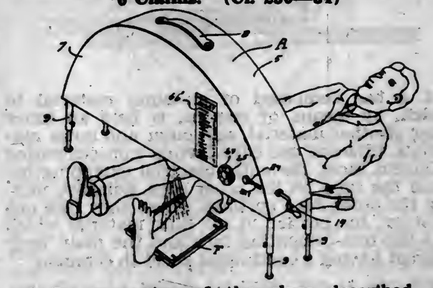


first travels upwards under its own momentum counter to the gas current and then falls, travelling with the gas current.

2,106,870
TRANSMISSION
Carl W. Fleas, Detroit, Mich.
Application July 17, 1933, Serial No. 680,866
17 Claims. (Cl. 74—336)

1. In a variable speed transmission mechanism, the combination with a driven member and a member rotatable relative thereto, of reduction gearing between the two members, a friction clutch also between said members for directly connecting the same, means responsive to the speed of and the load on the driven member for actuating said clutch, means permitting the driven member to overrun said reduction gearing when the same is rotating at the angular speed of the other member through the action of said clutch, and means acting directly on said clutch actuating means for varying the speed at which said clutch actuating means operates to directly connect the driven member to the other of said members.

2,106,871
POULTRY FOUNTAIN
Herbert A. Hegnett, Pomona, Calif.
Application April 5, 1937, Serial No. 135,147
8 Claims. (Cl. 119—74)

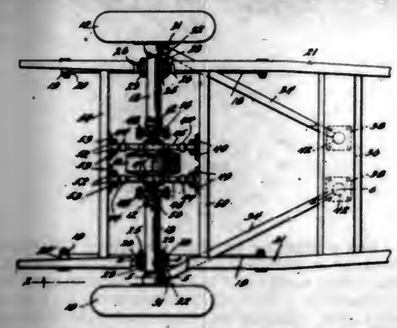


1. A poultry fountain comprising a bowl, a water inlet, a needle valve cooperative with the inlet for regulating the flow, said inlet opening upwardly towards the inner surface of the bowl and the axis thereof being in angular relation to a plane passing through the vertical axis of the bowl.

2,106,872
CIRCULAR KNITTING MACHINE
Henry Harold Holmes, Leicester, England, assignor, by mesne assignments, to H. Brinton Co., Philadelphia, Pa., a corporation of Pennsylvania
Application February 28, 1928, Serial No. 257,620
In Great Britain April 1, 1927
8 Claims. (Cl. 66—24)

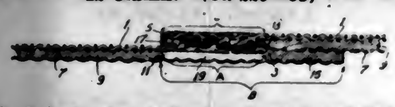
1. For a circular knitting machine, the combination of a needle-cylinder, needles therein, a needle-dial, needles of standard type in said dial, loop-transfer points each associated with a dial needle and slidable in said dial alongside and independently of its needle in a path substantially parallel with that of the needle, a cam to move the transfer points to engage loops on the dial needles, a dial needle clearing cam to clear loops on the dial needles, a withdrawal cam for the dial needles to move them to yield their cleared loops to the transfer points, and a cam to raise the cylinder needles to receive loops from the transfer points.

2,106,873
PORTABLE SELF-CONTAINED X-RAY APPARATUS
Hamilton L. J. Marshall, Troy, Ala., assignor to Osteograf Co., Inc., Troy, Ala., a corporation of Alabama
Application September 16, 1935, Serial No. 40,843
6 Claims. (Cl. 250—34)



1. In apparatus of the class described, an X-ray tube, a high voltage generator and a low voltage generator for energizing the tube, a spring motor, drive means between the spring motor and the generators, stop means normally holding the spring motor against operation, starting means for releasing the stop means, electrically released holding means for retaining the stop means released, and timing control means for the holding means for controlling the duration of spring motor operation.

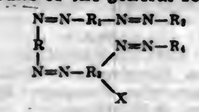
2,106,874
MOTOR VEHICLE
Clyde R. Paton, Birmingham, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application November 21, 1934, Serial No. 754,147
12 Claims. (Cl. 180—73)



1. In a motor vehicle, the combination with a

vehicle frame, of driving road wheels disposed at opposite sides of said frame, and means yieldingly supporting said road wheels for independent rising and falling movement with respect to the frame, said means comprising a differential gear housing disposed generally centrally of the frame and having gearing therein, at least one longitudinally extending leaf spring assembly acting be-

tween said frame and said housing to yieldingly support the latter, driving axles carrying said road wheels, said axles extending laterally of said differential housing and having universal joint connections with the gearing therein, and longitudinally extending leaf spring assemblies supporting said axles on said frame adjacent each road wheel.

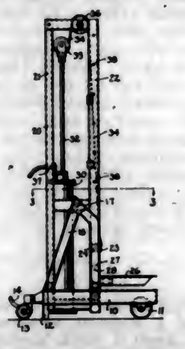


2,106,875
SEAMED BAG
William Wallace Rowe, Cincinnati, Ohio, assignor, by mesne assignments, to Bemis Bro. Bag Co., St. Louis, Mo., a corporation of Missouri
Application July 19, 1935, Serial No. 32,159
12 Claims. (Cl. 229—55)

1. A bag composed of an outer material to which, by means of cement, is held an inner liner of other material, said outer and inner materials adjacent one edge having non-cementing adjacent faces, the outer material extending beyond the liner on the other edge, adhesive joining the outer edge portions where they face one another, the portion of the liner material which has the non-cementing face and the main body thereof having a continuous sheet in common.

2,106,876
AZO DYESTUFFS
Friedrich Schubert, Leverkusen-I. G. Werk, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application March 30, 1936, Serial No. 71,797. In Germany April 4, 1935
9 Claims. (Cl. 260—76)

1. Azodyestuffs of the general formula:



wherein X is a member of the group consisting of hydrogen and N=N—R_5, and R stands for a radical selected from the group consisting of the benzene series and the 1,1'-diphenyl series, bearing the azo groups in the 4,4'-positions, R_1 stands for a radical of a naphtholsulfonic acid capable of coupling twice, R_3, R_4 and R_5 stand for aromatic radicals, R_2 stands for a radical of a 1,3-dihydroxy compound of the benzene series, yielding on leather in general brown to blackish brown shades of good fastness properties.

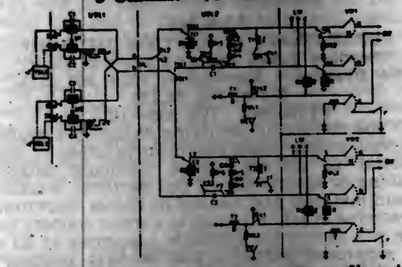
2,106,877
PROCESS OF PRODUCING ALCOHOLS FROM ALKYL SULPHURIC ACIDS
William H. Shiffler and Melvin M. Heim, Berkeley, and Marvin F. Miller, Albany, Calif., assignors to Standard Oil Company of California, San Francisco, Calif., a corporation of Delaware
No Drawing. Application August 22, 1930, Serial No. 477,146
9 Claims. (Cl. 260—156)

9. The process of producing tertiary amyl (pentyl) alcohol from an acid aqueous solution containing the reaction products of olefines of five carbon atoms, and corresponding at least in part to tertiary amyl alcohol, with aqueous sulphuric acid which comprises subjecting such solution, containing an appreciable quantity of free sulphuric acid, to distillation at a pressure lower than atmospheric to hydrolyze and vaporize alcohol therefrom.

2,106,878
PORTABLE ELEVATOR
Henry Lutcher Sinclair, Houston, Tex., assignor to Houston Compress Company, a corporation
Application August 6, 1935, Serial No. 34,862
1 Claim. (Cl. 187—9)

A portable hoist including a frame, a trackway longitudinally of said frame, a platform adapted for movement along the trackway, a motor unit comprising a vertically movable plunger in a cylinder mounted in the lower end of said frame, a sheave attached to said motor unit, means for actuating said motor unit to move the sheave longitudinally of said frame, a pulley in the upper end of said frame, a cable attached to the upper end of said frame and having its opposite end attached to said carriage, said cable passing from the carriage over said pulley and through said sheave, and adjustable stop means on said trackway to limit the upward movement of said carriage, whereby the position of said carriage will not be altered by removal of the load therefrom.

2,106,879
CERAMIC GLAZING COMPOSITION
Edward R. Stowell, Fort Wayne, Ind., assignor of one-half to Worthington Heyt, Cleveland Heights, Ohio
No Drawing. Application June 19, 1936, Serial No. 86,024
5 Claims. (Cl. 106—38.3)

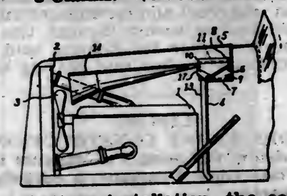


1. A process of making a "slip" for glazing ceramics, comprising bringing together a major portion of finely divided silicon carbide with a small proportion of finely divided silica and a small proportion of a sodium silicate compound of relatively low viscosity and water, allowing the silica to react with the silicate and finally adding a sodium silicate compound of relatively high viscosity and water sufficient to reduce the mass to a suitable consistency for brushing, spraying or dipping.

2,106,880
FRUIT JAR
Glenn A. Teas, Bedford, Ohio
Application October 24, 1935, Serial No. 46,540
1 Claim. (Cl. 215—37)

A method of eliminating bubbles from the interior of a jar of the type in which a closure with a bottom surface extending upwardly and outwardly from the center directly engages the contents of the jar, which consists in spinning the closure after application whereby the bubbles are discharged radially to the edge of the closure.

2,106,881
TELEPHONE SYSTEM
Fritz Wolf, Birkenwerder, near Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany
Application February 10, 1936, Serial No. 63,114
In Germany February 27, 1935
8 Claims. (Cl. 179—17)

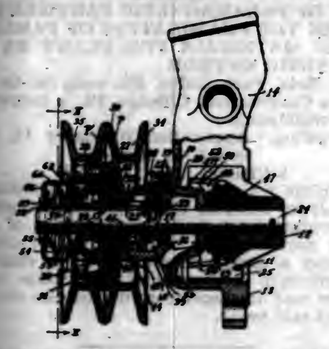


1. In a telephone system, a common line, telephone lines branched from one end of said common line, connecting lines branched from the other end of said common line, switches in each connecting line for extending calls from said telephone lines, means responsive to an incoming call over either connecting line or an outgoing call on one of said telephone lines for taking said common line and one of said connecting lines into use to the exclusion of the other telephone line and connecting line, switching means in said connecting line operated responsive to the call to apply an auxiliary potential to the connecting line to influence the switches thereon, said switching means operated transitorily responsive to an outgoing call and for the duration of an incoming call.

2,106,882
PASTE OF PARAMAGNETIC PARTICLES FOR USE IN THE EXAMINATION OF PARAMAGNETIC MATERIALS FOR FLAWS BY THE MAGNETIC METHOD
Carl E. Betz, Park Ridge, Ill., assignor to Magnaflux Corporation, Chicago, Ill., a corporation of Pennsylvania
No Drawing. Application December 12, 1936, Serial No. 115,640
3 Claims. (Cl. 175—183)

1. A plate for use in examining paramagnetic materials for flaws by the magnetic method, said paste comprising a uniform dispersion of finely divided paramagnetic particles in an oily vehicle and a small percentage of a dispersing agent effective to prevent agglomeration of said particles and to disperse said particles upon dilution of said paste.

2,106,883
BATTERY INSTALLATION FOR MOTOR VEHICLES
John Oliver Black, Detroit, Mich., assignor to The American Forging and Socket Company, Pontiac, Mich., a corporation of Michigan
Application April 8, 1936, Serial No. 73,240
3 Claims. (Cl. 180—68.5)



1. In a battery installation, the combination with a battery and a box receiving the battery and having an inlet in a wall thereof for cooling air and an outlet therefor in its bottom, of a strip substantially encircling the interior of the box at the junctures of its walls and bottom, and spacing the battery from the walls and bottom, said strip having a break therein defining a passage through which air may pass to the space beneath the battery and thence to the outlet, a strip extending upwardly from said first-mentioned strip and located between the break and the inlet, whereby said strips jointly baffle the air to prevent its direct flow from the inlet to the outlet.

2,106,884
SEAL FOR PUMP STRUCTURES
Sherwood C. Bliss, Buffalo, N. Y., assignor to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York
Application April 3, 1936, Serial No. 72,483
2 Claims. (Cl. 286—7)

1. In a pump structure of the class described comprising a frame providing a pump chamber and a bearing boss, a shaft structure extending through and journaled in said boss, and a pump

rotor within said pump chamber secured to the inner end of said shaft and having a recess surrounding said shaft, sealing structure comprising resilient packing material within the inner portion of said recess, a non-metallic sealing washer surrounding said shaft between said packing material and the adjacent end of said boss, a thin sheet metal retaining washer between said packing material and said sealing washer, said retaining washer being free for axial movement in said recess but having interlocking connections with said rotor for rotation therewith, said re-

taining washer being of large internal diameter so as to be in intimate engagement with only the peripheral portions of said packing material and the sealing washer, said sealing washer being of slightly larger internal diameter than said shaft so as to be free to rotate relative to the shaft, and spring means arranged to cause the exertion of pressure against said packing material for compression thereof within said recess and around said shaft and for engagement thereof with said sealing washer through the bore of said retaining washer for holding said sealing washer intimately against said bearing boss.

STORE FRONT CONSTRUCTION

Clyde J. Bristow, Oakmont, Pa., assignor to Pittsburgh Plate Glass Company, a corporation of Pennsylvania

Application February 12, 1936, Serial No. 63,539

3 Claims. (Cl. 189—78)

1. In combination in a store front construction, a pair of glass sheets having their edges in opposition, a clamping plate extending across said edges on the outer sides of the sheets formed so that it may be bent at its center to fit against the faces of the sheets and having an opening through its central portion, a cap fitting into said opening and provided with flanges which overlie the outer face of the plate on each side of the center line thereof, a stem secured at one end in the cap extending inwardly between the edges of the glass sheets, and a back clamp releasably secured upon the inwardly extending portion of the stem and engaging the rear faces of the glass sheets in opposition to the clamping plate.

STABILIZER STRUCTURE FOR AUTOMOBILES

Harry L. Chisholm, Jr., Buffalo, N. Y., assignor to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York

Application February 13, 1936, Serial No. 63,495

3 Claims. (Cl. 267—11)

1. In stabilizing structure for automotive vehicles, an integral torque bar extending across and journaled at its ends on the vehicle chassis, levers connecting the ends of said bar with the vehicle axle structure, said bar intermediate its ends having an offset portion, a hydraulic shock absorber of the rotary type mounted on said chassis within said offset portion of the bar and with its axial line coincident with the axial line of rotation of said bar, and a connection from said offset portion for transmitting the rotary movement of said bar to the shock absorber rotary element.

METHOD OF TREATING ORES

Theodore Earle, Pacific Palisades, Calif.

No Drawing. Application June 30, 1936, Serial No. 88,147

17 Claims. (Cl. 209—167)

1. The method of preparing sands, comminuted ores and similar materials for separation by froth flotation which includes regulation of the moisture content of the material between an upper limit less in amount than will satisfy the affinitive capacities of all of the separated particles and a lower limit determined by the amount of moisture adsorbable to the material from the atmosphere, and subsequent thorough admixture with the moisture-regulated material of relatively minute quantities of selective reagents.

SEPARATORY FLOTATION METHOD

Theodore Earle, Pacific Palisades, Calif.

No Drawing. Application June 30, 1936, Serial No. 88,148

13 Claims. (Cl. 209—167)

1. The method of purifying naturally granular material which comprises disintegration of said material to its constituent elements without crushing or splintering of the particles, washing of said material and discard of slimes therefrom, dewatering of said material to a water content less than will satisfy the affinitive capacities of all of the separated particles and to that minimum essential for selective flotatively effective limitation of the adsorptive powers of the particles relative to flotation reagents, agitation of said water-regulated material with a fatty acid and agitation of said mixture in a froth flotation cell for separation and removal of impure particles through said cell.

LIGHT SCREEN FOR AUTOMOBILES

Joseph Frank, Brooklyn, N. Y.

Application November 24, 1936, Serial No. 112,458

4 Claims. (Cl. 296—97)

4. A combined light reflector, screen and transmitter, comprising a sheet of flexible transparent celluloid coated on one side with a thin coating of silvering material capable of reflecting a large percentage of light impinging on the same, said coating being sufficiently thin to transmit therethrough a relatively small percentage of impinging strong white light as a clear blue color and acting to transmit red, green and yellow light as such, and said coating being continuous and capable of maintaining its continuity and light reflecting and transmitting capacities even though the sheet be repeatedly flexed in changing its form during use.

APPARATUS FOR MAKING SHEET GLASS

Heward L. Halbach, Clarksburg, W. Va., assignor to Pittsburgh Plate Glass Company, a corporation of Pennsylvania

Application December 24, 1935, Serial No. 56,064

8 Claims. (Cl. 49—17)

1. In combination in apparatus for making sheet glass including a drawing kiln connected at one end with a melting tank, and means for drawing a glass sheet continuously upward therefrom in a plane transverse to the kiln, a pot of refractory material also extending transversely of the kiln with its edges above the level of the bath and provided with a transverse rib for defining the line of draw and with inlet openings through its bottom on opposite sides of the ridge to permit a free flow of glass to the interior thereof, the end walls of the pot being spaced away from the side walls of the kiln, and edge holding means for the sheet above the surface of the glass in the pot and inward of the end walls thereof, the inlet opening on the side of the pot nearest the melting tank being nearer to said rib than the other inlet opening.

ILLUMINATED SIGN

Hyman C. Hammer, Chicago, Ill., assignor to Price Brothers, Inc., Chicago, Ill., a corporation of Illinois

Application August 2, 1937, Serial No. 158,089

1 Claim. (Cl. 40—130)

A luminous sign of the character described, comprising a base, a source of illumination mounted on said base, a hollow shell surrounding said source of illumination and having a dull finish provided on the inner surface thereof, said shell being open at its forward end, and an opaque plate member for partially closing said open end, said opaque member being supported

at its bottom edge on the base and having its outer edge spaced from the edge of said shell to produce a narrow space whereby, when the interior of said shell is illuminated, the band of light issuing through said space will present the effect of a luminescent tube.

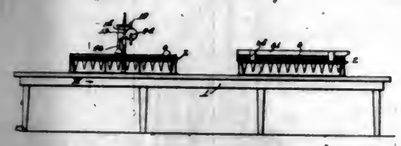
CLOSURE OPERATING MECHANISM FOR WASTE CANS

Meyer Kamenstein, Brooklyn, N. Y.



Original application August 28, 1935, Serial No. 38,176. Divided and this application January 23, 1936, Serial No. 60,441

4 Claims. (Cl. 220—36)
